From March 1 to 30, 1859	3,200	249,000
From March 1 to 31, 1860	2,710	192,000
From April 1 to 30, 1859	2,520	190,000
From April 1 to 30, 1860	2,383	153,000

Most descriptions of rum have realised quite previous quotations. Brandy and grain spirits have undergone no change.

The fruit market has continued heavy, at further reduced rates. Dealers, generally, continue to operate with extreme caution.

Rather large quantities of saltpetre have found buyers, on higher terms.

Scotch pig iron has sold slowly at 52s 6d and 51s 6d cash. Last week's shipments were 16,015 tons, against 11,233 tons in the corresponding week of 1859. Most other metals have changed hands slowly.

Linseed oil has advanced to 28*l* 10s. Olive has produced more money; and other qualities have ruled tolerably firm.

The business doing in the tallow market has been much restricted. To-day, P. Y. C., on the spot, has been quoted at 52s 6d. Town tallow is 51s net cash.

Mr H. Kentsch, of San Francisco, reports large discoveries of silver in that region. He observes:—"The mines situate on the eastern slope of the Sierra Nevada, in Utah territory, appear to equal in richness the most celebrated mines of Mexico and South America. About 50 tons of silver ore were extracted and brought down to San Francisco before the winter season, which ore yielded over 400*l* per ton. During the winter the comunications between San Francisco and these mines have been very difficult. Owing to the snow and severe cold the mines could not be worked, and prospecting parties met with little success until within a week or two. New leads have been discovered, and it is now ascertained beyond a doubt that these mines are very extensive. This fact, which has worked the greater part of our population into a fever, will cause a great sensation in commercial circles. It is believed that the quantity of silver extracted from these mines in the course of this year will be considerable."

"The demand for dry goods," observes the New York *Shipping List* of the 5th inst., "continues moderate, and the market has been somewhat irregular for most descriptions of both foreign and domestic fabrics, while prices have not varied materially for some considerable time past. Goods have been placed to a fair extent to supply the existing wants of the City and near-by trade, but there is little inquiry from the interior as yet. Manufactories are being constructed both in the Eastern, Southern, and South-Western States, which fact speaks well for the flourishing condition of the manufacturing business. Among the most recent movements in this direction is the proposed organisation of a new Company under the name of the Androscoggin Company, with 1,000,000 dols capital, for the construction of a new cotton mill, to be situated at Lewiston, Missouri. The demand for cotton goods for export continues active, and very full prices are realised for all such goods as are wanted for shipment, of which the supply continues moderate, the market buoyant, and holders very firm. Foreign goods continue in steady fair demand for desirable styles, but undesirable fabrics are crowded in the sales rooms, and sold at low rates, which are merely nominal."

With an improved demand from the home trade, the market has recovered from the depression which characterised it at the date of our last writing, and the better grades have sold to a fair extent at slightly enhanced prices, to which we conform our quotations. The more unfavourable European advices per steamer Canada, at Boston, were without influence on the market, which closed steadily yesterday at the annexed rates. The sales for the three days comprise 4,000 bales. We quote:—

NEW YORK CLASSIFICATION.

	Upland.	Florida.	Mobile.	New Orleans and Texas.

The cotton market has been very heavy during the week. A fair demand has arisen daily, but the supply is more than sufficient to meet it. We have again a large import, so that the accounts to-day show a further increase of stock. There is, notwithstanding, very little change to notice in prices. The better kinds of American are very steady, but undoubtedly concessions have been made in many cases in the lower grades. Egyptian are barely so saleable as last week. Brazil without change. East India heavy at last week's rates. The sales to-day will scarcely exceed 7,000 bales. The market is quiet. The reported export amounts to 10,660 bales, consisting of 5,620 American, 80 Brazil, and 4,960 East India.

MARKETS IN THE MANUFACTURING DISTRICTS

Most of the markets held this week have been very inactive, notwithstanding that the stocks in warehouse are limited for the time of year. In prices, however, no change of importance has taken place. The advices from Calcutta seem, for the moment, to have almost wholly checked the demand for export to the East. In the iron districts, trade has continued in a most unsatisfactory state, but no alteration has been reported in the quotations. Coals have sold slowly, owing to the determination on the part of some of the ironmasters to blow out furnaces.

MANCHESTER, May 17.—The Indian letters which were received here on Saturday, bringing the arrangements of the new Indian tariff, have put a stop for the present to business for that quarter, and considerable distrust has been expressed as to the future trade with that country in several articles. Shirtings, on which the duty now amounts to about 11½d per piece in the grey, and 1s 2d in the white state, have fallen here 1½d to 3d per piece. Jacconets, on which the duty is 5d grey and 7½d white, and madapollams, on which the duty is 5d grey, have also declined; but not so much at once, engagements being on them comparatively greater. Still, as in a few cases, where stocks are held, liberal reductions have been made, but buyers have refrained from operating. The China accounts have added to the adverse effect, and political causes have thrown

a disturbing influence over the other departments of the market. The chief exceptions in which business seems to be going on, are certain classes of ¾ printers and narrow cloths. Yarns have been extremely irregular and lower.

HUDDERSFIELD.—Bedford and woollen cords continue to meet a steady demand. The country trade has not yet begun to move with anything like healthy activity, notwithstanding the general expectation to the contrary. On the whole business was decidedly quiet both in the Cloth Hall, and in the warehouses, and complaints were very rife as to the general falling off in all branches of trade. Nothing worth mention has yet taken place in our local wool market.——LEEDS.—There are only few buyers in the town at present, and they do not operate with any spirit. Their operations, in fact, are more in the way of assorting up stocks than purchases for legitimate objects of speculation. Shipping houses are a little brisker. With respect to flax and yarns, trade is about stationary.——ROCHDALE.—The demand for flannel continues rather slack. The manufacturers, however, are well employed, and the general condition and prospects of the trade are satisfactory. Wools are held firmly by the staplers, and topmost figures of last week have had to be given by purchasers to-day. Skin wools are becoming scarce.——HALIFAX.—A trifling improvement is noticeable in the worsted trade, there having been a better demand for both the home and the foreign trade. Prices of all products are firm, as are also those of wool.——BRADFORD.—Wool—There is not much change to report under this head. The market continues tolerably well supplied for the time of year, and skin wool is more abundant than usual. Prices continue very firm. Yarns—There is more inquiry for export, but the prices offering are too low to meet the present rates for long wool. Pieces—There is no alteration in prices as compared with last week.——LEICESTER.—There has been rather more doing in some departments of the hosiery trade this week; a little has been doing for export. In the country districts the hosiery trade remains quiet. There is not much doing in wool, but prices remain very high. Yarns are without change, spinners continuing well employed.——NOTTINGHAM.—Business in the lace trade has been exceedingly dull. The fancy trade continues extremely quiet. There is a fair demand for Mechlins. The silk lace trade is expected to improve shortly. In hosiery there is rather more doing, and several branches are more busy than they have been for some time past. Yarns remain without material change. Silk continues dear.——GLASGOW.—The cotton market has been steady, at unchanged prices, except for cotton above middling, which is rather dearer. There is an improved feeling in the goods and yarns market, and considerable contracts have been entered into, particularly for goods at full prices. Yarns are light in stock, and held at extreme rates. Iron—Pig iron sold as low as 52s to 52s 6d.——DUNDEE.—The transactions, generally, have not increased; nevertheless, last week's prices are supported.——BELFAST.—There is a steady business doing in yarns, at full quotations. In the value of linens no change has taken place.——WOLVERHAMPTON.—Mr S. Griffiths reports the following prices for iron:—Finished Qualities—Common Staffordshire bars, 7*l* 10s at the works; best bars, 8*l* 10s; sheets, 9*l*; doubles, 10*l* 10s; nail sheets, 8*l* 10s; latins, 12*l*; boiler plates, 9*l*; best and best best in proportion; common rods, 7*l* 10s; hoops, 8*l* 10s; gas strip, 8*l*; Canada plates, 12*l*; and all others in proportion. Pig Iron —Staffordshire cold blast, 4*l* 7s 6d; best native hydrate pigs, 3*l* 15s to 4*l* 2s 6d; first-class all mine grey forge pigs, 3*l* 10s to 3*l* 15s; good mine pigs, with a medicum of flue cinder, 3*l* to 3*l* 5s; mine pigs, deteriorated by cinder, 2*l* 15s to 3*l* 2s 6d; grey forge cinder pig iron, 2*l* 15s to 2*l* 17s 6d; white forge cinder pigs, 2*l* 10s to 2*l* 15s; melters, Nos. 1, 2, and 3, 2*l* 17s 6d to 3*l* 2s 6d; superior makes of all mine melting iron, 3*l* 10s to 4*l*, according to make and quality; favourite Shropshire and Forest of Dean brands, 4*l* 7s 6d.

CORN.

AMERICAN GRAIN AND FLOUR MARKETS.

NEW YORK, May 5.—FLOUR AND MEAL.—The demand for State and Western flour has been moderate during the past three days, and the sales confined mainly to the wants of the local trade. Prices have been fully sustained, however, and in some instances a slight advance has been obtained. The market for Southern flour has sympathised with that of other kinds, to a certain extent, and the inquiry has been moderate at the prevailing rates of Tuesday last. The sales aggregate 5,700 bbls. Export from 1st to 30th April: wheat flour, 82,212 bbls, against 70,768 bbls in 1859. Export from Jan. 1 to April 30: 236,411 bbls, against 187,358 bbls in 1859.

GRAIN.—In wheat, only a very moderate business has been done, the firmness of holders having prevented shipments to any considerable extent, as shippers still refuse to operate, except at a material reduction from current rates. The transactions here have been at about previous rates, and amount to 29,750 bushels, including 11,600 Milwaukee Club, chiefly at 1.31 dol; 1,400 winter red Western and Jersey, 1.50 dol; 1,400 white California at about 1.64½; 1,000 white Michigan, 1.60 dol; 250 choice ditto, 1.70 dol; and 1,500 red Southern, on private terms. Also, included in the above aggregate are 22,800 bushels, embracing 200 choice white Michigan at 1.71 dol; 15,300 Milwaukee Club, 1.29 dol to 1.33 dol; 1,000 Racine, 1.31 dol; 2,800 white Indiana, 1.60 dol; and 3,500 Canada, 1.31 dol, closing dull, and prices in favour of the buyer. Corn is dull and drooping, with small aggregate sales at about 1 cent. per bushel lower rates; the sales are 36,000 bushels. Export from 1st to 30th April: wheat, 175,878 bushels, against 1,567 bushels in 1859; corn, 106,536 bushels, against 21,761 bushels in 1859. Export from Jan. 1 to April 30: wheat, 311,215 bushels, against 18,916 bushels in 1859; corn, 203,817 bushels, against 67,555 bushels in 1859.

LONDON MARKETS.

STATE OF THE CORN TRADE FOR THE WEEK.

MARK LANE, FRIDAY EVENING.

Most of the leading markets held this week have been but moderately supplied with home-grown wheat. For good and useful qualities, the demand has ruled somewhat steady, at full quotations; but low and damp parcels have moved off slowly, on former terms. The general quality of the samples brought forward has been tolerably good. There has been an improved feeling in the sale for foreign wheats, and, in some instances, the currencies have advanced 1s per quarter. The business done in it, however, has not been extensive. Malting barley has changed hands slowly, on somewhat uncertain terms; but both grinding and distilling sorts have realised very full prices. On the whole, the malt trade has been tolerably active. In the quotations however, no improvement has taken place. Oats have come slowly to hand, and for most kinds there has been a fair sale, at extreme rates to a slight advance. Both beans and peas have sold at full currencies, and there has been an improved inquiry for both English and foreign flour, at quite previous quotations.

The fine rains which have fallen in all parts of England this week, have had a most beneficial influence upon vegetation. There is now rather a large supply of grass in the pastures—the young wheats have progressed steadily, and the country, generally, has derived great benefit from the favourable change in the weather.

Most of the foreign markets have been somewhat inactive for wheat; nevertheless, holders, almost generally, have declined to meet buyers on lower terms. Barley, oats, beans, and peas have continued firm in price, and rather large parcels have changed hands on English account. The latest advices from New York are to the effect that a few parcels of wheat, flour, and maize were in progress of shipment to England. The trade, however, was somewhat heavy at barely previous rates.

In Scotland, wheat has sold at full prices, with a fair average demand. Spring corn, except fine barley, which has ruled easier, has commanded extreme rates.

Throughout Ireland there has been a steady inquiry for wheat and oats at very full prices. Most other produce has changed hands slowly, although the shipments have rather increased.

The few samples of English wheat in to-day's market sold steadily at 1s per quarter above Monday's currency. Foreign wheat was firm, and the turn dearer. All other kinds of produce, including flour, moved off steadily at extreme rates.

Mr Fd. Rainford states that 46 vessels have arrived off coast laden with grain since the 10th inst. Floating cargoes have commanded more attention, at full prices.

The London averages announced this day were:—

COLONIAL AND FOREIGN PRODUCE MARKETS.

TRANSACTIONS OF THE WEEK.

For Report of This Day's Markets, see "Postscript."

Mincing Lane, Friday Morning.

Sugar.—There has been less animation in the demand, and importers still show a disposition to sell freely, consequently former prices cannot be obtained; indeed, some descriptions show 6d per cwt reduction. The improvement in the deliveries for consumption last noticed continues, yet the excess of stock and expected heavy arrivals checks confidence. 1,390 casks West India were sold to yesterday (Thursday) at the former value: Barbadoes, by auction, went at 35s to 41s 6d, and 42s to 45s 6d for bright yellow. Several other parcels submitted partly found purchasers, including St Lucia at 35s to 42s; grainy Demerara and Berbice, 41s to 46s per cwt. The deliveries last week amounted to 5,460 tons including 410 tons for export, and the total quantity taken for consumption is now equal to that of last year. There has not been any material change in the stock, owing to the landings proving equal to the clearances The Dutch sale on Tuesday comprised 83,700 baskets Java, and went off well at full prices to a slight advance for low to middling qualities.

Mauritius.—12,800 bags, by auction, about two-thirds found buyers at the following quotations: brown, 32s to 38s; grey and yellow, 38s 6d to 42s; rather grainy, 39s 6d to 43s 6d for low grey to very good yellow; and 44s 6d per cwt for crystalised.

Bengal.—All good qualities remain scarce. 1,095 bags low soft date brown offered, by auction, were taken in at 32s to 33s per cwt.

Madras.—Native is unaltered. 503 bags grocery kinds realised the full valuations: soft greyish to very good yellow, 40s to 44s 6d; fine yellow and white, 45s to 46s 6d per cwt.

Penang.—4,174 bags were mostly disposed of, at and after the sale: brown, 34s to 37s 6d; soft grey to very good yellow, 38s to 43s 6d per cwt.

Foreign.—A floating cargo of 17,000 bags clayed Manilla has sold at 25s, and three of Havana, Nos. 9 to 11½, at 26s 3d to 28s, all for the United Kingdom. A cargo, No. 10½, is reported at 27s 3d for a near port. On the spot, 2,000 bags low brown Siam have changed hands at 31s, and a parcel of clayed Manilla at 37s. By auction, 1,294 casks Porto Rico were only partly sold: low to fine yellow, 40s to 47s; brown, 37s 6d to 39s 6d. 2,839 boxes Havana partially found buyers at 38s to 43s: washed in proportion; grainy white, 48s 6d to 53s. 225 casks 200 barrels Cuba and Havana brought 36s 6d to 40s for soft brown and yellow.

Refined.—The market does not exhibit any change this week, and there is decidedly less inquiry by the home trade. Common dry goods may be quoted at 52s: crushed, 48s to 50s 6d per cwt. There has been little alteration in bonded sugars since last Friday.

Molasses.—680 casks Cuba, offered by auction, were bought in: muscovado at 18s; clayed at 16s 6d; and 147 casks Madras at 16s. The latter since sold at rather less, and a parcel of old Cuba is reported at 16s per cwt. About 320 casks of the clayed since sold at 14s 6d. 200 casks Cuba melado were bought in at 34s to 40s per cwt.

Rum.—There are still buyers of Demerara at the recent decline, with few sellers, and the stock in first hands has become small. Fair to good qualities sold this week at 1s 10d to 2s; common Leewards, 1s 8d per proof gallon.

Cocoa.—1,148 bags Trinidad about one-third part sold at irregular prices, but generally showing 3s to 5s decline, excepting for the finest sorts at 91s to 95s: the remainder went from 73s to 86s for grey to good mixed red. 221 bags common St Lucia sold rather dearer, from 62s to 65s per cwt.

Coffee.—Imports from Colombo during the past fortnight have been very large, and the market is unsettled, buyers awaiting public sales. 154 casks 51 barrels and bags plantation submitted since last Friday sold at barely the former valuations: low middling to middling, 68s 6d to 73s. 1,101 bags native went at 59s to 61s 6d for ordinary to good, and 43s 6d for low qualities mixed with blacks. 180 half and quarter-bales Mocha of indirect import were taken in at 100s to 105s for mixed small berry. 102 casks 364 barrels and bags Jamaica went from 59s to 73s for fine ordinary to middling. 438 bags East India were partly taken in at 62s for Singapore Java kind, a few lots low black selling at 35s to 36s. Part of a cargo St Domingo afloat has sold at 60s 6d per cwt.

Tea.—Since the letters by the overland mail were delivered the market has been firm, with a steady business doing at full rates to a slight advance for the lower grades of congou. Common may be quoted 1s 4d to 1s 4½d per lb. The general demand is by no means animated.

Rice.—Privately a few parcels have changed hands, principally Bengal; low to fine ranging from 9s 9d to 14s 6d. Ballam brought 10s 3d; Madras, 9s 6d. Some Moulmein realised 8s 3d cash. The market is inactive, notwithstanding the heavy reduction in the stock every week for some time past.

Imports and Deliveries of Rice to May 12, with Stock on hand.

Exported	7810	8675	6390	26000
Stock	51200	76600	87220	34900

Spices.—183 bags Singapore white pepper sold at 6¾d to 6¼d, being again rather lower. Partial inquiries prevail at this reduction also for black at 4d to 4½d per lb. 71 cases cassia lignea brought 92s to 93s for pile 1. 118 barrels Jamaica ginger sold: common to good at 4*l* 8s to 6*l* 5s per cwt.

Sago.—1,000 boxes small grain have sold at 16s 6d to 17s per cwt.

Saltpetre.—There has been an improved demand, partly speculative, at an advance of 6d to 1s; and business to some considerable extent has taken place by private contract: Bengal, refraction 10⅛ to 7⅛, 41s to 42s 6d; fine, 44s to 44s 6d per cwt.

Imports and Deliveries of Saltpetre to May 12, with Stock on hand.

Deliveries last week 220 tons.

Cochineal.—378 bags rather more than one-third part sold at about previous quotations: Honduras silvers, 3s to 3s 7d; blacks, 4s 2d to 4s 7d: Teneriffe silvers, 3s 2d to 3s 4d; blacks 3s to 3s 8d: Mexica silvers, 3s 1d to 3s 3d per lb.

Other Dyestuffs.—Gambier is again firmer. 1,087 bales sold by auction: good, 17s 3d to 17s 6d; dark, 16s 9d. Business has also been done by private contract. 440 bags Cutch were taken in at 28s 6d. Good Bengal turmeric commands 15s to 15s 6d. Safflower unaltered.

Drugs.—The market is inactive. Yesterday, the 250 cases castor oil brought forward at public sale realised barely previous rates. Cubebs sold at 11*l* to 11*l* 17s 6d per cwt. Gum olibanum went dearer for fair to good sorts, at 55s to 65s per cwt.

Lac Dye.—187 chests were mostly bought in: D T at 1s 10½d to 2s 1d: other marks from 1s 2d to 1s 6d; ordinary native, 4½d to 5d; very low, 1d to 1⅝d per lb.

Shellac.—A sale of 50 chests good orange has been made at 10*l* 7s 6d per cwt, being rather under the late extreme quotations.

Lima Wood.—920 tons were bought in at 13*l* to 14*l* 5s per ton.

Logwood.—250 tons St Domingo have sold for arrival at 4*l* 15s per ton.

Rubber.—Para is firmer: fine, 2s 6d to 2s 7d. Yesterday, 110 packages East India, by auction, were withdrawn at 2s 2d. Sales have been made for arrival at 1d per lb less.

Metals.—The markets have been exceedingly dull, and with an absence of all speculative business. Spelter remains nominally at 20*l* 10s per ton on the spot, but no sales were reported to yesterday (Thursday). Scotch pig iron has tended downwards in value: mixed numbers were at one period bringing 53s, but the latest sales have been at 51s 6d to 51s 9d per ton. Foreign tin is steady: Straits, 129s to 130s per cwt. Other metals present little variation of importance.

Hides.—East India descriptions remain quiet, and 84,000 offered yesterday went at previous rates.

Hemp, &c.—On Wednesday, 2,330 bales Manilla offered by auction were sold at 1*l* to 1*l* 10s reduction for some kinds: common to good roping, 22*l* 5s to 26*l*. The sales of jute proceeded flatly, and the bulk of 7,380 bales was bought in. The portion sold, 1,200 to 1,300 bales, ranged from 14*l* 10s to 23*l* per ton for common to fine, being about the former value.

Linseed.—Imports continue large from the East Indies, and the fine weather for vegetation has induced holders to meet the market. Bombay offers at 51s 6d to 51s 9d; Calcutta, 49s to 49s 6d per quarter on the spot.

Turpentine.—Business has been done in rough at 9s. Spirits have met with more inquiry. American, 35s 6d to 36s per cwt.

Oils.—Moderate transactions have occurred in olive: Gallipoli, 63*l*; other sorts, 56*l* to 61*l*. Floating cargoes of the former have sold at 60*l* 10s per ton for the United Kingdom. Sperm continues to decline: American, 97*l*; colonial, 98*l* per ton. Palm is steady at 45s 6d for fine. Cocoa-nut has been in fair request: Ceylon, 42s 6d to 43s; Cochin, 44s 6d to 45s. The linseed oil market has been firm at 28s 6d; and for delivery in the last six months 29s 6d is demanded. Large sales have been made in rape, but the growing seed crops on the Continent will be improved by the rains: foreign refined, 42s 6d to 43s: contracts of brown for delivery in September to December have been made at 43s per cwt.

Tallow.—A further heavy decline has occurred in Russian on the spot and for early deliveries, but the fall in the quotation for the latter part of the year noticed on Friday appears to have caused partial inquiries. Yesterday the market was steady: Y. C. on the spot, 52s 6d; May and June, 51s 6d: October to December, 51s per cwt.

Particulars of Tallow.—Monday, May 14.

POSTSCRIPT.

Friday Evening

Sugar.—The market was quiet to-day. 328 casks Barbadoes by auction went at 35s to 42s. 2,037 casks West India have sold for the week. Three floating cargoes of Havana are reported for the United Kingdom: Nos. 12 to 13, at 27s 6d to 28s 4½d; and one, No. 11½, at 28s 3d for Gottenburg.

Copper.—66 casks Jamaica, and 56 casks 31 barrels plantation Ceylon sold at easier rates. 1,055 bags native went at 59s for good ordinary mixed; and 45s 6d to 49s for low, part blacks; 176 casks bought in at 59s to 61s. 800 bags Costa Rica were partly sold at 69s 6d to 70s 6d for middling, being moderate prices.

Rice.—7,000 bags have been sold: pinky Madras, 9s 6d to 9s 9d; common Moulmein, 8s 3d; and white Bengal at 10s 6d to 12s.

Spices.—85 cases cassia buds were bought in at 10*l*. 71 barrels Jamaica ginger went at 87s to 115s per cwt. 537 bags Singapore black pepper were bought in, but since sold at 4 1-16d. 281 bags pimento were chiefly bought in at 3¾d to 3⅞d per lb.

Gambier.—390 bales went at 16s 9d to 17s 3d per cwt.

Oils.—208 casks cocoa-nut part sold: Ceylon, 43s to 43s 6d; Cochin bought in at 45s. 400 casks palm part sold at 44s 9d to 45s per cwt.

Tallow.—Town was reduced to 52s; Y.C., 52s 6d. Forward deliveries unaltered. 119 pipes South American went at 52s 9d to 53s, being 1s 6d to 2s per cwt cheaper.

ADDITIONAL NOTICES.

Refined Sugar.—The home market for refined sugar has been very steady this week. For export nothing doing. The Dutch market, which opened this week with a very firm appearance, has since shown weakness, with symptoms of a decline.

Green Fruit.—Demand good. Change of wind has brought arrivals of oranges from Valencia, St Michael, and Lisbon. Some parcels of each, sold by Keeling and Hunt at public sale, went at lower prices. Lemons

sustain the advance. Nuts in moderate demand; Spanish to be bought on easier terms.

Dry Fruit.—Low currants are the only descriptions which go off readily, and on these there has been a further decline of 1s to 2s. Several arrivals this week. Turkey raisins also lower. Clearances extensive.

English Wool.—There is rather more inquiry for English wool, at fully previous rates.

Colonial and Foreign Wool.—The sales progress firmly at former rates. The home trade are buying more freely; the continental buyers not quite so eagerly as at opening.

Flax.—Market firm.

Hemp steady, and a fair amount of business transacted, at the quotations.

Cotton.—Sales of cotton wool from Friday, 11th May, to Thursday, 17th, inclusive:—100 bales Surat at 4⅜d to 5d for fair Dhollera and fully good fair Oomra; 500 bales Madras at 5d to 5¼d for fair to good fair Tinnivelly. The market continues steady, and a fair amount of business has been transacted in Tinnivelly at the extreme prices of last week. The finer qualities of Surat being scarce and firmly held, are fully ⅛d per lb dearer. 700 bales Surat and 300 Tinnivelly are advertised for public sale on Thursday, the 24th instant.

Silk.—Since the arrival of the last mail from China the market has been quiet, the state of trade preventing home consumers buying, and the larger holders waiting the next mail before pressing sales.

Leather and Hides.—The supply of fresh leather at Leadenhall on Tuesday was limited. The demand was of a general character, almost all articles meeting some inquiry, and the transactions somewhat larger than for some weeks previously. In prices no change can be quoted. The public sales of foreign raw hides this week were decidedly dull. Scarcely any salted hides were sold except Australian, nearly 2,000 of which brought only 5d, less by at least ½d per lb than at the previous sale, and about 1,000 Cape at a similar reduction. Of 84,000 East India kips, 59,000 only were sold, generally at former rates, almost all for the home trade. Some excitement occurred at Leadenhall this week by the presence of a considerable number of the buyers and sellers of oak bark, consequent on the determination of the Government to sell the bark grown in the Royal forests by auction in London. It had previously been the custom to sell it in the large towns in its several localities. There was a large attendance of buyers, and it was all sold, excepting one lot, at 4*l* 2s 6d to 5*l* 7s 6d per ton for the timber bark, and at 5*l* 12s 6d to 7*l* for flittern or coppice. These prices ranged from 10s to 15s per ton below the value of the previous year; but it must be remembered that at that period the stock of bark was declared to be very short, and the war in Italy had just commenced.

Metals.—The amount of business doing in metals is the smallest. Copper is much neglected, although prices are maintained. Iron is rather lower for pig, and manufactured shows no revival. Tin is flat, and prices tend rather downward. Spelter is rather lower in price. Lead is well maintained by demand at present, quotations. Tin plates find a better demand at improved prices.

Tallow.—Official market letter issued this evening:—

	s	d
Town tallow	52	0
Fat by ditto	2	6½
Yellow Russian	54	0
Melted stuff	38	6
Rough ditto	22	6
Greaves	16	0
Good dregs	7	0

Imports this week 786 casks.

PROVISIONS.

Friday, May 18.—Bacon market very quiet; a fall of 2s since our last. Arrivals fair. In butter there is great fluctuation: fine Friesland rose from 100s on Monday, to 103s next day. To-day's price 106s, quality indifferent. Jersey, 92s to 96s, move off heavily. The continued wet causes great depression of trade. Fine weather is anxiously looked for. A rise in lard this week. Ham trade improving.

METROPOLITAN CATTLE MARKET.

Thursday, May 17.—A very limited supply of beasts was on offer in to-day's market. All breeds sold somewhat briskly at fully Monday's prices; in some instances, indeed, they were rather higher. Sheep—the show of which was very moderate—changed hands freely at quite the late improvement in value. Downs readily produced 5s 6d per 8 lbs. There was rather less activity in the lamb trade; nevertheless, the quotations were well supported. The supply of lambs was by no means extensive. Calves sold somewhat freely, but we have no change to notice in their value. Pigs and milch cows were very firm in price.

Per 8 lbs to sink the offal.

	s	d	s	d		s	d	s	d
Coarse and inferior beasts	3	6	3	8	Prime Southdown sheep	5	4	5	6
Second quality ditto	3	10	4	2	Large coarse calves	4	6	5	2

Prime coarse-woolled do.	4	10	5	2	Quarter old store pigs	23	0	30	0

Lambs, 5s 8d to 7s 4d.

Total supply—Beasts, 752; sheep and lambs, 5,120; calves, 320; pigs, 340.
Foreign supply—Beasts, 150; sheep, 700 calves, 104.

NEWGATE AND LEADENHALL.

Friday, May 18.—Although the supplies of meat have rather increased to-day, the trade generally is steady, and prices rule very high.

Per 8 lbs by the carcass.

	s	d	s	d		s	d	s	d
Inferior beef	3	2	3	6	Mutton, inferior	3	10	4	4
Middling ditto	3	8	3	10	— middling	4	6	4	10

Lambs, 5s 4d to 6s 8d.

HOP MARKET.

Borough, Monday, May 14.—Our market has continued very firm throughout the past week, with a full demand for fine samples, the supply of which is very limited. Inferior descriptions are in fair request. Mid and East Kents, 80s, 105s, 140s; Weald of Kents, 62s, 75s, 84s; Sussex, 62s, 70s, 76s.

Friday, May 18.—The market continues firm, with but few hops on offer; the bine is more growing.

POTATO MARKET.

Southwark Waterside, Monday, May 14.—During the past week the arrivals coastwise have not been large; but as the weather has been fine, there was enough for the demand at the following quotations:—York Regents, 120s, to 150s; ditto Flukes, 120s to 150s; Lincolnshire Regents, 100s to 130s; Dunbar ditto, 120s to 150s; ditto reds, 120s to 130s; Perth, Forfar, and Fifeshire Regents, 110s to 130s; ditto reds and Rocks, 100s to 120s; Irish whites, 90s to 110s per ton.

Thursday, May 17.—The arrivals of potatoes coastwise and by rail continue limited, and trade generally is worse, but prices without quotable change. York Regents, from 160s to 180s; ditto, Flukes, 120s to 180s; Scotch ditto, 100s to 160s; ditto Cups, 110s to 130s; Dunbars, 120s to 140s; Rocks, 110s to 150s per ton.

HAY MARKETS.—Thursday.

Smithfield.—Meadow hay, 3*l* to 4*l* 15s; clover, 4*l* to 5*l* 17s; and straw, 1*l* 6s to 1*l* 12s per load. Trade dull.

Cumberland.—Meadow hay, 3*l* to 5*l*; clover, 4*l* to 5*l* 15s; and straw, 1*l* 7s to 1*l* 14s per load. A slow inquiry.

Whitechapel.—Meadow hay, 3*l* to 4*l* 15s; clover, 4*l* 5s to 5*l* 17s; and straw, 1*l* 6s to 1*l* 12s per load. Trade somewhat heavy.

LIVERPOOL MARKETS.

WOOL.

(From our own Correspondent.)

Friday, May 18.—There is a moderate demand for all useful kinds for immediate consumption, and, as stocks of these descriptions continue to be but light, holders are firm in their demands. The public sales in London are progressing satisfactorily, which tends to maintain the firm tone of our market.

CORN.

(From our own Correspondent.)

Friday, May 18.—Grain market steady; good consumptive trade in wheat at 1d to 2d advance. Flour in better request. Indian corn still drooping. Galatz, 35s 6d; Ibraila, 34s; Egyptian, 33s. Beans steady. Old Egyptian, 34s; new, 36s. Oats, barley, and oatmeal, in fair request at Tuesday's quotations.

METALS.

(From our own Correspondent.)

Friday, May 18.—The market for manufactured iron continues quiet, with only a limited demand, and with little or no change in prices. The business in Scotch pig iron during the week has been very moderate, and at reduced rates. The copper market is dull, and there has been no additional demand for the article since the late reduction in price. Little doing in lead, or in any other metals.

The Gazette.

Tuesday, May 15.

BANKRUPTS.

H. Muggeridge, St George's place, Brixton road, builder.
T. Thorp, Surrey house, Clapham road, linendraper.
S. Freeman and J. Clifford, Leicester, elastic web manufacturers.
D. Widdowson, Nottingham, lace manufacturer.
J. Williams, Pentypool, Monmouthshire, surgeon.
J. Box and H. J. Lewis, Gloucester, corn merchants.

EPITOME OF RAILWAY NEWS.

TRAFFIC RETURNS.—The traffic returns of railways in the United Kingdom for the week ending **May** 5 amounted to 525,635*l*, and for the corresponding week of last year to 477,210*l*, showing an increase of 48,425*l*. The gross receipts on the eight railways having their termini in the metropolis amounted to 223,810*l*, and for the corresponding week of 1859 to 209,238*l*, showing an increase of 14,572*l*.

RAILWAY AND MINING SHARE MARKET.

LONDON.

MONDAY, May 14.—The railway market opened heavily this morning on renewed political distrust, but partially rallied in the afternoon. The greatest changes were in South-Eastern, owing to the large speculative transactions in this stock, and the price, after being as low as 85⅝, improved at the close to 86½ to ⅝, or ¼ per cent. higher than on Saturday. In the colonial market, Indian guaranteed were chiefly affected, but closed firmer than at one period, East Indian being finally quoted 101½ to ¾; Grand Trunk of Canada stock left off steadily at 33¼ to 34½, and the second preference at 1 to 2 premium, while Great Western shares were flatter. French railways, Brazilian, and South Austrian, and Lombardo-Venetian showed a general decline. American railway bonds were rather dull, especially those of the Illinois and New York Central. The chief feature in mines was another rise in St John del Rey. There was no change of importance in joint stock banks. In miscellaneous descriptions a reduction occurred in Australian Agricultural and Madras Irrigation. Crystal Palace stock was likewise weaker. Victoria debentures, new, were last quoted 106¾ to ⅝; the Canadian loan, 101¼ to ¼ bonds, and 2½ to ¼ pm. scrip.

TUESDAY, May 15.—The railway market did not experience any material alteration to-day; the final prices were for the new account at the end of the month. The dealers were chiefly occupied with the settlement, and the general business was limited. Indian guaranteed was again rather dull. Grand Trunk of Canada stock was firm at 33 to ½, and the new prefereuce bonds steady at 1 to 2 premium. The foreign market continued flat; several French descriptions, Great Luxembourg, and Lombardo-Venetian presented a renewed decline. In American securities, New York and Erie shares improved. Mines were in little demand, and in some cases a reduction took place; St John del Rey, however, again advanced. City Bank shares were higher. In miscellaneous descriptions there was a rise in Madras Irrigation and a decline in Red Sea Telegraph. Victoria debentures, new, were last quoted 106¼ to ½; the Canadian loan, 101 to ¼ bonds, and 2 to ½ premium scrip.

WEDNESDAY, May 16.—The railway market was very heavy, especially during the latter part of the day, and closed at a general decline. In colonial descriptions, Indian guaranteed were fairly supported, but Canadian showed a reduction. Grand Trunk stock declined 1 per cent. to 32 to ½, and Great Western shares 10s to 12⅜ to ⅝. In the foreign market the principal changes were in Lombardo-Venetian, which touched par and ¼ premium, the last official price being ⅛ to ¼ premium. There was subseqnently, however, a fall to ⅛ discount to par. French shares were steady. American railway securities closed without alteration. Mines were again dull, and occasionally exhibited a decline. London and Westminster Bank shares continued to improve. In miscellaneous descriptions, Madras Irrigation advanced; while Van Diemen's Land were quoted lower. Victoria debentures, new, left off 106¼ to ½; Canada Five per Cent. bonds, 101⅛ to ¾; ditto, scrip, 2 to ¼ premium.

THURSDAY, May 17.—The railway market was very depressed, chiefly from sales to close open accounts in the present state of foreign politics. The colonial market was flat; most kinds of Indian guaranteed, Atlantic and St Lawrence, and Great Western of Canada, showed a reduction. After official hours, East Indian went to 100⅞ to 101½, and Canadian Great Western to 12⅛ to ¼. Grand Trunk stock was exceptionally firm at 32½ to 33. There was a considerable fall in French and other foreign shares, particularly South Austrian and Lombardo-Venetian. The latter first marked ⅛ dis., but gradually declined to ¼ to ⅜ dis.; Bahia were last quoted ⅜ to ½ dis., and San Paulo ⅜ to ½ dis. American securities were also less steadily supported. New South Wales, Nova Scotia, and Victoria (new) Government debentures were ¼ to ½ per cent. lower. Mines were dull, and in several cases exhibited a decline; among other St John del Rey. Joint stock banks were without alteration.

FRIDAY, May 18.—The railway share market to-day was rather firmer in character. A recovery of ½ per cent. took place in Great Northern stock, and of ⅜ per cent. in London and North-Western, Midland, and Caledonian. Other descriptions were quoted much the same as yesterday afternoon, the improvement being by no means general. London and North-Western stock was quoted 99 to ½; Great Western, 67¼ to ⅜; Midland, 115½ to 116; Caledonian, 89½ to 90; Lancashire and Yorkshire, 101¼ to 102½; South-Eastern, 84¼ to ⅜; Eastern Counties, 53 to ½; and Great Northern, 114 to 115. The stocks of the two leading Canadian railways were steady. Indian descriptions were dull, and Brazilian flat.

JULLIEN FUND.

Committee Room—50 New Bond street.

The Committee of the Jullien Fund, fearing that the subscriptions have been materially checked by the unfortunate death of Mons. Jullien, desire to explain that a widow and others, members of his family, can be protected from want only by the kind aid of those who appreciate the great services rendered by the late lamented maestro to the cause of the musical education of the English people.

The Committee confidently appeal to that benevolence for which their countrymen are so distinguished, for such prompt and liberal additions to the subscription list as shall enable them to do some justice to the memory of M. Jullien, and at the same time afford adequate relief to his bereaved family.

COMMITTEE for the DISTRIBUTION of the JULLIEN FUND.

Mr John Mitchell | Mr W. Duncan Davison
Mr W. R. Sams | Mr Julea Benedict
Mr Thomas Chappell | Mr A. Blumenthal

HONORARY TREASURERS.

Mr John Mitchell, 33 Old Bond street
Mr T. Chappell, 50 New Bond street
Mr W. R. Sams, 1 St James's street

BANKERS.

Messrs Coutts and Co., Strand
Heywood, Kennards, and Co., Lombard street
London and County Bank, Havover square

Who, as well as the honorary treasurers, have kindly consented to receive subscriptions.

April, 25th, 1860.

In compliance with numerous inquiries at the Box-office, the management has arranged to give Four Grand Mid-day Performances during the Whitsun Holidays, viz.: on Whit-Monday, May 28th, Tuesday, 29th, Thursday, 31st, and Saturday, June 2nd. The Entertainments will consist of a Recherche Display of Equestrian Performances and a light pleasing Dramatic Piece; commencing each day at Two o'Clock.

On Monday, May 21st, 1860, and during the week, the Grand Hippo-Drama, THE HISTORY OF A FLAG. Wonderous scenes in the cirque! supported by the most talented Equestrian and Gymnastic Artistes in the World. Concluding with a Laughable Farce. The magnificent chandeliers manufactured by Messrs Defries and Sons, of Houndsditch.

Doors open at ½-past 6, commence at 7. Box-office open daily from 11 till 4. Stage Manager, Mr W. West

AT HAMBLY HOUSE ACADEMY

Streatham Common, Surrey, Young Gentlemen are carefully Educated for the Public Schools, Military Colleges, Professions, or Commerce, by Mr R. S. TROUSDALE, L.C.P., aided by highly qualified assistant masters.

The domestic arrangements are on the most liberal scale; and the house is very delightfully situated. The terms for pupils under ten years of age, 30 guineas per annum; ten and under fourteen, 35 guineas per annum; fourteen, 40 guineas per annum. The above amount includes board and instruction in the Latin, Greek, French, and English Languages, Writing, Arithmetic, Merchants' Accounts, History, Geography, the Use of the Globes, Astronomy, Geometry, Algebra, and the other branches of the Mathematics. A library is devoted to the instruction and amusement of the pupils during their leisure hours. Religious works are provided for Sunday perusal; and lectures on various popular subjects are occasionally delivered. German Drawing, Dancing, and Music, on the usual terms. Washing, half-a-guinea per quarter. Drilling during the summer months, at a trifling charge; and board during a vacation, four guineas. All accounts are expected to be settled quarterly. Excellent accommodation for foreigners or gentlemen of neglected education. A quarter's notice of removal is required.

A TOILETTE REQUISITE FOR THE SPRING.

—Among the many luxuries of the present age, none can be obtained possessing the manifold virtues of OLDRIDGE'S BALM of COLUMBIA. If applied to the roots and body of the hair, it imparts the most delightful coolness, with an agreeable fragrance of perfume. It also at this period of the season prevents the hair from falling off, or if already too thin or turning grey will prevent its further progress, and soon restore it again. Those who really desire to have beautiful hair, either with wave or curl, should use it daily. It is also celebrated for strengthening the hair, freeing it from curf, and producing new hair, whiskers, and moustache. Established upwards of thirty years. No imitative wash can equal it. Price 3s 6d, 6s, and 11s only.—C. and A. Oldridge, 22 Wellington street, Strand, W.C.

Post free for Two Stamps.

EXTRAORDINARY DISCOVERY

of an Entirely NEW THEORY of CURING DISEASE, being the recorded experience of 30 years' special practice in Great Britain, France, and America—with evidence of the actual effects of the latest Scientific Discoveries, denominated NEW LOCAL REMEDIES, with the adjuncts of Constitutional Treatment not yet generally known, even by the medical faculty of the British Empire, but which have been recently introduced into England. Sent free on receipt of two stamps to defray postage, &c, by W. HILL, Esq, M.A., No. 27 Alfred place, Bedford square, London, W.C.—Daily consultations from Eleven till Two, and Six to Eight Evening.

CROSSE AND BLACKWELL,

Purveyors in Ordinary to Her Majesty, invite attention to their PICKLES, SAUCES, TART FRUITS, and other Table Delicacies, the whole of which are prepared with the most scrupulous attention to wholesomeness and purity. C. and B. have for many years enjoyed the high honour of supplying Her Majesty's Table with their Manufactures. A few of the articles most highly recommended are—Pickles and Tart Fruits of every description, Royal Table Sauce, Essence of Shrimps, Soho Sauce, Essence of Anchovies, Orange Marmalade, Anchovy and Bloater Pastes, Strasbourg, and other Potted Meats, Calf's-foot Jellies of various kinds for table use, M. Soyer's Sauces, Relish, and Aromatic Mustard, Carstairs' Sir Robert Peel's Sauce, and Payne's Royal Osborne Sauce. To be obtained of all respectable oilmen, grocers, &c., and wholesale of Crosse and Blackwell, 21 Soho square, London.

KEATING'S PALE NEWFOUNDLAND COD LIVER OIL,

perfectly pure, nearly tasteless, and free from adulteration of any kind, having been analysed, reported on, and recommended by Professors Taylor and Thomson, of Guy's and St Thomas's Hospitals, who, in the words of the late Dr Pereira, say, that "The finest oil is that most devoid of colour, odour, and flavour," characters this will be found to possess in a high degree. Half-pints 1s 6d, Pints 2s 6d, Quarts 4s 6d, and Five-pint Bottles 10s 6d, Imperial Measure.

St Paul's churchyard, London.

RUPTURES.—BY ROYAL LETTERS PATENT

WHITE'S MOC-MAIN LEVER

TRUSS is allowed by upwards of 200 Medical Gentlemen to be the most effective invention in the curative treatment of HERNIA. The use of the steel spring, so often hurtful in its effects, is here avoided, a soft bandage being worn round the body while the requisite retaining power is supplied by the MOC-MAIN PAD and PATENT LEVER, fitting with so much ease and closeness that it cannot be detected, and may be worn during sleep. A descriptive circular may be had, and the Truss (which cannot fail to fit) forwarded by post, on the circumference of the body two inches below the hips being sent to the Manufacturer.

Mr WHITE, 228 Piccadilly London.

Prise of a single Truss, 16s, 21s, 26s 6d and 31s 6d; Postage, 1s. Double ditto, 31s 6d, 42s, and 52s 6d; postage, 1s 8d. Post-office orders to be made payable to John White, Post-office, Piccadilly.

ELASTIC STOCKINGS KNEE CAPS, &c.,

for VARICOSE VEINS, and all cases of WEAKNESS and SWELLING of the LEGS, SPRAINS, &c. They are porous, light of texture, and inexpensive, and are drawn on like an ordinary stocking. Price from 7s 6d to 16s each; postage, 6d.

WHITE, MANUFACTURER 228 Piccadilly, London.

DR ROBERT ROWE ON INDIGESTION.

This day is published, price 2s 6d, the fifteenth edition,

NERVOUS DISEASES,

Liver and Stomach Complaints, Low Spirits, General Debility, and Diseases of Warm Climates; the Result of Thirty Years' Practice.

By G. ROBERT ROWE, M.D

"Dr Rowe claims with justice a priority of authorship, while he yields to none in his treatment. The value of this work is enhanced by its practical nature."—LANCET.

"We have no hesitation in placing this work among the first ranks. We entertain a high opinion of its value."—MEDICAL TIMES.

"This is a clever and useful work; contains much that is worthy of attention, and should be read by all martyrs to indigestion and other ills."—TIMES.

Also, by the same Author, 2nd edition, price 4s 6d, On some of the Important Diseases of Females and Children.

London: J. Churchill, and to be had of all booksellers.

THE HUMAN HAIR

GRIMSTONE'S THREE MINUTES'

ADVICE on the Growth, Cultivation, and Preservation of the Human Hair. This unique little work contains two engravings and many letters of undoubted authority, proving Grimstone's Aromatic Regenerator to be the only article that will produce a new growth of human hair, eyebrows, moustachios, whiskers, with a new growth of hair upon bald places. Sold in triangular bottles, 4s, 7s, and 11s. This size contains four of the 4s size; by post 12s, case and postage included

Grimstone's Eye-Snuff for exportation. Sold in Jars 8s per lb; or in Tin Canisters, 8d, 1s 3d, 2s 4d, 4s 6d and 8s 6d. His Medicated Eye-Snuff, samples 1s 1½d 2s 9d, and 4s 6d. This snuff is intended for Ladies or Gentlemen who are not Snuff Takers. All letters to William Grimstone, merchant, 52 High street, Bloomsbury.

A New Edition of

THE PHILOSOPHY OF MARRIAGE.

By JOSEPH KAHN,

Graduate in Medicine, Surgery, and Midwifery in the Royal and Imperial University of Vienna, Erlangen, &c., &c.

This popular work (which has been translated into four different languages) has now gone through forty-one editions of 10,000 each, and is designed to impart accurate knowledge on subjects which involve, the means of securing moral and physical happiness.

Price One Shilling, or, post free, for Twelve Stamps, direct from the Author, 17 Harley street, Cavendish square, London, W.

A Boon to Nervous Sufferers.

GIVEN AWAY.—26,000 COPIES

of a Medical Book, for the benefit of Nervous Sufferers, sent, post free, by the author, secure from observation, on receipt of a directed envelope, enclosing two stamps, the Private Medical Friend, a new work on the Self-cure of Nervous Debility, Loss of Memory, Dimness of Sight, Lassitude, Indigestion, Dislike to Society, &c., which, if neglected, result in consumption, insanity, and premature death, with plain directions for perfect restoration to health and vigour. The true guide to those who desire a speedy and private cure.—By HENRY SMITH, Esq., 8 Burton crescent, Tavistock square, London, W.C.

HOLLOWAY'S PILLS AND OINTMENT.

—All the maladies incidental to spring can be prevented, checked in their course, or ultimately cured, by these fine purifying and cooling medicaments. The Pills rouse the stomach, regulate the liver, stimulate the kidneys, and act gently on the bowels. The Ointment rubbed over any part penetrates to neighbouring organs, which it frees from all noxious and irritating humours, and, aided by the Pills, expels them. By these remedies the skin is cleansed of all freckles, spots, and disfigurements, without driving them inwards or doing harm. It is wonderful how weakness, low spirits, and enervation give way to vigour and vivacity under a course of Holloway's medicines, which may be safely used at all times by both sexes.

DR KAHN CONTINUES TO

deliver Daily, at Three and Eight o'clock, his popular Lecture on the "Philosophy of Marriage," at his Anatomical Museum, top of the Haymarket.

The Museum is open (for gentlemen only) from Twelve to Five, and from Seven to Ten. Admission, One Shilling.

Dr Kahn's treatise on the above subject, sent post free for twelve stamps, direct from the author, 17 Harley street, Cavendish square.

VALUABLE INFORMATION.—

GRATUITOUS EDITIONS of the following LECTURES, delivered at the Royal Institute of Anatomy, Science, and Medicine, 369 Oxford street, London, by W. B. MARSTON, the Principal, are being issued, with plain directions for SELF-TREATMENT and CURE in each of them.

TO THE NERVOUS AND DEBILITATED.

Just published, the 125th thousand, with numerous plates, in a sealed envelope, price 1s, sold by all booksellers, or post paid, by the Author, for 12 stamps,

MANHOOD: THE CAUSE AND CURE of PREMATURE DECLINE,

with Plain Directions for Perfect Restoration to Health and Vigour. By J. L. CURTIS, 15 Albemarle street, Piccadilly, London.

CONTENTS.

INTRODUCTORY CHAPTER on the Physiological Structure and Functions of the Reproductive Organs.

CHAPTER II.—Causes of Spermatorrhœa and Impotence; Early Vicious Indulgences; Dangers of Neglect.

CHAPTER III.—A Review of the Disqualifications of Marriage; whether resulting from the Youthful Abuse, the Follies of Maturity, the Effects of Climate, or Infection.

CHAPTER IV.—Plan of Treatment, Medical and Moral, with observations on a new and successful mode of detecting Spermatorrhœa and other Urethral discharges by microscopic examination.

CHAPTER V. and VI. on the modern Treatment of Gonorrhœa and Syphilis.

The Book concludes with numerous interesting cases, to which is added the Author's receipt of a preventive Lotion.

MR CURTIS, author of the above Medical Treatise, may be consulted as usual. The efficacy and harmless nature of the remedies employed by MR CURTIS having been demonstrated by a successful practice extending over a period of 20 years nervous sufferers have a perfect guarantee that the utmost skill and experience will be made available in the treatment of their cases.

Consultations from 10 till 12 3, and 6 till 8. Sundays from 10 till 1.

HUBBUCK'S PATENT WHITE ZINC PAINT.

By their process, which is patented, Pure White Zinc Paint is cheaper than White Lead. It is the most durable and beautiful paint known, and does not stain or discolour with the London atmosphere.

CHEAPNESS.—Two hundred-weight of this Paint, with six gallons of Oil, covers as much surface as three hundred-weight of White Lead and twelve gallons of Oil. It is cheaper in the first instance, as well as desirable on every consideration.

ADULTERATIONS.—Prejudice is caused by some Paint Grinders selling Zinc Paint adulterated with Sulphate of Barytes, some even to the extent of thirty per cent. Whether this is sold under the name of "Improved Zinc Paint," or is candidly sold as Number Two or Three qualities, no Painter can produce good work with it. He naturally condemns Zinc Paint altogether.

That Painters have never seen the best Zinc Paint is evident, or they would not use any other paint for their best work. To prevent the prejudice which the inferior article must produce, each Cask of Pure White Zinc is stamped

"HUBBUCK, LONDON, PATENT."

THOMAS HUBBUCK and SON, WHITE LEAD, OIL, PAINT and VARNISH WORKS, 24 LIME STREET.

Messrs ALLSOPP and SONS take the opportunity of announcing to private families that their Ales, so strongly recommended by the medical profession, may be procured in Bottles and Casks, and on Draught, from all the most respectable wine and beer merchants and licensed victuallers, on "ALLSOPP'S PALE ALE" being especially asked for.

When in bottle, the genuineness of the lable can be ascertained by its having "ALLSOPP and SONS" written across it upon red and white ground striped.

The Brewery, Burton-on-Trent, April 30, 1860.

TEETH.—MR ESKELL,

Surgeon Dentist, 314 Regent street (facing the Polytechnic), supplies his PATENTED INCORRODIBLE TEETH, which can be matched so closely in shape and colour to those left in the mouth, and are formed so exactly to nature, that the closest observer cannot detect the difference, and in all cases they restore perfect articulation and mastication. These teeth are fixed from one to a complete set upon Mr Eskell's never-failing and painless principle of SELF-ADHESION, without extracting any teeth or stumps, or giving any pain whatever; and being incorrodible, they possess the superior advantage of never changing colour nor decaying. Mr Eskell's celebrated OSTEOPLASTIC ENAMEL for stopping Decayed Teeth is a preparation which never changes colour nor affects the colour of the tooth, and is free from any injurious properties either as regards the teeth or general health. Its application is easily performed, and without giving the slightest pain. Deficiencies of palate effectually remedied. Loose teeth fastened. Teeth regulated. Discoloured teeth restored, &c. Hours, Ten to Six. Consultation free. Charges strictly moderate.—314 Regent street, London (opposite the Polytechnic). Established 1847.

Agents required in every town where none are already appointed.

JOSEPH THORLEY, the Inventor and Sole Proprietor. Offices, 77 Newgate street, London.

A pamphlet sent free by post on application.

HARVEY'S FISH SAUCE.—

Notice of Injunction.—The admirers of this celebrated Fish Sauce are particularly requested to observe that none is genuine but that which bears the back label with the name of WILLIAM LAZENBY, as well as the front label signed "Elizabeth Lazenby," and that for further security, on the neck of every bottle of the Genuine Sauce will henceforward appear an additional label, printed in green and red, as follows:—"This notice will be affixed to Lazenby's Harvey's Sauce, prepared at the original warehouse, in addition to the well-known labels, which are protected against imitation by a perpetual injunction in Chancery of 9th July, 1858."

6 Edwards street, Portman square, London.

MAPPINS' CUTLERY AND ELECTRO-SILVER PLATE

always in extensive stock at their London warehouse for exportation, at Sheffield prices.

MAPPIN BROTHERS are intimately acquainted with the proper class and quality of their Manufactures suitable for different markets; and they spare no expense or labour in the packing up of their Cutlery and Electro-Silver Plate, so that it shall open out well on the other side.

Their book of drawings and prices is invaluable to buyers abroad. No goods shipped unless prepaid, or payment secured through some English merchant.

CAUTION.—"59th Geo. III., c. 7, sec. 8," entitled, "An Act to regulate the Cutlery Trade in England," provides, "that any offender against this Act may be committed to prison by Two Justices of the Peace for Three Calendar Months."

We hereby give notice that we shall take proceedings against any person or persons, selling, or manufacturing any article of "Cutlery" stamped with intent to counterfeit or imitate our Corporate Mark "The Sun," granted to us by "The Cutler's Company," June 26th, 1835.

Signed,

MAPPIN BROTHERS,

Queen's Cutlery Works, Sheffield; and 67 and 68 King William street, London, E.C.

Table Cutlery, Razors, Pocket Cutlery, and Scissors of their own Manufacture, in stock for exportation, at Sheffield prices.

SPRING AND SUMMER ATTIRE.—

E. MOSES and SON beg to state, that their preparations for Spring and Summer exceed any of their former efforts as well in extent as in variety. They have visited the principal markets both at Home and Abroad for the best and newest manufactures, and have succeeded in collecting such an assortment of goods as has never before been exhibited under one roof in this or any other country.

Their Bespoke Tailoring Departments have been supplied with an endless variety of the choicest and most popular fabrics.

Their Ready Made Clothing Stock is complete in every respect, and they venture to say that for Elegance of Style, Durability of Material and Workmanship, Tastefulness of Finish and Cheapness, it is quite unequalled, even in the Metropolis of England.

No less care has been bestowed on the Hosiery, Hat and Cap, and Boot and Shoe Departments, which have been furnished with an entirely new stock of fashionable and seasonable goods at such prices as enable the proprietors to offer their patrons very great advantages.

N.B.—E. MOSES and SON take this opportunity of announcing, that they intend giving their customers the full benefit of the abolition of the duty on silks, gloves, &c.

E. MOSES and SON, Corner of MINORIES and ALDGATE, and Corner of NEW OXFORD STREET and HART STREET.

COUNTRY BRANCHES—Bradford & Sheffield, Yorkshire.

E. MOSES and SON wish it to be particularly observed that if any article be not approved of it will be exchanged, or the money returned without hesitation.

Their Book for Spring and Summer, containing "The Growth of an Important Branch of British Industry," with rules for self-measurement, and list of prices, may be had gratis on application, or post free.

SPECIAL NOTICE.—E. MOSES and SONS Establishments will be closed on Saturday evening the 26th and Monday the 28th instant, and will be re-opened as usual on Tuesday morning.

THE "INDISPENSABLE" SUIT,

made in various colours and patterns, and particularly adapted for walking, riding, travelling, and business. This is universally acknowledged to be the most comfortable and serviceable suit ever introduced. Price from 35s.—To be obtained of E. MOSES and SON, Corner of MINORIES and ALDGATE, and Corner of NEW OXFORD STREET and HART STREET.

TOURISTS AND EXCURSIONISTS

are specially provided for at E. MOSES and SON'S, MERCHANT TAILORS, HATTERS, HOSIERS, BOOTMAKERS, &c., Corner of MINORIES and ALDGATE, Corner of NEW OXFORD STREET and HART STREET, BRADFORD and SHEFFIELD, YORKSHIRE.

ICE, AND REFRIGERATORS FOR

preserving Ice and cooling Wine, Butter, Cream, Water, Jellies, and provisions of all kinds, manufactured by the WENHAM LAKE ICE COMPANY (now removed to 140 Strand, W.C.), of the best make and at the lowest cash prices. No agents are appointed in London for the sale of the Company's Ice or Refrigerators. Pure spring-water Ice, in blocks, delivered to most parts of town daily, and packages of 2s 6d, 5s, 9s, and upwards, forwarded any distance into the country by "goods" train, without perceptible waste. Wine-coolers, ice-cream machines, ice planes for sherry-cobblers, freezers, moulds, &c. Detailed printed particulars may be had, by post, on application to the Wenham Lake Ice Company, 140 Strand, London, W.C.

CONSUMPTION AND ASTHMA

CURED.—Dr H. JAMES discovered, while in the East Indies, a Certain Cure for Consumption, Asthma, Bronchitis, Coughs, Colds, and General Debility. The remedy was discovered by him when his only child, a daughter, was given up to die. His child was cured and is now alive and well. Desirous of benefiting his fellow-creatures, he will send, post free, to those who wish it, the recipe, containing full directions for making and successfully using this remedy, on receipt of their names, with stamped envelope for return postage.—Address to O. P. BROWN, 14 Cecil street, Strand.

MR LEWIS AND SON,
113 Strand.—The Royal Lewisian Systems of Writing, Arithmetic, Bookkeeping, and Shorthand, as taught for upwards of fifty years by Mr Lewis, the real inventor and first teacher of these world-renowned and only infallible systems, insures perfection in any of the above branches after a few easy and interesting lessons Persons unable to take the lessons may obtain the inventor's works for self-instruction at his only institution. 113 Strand

IMPORTANT NOTICE.
GLENFIELD PATENT STARCH
is the only STARCH used in
HER MAJESTY'S LAUNDRY.
And as some unprincipal Parties are now making and offering for Sale an Imitation of the
GLENFIELD STARCH,
we hereby caution all our Customers to be careful, when purchasing, to see that the word GLENFIELD is on each Packet, to copy which is Felony.
WOTHERSPOON and CO., Glasgow and London.

DEANE'S TWO-HOLE BLACK PENS
which are unequalled for their durability and easy action, are adopted by the gentlemen of the Stock Exchange, and the principal bankers, merchants, and public companies of the city of London, besides several of Her Majesty's judges, the most eminent counsel, and the reverend the clergy. Their cheapness and popularity ha induced many unprincipled people to put forth imitations of the genuine articles, which are equally useless to the purchaser, and disgraceful to the vender. The public are therefore cautioned, and respectfully requested not to purchase any as DEANE'S GENUINE TWO-HOLE BLACK PENS, unless each pen is stamped
"G. and J. Deane, London Bridge,"
and the box, which contains exactly twelve dozen, has thereon a variously coloured label, inscribed
"G. and J. DEANE'S Two-Hole Black Pens, 46 King William street, London bridge."

HANDSOME BRASS AND IRON BEDSTEADS.—HEAL and SON'S Show Rooms contain a large assortment of Brass Bedsteads, suitable both for Home use and for Tropical Climates; handsome Iron Bedsteads with Brass Mountings and elegantly Japanned; Plain Iron Bedsteads for Servants; every description of Wood Bedstead that is manufactured, in Mahogany, Birch, Walnut-tree Woods, Polished Deal and Japanned, all fitted with Bedding and Furniture complete, as well as every description of Bedroom Furniture.
HEAL AND SON'S ILLUSTRATED CATALOGUE, containing Designs and Prices of 100 Bedsteads, as well as of 150 different articles of Bedroom Furniture, sent free by post.—HEAL and SON, Bedstead, Bedding, and Bedroom Furniture facturers 196 Tottenham court road W.

DINNEFORD'S
PURE FLUID MAGNESIA
has been for many years sanctioned by the most eminent of the Medical Profession, as an excellent remedy for acidities, heartburn, headache, gout, and indigestion. As a mild aperient it is admirably adapted for delicate females, particularly during pregnancy; and it prevents the food of infants from turning sour during digestion. Combined with the Acidulated Lemon Syrup, it forms an effervescing aperient draught which is highly agreeable and efficacious.
Prepare by DINNEFORD and CO., Dispensing Chemists (and General Agents for the Improved Horse Hair Gloves and Belts), 172 New Bond street, London, and sold by all respectable Chemists throughout the empire.

NO MORE MEDICINE.—
For Habitual Constipation, Indigestion (Dyspepsia), Diarrhœa, Nervous, Bilious, and Liver Complaints.
DU BARRY'S delicious Health-restoring REVALENTA ARABICA FOOD.—Certificate No. 36,418. In our practice we have been enabled to appreciate the virtues of Du Barry's Food. In its effect on chronic Dyspepsia (Indigestion), Nervousness, Constipation, Diarrhœa, Bilious and Liver Complaints, Cough, Asthma, Debility and incipient Consumption, we find it the safest remedy. Dr Ure, M.D., F.R.S.; Dr Harvey; Dr Bright, Dr Sherland; Dr Campbell.
At a cost of about a penny per meal, it speedily cures constipation, dyspepsia (indigestion), nervousness, flatulency, distension, phlegm, biliousness, liver complaints, hysteria, neuralgia, sleeplessness, acidity, congestion, blood to the head, headaches, loss of memory, indigestion, nervous fancies, palpitation, heartburn, eruptions, impurities, fever, irritability, low spirits, diarrhœa, dysentery, noises in the head and ears, debility, diabetes, pains between the shoulders, cramps, spasms, nausea and sickness, sinking, fits, colds, catarrhe, cough, asthma, bronchitis, consumption, debility, gout, rheumatism, hæmorrhoids, also children's complaints, and saves fifty times its cost in medicine. It does not interfere with a liberal diet, but imparts a healthy relish for lunch and dinner, and restores the faculty of digestion and nervous and muscular energy to the most enfeebled We extract a few of many thousand cures:
Cure No. 1,771.—Lord Stuart de Decies of many year's dyspepsia.——Cure No. 42,832.—"Fifty year's indescribable agony from dyspepsia, nervousness, asthma, cough, constipation, flatulency, spasms, sickness and vomiting, have been removed by Du Barry's excellent food."—Maria Joly, of Lynn, Norfolk.——Cure No. 53,816.—Field Marshal the Duke of Pluskow, of dyspepsia, constipation, nervousness, and liver complaints, which had resisted all baths and medical treatment.——Cure No. 47,121.—Miss Elizabeth Jacobs, of extreme nervousness, indigestion, gatherings, low spirits, and nervous fancies.——Cure No. 54,816.—From the Rev. James T. Campbell, Syderstone Rectory, near Fakenham, Norfolk: "In all cases of indigestion, and particularly when the liver is affected, I consider Du Barry's Revalenta Arabica food the best of all remedies."—James T. Campbell.
Sold in canisters, 1 lb, 2s 9d; 2 lbs, 4s 6d; 12 lbs, 22s; 24 lbs, 40s. Super-refined quality, 5 lbs 22s; 10 lbs, 33s. The 10 lb, 12 lb, and 24 lb canisters carriage free, on receipt of post-office order by Barry Du Barry and Co., 77 Regent street, London; Fortnum, Mason and Co., Piccadilly, London; Abbis, 60 Gracechurch street and all grocers and chemists.

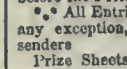
By Order of the Board,
T. SARGENT.
Inland Revenue Office, Somerset House.

PENALTIES.
The Commissioners of Inland Revenue hereby give Notice, that every person taking, killing, or pursuing game, without first obtaining a certificate, incurs a penalty of £20, and is also liable to be surcharged in double the amount of the certificate duty.
Any person in pursuit of game refusing, on being duly required, to produce his certificate, or to permit the same to be read, or a copy thereof to be taken, or refusing to declare his true name and place of residence, also incurs a penalty of £20:
Gamekeepers are desired to take notice that a certificate at the rate of £1 7s 6d will not authorise any person to kill game beyond the limits of the manor for which he is deputed; and, in order that a certificate at such a rate of duty may protect a gamekeeper, it is requisite, not only that he should be deputed by some lord or lady of a manor or reputed manor, but also that such deputation should be registered with the Clerk of the Peace, or the gamekeeper will be liable to be surcharged in double the duty of 4l 0s 10d, and also to be prosecuted by any common informer for the penalty of 20l.
N.B.—It is the intention of the Commissioners of Inland Revenue to publish in a separate list the names and residences of all persons surcharged in double duty for sporting without certificates.

FIRST-CLASS PROTESTANT EDUCATION, at the Royal Continental Collegiate Institution, Bushey heath, Herts.—In addition to all its qualities as a first-rate classical and commercial school, it is also highly recommended for a thorough French education. Some of the parents who are continually visiting France, and whose sons have scarcely been two years at this school, are most happy to assure those parents who are desirous that their children should acquire a thorough knowledge of the French language, without wishing them to neglect their English and classical education, that their sons speak far better and more grammatically than any of the sons of their friends who have spent two or three years in schools in France merely for the purpose of acquiring that language. Terms inclusive, and vary, according to age and requirements, from £40, £50, to £60 per annum—id est, four terms, each of 75 days' duration, with two months' holidays. Pupils are received any day, their term beginning from the day of their arrival. No restrictions to parents. Not one case of illness has occurred since the school has been established (1857).—Address, stating age and requirements, Professor Vellère (late of the Harrow Preparatory School), Bushey heath, Herts. The pupils wear a uniform very elegant and becoming.



CAUTION.—FORD'S EUREKA SHIRTS.—As spurious shirts are advertised and sold as "Ford's Eureka's," none are genuine unless stamped thus:—"R. FORD'S EUREKA SHIRT, 38 POULTRY, LONDON."
Best Quality:—Six, for 42s.
Second Quality:—Six, for 33s.
Richard Ford, 38 Poultry, Bank, London, E.C.

S. W. SILVER AND CO., OUTFITTING WAREHOUSES, 66 and 64 CORNHILL, E.C.
Special Outfits for Australia, India, and China, for Naval and Military Officers, Cadets, Midshipmen, and Civilians. Clothing for Gentlemen's Home Use,—viz., Naval and Military Uniforms and Civilian Dress of the best Materials and Workmanship. Shirts, Hosiery, Gloves, &c. Ladies' Outfits. Furniture for Camp, Barrack, Cabin and Colonial use, embracing every variety of Cabinet Work, Canteens, Trunks, Portmanteaus, &c., portable and suited to all climates.
Manufactory, Silvertown, opposite H.M. Dockyards, Woolwich.

THE FINANCIAL POSITION OF THE HOUSE OF LORDS.

We have no wish to infringe upon the province of the Committee of the Commons which is to search for precedents to justify or to condemn the refusal of the House of Lords to remove the duty from paper. We do not wish to discuss antiquarian details, which are referred to more as a matter of form than anything else. But there are some points of a practical character involved in the controversy which should not be lightly passed by. The controversy is one both of law and policy. Two questions are raised by it—first, what by constitutional usage and law have the House of Lords a *right* to do? Secondly, what is it *expedient* they should do? We will offer some remarks on each.

We can hardly suppose that the most diligent research will discover much new law that has escaped Lord Lyndhurst on one side, and Lord Cranworth on the other; and the principal points seem to be very clear. In favour of the power of the House of Lords to reject this Bill is the great and certain fact that we do not know *any* instance in which they are forbidden to reject a Bill. No such instance has been cited. All Bills are sent up from the House of Commons alike; all are discussed alike; all seem by the form of the House to be open either to rejection or acceptance. The House of Lords have always been thought to have a legal veto on all legislation if they choose to exercise it. Secondly, Lord Lyndhurst has cited instances in which the House of Lords have rejected money bills,—small and petty bills, perhaps, in most cases, but still legal precedents and technical justifications.

On the other hand, Lord Cranworth has shown that there is no precedent since the Revolution for the precise step the House of Lords have now taken. There is no case—or seems to be no case—in which they have interfered with the financial provision of the year. They have rejected pecuniary Bills of various sorts, but it has always been for some other reason. In some cases, such Bills have contained other matter which the Lords did not like; in other cases, the *kind* of taxation imposed did not please them; but they have never said that the 'sum of money which the Government asked for, and which the House of Commons have 'voted, is insufficient, and we will increase it.' They have never said to the financial authorities of the country, 'You 'are not asking for enough money; we will give you more 'money.' And this is what they propose to do now. In mere law, Lord Lyndhurst's precedents are sufficient. We do not see how any Committee of the Commons can get out of them; but in substance and in constitutional policy there is a marked distinction between what the Lords are now doing and what they have ever before done.

Next, is it, then, politically expedient that the House of Lords should have this power? This can only be decided by considering the position which the Lords now occupy in our constitution. And this is somewhat peculiar.

The House of Lords have lost most of their originative functions. They scarcely ever now originate a Bill on what we may call a contentious subject. On Law Reform, on minor social questions, on all subsidiary questions, they still possess all the power they once had; but on great political questions they have not the substantial power of beginning a Bill. They are only a Court of Review.

Secondly. The House of Lords have in reality only a power of objecting to legislation *for a time*. They have in theory a perpetual veto, but in practice only a suspensive veto. Some writers who have taken a high Conservative view of the English constitution have objected to this doctrine,—they have wished to make out that the House of Lords have as efficient a veto as the House of Commons has. They have wished to represent the two Houses as equal in practice as well as in theory. But good sense and long usage have settled the subject. Two Chambers of exactly equal authority could not exist. In case of settled and prolonged disagreement, one must yield to the other; and, as a fact, the Lords ultimately give way to the Commons. They reject Bills which they do not like for a few years; *then*, they pass them.

Thirdly. The House of Lords have not even a suspensive veto upon some subjects. On topics connected with their class interests they have none. The case of the Corn Law is an example. Every one knows that a large majority of the House of Lords disapproved of the repeal of the Corn Law; they would have been glad not to consent to it. Nevertheless, on the very first occasion in which a Bill for the repeal was sent up from the Lower House, they assented to it and passed it at once. They yielded to the public feeling, if not willingly, yet immediately. No one doubts that they judged wisely. The House of Lords has one great defect—one incurable defect in its constitution. It contains many men of the highest talents, of the most various origin, of the most successful careers; it contains lawyers who came no one knows whence, and bishops who certainly were not born in high station. Yet the vast majority of the House of Lords is composed of an aristocratic class who were born to landed estates, and who have the prejudices, the habits, the opinions common to landed proprietors of their time and country. They are naturally and invariably to be suspected on points on which the characteristics of their class are likely to be misleading. The question of Protection was one of these, and in consequence the House of Lords could not exercise even a suspensive veto, for they knew that the public would have no confidence in them upon it.

These are the general functions of the House of Lords. How do they bear on the special topic before us—finance? The loss of the originating function is of no consequence here, for that function never extended to matters of finance. The House of Lords could never begin a money bill. We need only consider whether they have in this case, as in others, a temporary provisional veto. Are there any reasons why they should not have that power in this case as in other cases?

We think there are no such reasons. We think if we have a *revising* Legislature at all, its functions should extend to this case as well as to others. We will not speak of the merits of the paper duty now; our readers know what we think of that, but we will state a hypothetical case. Suppose a weak Government in the House of Commons desirous of popularity, and not very careful of the future; suppose that Government should propose, for the sake of stray votes in the House, or of momentary popularity at an ensuing election, to give up necessary taxes—real parts of the permanent income of the country. Is not this the very occasion in which such a body as the House of Lords would be of use, and in which, therefore, the constitution must be assumed to have intended that they should be of use? The House of Lords is not subject to electioneering influences; it does not change so quickly as the House of Commons; it is, therefore, more responsible to public opinion for its past actions: it is an assembly of immense permanent wealth; it has in consequence an immense interest in permanent financial prosperity. These peculiarities are precisely those which most fit it to interpose beneficially in the not impossible case which we have supposed.

We think that this is a power which should be exercised with very great caution, and that, as money is a delicate thing, no class interest ought to be allowed to interfere in it. We should deeply regret to see the House of Lords interfere where it might be said they had a pecuniary interest. We should lament if they were to interfere to preserve Customs duties, paid by the lower classes, and thereby get rid of or reduce an income tax falling on themselves. We know public opinion would not support them in such a case any more than it did in the case of the Corn Law. But we see no reason why the Upper House should be specially excluded from financial subjects; the defects arising from its peculiar structure affect it on other subjects as well as on that.

We know that this will be denied. It will be said: 'We 'have a vast and corrupt national expenditure; that na- 'tional expenditure is mainly spent *by* the aristocracy and *for* 'the aristocracy; it is most important that the aristocracy 'should not be allowed to increase on any possible occasion 'the income of the country, for you never can be sure they 'do not mean to spend it on themselves.' We are not fancying an argument: this is one which is implied on many occasions, though it may not be so distinctly worked out. We, as our readers know, do not think that any such charge can be brought against the regulators of our national expenditure. We will not undertake to say that it is managed in the best way; we believe more might be made of the money; but we do not believe the defect in efficiency to be the consequence of corrupt intention. On the contrary, we believe that our revenue is raised and spent with a purity, conscientiousness, and an anxiety for the public interests, which cannot be equalled, or nearly equalled, in any other country of the world. Nor, in so far as there is corruption in our system, have the aristocracy the best part of it. The borough attornies have far more bad patronage at their disposal than the Peers. It is a dream and a delusion to think that our aristocracy "fatten "on the plunder of the public"; no one who looks calmly at real facts will think so, or think of thinking so.

On the whole, therefore, we believe that the ordinary, occasional, and suspensive veto of the House of Lords may sometimes be judiciously exercised in matters of finance: that there is no constitutional reason for excluding the House of Lords from this province that there are by no means impossible cases in which that House could usefully interfere in it. We admit it to be an anomaly that the Peers may reject a Bill which they cannot alter, but the British constitution is full of anomalies. When they do not work amiss, we must endure them as we can,—for we shall never have time for a Reform Bill which will abolish even a tenth of them.

THE POLICE GOVERNMENT IN SICILY.

The news which we get from day to day of Garibaldi's successes in Sicily, and of the popular rising in his favour within the walls of Palermo, are received with sufficient enthusiasm by by far the greater part of the English nation. But we doubt if many Englishmen know distinctly the causes which make the Sicilians so unanimous in their revolt, —so unanimous in rejecting the tardy offer of a Constitutional Government under Count Trani, which has at length been extorted from the fears of the young King. No administration, however bad and however tyrannical, which could pretend to be humane or even human, could have united the Sicilians in opposition to it as they are now united. They have been taught that the Neapolitan Government has not only no scruple in making bad laws, but has no scruple in utterly violating such laws as it has made; that it chooses the most execrable executive instruments in whom to lodge the privilege of overriding the law at pleasure,—fiends who delight in suffering, and who study the art of refined torture with all the effeminate pruriency of depraved Oriental tyranny. We called attention last week to a pamphlet* published in Paris, with a detailed account of some of the tortures which have recently been but too familiar to the inhabitants of Palermo and Messina. As the pamphlet in question may not be within the reach of many of our readers, and as it is, we believe, undoubtedly authentic and accurate, we will illustrate the exciting causes of the present Sicilian insurrection by a quotation from its pages.

Maniscalco, the Director of Police, an old gendarme, and the son of a waiter in a Naples hotel, has now for some time practically been the ruler of Sicily, and it is under his auspices that the system of torture has been perfected.

"Every commissary, every gaoler," says M. De La Varenne, "has his own method of applying torture. It is revolting to come to details, but they are unhappily exact and confirmed by official authority. The famous Pontillo owes his reputation to the species of torture which he applies in his own Commissariat, making the victim sit down in a railed arm-chair set with razor blades, under which is placed a pan of burning coals. The inspector, Louis Maniscalco, the namesake of the General Director, applies to the accused little iron hands provided with a closing screw. This is called, in the language of the police, 'the angelic instrument.' The gaoler, Bruno, belonging to the Police-Commissariat of the odious Carrega (there is a prison in each Commissariat), tortures by stripping the victim of his clothes and binding his head between his legs. Others employ the torture of the *tourniquet*, drawing a cord with a stick inserted in it tight round the head of the accused till the eyes start out of the head and the skin cracks. Others have recourse to starvation, to blows, to the privation of light and of breathable air. But the one satellite of the Director-General who outstrips all the others is the notorious captain Chinnici, born a peasant in the village of Belmonte, a robber by profession, and now an officer of police and rich proprietor. Sent by Maniscalco into the town of *Nicosia*, in order to discover the assassin of a certain Gorgone (a captain of this district, killed in consequence of incredible excesses of ferocity), from among thirty individuals thrown into prison on the vaguest suspicion of complicity in this crime Chinnici chose two, at hazard, to make an example of them, and to slake his thirst for torment. These two unfortunates were Rosario Chimera, of the Valle d'Olmo, and Pizzolo. They underwent the most atrocious tortures, such as the 'silence-hood,' the 'angelic instrument,' hunger, the bastinado in excess, without choosing to confess an action which they had never committed. The police agent then got hold of the wife of Chimera, a young and beautiful woman, twenty-two years old. After heaping on her the most horrible violence, he caused her to be tied naked on a bench, and gave her up to the brutality of his men. She remained there three days in this state, without food, till, half dead, the unhappy woman deposed that her husband had formerly said that he would 'kill the captain Gorgone.' This evidence, extorted in this manner, is immediately received by a judge sent for the purpose, and Chinnici, delighted at having got his first piece of evidence, returns to the dungeon of the two wretches to tell them the confession of Chimera's wife; and as they persist in their denials, he has recourse this time to a torture of such monstrous obscenity that it is impossible to describe it. The victims at last give in and confess all he wishes. Chinnici has them dragged with all the due preparations to the place where they committed the crime, in order to renew to the judge, and before the crowd, the confession of their

* La Torture en Sicile, par M. Charles De La Varenne. Paris: Dentu.

guilt and their designation of the place where they had stood to fire. But when they found themselves again in the open sunlight and in the presence of their fellow-citizens, a little energy returned to the two martyrs. They lifted up their heads, and with a feeble but firm voice, they proclaimed themselves innocent, and denounced the infamous means employed to torture them. A cry of horror arose, and the police throwing themselves upon them, carry them back gagged to prison. The same torture is again applied. Chimera and Pizzolo confirm their first confession, and are conducted to Catana, the chief town of the province. There the great Criminal Court, seeing the too evident marks of all the tortures they had endured, receives their explanation, orders them to be visited by a commission of physicians, whose report courageously confirmed the sad truth, and, at the risk of involving themselves in a very disagreeable affair with the police, the judges 'cancel the confession made by the pretended culprits, and proceeding to a new and more regular adjudication, by a sentence passed on the 20th December, 1859, declare the two accused innocent, and order them to be immediately set at liberty.' In spite of this solemn decree, the unfortunate men are still kept in prison, by the direction of Maniscalco."

If, as we have every reason to believe, these and many other similar facts narrated in the painful pamphlet from which we have quoted, be strictly authentic,—the inhabitants of Palermo and the other towns in the power of the Sicilian police must have been treated worse than the English remaining in Delhi were treated by the mutineers. It is in the prisons of Morreali, near Palermo, we learn, that Maniscalco chiefly imprisoned and thus tortured the political "*suspectes*"—the very place which Garibaldi is said now to have mastered, and from which he was understood to be planning his attack on the town. Assuredly, whatever hatred was justly felt in England and Calcutta for the Nana, must be still more strongly felt in Sicily for the Director of Police, Maniscalco. He has none of the excuses of an alien race for the malignity with which he has treated his prisoners,—though he has, we believe, the excuse which the Nana had not, that his system is known to, and approved by, his superiors at Naples, who must share with him the responsibility of these hideous tortures.

Much has been said about the disposition of the Austrian and Russian Governments to interfere on behalf of the Neapolitan Government, at least so far as to prohibit further help to Garibaldi, if not to give actual assistance to the Neapolitan Crown. Were such facts as we have just quoted brought to the knowledge of these Governments, we do not think that, whatever their political bias, there would be any real danger of their intervention. The Austrian system is tyrannical, and the Russian system is despotic; but they are neither of them ferocious, cowardly, and cruel. When such sins as we have detailed are committed by any Government, it is alike the interest and duty of all Governments to show their horror by permitting the consequences of such crime to take their natural course. It is as much in the interest of a Despotism as of a Free Government to wash its hands of all such atrocities as these, and to decline to shield the perpetrators from the fate which must sooner or later await them. And that Garibaldi will soon fulfil that fate, and inflict a fitting retribution for the hideous crimes of two generations, there is now every reason to hope. Could such crimes go long unpunished, we should almost lose faith in the Providence of history.

THE REVENUE WHICH WE HAVE.

In his Budget speech, Mr Gladstone referred principally to what may be called a rhetorical deficit. Some very productive taxes happened to cease legally and theoretically this year. He assumed that they would cease really and practically, and, on that assumption, he showed that he had to deal with a deficit such as no English financier has had to face—a deficit of no less than 13,400,000*l*. In reality, no one supposed there was any such deficit; every one knew that the tea and sugar duties, as well as the income tax, would be renewed. Lord Derby has taken the rhetorical deficit of the speech as the real deficit of the Budget. We do not say he did so unfairly or improperly. Mr Gladstone cannot complain that his opponents calculate as he has taught them to calculate; still nothing can more confuse a financial question than to have large and startling figures unnecessarily intruded into it.

We possess an advantage which Mr Gladstone had not when he introduced the Budget on February 10. We have the accounts made up to the 5th of April. These accounts give us the folowing table:—

	£	£
Customs	24,460,000	
Less by changes proposed by Mr Gladstone	2,776,000	
		21,684,000
Excise in 1859-60	20,361,000	
Less by changes proposed by Mr Gladstone	1,155,000	
		19,206,000
Stamps in 1859-60		8,043,000
Taxes —		3,232,000
Post Office		3,310,000
Crown lands		284,000
Miscellaneous (Spanish money omitted)		1,545,000
Property tax at 10d for three quarters of a year		8,472,000
Property tax outstanding on 5th April, 1859		2,250,000
		68,026,000
Temporary aids this year		1,400,000
		69,426,000

We have reckoned nothing here for the new taxes and for increased consumption consequent on the recent changes. We would rather not calculate on the produce of taxes which are of a novel character, or on an increased consumption of which the effects on the revenue are disputable. But it will be seen from the following table that the ordinary revenue of the country is augmenting with rapidity:—

	Customs.	Excise.	Total.
	£	£	£
1855	20,987,752	16,389,486	37,377,238
1856	22,370,779	17,357,459	39,728,238
1857	21,276,743	16,685,604	37,962,347
1858	23,018,138	17,069,565	40,087,703
1859	23,768,981	18,144,118	41,913,099

Here is an increase of 4,535,861*l* in five years, being nearly 1,000,000*l* a year. If, then, we add this sum to the produce of the shilling income tax, which we have always pointed out to be the necessary attendant on Mr Gladstone's Budget, we have for the year 1860-61—

	£
Revenue as before	68,026,000
Augmentations	1,000,000
Additional income tax	2,200,000
	71,226,000

subject, on the one hand, to deductions from the fresh change in the wine duties and other smaller changes to come into operation on 1st April, 1861; and, on the other hand, to whatever additional income the new taxes may give us.

We do not say that this will be a sufficient revenue for our expenditure, because no one can tell what the cost of the China war will be; but we say it is a very great revenue—greater than we ought to have to raise during an European peace, and enough to protect us against unfounded alarms and exaggerated apprehensions.

MR WARNER, M.P., ON PARLIAMENTARY REFORM.

The time for maturing fundamental improvements in the Reform Bill is now nearly over. On Monday week the House will go into Committee upon it, and then its fate, at least as regards the House of Commons, must soon be determined. We express a very universal feeling among thinking men when we say that the most likely fate for the Bill is probably the least desirable of all. It will not be absolutely rejected. It cannot and ought not to pass in its present form. We fear greatly that the machinery of a Committee of the whole House is quite unsuited to engraft on it fundamental modifications of principle which would render it worthy of the country's acceptance. But it may be shuffled away by an indirect and unworthy dilatoriness, without bringing any principle to the issue of a straightforward discussion. And thus the whole debates of the session will virtually be lost. The mind of the nation will be as little settled as ever on this agitated and agitating theme, which is the despair of Ministers, the dissolvent of all natural political combinations, and, in a word, the most dishonestly treated question of the day. If the House of Commons have their own true dignity and the national honour at heart, they will no longer evade, they will give the distinctest possible answer to, the question presented to them,—and lay down the broad principles which the Bill ought in their estimation to embody. There were not wanting in the recent debate some faint tokens of promise for such a result. The Liberals for the first time spoke out their mind, in favour of reform but against Democratic tendencies. The honest and masterly speech of Mr Black,—the positions taken by

Sir John Ramsden, Mr Marsh, and Mr Warner,—were indications that the true principle at stake is at last clearly discerned. If only a practical combination could be effected at all proportioned to the substantial unanimity among thinking men of all parties, the reproach of the House of Commons might be taken away. It will be a real disgrace for that body again to get rid of the question by a side-wind. It will be a real disgrace to let a bad measure pass from want of courage and energy to transform it into a good one. It is essential for the credit of the House that a statesmanlike solution should be distinctly marked out, if not finally adopted. It is mere legislative imbecility to shrink from coping with a question which has been before the House for years, and on which the country has shown clearly that it needs fearless and well-considered counsel from its representatives, instead of wishing to dictate to them what they shall decide.

Mr Warner, the member for Norwich, has done much to promote an intelligent discussion and a sound decision by the sensible pamphlet which he has just published* in defence of his own view. It is short, clear, and practical. It adopts principles which have been consistently advocated in these columns, and recommends expedients which we have often suggested and discussed. We do not think that the measures he recommends would be an adequate or final solution of the whole question. But while we are sure that they would break ground in the right direction, we incline to think that they are more suitable for grafting on to the present measure than a more complete answer to the constitutional problem before us might be.

Mr Warner says, with great truth, that "if the proposals "of the Government are carried out as they stand, they will "not provide for the special object which is advocated here,— "the distinct representation of the feelings and opinions of "that large part of the people which supports itself by "manual labour. On the other hand, if the Bill is lost, "we shall be further than ever from a settlement of "the Reform question, but we may be approaching that "conflict of classes which can only end in the destruction of "the very foundations of Constitutional government." And he contrasts with great force what we have ever maintained to be the true object of a Reform Bill, the gift of a real representation to the working classes as a whole, with the avowed object of Lord Derby's measure last year,—the enfranchisement of the *élite* of that class. "For in the representation of a "class there can be no selection. You may frame tests of "property, of education, or any other; but just so far as "you do this, you will give representation to individuals "possessing these qualifications, and not to the class from "which they are taken. If the opinions of the working "classes are to be advocated in Parliament, their represen- "tatives must be chosen by them generally, and not by those "individuals amongst them who may have fifty pounds in a "savings' bank, or who can afford to live in a better house "than their neighbours."

The object, then, to be attained, Mr Warner justly thinks, is to get a real representation of the whole working class, not to modify middle-class constituencies by a certain infusion of the best working-class elements into them. And this object can only be successfully compassed by giving whole constituencies into the hands of the working class, wherever that class is most independent and most qualified to represent the universal wishes of their brethren all over England, while retaining whole constituencies in the hands of the middle classes where it is obvious that the working classes are not thus independent and intelligent. There is a *primâ facie* case against uniformity, Mr Warner says. At all events, we would say, there is no *primâ facie* case in its favour,—and every reason against it where the moral qualifications which form the basis of electoral rights are not uniform. Of all *abstract* rights, the abstract rights of a 10*l* or 6*l* householder are the most intrinsically absurd. The only defence of a 6*l* franchise is the practical defence that it enfranchises, on the whole, a healthy political class. If it does this in one place and not in another, then the 6*l* franchise is defensible in the former case and not in the latter. Surely nothing can be more obvious. To admit, then, the working classes in the manufacturing towns may be well,—and to exclude them in the smaller boroughs may be also well.

But if this were all, the fatal principle would be admitted, that so soon as the working classes are qualified for political influence all over England, they might justly be allowed to absorb the *whole* political power all over England. Mr Warner sees this, and guards himself against it:—"I "would propose to reduce the occupation franchise in "some of the large manufacturing towns to a limit considerably "below that at which it is fixed in other boroughs, so as to "include the great mass of skilled workmen. These would "be sufficiently numerous to return members representing "their own opinions; and they would practically disfran- "chise the other classes in these boroughs, were not arrange- "ments made for their protection.....The form of the "present Reform Bill affords an opportunity for introducing "such a provision with the least possible derangement of "its general plan. It proposes to give a third member to a "few of the large manufacturing and commercial boroughs. "Great exception is taken to these *unicorn* constituen- "cies as they have been called; and it may perhaps "be granted that, if all the members were to be "chosen by the majority, it would be better to divide "the electoral bodies, so that none should return more "than two, or even one. But the objections disappear if the "simple provision is introduced, that no elector shall vote "for more than two candidates, as was proposed by Lord "John Russell in 1854. Nothing has ever been seriously "urged, I believe, against this proposal, except the sug- "gestion that electors may look upon it as a kind of partial "disfranchisement to be restricted to two votes, where they "would otherwise have been entitled to more. The objection "lies rather to the presumed unpopularity of the plan than to "the plan itself; but if any force could be supposed to "attach to it, nothing would be easier than to obviate even "the appearance of disfranchisement by another form of "voting equally simple and equally effective for the object "in view. Instead of curtailing the number of votes, let "each elector retain his present rights, with the additional "power of accumulating his votes on one or more of the "candidates. The form is immaterial; the principle is most "important. Without it, a very large part of our great con- "stituencies is virtually disfranchised."

The solution thus suggested is not complete. It does not meet the problem of the enormously preponderating numbers of the working class so directly and simply as the plan of plural voting. It does not in an equal degree admit of indefinite yet just development, as generation after generation brings up new candidates for the electoral franchise. But it lays down a principle which might be afterwards expanded into such a solution, in maintaining the right of the numerically inferior classes to some representation even in the very localities chosen for the seats of working-class power,—and it lays it down in a form less startling perhaps to the public mind at present than the complete and more elastic principle of plural voting. If Mr Warner's plan were earnestly taken up by the moderate party in the House of Commons, we should have at least advanced a step, and a bold step, in the direction of honest constitutional reform; we should have fairly encountered and defeated the Democratic principle, while making a large concession to the sound principles of popular self-government.

*The Representation of the Working Classes. By Edward Warner, M.P. Ridgway.

AMERICAN "PLATFORMS."

Why is it that there is so little intelligence in England as to the political discussions in America? There are none in Europe of greater moral or practical moment, and yet our interest in their final issues is faint, and our ignorance of the political causes which produce these results almost absolute. We know almost more concerning the political crises in Pekin and Yeddo than concerning those at Charleston and Chicago; and this, though China and Japan have no constitution and no representative organs, while the constitution and political discussions of the United States are open to all the world. One great reason is, that the great turning points of American policy are the quadrennial Presidential elections, and that the causes which determine these Presidential elections are scattered in the most perplexing way over the whole surface of the United States, instead of being concentrated in the discussion of any central body whatever. The representative

assemblies at Washington sometimes thwart and sometimes sustain the policy of the Executive,—but they do not and cannot really determine it. The President once elected, the general tendency of United States policy is traced out for the next four years, and on the event of the election the majorities in the Senate and the House of Representatives can exert but a very slight influence. The real determining power lies with those extra-constitutional political organisations which are called Conventions and Caucuses. It is not at Washington, but at Charleston, at Baltimore, at Cincinnati, at Chicago, and so forth, that the ranks are mustered and the battle fought. And these extra-constitutional assemblies are affected by causes and influenced by motives which can never be clear to the mind of any foreigner. They are not responsible deliberative assemblies in which we can see the operation of political motives. Their strings are pulled from behind by multitudes of unseen hands of which we know nothing, and the final result is determined as a most complicated question of compromise between parties representing infinitely varied shades of political interest. Experience proves that the shades of party opinion generated in vast popular electoral bodies such as the primary assemblies for electing the President of the United States, are infinitely more subdivided, more difficult to distinguish, more hair-splitting, than those which result from the discusions of a deliberative assembly. Half the distinctions which are so carefully multiplied and so variously combined by the political agents who represent the various party interests in a vast country like America, would vanish away in the light of intelligent discussion in a representative assembly. It seems to be certain that the result of submitting the choice of a general Executive policy to the people at large, by such an election as the American election for President,—is to break up opposing principles into an almost unlimited number of varieties of political compromise which would all resolve themselves into two or three simple forms, if, instead of being manipulated by party demagogues in appeals to the people, they were submitted to the continuous discussion of an independent deliberative body.

There is the most striking illustration of these remarks in the recent conflicts of the Democratic Convention at Charleston and the discussions which have arisen out of them. The various "platforms" which it is the object of these Caucuses to draw up for the acceptance of their chosen candidate for the Presidency, exhibit shades of distinction which, while almost imperceptible to English eyes, are made the subjects of the hottest warfare in the United States. There is the Northern Democratic platform and the Southern Democratic platform, and the Compromise platform which would unite the two. There will be also the National American platform, and the Democratic Republican platform, and the New England Republican platform, and the platform of "Mahogany Whigs slightly varnished with Republicanism," and multitudes of other political shades of party opinion on both sides, as well as many intermediate views. And all this is the result, and the necessary result, of having great questions of policy submitted at first hand to a mass of voters who have never cleared or collected their own thoughts on the subject, and who are therefore at the mercy of demagogues who think on their behalf as best suits the interests of the place and time. If you ask a whole people, of very immature political convictions where they have any at all, to vote every four years on a broad government policy, it cannot but be that they will be split up into hundreds of sections, resting on distinctions which they do not half comprehend,—distinctions which, if brought into discussion in a compact body of representatives, would disappear or coalese into a very few broad lines of thought.

The Charleston Convention of Democrats has split,—and to all who sincerely hate the system of slavery, it is matter of great satisfaction that it has split,—on such a rock as this. In English eyes the distinction between the three parties of Democrats is not very important. The Douglas or Northern Democrats stoutly sustain slavery in the Slave States, sustain the sacredness of the Fugitive Slave Law as between the different States, while they contend for the power of the Territorial Legislatures to decide for or against slavery in the territories. The Southern Democrats claim an absolute right to preserve their property in slaves, not only in the Slave States, but in the territories; concede no power either to Congress or to the Territorial Legislature to modify that right; and hold that Congress is bound to maintain them in possession of that right. The mediating Democrats wish to drop the question at issue as to the Territorial Legislature's rights; and without giving up the claim of the slaveholders to exemption from all interference,—either on the part of the Territorial Legislatures, or on the part of Congress,—in their rights,—wish to waive the discussion for the present, on the ground that the judicial protection of the Supreme Court of the United States, which was extended to them in the Dred Scott case, is sufficient at least for their present purpose. Mr Clingman, of North Carolina, expressed this view with amusing candour when he said: "They only wished Congress "to intervene when the judiciary failed to afford requisite "protection to slave property.....He knew of no democrat "who was unwilling to take the Dred Scott decision as a "part of the party creed, but he wanted to take it as it was, "and not the commentaries upon it, *just as he preferred the "Bible to the explanations of any commentator.*" It is clear, we think, that all these three Democratic platforms must end in the same policy, as they all adopt the same "Bible," though some draw up a creed from it, and some adopt the creed without drawing it up. They all of them heartily approve slavery, and all of them contain a "plank" in favour of adding Cuba to their Slave State possessions. The most dangerous of them is that which, with an appearance of mildness, does not wish to define the rights of slaveholders in the territories further *for the present*, but proposes to rest contented with the "Bible" of the Dred Scott decision, and the protection of the Supreme Court. This is the party which carried the majority at the Charleston Convention, though its "platform" caused the very unwise secession of the thorough-going Southerners. If the Republicans can only withstand the same tendency to divergent "platforms," in which all the "planks" but one may perhaps be identical,—and will rally their forces on the great common ground of doing all that is practical to arrest, and beat back the encroachments of the slavery principle,—there is now a good chance that they may conquer their opponents. The Chicago Convention will soon show whether or not this is possible. We only fear that the causes which tend to fragmentise political parties in the United States are too deeply imbedded in the political constitution to render a hearty union in the Republican party much more probable than in the Democratic.

THE STATE OF THE MONEY MARKET.

The Bank Directors have this week again lowered the rate of discount, and it now stands at 4 per cent. There can be no doubt of the propriety of the alteration, as the figures will show. The reserve in the Banking Department, the corresponding changes in which are the best indication of the increase or diminution in the unemployed capital of the country, has recently fluctuated as follows:—

	£
April 4	6,841,825
— 11	4,922,085
— 18	6,548,560
— 25	6,813,465
May 2	6,366,505
— 9	7,182,845
— 16	7,622,590
— 23	8,346,100

The bullion during the same period has fluctuated in the following manner:—

	£
April 4	14,883,597
— 11	14,637,102
— 18	14,624,686
— 25	14,687,120
May 2	14,883,311
— 9	15,373,326
— 16	15,527,350
— 23	15,844,195

These changes clearly show that the supply of capital has lately augmented faster than the demand for capital, and that its value has fallen in consequence.

That the unemployed capital of the country should have increased is certainly disappointing to us. We had hoped that the trade of the country would have augmented somewhat rapidly in many directions during the present year. It certainly has augmented to a certain extent, and there has been a proportionate rise in the value of capital. The reserve

of notes was 8,465,590*l* on the 4th of January, and the rate of discount then was 2½ per cwt.

One principal cause which has delayed the realisation of our hopes is the state of the Continent. We must not disguise from ourselves that there is a feeling of apprehension in Europe which has spread very widely, and which it will not be easy to allay. The character and designs of the French Emperor are widely distrusted. Close observers think that they can discern in him a great dread of a continental coalition, such as that which ruined his uncle. They think, therefore, that he will abstain from pursuing designs which may bring on such a coalition. But even to close observers this opinion is only a speculation. It is but one 'guess among 'many,' and the public throughout Europe form no such refined judgment. They see a man of singular mind, strange antecedents, reserved character in a position of almost unbounded power; they say, 'We can form no conception of this man's 'character; we must be ready for the worst which he may 'do.' Accordingly, consumers reduce their consumption, dealers reduce their dealings, and the result is depression.

Even when the French Emperor has had good intentions, what he has done for trade has not always had a good effect. He has been most anxious to make a beginning of free trade in France; but he has been foiled as yet, to a certain extent, by the prejudices of his subjects. He has given them pledges not to reduce certain protective duties till certain stipulated and somewhat distant periods. But no measure could be more unfortunate. What traders require is a certain future. Rather the worst change at once than a deferred change which paralyses. To a great extent, as we are informed, this concession of the French Emperor has had a bad effect on French trade. The public have not the advantage of protection, for the protected interests dare not augment their machinery or enlarge their trade. They have not the advantage of free trade, for free trade does not exist.

The unfavourable accounts from Australia, and the less favourable accounts from India, have also had a depressing effect on trade, and may have contributed to the increase of unemployed capital. The prospects of the English money market are the prospects of the civilised world, and no cause can affect, even for a short time, distant regions, without its consequences being felt in Lombard street.

THE NEW STAMP ACT.

Subjoined is further information with respect to liabilities under the Stamp Acts:—

9 Birchin lane, May 23.

Sir,—We enclose two forms that are in very general use, and without being impressed with any stamp duty.

As vendors of stamps, we had the first submitted to us by a bank, to know if it were chargeable with the 5s letter of attorney stamp, under the recent Act (23d Victoria, cap. 15); and, while we were of opinion that the instrument was legally a power of attorney, and chargeable as such, not with 5s, but with 30s duty, under the previous Acts (the amount to be received under it not being defined or limited), we thought the question of sufficient importance to take the opinion of the Inland Revenue Board upon; and we enclose herewith their reply.

Our second question to the Board was, whether the new Act applies to letters of attorney for receipt of all moneys of the limit therein named and defined, and not exclusively to Government or Parliamentary stocks or funds.—We remain, Sir, your obedient servants,

G., W. H., and W. Witherby.

"Gentlemen,—I will thank you to pay to A. B., of on my account, all dividends now payable upon the shares standing in my name, and also all future dividends which may become payable thereon, or upon such shares as may from time to time stand in my name, and your receipt will be a sufficient discharge for the same.—I am, gentlemen, your obedient servant."

"I hereby authorise A. B., of Newcastle-upon-Tyne, solicitor, for me and in my name to sign, seal, and, as my act and deed, to deliver a certain deed of arrangement, dated the day of , 1860, and made between A. B., of Newcastle-upon-Tyne, grocer, of the first part, C. D., of Newcastle-upon-Tyne, gentleman, of the second part, and the several creditors who should execute the said deed, of the third part.

"As witness hand this day of 1860."

"Inland Revenue, Somerset House, May 22.

"Gentlemen,—The Board of Inland Revenue have had before them your letter of the 17th instant, and in reply I am directed to state that the instruments therein alluded to are both letters of attorney chargeable with the duty of 30s, under the 55th George III., c. 184.

"The question submitted in the concluding paragraph of your letter I am directed to answer in the *affirmative*.—I am, gentlemen, your obedient servant, T. Sargent.

"Messrs Witherby."

Erratum.—In our last number, in the article at p. 531, on the analysis of the Edinburgh Constituency, there was an error in the figures given for the number of electors likely to be added by the 6*l* franchise in Leeds and Derby. We compared those towns with Edinburgh to show that the number added are much greater than in Edinburgh; the figures were, however, extracted from a wrong column, and should have stood thus:—

	Registered Electors.		£6 and under £10.
Edinburgh.....	8,469	...	3,947
Leeds	5,945	...	8,223
Derby.....	2,505	...	4,089

So that while at Edinburgh less than 50 per cent. are added, at Leeds more than 130 per cent., and at Derby about 160 per cent., would be added by the extension of the franchise to 6*l*.

Agriculture.

FARM LEASES.

RESTRICTIVE COVENANTS AND REGULATIONS.

Every day discloses evidence of the backward and imperfect character of the arrangements under which land is occupied for farming purposes. We sometimes hear the farmer blamed for want of enterprise, but when we remember that he commonly carries on his business under trammels of the most onerous kind, it is surprising that he farms as well as he does. The very nature of the operations of agriculture, and the permanent conditions of soil and climate with which he has to do, are in themselves sufficient to induce caution, perhaps slowness, in adopting changes or improvements, but when to these are added the uncertainty and precariousness of the tenures of the English farmer, and the restrictive regulations of the Scotch farmer's lease, the obstacles to rural enterprise would seem to be well nigh insuperable.

We have not long since referred to the apparent paradox that, in England, landlords generally prefer inferior tenants for their farms, and the circumstances which induce such preference; and we now meet with a discussion at the Morayshire Farmers' Club, wherein the difficulties of the Scotch farmers are considered and exposed. Mr John Collie read a paper on "Farm Leases as Regulating the Cropping and Cultivation of Land, with their relative Effects on the Interest of Landlord and Tenant." And be it noted that the Scotch farmers start at a point considerably in advance of the position of English farmers on this question, for the Scotch farmers all have leases. Referring to the importance of the subject, Mr Collie said:—"They (farm leases) extended over a period embracing the greater part of a man's lifetime; so that great care ought to be taken in framing them not to throw any impediments in the way of a tenant so as to prevent him from taking advantage of the improvements which occur from time to time in the management and cropping of his land." He showed that it is a fallacy to say that these views had regard only to the interest of the tenants, for "he maintained that whatever may prove to be an advantage to the tenant must be so to the landlord. It is impossible for a tenant to benefit himself, either by increasing the produce of his land or otherwise, without doing a benefit eventually to the landlord." The exertions of tenants and their applications of capital had changed the whole aspect of the country. During the last half of the last century the greatest improvements in farming had taken place. "Small holdings were put together and large farms made, so that farming became a matter not only for the poor hard-working man, but all classes of society turned their attention to it, and they found the tenantry a class of men possessed of capital, skill, and energy—men very well fitted to improve the country. Before 1740 leases were unknown in Scotland, and farms were let, as in England at present, from year to year. Their money rent was small, but the tenants had numerous burdens imposed on them "which cut at the very root of that independence which ought to exist amongst the tenantry, and which was essential to the existence of agricultural prosperity." At first leases were granted for one or two lives, but at present the Scotch leases are usually granted for a definite term of 19 years. "They lay down certain rules for cropping, and minutely specify the rotations during the 19 years for which the farm is held. The object of these clauses was, that the tenant might not be allowed, so far as a lease could prevent him, to miscrop his land, but that he might be obliged to farm it properly, so that at the expiry of the lease it might be handed over much in the condition in which he received it." Now mark what this practical farmer says as to the effect of such regulations. "That restrictions, as a general rule, had always proved detrimental to the interests they were meant to protect. Enacted at a time when these interests were imperfectly understood, they were made with a view to guard against invasions which existed only in imagination..... Experience had now taught them to look upon these clauses as almost useless. They did not succeed in the object they had in view.....in short, no clause will make a bad tenant a good one, or prevent him from injuring the land and reducing it almost to a state of sterility.....The only security a proprietor can have for the proper treatment of his farm and the improvement of his estates, he (Mr Collie) held to be by selecting his tenants, not by any clause he may introduce into his leases to ensure good cropping." So far as regards the interest of the landlord they are useless,

but, as regards the tenants, "are they not obstacles to improvement? However well adapted a rotation of cropping may be for a locality at the commencement of a lease, it may be very different in the course of a few years.....If they (tenants) were tied down by these restrictive clauses, they could not take advantage of any change, however sure of benefit from it both to landlord and tenant." Variations in the prices of farm produce may render it important to the tenant to vary his rotation. The only restrictions required to be put upon the tenant as to cropping were towards the end of the lease. "He was certain that if these restrictive clauses were done away with to the extent he had indicated, in 99 cases out of 100 it would be followed by increased progress and improvements.

Mr Geddes agreed that, whatever might have been the case when these restrictive regulations were first adopted, they are now unnecessary and vexatious "when agriculture is conducted by men of skill and capital. The interests of landlords and tenants were identical. Let a proprietor have a bad tenant, and let the restrictive clauses be what they may, he will receive his land at the end of the 19 years in a worse state than he gave it, while if he gave his land to a good tenant, there is no doubt that he will receive it back considerably improved, for this reason, that bad farming will not pay. Bad farming will pay no man now-a-days. The better a man farms his land the better it will pay. .....These restrictive clauses were entirely behind their time." There was no difficulty in framing a reasonable lease, or making provision for the land being left in a proper state.

Mr Stephen asked "what would any commercial man think if they were to tell him what he must do for 19 years hence—that he must work with the same machinery as now? He did not think that any restriction would make a bad farmer a good one; but restrictions prevent a good farmer from doing what he ought to do and would do."

Mr Webster thought the tenant should be bound only by the rules of good husbandry. "The other day he had run his eye over some new leases, drawn up for large estates in this county. You are bound to have four-fifths of your fallow under turnips. You are not allowed to grow anything else on the remaining fifth—no mangold wurtzel or anything, while they knew that turnips were beginning to fail. Landlords might appear at first sight to be to blame in this matter, but landlords cannot pay attention to everything. Factors are the men who are really to blame, because they ought to know and should tell the landlord."

Mr Allan, a corn-factor, had lately renewed the lease of some mills, and "though he paid more rent he was not fixed with any restrictions. He believed what is good for a mill is good for a farm.....He had a clause allowing him to lay out a considerable sum of money on improving the premises if required, and was bound to leave the houses of the same value as when he got them. This was not a bad illustration of their wishes in regard to farms—that if he left his mills at the end of the nineteen years at the same value as he got them, he might take as much money out of them in the course of the nineteen years as he could."

Mr Leitch insisted on the necessity of the tenant having complete control of the game.

The Chairman said, "*Leases were the very beginning of that commercial feeling which has been introduced into agriculture.* A lease ought to be equally binding on the landlord and tenant; but everything in their leases was favourable to the landlord." He proposed the following resolution on the subject, which was unanimously adopted:—"That as every system of operations on the soil, for any lengthened period, is equally injurious or beneficial to landlords and tenants; that as different qualities of soil upon the same farm, and different seasons, often require different kinds and modes of cropping and treatment; that as many of the conditions of labouring and cropping in leases operate prejudicially, it is considered that the limiting of these conditions, until towards the end of the lease, would be favourable to landlord and tenant." Now this is a very temperate exposition of evils of cropping regulations by a body of farmers who have attained the first step towards the adoption of sound commercial principles in reference to agriculture—*i.e.*, the possession of leases. That is a point not yet attained by their English brethren.

We gather from some remarks in the *Mark Lane Express*, that a Mr John Beasley, of Chapel Brampton, in Northamptonshire, has recently delivered a lecture to some meeting of farmers in Berkshire, on "The Duties and Privileges of the Landlords, Occupiers, and Cultivators of the Soil,"—for we have not seen any report of the lecture,—in which, from a passage quoted, he seems to think that the whole secret of successful farming is to look out for a good landlord. "I know (says Mr Beasley) one large estate, where the average holdings of [the families] all the tenants, paying fifty pounds a year and upwards, are more than ninety years; and upon this estate there are no leases or agreements, and never have been. Look out, then, for a good landlord; and, if you are fortunate enough to live under one, take care you set a proper value upon him." Here the very first step to the advancement of agriculture, a lease, is objected to, and as a substitute reliance on the accident, the capricious accident, of what is called "a good landlord" is recommended. Can anything be more absurd or unbusinesslike? What matters it whether the tenants and their families have vegetated on their farms for a century, if the actual occupiers are not free to follow their business in the best manner, and safe to enjoy the results of their skill and expenditure? And who can say they have any such security without leases? It is a mere pandering to prejudices entertained by landowners to enunciate such views to a body of farmers. Husbandry will never be made what it is capable of becoming, while the land agents and advisers of the landlords hold such backward and unsound opinions. Mr Beasley, however, seems to be fully sensible of the advantage possessed by the farmer who has sufficient capital to work his farm properly, for he gave the following modern version of an old story. "On one occasion an old friend went to pay the well-known Mr Bakewell a visit, for the purpose of explaining to him his position, and at the same time begging that he would recommend him what to do. He had lived all his life upon his own farm of 1,000 acres; he lived very well, but he had never saved a shilling. He had three daughters, and the eldest was about to be married; he highly approved of the match, but the intended husband expected some portion, and he had nothing to give him. Should he mortgage his estate, or what should he do? Mr Bakewell begged of him to spend the night with him, and promised the next morning to give him the result of his cogitations. Accordingly, the next morning, when they met at breakfast, Bakewell said, 'I have made up my mind what you ought to do; give your son-in-law one-fourth of the farm, keep the remaining three-fourths, and do not part with any portion of your capital and stock, and work the remaining three-fourths with it. Do it better than you have hitherto done, and your income will be rather increased than diminished." His friend followed his advice; but at the end of two or three years, another daughter would be married, and the perplexed father again resorted to his friend Bakewell for advice, under this new difficulty. Bakewell coolly said, he had watched his proceedings, and seen their results; he must do in this case as he had done before, he must give up another fourth of his farm, and keep the original capital and stock. The father seemed somewhat puzzled, but, as the first experiment had succeeded, he determined to try it in this case also. Last of all the youngest daughter was to be married, and, in utter despair, the poor father paid another visit to Dishley to explain his perplexity. 'Well,' said Bakewell, 'tell me honestly whether your income has diminished by having reduced your farm by one-half.' The father acknowledged he thought it had not. 'Then,' said Bakewell, 'you must give up another fourth of your farm, and keep your house and the remaining 250 acres for yourself, and, to tell you the truth, you will then have just such a farm as your stock, your capital, and your head are fit for, and will be a better and happier man than ever.' Old Bakewell used to tell the story with great glee, and declared his friend left as much stock and capital upon the 250 acres as he had ever had upon the 1,000, and, as he believed, made a better income out of it." This is precisely the story told by Columella of the man and his vineyard, and with the same results. The moral is good and true.

Literature.

ROBERT OWEN AND HIS SOCIAL PHILOSOPHY. By WILLIAM LUCAS SARGANT, Author of "Social Innovators," &c. Smith, Elder, and Co.

(FIRST NOTICE.)

THERE is a class of persons whose conduct and character offer an almost inscrutable problem to the curiosity of those whom accident, or personal interest, or the study of some peculiar subject with which these erratic beings have connected their names, may lead to think or to inquire concerning them; a problem which is never wholly to be explained even by those most familiar with them, and which is too often evaded by a general condemnation as unphilosophic as it is uncharitable. To this class belong many men of distinguished benevolence, some of high conscientiousness, a few of unusual ability; some of them are successful in the practical business of life, and suddenly desert it for some pursuit to which they are wholly unfitted, and in which they appear absolutely ridiculous; some of them, while wholly unsound on almost all matters of opinion—while not merely contradicting flatly the received judgment of mankind, but talking the wildest and most palpable absurdities on nine questions out of ten—display on some one favourite topic not merely a right opinion, but the power to carry it out to effectual success; others, while quiet and sober in general, are what appears to the average intelligence of mankind not only rabid but utterly unintelligible in their enthusiastic unreason on the special idea which forms the larger half of their mental and moral being; not a few, while in all ordinary matters scrupulously honest and conscientious, seem in regard to the object on which their heart is set to think that the end justifies all means—and not only so, but appear insensible to the fact that the means they propose are immoral, or that the statements they make are untrue. But a few generic qualities are common to them all. They are all incapable of close thought and accurate reasoning; they are all im-

patient of delay and intolerant of contradiction; they are all prone to the assumption of infallibility, all of them unwilling to listen and almost unable to learn. They are generally ignorant, and invariably arrogant. They want the sense of proportion between things, men, and ideas,—between themselves and the world—and wanting that sense, they are necessarily deficient in that indefinable faculty of "judgment," in which the sense of proportion is so large a constituent. Hence they are generally in extremes, always unstable, and seldom in the right. They make many enemies by their impatience and vehemence, and justify in appearance the harsh judgments they thus provoke, by actions which men less clever and less conscientious would see to be silly or wrong—but which they, wanting judgment—of which neither conscience nor cleverness can supply the place—are unable to see in that light in which the world must view them. With their eyes fixed on an object generally out of reach and often non-existent, they blunder and stumble vigorously on the road of life, injuring themselves and endangering others—getting from their irritated neighbours the credit of being hypocrites or madmen, but seeming to themselves worthy candidates for the crown of martyrdom.

Of such men was Robert Owen; the skilful manager of cotton mills at twenty; the educational philanthropist and friend of statesmen and princes at forty-five; the apostle of a socialist Utopia at sixty: in early youth and mature manhood the outspoken, offensive, aggressive atheist; in old age the victim of the silliest superstition that has degraded this educated century. Throughout all his changing phases of opinion and activity he was the same man as when he began: narrow-minded, ignorant, dogmatic, and conceited as few men are, and as fewer still are allowed to show themselves; earnest, benevolent, and good tempered enough to win—despite such faults—courtesy from the world, and warm affection from a large circle of friends and disciples. With little or no knowledge of theology, and with a mind wholly incapable of weighing theological evidence, he had arrived in early youth at a settled contempt for all religious creeds—apparently on the score of their number and diversity, and was wont to thrust his unbelief down the throats of his religious friends, in a manner certainly likely to peril friendship. Yet he was allowed to marry the daughter of a sincere and orthodox Quaker; and the severest rebuke which he ever seems to have drawn down by the opinions he was wont to force upon his father-in-law was the observation—very well deserved, but quite too delicate for Owen's appreciation—"Thou needest be very right, for thou art very positive." In a similar manner he was prone to obtrude his Utopian schemes upon all manner of audiences: on meetings assembled to discuss county business, and the poor rates, as upon those of the National Association for the Promotion of Social Science. No presence abashed him; no modesty checked his intrusiveness; no eminence, social or scientific, secured his acquaintances from his lectures upon topics of which he understood far too little to be aware how profoundly ignorant he was. And yet it rarely occurred to Mr Owen to find the door of any house he had once entered closed against him by absurdities which would have altogether excluded any other man from educated or polite society. His writings are so utterly unreadable that it is difficult to conceive how his speeches could ever have found listeners; and yet he did speak to crowded and attentive audiences—though no doubt he greatly exaggerates both their numbers and their attention. His theories upon human nature and the constitution of society are almost too childish to find place in any serious discussion of such topics: and yet he contrived to effect marvellous reforms among a large colony of factory operatives, recruited originally from among the dregs of the population, and to govern them for many years in greater peace, happiness, and order, than were enjoyed by the average of those around them.

The redeeming feature of his character—the quality by which he achieved all the good he did accomplish among the men with whom he dealt, and which won pardon for the nonsense he talked and for the mischief he wrought even from those whom he most grievously misled and injured—seems to have been that marvellous sweetness of temper and amiability of manner which is dwelt on by his panegyrists to the exclusion of all discussion of his intellectual capacity. He had that which Mrs Browning ascribes to Napoleon—"the genius to be loved"—a gift wholly apart, not unfrequently, from any qualities that should command esteem or confidence from sober thinkers. His self-will and disregard of the rights of others—faults almost invariably found in the narrow-minded fanatics of a single idea or a Utopian project—made him bitter enemies among those who had close business relations with him, and who were not disposed to submit to his imperious bearing. But he found new friends as fast as he alienated old associates; and among those who had no pecuniary dealings with him, he generally continued to preserve affection even when experience had made trust impossible. To the followers whom he had constantly led into scrapes and left in them; to those from whose side he shrank in the hour of obloquy and danger; to those whose small savings have been swallowed up in his absurd and ill-conducted attempts, the reckless and incapable leader, the false prophet whose ignorance they now comprehend and whose prophecies have so sorely deluded them, is still "the good old man" of whom they can bear to hear no censure, of whom they speak with almost filial affection and regard. A much abler man would not have been allowed to repeat so often his ruinous experiments; a much less mischievous fanatic would be remembered only with bitter resentment by his mistaken followers. But Robert Owen, to the last, found men ready to commit themselves to his delusive schemes, and to the last seems to have heard scarcely a word of reproach from those whom he had so seriously misled and injured.

He himself was incapable of learning by experience—incapable, we might say, of learning at all. For he never reasoned. His opinions were not the fruit of sober thought, or the insensibly acquired impressions of contact with other minds and with the affairs of life. They were picked up at hazard, embodied in emphatic phrases, strung together inconsistently, and repeated without attempt at proof, explanation, or elucidation. He had a whim to consider that the whole of his doctrines rested upon his fundamental assertion, "that the characters of men are not formed by them, but for them," which he supposed to mean that the infant, as it comes into the world, is a mere piece of plastic clay, to be moulded into any shape by its "surroundings." The saying, in the form in which Mr Owen at first stated it, had a good deal of truth in it; so much, indeed, that it is probable he had borrowed it without understanding it. For men are formed partly by inheritance, partly by circumstances, and partly by their own exertions, by their own use of the circumstances around them. Mr Owen, adopting the doctrine of Necessity, and denying altogether the freedom—that is to say, for all practical purposes, the existence—of individual Will, denied altogether the share of the individual in moulding his own character. This is an error into which men of clearer heads than his have fallen, while bewildered in the dreary mists of metaphysics. But he was so careless as to overlook altogether, and repeatedly deny by implication, the existence of any original principles, qualities, and impulses in human nature as such, independent of the circumstances of the individual; and in the nature of each individual, prior to the action of any external circumstances upon his consciousness. This omission is not at all implied in the original statement, that "men's characters are formed not by them, but for them." But it is an omission essential to the chief practical dogma of Owenism, that you may modify human characters as you will by the modification of their "surroundings." It was this dogma that enabled Mr Owen, in his wildest schemes, to get over the fatal objections founded on the inherent constitution of the human mind. He affirmed—it is hardly fair to say he thought, for having once found a form of assertion, he seems never to have thought again on the subject—that there was no inherent constitution whatever; that he could make the human mind what he pleased if he were allowed to make its circumstances at his discretion. Thus he avoided, in his Communistic dreams, the rude shock which brings other dreamers of that class into collision with common sense, when they are reminded that self-interest and idleness are motives in human nature too strong to be subdued to the Communistic mould. Robert Owen proposed simply to create humanity anew, by a process which would take the indolence and selfishness out of it. He himself, it is but fair to say, was energetic and—except in regard to his greediness of authority and influence, and his extraordinary vanity—unselfish; and he does not appear ever to have felt how idle and how selfish men generally are. His weak constitution, by compelling him to strict temperance, had a good deal to do with both those qualities; while the restlessness which belongs to such minds as his would make mere indolence impossible, and study or quiet thought intolerable to him. But, to return to his original dogma, he drew from it—or professed to draw from it, while really deriving it from some other source—the doctrine that human beings, not being accountable for their own characters, or the conduct which is a consequence of their characters, are not fit subjects for punishment or reward. Here is a fair sample of Owen's habit of thought. He speaks of punishment and reward as if they were purely retributive, and pronounces them not only unjust,—which they, no doubt, would be if justice had a meaning at all under such a scheme,—but absurd, without considering for a moment that, if the characters of men, women, and children are really formed by their circumstances, punishment and reward may well be among the most powerful agents in the formation. A similar inconclusiveness and inconsistency pervades the whole of Owen's so-called "Philosophy."

Unlike most Communists, Robert Owen was, as his biographer remarks, far from a Radical. His dogma "that men's characters are formed for them" was hardly consistent with the notion of leaving them to govern themselves, and create their own "surroundings." A benevolent government, directing all the operations of society for the benefit of all its members, not an absolute freedom on the part of individuals to seek their own happiness and their own interests in their own fashion, was his ideal, as it is that of other Communists; and, less bent on contradiction than they generally are, he saw no occasion for basing this all-pervading power on the consent or choice of its subjects. His own instincts and aspirations were thoroughly despotic; and though none of his schemes were such as could by possibility have succeeded, their downfall was probably hastened by his utter inability to work *with* others instead of *for* them,—to retain the lead while allowing perfect liberty and self-government to his followers. We have already exceeded our space, and must reserve an account of, and comments on, the life of Owen for a future number.

TRANSFORMATION: or, The Romance of Monte Beni. By NATHANIEL HAWTHORNE, Author of "The Scarlet Letter," &c. Smith, Elder, and Co.

We doubt whether, since the days when the high-flown and transcendental romance gave way to the modern novel, and fiction became amenable, in theory at least, to the laws of probability and common sense, anything has appeared in print so thoroughly startling as "The Romance of Monte Beni." In one respect it is even more remarkable than the romances of Mrs Radcliffe's school,—for though they contained mysteries innumerable and villains of the deepest dye, yet the mysteries, after torturing our minds through many pages, were at last explained, and the villains satisfactorily accounted for and disposed of. Such is not the case with Mr Hawthorne's romance. He gives us an infinite number of riddles, through which the conscientious reader gropes the length of eight hundred odd pages, and at the end the author states that it will be better for him, on the whole, not to have the answers. A distracting number of hares are started, and we are not allowed the gratification of hunting down a single one. Whatever may be the other merits of the book, and they are not few, the author can hardly expect the reader to recognise them in the mortified and irritable state of mind that must ensue on such a day's sport as this. To justify the bitterness of his criticism, and ensure the sympathy of an intelligent public, the victimised reader need only recapitulate the principal incidents of the tale.

Four young people find themselves together in the capitol at Rome one winter's day. These are Kenyon, a gifted American sculptor, and Hilda, a pretty New England orphan girl, whose talent for painting has brought her to Rome, and whose almost religious devotion to the old masters, and delicate perception of their merits and meaning, have established her as the most successful copyist of her day. She has her studio at the very top of one of the old Roman palaces, which possesses the unusual feature of a Gothic tower. At one angle of this tower is a shrine of the Virgin, before which, though a descendant of the Puritans, Hilda undertakes to keep a lamp burning. This lamp has been burning for centuries, and the legend maintains that if it ever goes out the tower will fall, and other uncomfortable consequences ensue. Hilda also feeds a flock of white doves, and is very cold and reserved to Kenyon, who is in love with her. The two other persons in the capitol are Miriam, a young woman who possesses great beauty, great genius for painting, a great sorrow and a great mystery, and Donatello, a young Italian Count of very simple and joyous character, who is irresistibly attracted by the fascinations of Miriam, and follows her about and is treated by her very much like a pet-dog. The three first-named persons are all struck with Donatello's striking resemblance to the Faun of Praxiteles at which they are looking, and playfully desire him to shake aside his brown curls that they may see whether his ears are in keeping with the rest, and display pointed, furry tips. Half laughing, but with a certain earnestness, Donatello declines, and begs his friends to take the tips of his ears for granted. This resemblance is the key-note of the story. There is a legend in Donatello's family, a very ancient one, that the founder was a faun, who wooed and won a human maiden. The characteristics of the family have always been great simplicity, and an affinity with nature such as might be possessed by a race placed between the human family and the lower orders of creation. Every now and then it is said, too, that the original type reappears in its completeness, ears and all, and Donatello presents all the mental deficiencies, and the pleasing, loveable, simple character that would seem to mark him out as one of these reproductions of the sylvan ancestor. Some months before their visit to the capitol, the same party had explored the catacombs of St Calixtus together. Miriam was lost for a short time in the subterranean passages, and when recovered reappeared in company with a large, dark, mysterious-looking person, who from that time follows her about like her shadow, and exercises some unaccountable influence over her. She is evidently in his power, and as evidently entertains very unamiable feelings towards him. Seeing this, Donatello's almost animal hatred and anger concentrate themselves upon the mysterious person, and he is ready to fly at him at any moment on the slightest hint from his adored Miriam. One night after a *soiree*, a large party of artists, among whom are our friends, roam about the ruins by moonlight, and find themselves at last looking over one of the sides of the Tarpeian Rock. The tall, dark figure has been following Miriam as usual, and finds itself unluckily alone with her and Donatello on the edge of the precipice, when the rest of the party have proceeded on their way. The critical moment has arrived. Donatello takes up the villain in his arms and dashes him over the brink. He must, after all, be a very passive villain, for Donatello had time to consult the expression of Miriam's eyes while holding his victim over the cliff, and not until he sees that she approves the act does he actually fling him down. Hilda alone, unknown to the others, is witness of this scene. Miriam, till now only the victim of wickedness and misfortune, thus stains her soul with crime, and devotion to the welfare of her accomplice becomes the ruling passion of her life. His love at first appears to be extinguished by the oppressive sense of guilt under which he labours, and he leaves Rome and retires to his ancestral castle in the Apennines. Henceforth Miriam follows him in the same uncomfortable way that she was followed before by the mysterious personage. She manages to pay a visit of some length to the ancestral abode, and even to sing songs in the tower without his taking any cognisance of her presence. She has several interviews with the painter, who spends the summer with his friend, and who, suspecting the state of the case, approves her resolution to live for her accomplice's welfare. Donatello, all this time, spends many hours on the top of the tower, and, through sin, sorrow, and remorse, is acquiring those qualities in which his original faun-like nature is deficient, and losing the simple power of enjoyment, and the affinity with nature which before distinguished him. It is this gradual change of character which constitutes the transformation of the tale. Kenyon at length brings Donatello and Miriam together, reminding them with a certain calm superiority of tone which he maintains all through, and which predisposes us very much against him, that their union must be one of mutual support, help, and effort, and that they must renounce all idea of earthly happiness. In the meantime Hilda is alone at Rome; she has fallen within the shadow of dreadful guilt, and in consequence displays occasionally the expression of the Beatrice Cenci, and at last, not being able to bear the knowledge of the crime alone, goes into a confessional in St Peter's and disburdens her heart. Miriam has left a parcel with her to take to the Cenci Palace on a certain day, and in fulfilling this request of her cast-off friend Hilda is kidnapped. The sculptor in the meantime returned to Rome, is distracted at her disappearance, and searches for her in vain for several long weeks. At last, in consequence of a communication from an unknown hand, he bends his way to the Campagna, and stops at the scene of some new excavations. Here he finds a beautiful antique statue, and is joined by Miriam and Donatello, in the costumes of a peasant and a contadina. They speak enigmatically of Hilda, whose restoration involves in some way the execution of justice upon themselves,—for Donatello has yielded himself up to the law, but assures the painter of her well-being. Miriam also tells her own story. She is connected with a family,—half-English, half-Italian,—in which a dreadful crime has been perpetrated, and, though innocent herself, the circumstances are awkward, and make her appear as an accomplice. In consequence of this state of things, which she mentions in a general way, without condescending to details, she leaves her home secretly. The villain is a connection of the family, to whom she had been betrothed in early youth; she had revolted from this arrangement owing to his viciousness, but he had it in his power, after the recognition in the catacombs of St Calixtus, to expose her connection with the criminal family, and also, to all appearance, with the crime. The next we see of the peasant and the contadina is in the carnival at Rome, where, as far as we can make out,—for the disagreeable fact is not stated directly,—the guilty couple are taken up. At the same moment Hilda appears suddenly on a balcony opposite to where Kenyon is stationed, apparently as much to her own surprise as to that of the occupiers of the balcony and to Kenyon. Where she had been and what she had been doing remains a mystery. It may be that the Jesuits had taken possession of her bodily, for her confession was enough to encourage their hopes, and the Abbate who had received it was on the balcony. It may be that she was taken up in consequence of her connection with the murder, for her release was simultaneous with the arrest of the guilty parties. The author does not explain, but says that "it is, perhaps, better to fancy that she had been snatched away to a land of Picture; that she had been straying with Claude in the golden light which he used to shed over his landscapes." The idea of the transformation will be understood from the following dialogue, which took place in the scene on the Campagna:—

"Is he not beautiful?" said Miriam, watching the sculptor's eye as it dwelt admiringly on Donatello. "So changed, yet still, in a deeper sense, so much the same! He has travelled in a circle, as all things heavenly and earthly do, and now comes back to his original self, with an inestimable treasure of improvement won from an experience of pain. How wonderful is this. I tremble at my own thoughts, yet must needs probe them to their depth. Was the crime—in which he and I were wedded—was it a blessing, in that strange disguise? Was it a means of education, bringing a simple and imperfect nature to a point of feeling and intelligence which it could have reached under no other discipline?"

"You stir up deep and perilous matter, Miriam," replied Kenyon. "I dare not follow you into the unfathomable abysses whither you are tending."

"Yet there is a pleasure in them! I delight to brood on the verge of this great mystery," returned she. "The story of the Fall of Man! Is it not repeated in our romance of Monte Beni? And may we follow the analogy yet further? Was that very sin—into which Adam precipitated himself and all his race—was it the destined means by which, over a long pathway of toil and sorrow, we are to attain to a higher, brighter, and profounder happiness, than our lost birthright gave? Will not this idea account for the permitted existence of sin, as no other theory can?"

"It is too dangerous, Miriam! I cannot follow you!" repeated the sculptor. "Mortal man has no right to tread on the ground where you now set your feet."

"Ask Hilda what she thinks of it," said Miriam with a thoughtful smile."

The question is propounded to Hilda, who, however, is so shocked and wounded at the idea, that the sculptor has to retract and beg her pardon as quickly as he can. After the decided snubbing that he gave Miriam with regard to the theory, we can-

not but feel that he speaks of it both with too much favour, and too much as if it were an original idea, and we are particularly gratified at the treatment he receives. However, he proceeds to say that, seeing what a miserable state his mind is in, he hopes she will take it under her guidance. The scene is not given in full, but we presume that she recovers from the theory sufficiently to give her consent to this arrangement, for they certainly marry and return to America.

There is an endless number of questions which we feel inclined to put to the author after closing the book. All the little threads of the story are left loose in a most tantalising manner. Why was Hilda kidnapped, why did she reappear on the balcony, why did Miriam give Hilda the parcel to deliver, and why did it get *her* into trouble? We might pursue these interrogatories *ad infinitum*, but one there is that interests us more particularly than all the rest, viz., why would not Donatello show his ears; were they really not of human shape? "The gentle reader, we trust," says our author, "would not thank us for one of those minute elucidations, which are so tedious, and, after all, so unsatisfactory, in clearing up the romantic mysteries of a story." If this is all the answer our author has to give, we, the gentle reader, feel inclined to put a further question, and ask, why the story was written at all?

The fact is the story was not written for its own sake, but because Mr Hawthorne had a good deal of other matter to give us. A residence in Rome and travels in Italy had left his mind full of thought and poetical memories, and unfortunately he has seized a highly romantic and complicated story as a vehicle for them. Though the tale will strike most readers both as weak, and as improbable to the degree of absurdity, yet few, we think, would be willing to give up the reflections and description which make up more than half the work. Mr Hawthorne can tell us nothing of ordinary human nature, or of real daily life, but he has a very fine perception of the more exalted, poetical state of mind, and the regions that lie between thought and feeling, to which not one man in a hundred is capable of giving the simplest expression. He is fond of dealing with mesmeric attractions and influences, and seems to be permanently conscious of those subtle, mysterious relations of which common men and women only catch a slight glimpse now and then. Few persons are entirely independent of these things, and they may be made the means of most striking effects in works of fiction. No one who remembers the scene in "Jane Eyre," when, being tempted to accept her cousin's offer, she hears Rochester's voice coming through the night air and calling her, will deny that they can be powerfully affected by this class of half-supernatural incidents. But when all the characters of a tale are constantly in this state of mind, we feel that the whole thing becomes a burlesque,—at all events it deals with a world with which we have nothing to do. Therefore, as regards the tale and the characters, "Transformation" appears to us to be a worthless production. But we feel that the author had capital materials, in the history of the family of Monte Beni and of Donatello, for a real romance, and kind of prose-poem, in which we should not have expected anything like real life, but which would have served as a vehicle for the charming legends, the poetical descriptions, and the half-supernatural incidents with which the pages before us abound. Mr Hawthorne's sensitive mind and delicate pen are peculiarly fitted to gather up and place before us the impressions made by Italian art and Roman ruins on a poetical mind. The descriptions of the meaning and expression of some of the most world-famous pictures and statues, which he puts into the mouths of his artists, are full of the finest perception. They are not indeed like artists' conversation. They deal far too exclusively with the poetry of the subjects of the pictures to resemble the necessarily technical and semi-material remarks of real labourers on canvas and in marble, but they are full of interest, and show both observation and insight. Kenyon, before bringing Donatello and Miriam together under the statue of Pope Julius III. at Perugia, travels about the Umbrian plain and mountains with the former. The description of the scenery of the mountain cities of the Apennines that were the cradles of old Italian art, and of the Italian people in those remote districts, are all beautiful. One short extract will give the reader an example of the style of thought and observation that pervade these passages:—

> At this moment it so chanced that all the three friends by one impulse glanced upward at the statue of Pope Julius, and there was the majestic figure stretching out the hand of benediction over them, and bending down upon this guilty and repentant pair its visage of grand benignity. There is a singular effect oftentimes when, out of the midst of engrossing thought and deep absorption, we suddenly look up, and catch a glimpse of external objects. We seem at such moments to look further and deeper into them, than by any premeditated observation: it is as if they met our eyes alive, and with all their hidden meaning on the surface, but grew again inanimate and inscrutable the instant that they become aware of our glances.

An Arctic Boat Journey in the Autumn of 1854. By Isaac J. Hayes, Surgeon of the Second Grinnell Expedition. Edited, with an Introduction and Notes, by Dr Norton Shaw. Richard Bentley, New Burlington street.

Three centuries of arctic exploration have completed the outline of the American Continent, and have added to our charts, piece by piece, with unwearied labour and undaunted perseverance, the chaotic mass of islands, straits, and seas that lie off its Northern shore,—an inextricable labyrinth, within which was long hidden the sought for, and now discovered but useless, passage between the Atlantic and the Pacific.

In a purely Northerly direction much less has been accomplished. The question whether there lies around the Pole an eternally ice-locked and impenetrable barrier, or an open navigable sea, still remains unsolved. Beyond 81 deg. of latitude all is veiled in mystery.

Dr Kane, when in command of the Second Grinnell Expedition, penetrated further North than any one either before or since. He was, it will be remembered, incited to this by the hope of finding down Smith's Strait a way into that sea in whose existence he believed, and into which he thought it probable that Sir John Franklin had steered his ships through Wellington Channel. Franklin did, as we know, attempt that passage, if passage there be, but was stopped by the ice. The same cause brought Dr Kane to a stand in latitude 78 deg. 40 min., while the roughness of the ice, the loss of all his dogs, and the sickness of his men, from want of fresh food and fuel, hindered him from carrying out an effective search by sledging parties, as Sir F. McClintock has since so ably and thoroughly done in Boothia and King William's Sound. All that the crew of the beset ship learnt from those excursions which they were able to make, was the tantalising nearness of the water they were seeking, and their entire inability to reach it. If the report of the ship's steward, Morton, and the Esquimaux hunter, Hans, is to be credited, there lay within fourteen days' journey of the vessel an "iceless sea," stretching far away towards the North,—"a great waste of waters," where, in strange contrast to the silent desolation southwards, "the ear was gladdened by the novel music of dashing waters," and "not a speck of ice could be seen."

To test the truth of this apparent confirmation of the often-repeated theory of an unfrozen Polar Sea (a test which Dr Kane from sickness and want of necessaries was not able to apply), Dr Hayes is engaged in fitting out a fresh expedition, with the approbation of the various scientific associations of the United States. He feels confident that, with more ample resources, and the added experience he has gained of the regions to be explored, he will not only succeed in seeing again the little flag he planted in his last voyage upon "the most Northern known land on the globe," but in carrying out his researches to some worthy issue upon these hitherto unexplored regions at the head of Baffin's Bay. The reasons which (besides the testimony of his shipmate, Morton) induce Dr Hayes to place faith in the existence of an open navigable sea beyond the ice-belt that stretches over the North of Baffin's Bay are, chiefly, that the sea birds even in that rigorous climate fly Northwards at the approach of spring,—that the temperature of the water proved to be higher than that of the air as the current came down from the North,—that the cold, measured by the thermometer, became less intense and the air damper when a North wind blew,—and that the Esquimaux point to the North as the cradle of their race, and are accustomed in severe winters to migrate Northwards, following up the seal and the walrus as they seek more open feeding places. These are all curious indications of some unknown facts, but are, perhaps, slender grounds upon which to build up a theory of so much importance to his future undertaking. It is evident, however, that he places faith in the veracity of Morton's statement, and it must be remembered that he had it at first hand from his own lips on his return to the ship from his Northern sledging excursion.

In furtherance of his project, in order that the proceeds of the sale may add to the means at his command, Dr Hayes has published, in one small volume, the particulars of that bold—and if it had not been supported by the approval of one well versed in arctic travelling, Penny's and McClure's interpreter, Peterson, we should have said rash—enterprise, the retreat of eight men, poorly provisioned and equipped, from Renslaar Harbour, at the head of Smith's Straits, to Upernavik, on the coast of Greenland. Captain McClintock, in speaking of his interpreter, Peterson, writes in his Journal: "I am surprised that no account of the extreme hardships of this party, so far exceeding those of their shipmates on board, has ever appeared." It has at length appeared, and fully bears out all that Peterson related to his captain. It is a wonderful instance of how much the human frame can endure when supported by a resolute and courageous will. It may at first sight seem a little incongruous that Dr Hayes should endeavour to promote a new expedition by publishing the details of a former disastrous enterprise; yet we think he is only right in supposing that the qualities here exhibited under misfortunes are the best guarantee for success under more favourable circumstances.

Dr Kane's ship was only provided against one winter, and, owing to accidents, it was very deficient in fresh provisions: it was, therefore, with much anxiety that he found the summer almost gone, and no prospect opening for setting free the Advance. "I cannot disguise it from myself," he writes, "that we are wretchedly prepared for another winter on board. We are a set of scurvy-stricken, broken-down men; our provisions are sorely reduced in quantity, and are altogether unsuited to our condition." Under these circumstances he granted to those of his crew who desired it, liberty to seek safety in a retreat Southwards before the close of

the autumn. Eight of his crew, including the surgeon and the interpreter, resolved to attempt "the journey over the thousand miles of ice-girt water which lay between the brig and the nearest outpost of Christian men," with two small boats, an ill-made sledge, and provisions for five weeks. If they reached Upernavik in safety, they were to make known the condition of their comrades to the whaling vessels that called at that place; if they failed, they were to return, sure of a hearty welcome, to their ship. For three hundred miles they forced a painful way, and then, hemmed in by ice, and caught up by an early winter, they were unable to retreat or to advance.

With their now useless boats hauled up on shore, their sledge broken, their provisions reduced to a few days' supply, a fortnight at most must exhaust them,—the country around more than commonly barren of life, and the long winter darkness fast coming on. "Yet courage did not forsake us, nor was there one word of lamentation." To build a hut was their first care. It was placed in a crevice of the rock which thus formed two ready-built sides; stones and sand formed the other two; while the roof was canvas covered with moss. It will give some notion of the labour required in building even so rough a shelter when we say that cart-loads of snow had often to be dug out with tin dinner-plates before one lump of moss could be found. Twelve days were passed in this work; at the end they thankfully sheltered in their "cold, fireless, damp, and vault-like den," and summed up their stores of food. "There's three quarters of a small barrel of bread, a capful of meat biscuit, half as much of rice and flour, a double handful of lard, and that's all,"—beside a small quantity of tea, and a plentiful supply of coffee, their greatest comfort, next to their pipes, in the weeks of slow starvation that lay before them. Game of any kind was extremely scarce, and correspondingly shy; traps and guns were both for the most part unavailing; stone moss was the sole dreary resource left, when a visit from the Esquimaux rescued them from the immediate danger of starvation, to keep them in a perpetual state of watchfulness against the treachery of their dangerous yet indispensable allies. It is a curious picture of savage life that comes out during the months of half-friendly, half-hostile intercourse between the white men and their Esquimaux neighbours. We do not remember ever to have seen such life-like painting of Esquimaux character and modes of life,—of the mingled simplicity and cunning, kindness and indifference to suffering, of the one, and the perfect adaptation of the other to the necessities of their position, as is given in the little volume before us. In this, fully as much as in the broad interest of its narration, consists the value of Dr Hayes' "Arctic Boat Journey."

LECTURES ON THE MOUNTAINS; or, The Highlands and Highlanders as They Were and as They Are. Saunders, Otley, and Co., 50 Conduit street, Hanover square.

THE title of this little book promises well, but its contents are disappointing. It might have been reasonably expected that the recollections, by one born in the Highlands, of the primitive manners, and quaint superstitions of the people among whom he lived, before English money and English fashion had penetrated into the most secluded glens of Scotland, and the shepherd on "the misty mountain side" had given place to, what the author elegantly terms, the "sporting locations" of "the nobility and gentry of England," would be of some freshness and interest; containing at least curious local details, and trustworthy pictures of modes of life and thought fast becoming obsolete. We do not need, however, to read further than the introductory address to these so-called lectures to see that they are written, not from genuine love of their subject, but to take advantage of "the avidity with which popular treatises and lectures on national institutions, and men, and manners, are now received by all classes;"—and when, a little further on, we read that "to bring out the charms of a subject it may be sometimes expedient to blend facts with fictions" .....but "that upon the whole the author's descriptions and illustrations will be chiefly founded on original native materials, historical and legendary," we are fully prepared for the style of thing that follows—an incongruous patchwork of things, old and new; wildly grotesque legends told with an intolerable air of vulgar facetiousness and patronising condecension; anecdotes of high personages in their autumn retirement that have already gone the round of long-vacation newspapers hard up for news; and glorifications of this "enlightened age," after the approved fashion of popular lectures. Some grains of salt may be found here and there, but even these are so washed out by the diffuse wateriness of the author's style that they have lost all their original flavour.

THE REAL AND THE BEAU-IDEAL. By the Author of "Visiting my Relations." Richard Bentley, New Burlington street.

THERE is so much that is excellent in this little volume, that we could wish it had appeared under a different form and name. The latter is feeble-minded, and suggestive of nothing so much as of a third-rate sentimental tale; while the old-fashioned device of letters from an elderly maiden lady to a newly-married niece (unless we are to suppose them genuine) ill accords with the truthful earnestness of the writer, and cramps her wider range of thought within the limits of a particular case. Young married ladies will be apt to think that they can order their own ways without the advice of a suppositious maiden aunt; and few general readers will take up the book for the sake of any chance applicability to themselves. In a work, too, whose chief aim is to unmask the falsehood of appearances—both the grosser outward ones, and the more subtle inward ones of the imagination,—and to make direct appeal to the witness of the heart as to the beauty of truth, it is disadvantageous to place any veil of fiction between the writer and reader—any imaginary "Kate" to bear the onus of responsibility in obeying or disobeying the precepts of Aunt Jane. Stripped of its extraneous (however sensible) remarks upon the management of house and children, behaviour towards mother-in-law and sisters-in-law; and taken as an essay on truth, or a discourse on the guiding power of religion in the heart, it contains thoughts of much depth and beauty, and might form a valuable aid to young minds, who, feeling "the weight of chance desires," are in earnest in their search after a more enduring happiness than youth and pleasure alone can give them. The writer's aim is to bring her readers' mind heartily to join in the concluding lines of the noble poem to which we have just referred:—

> Give unto me, made lowly wise,
> The spirit of self-sacrifice;
> The confidence of reason give;
> And in the light of truth thy Bondman let me live.

The National Magazine. April and May, 1860. W. Kent and Co.

WE have before us two numbers of this magazine, which has frequently been noticed in our columns. The price, one shilling, is decidedly moderate for the number of woodcuts and the amount of letter-press that it contains. Both are decidedly of good quality,—the tales forming the larger and the better proportion of the latter. One, entitled "The Shadow in the House," is by Mr Saunders, the author of "Love's Martyrdom," a drama which appeared a few years ago, and was considered one of the most striking dramatic productions of the age. Mr Edward Copping, author of "Aspects of Paris," contributes another entitled "Sundown." The woodcuts are chiefly devoted to the reproduction of good pictures. Hilton's "Crucifixion," Mr Ward's "Sleep of Argyle," and Mr F. Goodall's "Going-a-Maying," are among the best in the two numbers before us. The short explanations and criticisms which accompany the engravings are too discursive, and not sufficiently to the point.

Foreign Correspondence.

(FROM OUR CORRESPONDENT.)

PARIS, Thursday.

The bill for reducing the import duties on sugar, coffee, cocoa, and tea, having passed through the Legislative Body and received the Imperial sanction, is promulgated in the official *Moniteur* of this day. It is consequently the law of the land, and comes into operation from this very day the 24th. In previous letters I have stated what the new duties are, but, as they will affect British productions or British shipping, it may be convenient to your readers to have them repeated:—

	The 100 kilogs (nearly 2 cwts).
	f
SUGAR—Native	25
Not refined and not assimilated to refined:—From French colonies	25
Ditto from other places out of Europe	28
Ditto from entrepots (places in Europe)	34
Ditto by foreign vessels from anywhere	39
Refined in the manufactories of native sugar, "non abonnés," and in the colonies—Same duties as preceding, increased by 2f 50c the 100 kilogs	
Molasses of the French colonies	7
COFFEE—By French vessels, from French colonies and French establishments on the Western Coast of Africa	30
By ditto from other places out of Europe	42
By ditto from entrepots	50
By foreign vessels from anywhere	55
COCOA—By French vessels, from French colonies	20
By ditto from other places out of Europe	25
By ditto from entrepots	35
By foreign vessels from anywhere	40
TEA—By French vessels, from producing countries out of Europe	75
By ditto from other places	90
By foreign vessels from anywhere	100

The law enacts that a reduction of 3f the 100 kilogs on French colonial sugar accorded in 1856 shall be continued to the 30th June, 1866; that a differential tax on sugar from French colonies beyond the Cape established in 1851 shall be maintained to June 30, 1864, shall then be reduced, and on the 30th June, 1865, shall be abolished. It also enacts that the reductions in duties effected in 1841 on coffee, cocoa, and tea, imported direct in French vessels from places beyond the Sunda Isles, shall cease on the 24th May next. As to tea, notwithstanding the stipulation that the law is to come into operation on this very day (the 24th May), a clause at the tail of the law declares that it is only on the 31st May, 1866, that the new duties on tea shall take effect. One clause in the law is of considerable importance in France; it is that which requires 76 or 80 kilogs of refined sugar to be exported per 100 raw, in order to obtain the drawback. Another clause allows a certain favour to coffee put on board ship in India or beyond the Sunda Isles previous to the 1st June of the present year.

The debate on the bill in the Legislative Body was very long, but not very brilliant. The per centage of refined sugar required to be imported in order to obtain the drawback was complained of, because it is greater than has heretofore existed, and because it will (as was alleged) prevent French refiners from competing on such advantageous terms as heretofore with the refiners of Holland, Belgium, and England. A complaint was also made that the bill did not contain an enactment expressly allowing drawback on refined *native* (beetroot) sugar; the clause on this matter referring only to colonial and foreign sugar refined. The Government promised that the complaint should be taken into consideration. On the extent to which the reduction of duties (they are about one-half of the present ones) will increase consumption; on the advantage which French merchant shipping may expect to derive from larger imports of sugar and coffée; and on the propriety of subjecting the revenue to the loss which that reduction will occasion, contradictory opinions were expressed. But that the objections of the dissentients were not considered of much value is proved by the fact that on a division the bill was adopted by 233 votes to 10.

A bill presented by the Government to the Legislative Body removes the restrictions on the import of grain and rice from foreign countries into the French West Indian colonies and the Isle of Reunion. Though of no intrinsic importance, this bill is another step in the right direction.

The Superior Council of Commerce is continuing its inquiries previous to fixing the duties to be paid by British productions under the treaty. The ironmasters have given it a good deal of trouble, and it is certain that the cotton-spinners and others will be still more tiresome.

The quotations on the Bourse present an improvement;—they are as follow:—

The Minister of Agriculture and Commerce has addressed a communication to the Chamber of Commerce of Rouen, and probably to other Chambers of Commerce likewise, warning traders and manufacturers that "at Glasgow a number of persons are obtaining goods in France on bills, which bills they do not pay when due." These men, he says, buy up all sorts of things,—silk goods, paper, shawls, hams, &c.; and they sell them by auction for whatever they will fetch. To excite confidence, they pay for the first order, but for subsequent ones they give bills, and the bills, as stated, are never paid. The Minister, accordingly, recommends French firms who receive orders from Glasgow from people unknown, not to execute them until they shall have communicated with the Secretary of the Trade Protection Society, Virginia street, in that city.

The monthly Customs returns just published show that the anticipated commercial reforms caused in April a greater diminution of imports than had been expected. The import duties during the whole of that month were only 8,956,504f, whereas in the corresponding month of last year they were 16,580,765f, and in the same month of the year before 14,836,992f. The following were the quantities imported of the principal articles on which the duties have been modified:—

	April 1860.	April 1859.	April 1858.
Cocoa ....quintals*	1539	2799	3720
Coffee	2010	30008	20128
Cotton	27664	74605	76549
Indigo	154	664	573
Wool	3792	16357	12178
Colonial sugar	20011	64316	88143
Foreign sugar	46104	72330	38168
The other imports were as follow:—			
Oxen and sheep ....head	35410	36051	28019
Wines....hectolitres*	20069	8406	9435
Alcohols	7020	2125	1265
Grain....quintals	8398	152472	118452
Flour	14		
Flax and hemp yarn	794	303	305
Oleaginous seeds	62026	70655	66909
Hops	48	614	...
Coal	3646200	3881618	3788343
Coke	435421	370219	...
Flax	15211	7493	14985
Cast iron	12854	32292	50290
Bar iron	265	606	9438
Copper	10117	9426	8672
Salt	14885	15746	9415
Silk	2376	2343	4114
Flax and hemp fabrics	1306	894	820

* The quintal is nearly 2 cwts, the hectolitre rather more than 22 gallons.

For the first four months of the year the total import duties were 47,302,338f; for the corresponding period of last year they were 58,571,454f; and for that of 1858, 55,630,291f. Comparing these figures with those of April exclusively given above, the decline of the latter month will appear even more striking.

The following were the principal exports for the month of April of the three years:—

	1860.	1859.	1858.
Oxen and sheep ....head	6550	5270	4519
Wines ....hectolitres	216644	276082	144172
Alcohol	19395	32285	11044
Grain ....quintals	379465	755216	471757
Flour	164261		
Woollen yarn	12	...	16
Do. with drawbacks	622	242	232
Cotton yarn	39	86	21
Ditto with drawbacks	180	151	204
Machinery ....francs	454005	407102	332978
Millinery	443838	511354	675610
Prepared skins & gloves....qtls	5918	6204	4656
Ditto with drawbacks	477	227	702
Porcelain	4604	4420	4034
Soap	122	86	421
Ditto with drawbacks	6588	7999	6071
Salt	103405	180229	218527
Silk	468	525	348
Refined sugar	16	1	16
Ditto with drawbacks	51276	46587	30435
Cotton fabrics	1537	1311	1551
Ditto with drawbacks	7156	5673	7858
Flax and hemp fabrics	2605	1311	1875
Woollen fabrics	1771	1474	1100
Ditto with drawbacks	3938	2989	3695
Silk fabrics	2538	3441	2793
Oilcake	29559	19482	...
Glass and crystal	7941	7086	6729
Ditto with drawbacks	27069	24563	16207

It will be observed that the decline in some of the principal articles of export is counterbalanced by an increase in others.

The precious metals for the aforesaid months of April of the three years, present these results:—

	1860.	1859.	1858.
SILVER.	f	f	f
Imported	5432520	21564700	10615520
Exported	26300780	39160980	10814560
GOLD.			
Imported	18492900	73116600	36924900
Exported	8684100	17539800	6709800

You will notice that the export of silver still continues very largely to exceed the import. The excessive drain of silver from this country has, you are aware, for some time past caused considerable uneasiness, and if it be much prolonged it cannot fail to have serious consequences.

The stocks of the principal descriptions of merchandise at the end of April of the present, and the last two years, were as follows:—

	1860.	1859.	1858.
Cocoa ....quintals	18060	37717	17830
Coffee	137914	107020	150171
Grain	49101	64543	74090
Cotton	492837	231329	253118
Cast iron	115930	109403	139904
Tallow	2348	6206	7063
Hops	1154	3509	...
Indigo	2863	3387	6088
Wool	47906	27291	65078
Salt	15338	3072	16771
Silk	1462	1387	2677
Colonial sugar	360537	147919	206821
Foreign sugar	225609	86133	88831

The shipping returns give these results:—

First four months of	Entered. No.	Tonnage.	Sailed. No.	Tonnage.
French Vessels.				
1860.....	2729	444464	2678	449706
1859.....	2857	473501	3044	487204
1858.....	2839	465159	2995	466025
Foreign Vessels.				
1860.....	4001	715757	2983	463815
1859.....	4408	689855	3609	494706
1858.....	3747	627767	3142	457502

Subjoined is an account of the markets:—

Flour.—At *Paris*, business has not been very active during the past week, and yesterday quotations were 56f to 57f for ordinary the sack of 159 kilogs; 58f to 59f good; 60f to 60f 50c superior. Four marks for the current month were 58f; June, 58f 50c; July 60f 25c; July and August, 61f.

Wheat, at *Paris*, yesterday, sold at first with difficulty, but prices were firm to the close. Choice was 36f to 36f 50c the sack of 120 kilogs; good, 34f 50c to 35f; ordinary, 33f 50c to 34f; secondary, 32f 50c to 33f. Of the provincial markets, 19 present a rise of 20c to 1f the hectolitre, 72 a fall of 10c to 2f 63c, and 33 remained unchanged.

Cotton.—The quantity sold at *Havre*, in the week ending Friday, was 6,173 bales, and the importations 18,679. With the exception of low Mobile, which rose 1f, the quotations of all sorts remained unchanged, low New Orleans being 88f the 50 kilogs, and very ordinary ditto 95f. This week the market has been calm: low New Orleans, 88f.

Sugar.—At *Havre*, in the week ending Friday, business was very calm. 150 hogsheads French West India, disposable, went at 62f 50c the 50 kilogs; a smaller lot of ditto, 64f 50c; and 123 casks Havana, 38f 50c the 50 kilogs; and no other sales were made. The arrivals were about 1,738 hogsheads Guadeloupe, 1,282 casks Havana, 700 sacks Rio Grande, 372 sacks from Dunkirk. This week there have been no sales. At *Nantes*, last week, business was unimportant, and prices nominally closed at—Mauritius 66f; Reunion, 64f; French West India, 61f, all duty paid; Havana, 37f in bond. The arrivals were about 1,500 hogsheads French West India. This week, 200 sacks Reunion have been sold at 66f to 67f. Little was done at *Bordeaux* last week, and closing quotations were: French West India, 61f 50c to 62f; Reunion, 62f 50c to 63f 50c; ditto "gros grain," 66f; Mauritius (570 sacks sold), 67f. This week, 1,000 bales Reunion have been taken at 64f; 1,500 ditto "gros grain" at 69f; and a smaller lot of gros grain, also one of French West India, at prices kept secret.

Coffee.—Business at *Havre*, in the week ending Friday, was, in anticipation of the modification of the import duties, exceedingly active. 2,200 sacks Hayti Port-au-Prince for early delivery went at 82f to 83f the 50 kilogs in bond; 850 sacks for delivery in June and July, 82f to 82f 50c; 200 sacks Cape disposable, 83f; 180 ditto for delivery, 84f; 74 sacks Gonaïves for delivery, 86f; 600 sacks Rio, not washed, 76f 50c; 5,600 sacks ditto for delivery, 74f 50c to 77f; 2,600 sacks Costa Rica, 132f 50c duty paid; 462 sacks Ceylon triage disposable, 131f to 133f; 716 sacks Malabar for delivery, 135f. The arrivals of different sorts were upwards of 20,000 sacks. This week there have been numerous sales. French West India, 147f 50c duty paid; Porto Rico, 95f to 98f in bond; Hayti, 83f to 83f 50c; Gonaïves, 84f 50c; Hayti Cape, 84f; Ceylon triage, 133f to 135f duty paid; Ceylon native, 131f 50c; Manilla, 108f. At *Nantes*, last week, business was insignificant; the sole sales having been 30 bales Reunion, 145f duty paid; 20 ditto inferior, 135f; and 100 sacks Port-au-Prince Hayti, 82f 50c in bond. This week, Hayti has been at 82f 50c; Java (sales numerous), 140f 50c to 142f 50c. At *Bordeaux*, last week, a small lot of French West India "Habitant" went at 150f duty paid. This week, 640 sacks Mysore have been taken at 116f (new duties) and 139f. At *Marseilles*, last week, 4,700 sacks Rio went at from 72f to 76f, according to merit, and 5,500 sacks Maracaibo at 80f. Some damaged Rio were also sold.

Indigo.—At *Havre*, in the week ending Friday, only 19 cases Bengal were sold, but the prices were not stated. The arrivals were insignificant. It may be well to remark that in the prices which may hereafter be given, the import duties taken off by the Government will be deducted. This week, there have been rather numerous sales; the greater part at prices kept secret, the rest (Bengal) at 13c to 55c premium on the estimates. At *Bordeaux*, last week, the sales were about 140 cases, and this week also business has been active: prices not given.

Wool.—This article, at *Havre*, in the week ending Friday, was calm: 30 bales La Plata went at 1f 60c to 3f 25c the kilog; 4 bales Syria, 1f 45c; 6 sheepskins, Buenos Ayres unwashed, 1f 85c. The arrivals exceeded 1,000 bales. This week, Buenos Ayres sheepskins unwashed have been at 1f 35c to 1f 50c; Buenos Ayres unwashed, 2f 40c; Russian, 7f 80c to 8f 50c.

Tallow.—At *Havre*, for the week ending Friday, nothing was done. The arrivals were 100 pipes Buenos Ayres. This week there have been no sales. At *Paris*, yesterday, the 100 kilogs were 137f,—a slight rise on last week's quotations.

Hides.—At *Havre*, last week, the sole sale noted was 2,200 Lima, dry-salted, at 85f the 50 kilogs duty paid. The arrivals were very numerous. This week, Monte Video ox, salted, have been at 86f; horse, dry, 10f 12½c each; Pernambuco, dry-salted, 105f to 107f; Martinique, salted, 72f 50c.

Spirits.—At *Paris*, 3-6 of 90 deg. was 107f to 108f the hectolitre; Montpellier, 140f. At *Bordeaux*, the day before yesterday, 3-6 Languedoc was 135f; beetroot, 108f.

COMMERCIAL AND MISCELLANEOUS NEWS.

The annexed commercial report is dated Bombay, April 27:—The import market continues in a depressed state, notwithstanding that the stocks in the bazaar are low, and that money is unusually abundant at this time of the year. Dealers evince much caution in making purchases though holders have somewhat relaxed in firmness; only a moderate business has therefore been done, and that at a reduction in prices. In the export market a large business has been done in cotton, especially at the beginning of the period under notice. In other commodities transactions have been on a moderate scale. The money market is easy, and the Bank of Bombay has reduced its rates of discount one per cent. all round, which now stand at 5 per cent. on Government paper, and 7 per cent. on private bills. Government securities are a shade lower, in consequence of lower quotations from London. The rates of exchange upon London have ruled for this mail at 2s 1d to 2s 1⅛d for six months' sight bank bills, and at 2s 1⅛d to 2s 1⅛d for first-class credit bills and document bills. Our closing rates are for bank bills 2s 1d, for credit bills 2s 1⅛d, and for document bills 2s 1 3-16d. The freight market has exhibited considerable variation. The quotations to-day are for London, cotton, 3*l* 12s 6d to 3*l* 15s; seeds, 3*l* 2s 6d to 3*l* 5s; for Liverpool, cotton, 3*l* 5s to 3*l* 7s 6d; seeds, 2*l* 10s to 2*l* 12s 6d. Freights for China, which a week ago were dull, have again risen to their former status, and are now quoted at 24 rs to 25 rs per candy. For Singapore the rates are nominal.

A valuable history of the Indian railway system has been furnished in a report to the President of the India-Council by Mr Juland Danvers, the Secretary of the Railway Department at the India Office. It describes, among a vast number of other details, the progress of each company from its commencement, the nature of the guarantees accorded, the amounts of capital still to be raised, the scale of receipts and fares and extent of traffic in each instance, the number of persons employed, European and native, and the respective rates of mortality among them. The system dates from 1845, when the East Indian and Great Indian Peninsular Companies were respectively projected, and the number of companies now in existence is eight, employed to open 4,917 miles of communication, exclusive of the navigation of the Indus from Kotree to Moultan, a further distance of 570 miles. The largest of the companies is the East Indian, which will require a capital of 19,000,000*l*, and the smallest the Calcutta and South-Eastern, with a capital of 250,000*l*. The total capital already sanctioned to be raised under guarantee is 34,133,000*l*, and the total estimated to be necessary for these companies is 52,430,000*l*. Of the amount authorised, 27,079,712*l* had been raised at the end of 1859, of which but 625,971*l* had been obtained in India. Out of every 1,000,000*l*, about 555,000*l* is expended here for iron, other materials, &c. Among the Europeans employed, the average per centage of deaths in 1859 was 2.9, while the rate of mortality in the army is reckoned, exclusive of war casualties, at 6 per cent. In this respect the experience of the Scinde Company has been the most favourable. The average number of passengers per mile on all the railways open in India was in the year 1859 6,533, of which 48.6 was contributed by the East Indian, 41.2 by the Great Indian Peninsular, and 10.2 by the Madras. The proportion of first-class was only 1.2 per cent., and of second only 6.2, the great third-class total being 92.6 per cent. The aggregate receipts were 402,025*l*, of which 157,031*l* was from passengers, and 244,994*l* from goods; and the working expenses being 187,065*l*, there were total profits of 214,960*l*. The cost of the lines thus open was 4,087,000*l*, and the guaranteed interest upon it being not more than 201,850*l*, the Government was practically relieved from any payment for them. The goods traffic is gradually gaining on the passenger traffic, and this feature is thought likely to increase in proportion as the lines are extended. In 1856 the passenger traffic comprised 55.40 per cent. of the whole, and last year only 39 per cent.

COMPARATIVE EXCHANGES.

The quotation of gold at Paris is about at par, and the short exchange on London is 25.12½ per 1*l* sterling. On comparing these rates with the English Mint price of 3*l* 17s 10½d per ounce for standard gold, it appears that gold is about 2-10ths per cent. dearer in Paris than in London.

By advices from Hamburg the price of gold is 422½ per mark, and the short exchange on London is 13.3⅞ per 1*l* sterling. Standard gold at the English Mint price is, therefore, at about the same price in London as in Hamburg.

The course of exchange at New York on London for bills at 60 days' sight is about 109⅜ per cent., which, when compared with the Mint par between the two countries, shows that the exchange is slightly in favour of England; and, after making allowance for charges of transport and difference of interest, the present rate leaves a small profit on importation of gold from the United States.

The Bankers' Gazette.

BANK RETURNS AND MONEY MARKET.

BANK OF ENGLAND.

(From the Gazette.)

An Account, pursuant to the Act 7th and 8th Victoria, cap. 32, for the week ending on Wednesday, the 23rd day of May, 1860.

ISSUE DEPARTMENT.

	£		£
Notes issued	29,569,390	Government Debt	11,015,100
		Other Securities	3,459,900
		Gold Coin and Bullion	15,094,390
		Silver Bullion	...
	29,569,390		29,569,390

BANKING DEPARTMENT.

	£		£
Proprietors' Capital	14,553,000	Government Securities (including Dead Weight Annuity)	9,728,943
Rest	3,278,026	Other Securities	19,936,674
Public Deposits (including Exchequer, Savings Banks Commissioners of National Debt, and Dividend Accounts	7,666,533	Notes	8,346,100
		Gold and Silver Coin	749,805
Other Deposits	12,569,848		
Seven Day and other Bills	694,115		
	38,761,522		38,761,522

Dated the 24th May, 1860. M. MARSHALL, Chief Cashier.

THE OLD FORM.

The above Bank accounts would, if made out in the old form, present the following result:—

Liabilities.	£	Assets.	£
Circulation (including Bank post bills)	21,917,405	Securities	29,587,617
Public Deposits	7,666,533	Coin and Bullion	15,844,195
Private Deposits	12,569,848		
	42,153,786		45,431,812

The balance of Assets above Liabilities being 3,278,026*l*, as stated in the above account under the head Rest.

FRIDAY NIGHT.

The preceding accounts, compared with those of last week, exhibit—

A decrease of Circulation of	£444,481
An increase of Public Deposits of	81,190
An increase of Other Deposits of	344,166
No change int he amount of Government Securities.	
A decrease of Other Securities of	329,366
An increase of Bullion of	316,845
An increase of Rest of	6,604
An increase of Reserve of	698,620

The alteration both in the reserve and the bullion is very favourable, and explains the fresh reduction in the Bank's charge. The amount of the reserve is now large.

Subjoined is our usual weekly table, affording a comparative view of the Bank returns, the Bank rate of discount, the price of Consols, the price of wheat, and the leading exchanges, during a period of four years, corresponding with the present date, as well as ten years back, viz., in 1850:—

At corresponding dates with the present week	1850.	1857.	1858.	1859.	1860.
	£	£	£	£	£

Exchange on Paris (short)	25 60	25 30	25 2½ 10	25 7½ 12½	25 10 17½
— Amsterdam ditto	12 3	11 18	11 15	11 12 13	11 14½ 14½
— Hamburg (3months)	13 12½	13 8 8½	13 6¾ 7	13 3½ 5¾	13 5½ 5¾

At the corresponding period of the year 1850, the debates in Parliament had reference principally to the withdrawal by France of her Ambassador in London. An attempt had been made upon the life of the King of Prussia, who was wounded in the arm. The Emperor of China had died, and had been succeeded by his fourth son, who was nineteen years of age.

In 1857, the money market continued tight, the shipments of silver by each Eastern packet averaging about three-quarters of a million sterling, whilst the Bank of France continued their purchases of gold here at a premium.

In 1858, on the contrary, the supply of money was exceedingly large, and the rate of discount in the open market did not exceed 2½ per cent. The Brazilian 4½ per Cent. Loan of 1,526,000*l*, at 96 per cent., had been announced, and commanded 1 per cent. prem.

In 1859, although the Bank of England minimum was kept up at 4½ per cent., the rate for the best bills in the open market had fallen to 3 to 3½. The question as to whether coal is to be considered contraband of war engaged discussion. Since the outbreak of the war in Italy, numerous financial and commercial disasters had occurred in Germany and other parts of the Continent.

The amount of the "other" deposits, as compared with the "other" securities, showed, in 1850, a deficiency of 88,640*l*; in 1857, a deficiency of 8,580,228*l*; in 1858, a deficiency of 591,535*l*; and in 1859, a deficiency of 2,280,868*l*. In 1860, the deficiency is 7,366,826*l*.

Yesterday the Bank of England minimum rate of discount was lowered from 4½ to 4 per cent. No doubt was entertained that the step would be taken either this week or next. The subsequent course of the discount market confirms the accuracy of the judgment of the Directors. The demand, it is true, has become somewhat brisker since the alteration was made, but this arises merely from the circumstance that a considerable number of persons had delayed to supply their requirements. To-day the terms for the best short bills were ⅛ to ¼ per cent. below those of the Bank, being 3¾ to 3⅞. For good paper having more than six weeks to run, 4 per cent. was charged, for four months about 4¼, and for six months 4½ to 5 per cent. A good amount of business was done to-day at the Bank, but the demand in most quarters was by no means pressing, and the supply of money was ample.

In a few days the Bank of England will be prepared to commence their quarterly advances; but before they are called upon to any important extent, it will be necessary that the supply of money in the general market shall be worked off, under the influence of the payments on account of revenue.

The demand for gold for the Continent is only moderate, and that for silver for the East is slack, pending the arrival of the letters which are anxiously expected from China. The Continental exchanges have not yet received any unfavourable turn from the decline in the value of money here; whilst the recent improvement in the exchange at New York is maintained, and causes a continuance, upon a moderate scale, of the flow of specie to this side. Meanwhile, the uneasiness excited by the condition of politics on the Continent imposes a severe restraint upon speculation, and even checks the development of enterprise of a more legitimate character. All these considerations tend to disconrage the idea of any speedy recovery in the rates of discount.

The Joint Stock Banks have announced a reduction of ½ per cent. in the rates allowed for deposits. They now give three per cent., being one per cent. below the Bank of England minimum rate of discount. At the London and Westminster Bank, however, only two per cent. is allowed for sums below 500*l*.

The discount establishments have reduced the rate for money at call from 3½ to 3 per cent., and for money at a few days' notice from 4 to 3½.

In the Stock Exchange to-day there was a good supply of money at 3½ per cent. on Government securities.

About 64,000*l* in refined gold was this day sent into the Bank.

Of the 164,500*l* in Australian gold at sea by the ships Omar Pasha, Southampton, and Dream, the bulk, by the two former vessels, is nearly due.

The Massilia will take for Bombay, on the 27th instant, only 14,650*l* in silver, and 5,100*l* in gold.

The Committee of the Stock Exchange have concluded their investigations in reference to the transactions of certain members with Pullinger, late chief cashier of the Union Bank of London, and they have unanimously agreed to suspend four members of the body. The following resolutions have been posted in the Exchange:—

May 22, 1860.

"Taking into consideration the cases of Mr W. A. Bradock, Mr R. Johnston, Mr J. T. Sheldon, and Mr Theodosius Uzielli, in relation to their violation of rule 58, by transacting speculative business for W. G. Pullinger when a clerk in the Union Bank of London, without communicating with his employers, and the different facts elicited in the examination of these gentlemen before the committee—

"Resolved,—That Mr R. Johnston be suspended until the 25th of March, 1861, his readmission after that date to be decided upon by the committee for the time being.

"That Mr J. T. Sheldon be suspended until the 25th of March, 1861, his readmission after that date to be decided upon by the committee for the time being.

"That Mr Theodosius Uzielli be suspended until the 25th of March, 1861, his readmission after that date to be decided upon by the committee for the time being.

"That Mr W. A. Bradock, in whose case there are extenuating circumstances, be suspended for the term of three months from this day.—By order of the committee, "G. Lovelless, Secretary."

The following resolution has also been unanimously passed :—

"The committee having ascertained that Messrs Bell and Ball, members of this house, transacted speculative business to a most reckless extent for Pullinger, thereby not only infringing one of the rules of the Stock Exchange, but involving its members in a calamitous loss, desire to record on their minutes their unanimous and severest censure on the conduct of Messrs Bell and Ball, who, by their recent failure, having ceased to be members of the Stock Exchange, are no longer personally within the control of the committee.—By order of the committee,

"G. Lovelless, Secretary."

Mr James Low's Indian circular furnishes some interesting particulars, showing the amount of the Indian native Government paper held in this country, as well as the extent of the recent influx. The total amount of the public (native) debt of India standing on the London books on the 30th ult. was as follows :—

Public Debt of India on the London Books, April 30, 1860.

		Promissory Note Loans. Total amount of Notes advised for Registration.	Portion of which transferred into Stock.
		Sa. Rs.	
1.	4 per cent. loan of 1824-25	16.000	...
2.	— — 1828-29	17.280	...
3.	— — 1832-33	7.23.040	1.32.693
		Co.'s Rs.

	5 — — 1856-57	3.47.05.100	6.5.79.000
	5½ — — 1859-60	1.94.93.900	4.59.700
Notes and stock, total		6.38.23.420	
4 per cent. transfer loan stock		Sa. Rs.	184.64.690 15 3

This statement shows a total, in notes and stock, equal to 6,382,342*l* sterling (at 2s per rupee), and as the total shown in the previous half-yearly statement, made up to the 31st October, 1859, was 3,699,090*l*, it follows that the amount transferred to the London books during the last six months is 2,883,252*l* sterling. This is exclusive of the stock with coupons attached.

The movements in bullion and in the Indian Government paper are thus noticed by Messrs Pixley, Abell, and Langley ;—

Gold.—The gold ex Result and Jessie Boyle, from Melbourne, has been sold, and nearly the whole, after having been refined here, has been sent to the Bank. The gold ex City of Baltimore, from New York, being fine, was also sold to the Bank. The demand for export has, in fact, nearly ceased, only about 30,000*l* of bar gold having been taken for export. The Africa, from New York, brought 20,000*l* ; a portion of this amount, however, consisted of Mexican dollars. It is not unlikely that any early arrivals of gold may be sent into the Bank of England, there being at present but little business doing in gold for the Continent. The outgoing mail to Bombay will take out a small amount in gold.

Silver.—Beyond the arrivals of some small amounts from the Continent, but little has been doing in the silver market ; there has not been any demand for the outgoing mail to Bombay ; the steamer leaving on the 27th inst. will, we believe, take ont the smallest amount that has been known for some years. We quote the price as 61⅜d per ounce standard.

Mexican dollars have also participated in the general flatness of the market for silver. We quote the price as 62⅜d per oz nominally ; but if the letters that are expected from China on the 27th instant bring any orders, a rise may be looked for, there being comparatively but a small quantity held here for sale.

Exchange on Bombay and Calcutta, for Bank 60 days' sight drafts, continues 2s to 2s 0⅛d, with little doing. Madras bank post bills have been sold to some extent at 1s 11⅞d. Bills with documents, 1s 11½d per rupee.

India Government Loan Notes have been in better demand the last two days, notwithstanding advices from Bombay and Calcutta of lower prices. Our improvement is no doubt owing to increased ease in money, caused by restriction of business from prudent motives, and consequent accumulation of capital. Continued abundance of money will doubtless assist these, as well as other securities, and better prices are not unprobable. We quote 5½ per Cents., this day, 102⅞ to 103¼ ; and 5 per Cents., 97¾ to 98¼, with business doing.

Quotations for Bullion.—Gold—Bar gold, 77s 9d per oz std ; bar gold, fine, 77s 9d per oz std ; bar gold, refinable, 78s per oz std ; Spanish doubloons, 76s 6d per oz, last price ; South American doubloons, 74s per oz, last price ; United States gold coin, 76s 3½d per oz, last price. Silver—Bar silver, 5s 1⅛d per oz std ; bar silver, containing 5 grs of gold, 5s 1⅞d per oz std, last price ; fine cake silver, 5s 6¼d per oz, last price ; Mexican dollars, 5s 2⅜d per oz, last price ; Spanish dollars (Carolus), 6s 2d per oz, last price ; five-franc pieces, 4s 11⅝d per oz, last price.

The 28th annual meeting of proprietors of the National Bank was held on Tuesday. The Directors' report showed that the net profits of the bank, in 1859, were 12,610*l* 2s 8d greater than in the preceding year, and that the rest or undivided profits, after paying the last February dividend and bonus, and making a reserve for a building fund, has increased to 139,781*l* 18s 4d, being 15,813*l* 19s 2d above the amount at which it stood at the same period of 1858. It was mentioned that the present state of the rest, and the prosperous condition of the institution, leave in the mind of the Board no fear as regards the permanent maintenance of the dividend at the rate of 8 per cent. per annum ; but, necessarily, the amount of bonus must depend upon the current profits of each year. The report was unanimously adopted.

At an extraordinary general meeting of the Intercolonial Royal Mail Steam Packet Company (limited), held on Thursday, the report of the Directors was unanimously adopted, and a dividend was declared at the rate of 7½ per cent. per annum, free of income tax, for the five months ending December 31, 1859.

A new undertaking is announced, under the title of the Himalayan Tea Company. The experiments initiated upon a considerable scale by the Government in the hill districts of India have shown that tea can be produced there at a considerable profit. It appears to have been decided, however, that the Government plantations shall be disposed of, and that the future prosecution of this branch of enterprise shall be left to mercantile energy. The object of the Company now announced is to purchase and work the Government plantations. The cheapness of labour, the large supply of land, and the accessibility of a market are all points in favour of the undertaking, which has been received with considerable favour. The Assam Tea Company, as is well known, has of late years attained great prosperity, and a gentleman, who has been on the direction of that Company from the commencement, is on the board of the present undertaking. The capital is fixed at 250,000*l* (with power to increase) in 20*l* shares.

We are requested to state that the subscription for shares in this Company will be kept open until Monday afternoon.

The letters of allotment of the Thames and Mersey Marine Insurance Company are expected to be issued on Thursday next. The applications, irrespective of those from the directors, have reached no less than 415,438 shares, the entire capital of the Company consisting of 100,000.

The allotment of the shares of the London and South-African Bank was effected yesterday. The new establishment will no doubt commence business directly the charter is obtained.

The quotations for shares in new undertakings this afternoon were as follow :—Ocean Marine Insurance, 2 to 2¼ prem. ; Universal Marine Insurance, ⅛ to ⅜ prem. ; Thames and Mersey Marine, 1⅛ to 1⅜ premium ; London and Provincial Marine, ⅜ to ¼ dis. ; and London and South African Bank, ¼ to ¼ dis.

The Directors of the Indian and Australian Telegraph Company are about to wind up the undertaking. Of the deposits of 2s per share, 1s 6d will be payable on the 30th inst.

The report of the Directors of the Trust and Loan Company of Upper Canada recommends a dividend at the satisfactory rate of 8½ per cent. per annum.

At a meeting held on Monday, it was agreed by the subscribers and decided to-day to close the Commercial Sale Rooms on Saturdays at 3 o'clock, commencing with to-morrow week.

At Paris, to-day, the 3 per Cent. Rentes closed at 69.20 for money, and 69.10 for the account. These prices are ¼ per cent. below those of yesterday, but show a recovery of ¼ to ⅜ from the fall which took place last week.

The English funds have likewise shown a tendency to recovery, the feeling of uneasiness with regard to the immediate course of Continental politics having slightly subsided. The public mind, however, is still sensitive. Consols, which closed on last Friday at 94¾ for the 6th of June, had risen yesterday to 95¼ to ⅜, and closed to-day at 95 to ½. The improvement established during the week amounts to ½ per

cent. Support is afforded by the fine weather and by the approach of the dividend period. Immediately upon the conclusion of the June settlement, Consols will be quoted ex the dividend. Subjoined is our usual list of the highest and lowest prices of Consols every day, and the closing prices of the principal English and foreign stocks last Friday and this day:—

The recovery in British railway stocks has been more rapid than that in the funds, owing to the continuance of favourable traffic returns, combined with the proved reluctance of *bonâ fide* holders to sell. The advance attained during the week amounts to 1½ per cent. in Great Northern, Lancashire and Yorkshire, London and North-Western, and London and South-Western stocks; 1 per cent. in Eastern Counties, Great Western, and Berwick; ¾ per cent. in South-Eastern; and ½ per cent. in Caledonian, North-British, and York and North Midland. The market closed this afternoon with firmness at the improvement. Subjoined is our usual list of the closing prices of the principal shares last Friday and this day:—

Imports of the week ..... 113,051 qrs.

COMMERCIAL EPITOME.

FRIDAY NIGHT.

About an average supply of English wheat, including several samples left over from Monday, was on offer at Mark lane to-day, and both red and white qualities changed hands heavily, at barely previous quotations. In foreign wheats next to nothing was doing on former terms. All spring corn was very dull, and lower to purchase. Flour was inactive, at Monday's improvement in value. The imports from abroad are on a liberal scale, viz., 21,120 quarters of wheat; 13,950 barley; 29,140 oats; and 1,120 sacks of flour.

At Liverpool, this morning, wheat was 1d dearer; but the demand for it was by no means active. Other produce met a slow inquiry. Advices from New York to the 12th instant state that both wheat and flour were rather drooping in price.

Messrs Briggs and Co., of Alexandria, writing on the 12th instant, observe:—

There has been a marked increase in arrivals of wheat and beans. Both are in good demand, and the former very firm in price. Beans are a trifle lower than during the previous week, but are bought up with utmost readiness at present rates. We have no change to note in the value of Indian corn. We have had a slight increase in receipts of barley, and prices are lower. The following is the present value free on board:—Saide wheat, 36s 6d to 38s 6d; Behera wheat, 35s to 36s; Saide beans, 28s 6d to 28s 9d; Behera beans, 27s to 28s; Indian corn, 26s to 27s 3d; barley, 19s to 20s 6d; lentils, 25s to 26s per quarter.

There has been again a moderate demand throughout the week in the Liverpool cotton market, the total sales amounting to 43,000 bales. Spinners have taken 31,500 bales, speculators 2,000, and exporters 9,500 bales. Prices have only with much difficulty been supported, and here and there a decline of fully ⅛d per lb has been submitted to. Some needy holders have been compelled to accept even a larger reduction in order to effect sales. To-day the market closes lifeless, and very quiet; sales only 6,000 bales. There seems little or no prospect of any improvement while the American crop accounts come so favourable, and the stock in Liverpool affords so abundant a choice.

New York letters to the 12th instant inform us that cotton was rather advancing in price—middling Uplands having sold at 11½ to 11⅝d cents. The New Orleans market to the 11th instant was steady for cotton, but no advance was noticed in the quotations. The week's sales had embraced 45,000 bales.

The following report of the cotton trade at Alexandria, and dated the 12th inst., has been forwarded by Messrs Briggs and Co.:—

The inquiry for cotton has continued, and prices of even low grades are higher, while great competition is manifested for the better kinds. The sales for the week have been as follows, per lb free on board:—1,152 bales very low ordinary to middling, 6d to 8.30d; 886 good middling to fair, 8.45d to 8.85d; 104 fully fair, 9.15d to 9.27d; 10 fine, 11.80d; total, 2,152 bales. There are three steamers in port, besides two which are leaving to-day; they are loading chiefly with grain at 4s 6d per qr, having very great difficulty in filling up with cotton at 5-16d in full. Under these circumstances sailing vessels can get nothing. Exchange is heavy at 96½ to 96⅝ piastres per £ sterling.

Public sales of tea have been held this week. They have gone off somewhat briskly, at an advance in the quotations of from ½d to ⅝d per lb. Privately, the market is still firm.

For nearly all kinds of raw sugar the inquiry has been comparatively heavy, and prices have given way about 6d per cwt. Refined goods have changed hands slowly, at barely previous rates.

The coffee market has continued heavy, and plantation Ceylon qualities have receded in price from 1s to 1s 6d per cwt.

All kinds of rice have met a slow inquiry; but, compared with last week, no quotable change has taken place in value.

The attendance of both home and foreign buyers at the colonial wool sales still in progress has been large, and the whole of the quantities offered have changed hands at a slight advance on the opening rates. English wool is very firm.

There has been an active sale for saltpetre on higher terms, fine parcels having realised 45s 9d per cwt.

The value of rum is still firmly supported, notwithstanding that the sales have not increased. Brandy and grain spirits are rather inactive.

Scotch pig iron has sold slowly at 51s to 51s 3d cash mixed numbers. In the value of other metals very little change has taken place.

The oil market has ruled steady at full quotations. The leading value of linseed oil is 28s 3d per cwt.

Tallow continues a slow sale at barely late rates—P. Y. C., on the spot, having sold at 52s 3d per cwt. Thus, it will be seen that the enormous speculation on the part of the Moscow Company is not likely to turn out so profitable as was at one time anticipated. In reference to the extent of our future supplies of tallow, much discussion has sprung up; but, of course, much will depend upon the power of the Russians to withhold a portion of their usual shipments. The annexed estimate has received rather wide publicity:—

	Casks.
Stock in London 2nd January, 1860	44,453
Probable imports into United Kingdom for 1860, on reliable authority known to be available for shipment at St Petersburg 138,000 casks, of which quantity the Continent may take 10,000 casks, leaving for this country	128,000
From the Black Sea we may have	15,000
— South America (last year 23,000 casks)	15,000
— All other places	10,000
	212,453
Estimated consumption and export of the United Kingdom for 1860	140,000
Probable stock in London end of 1860	72,453

"There has been little or no change in the market for domestic dry goods during the past several weeks," observes the New York *Shipping List* of the 9th inst., "and but little demand has prevailed. The demand for export continues fair, and the aggregate sales for the week are to a fair extent, while the actual shipments compare favourably with former weeks. Though the inquiry for foreign fabrics continues moderate, there is more tone to the market, and less irregularity and fluctuations. Desirable styles meet with fair sale at remunerative prices, but the large accumulation of undesirable goods renders them almost unsaleable except at public sale, where prices are irregular and unsatisfactory, as a general thing, though goods have recently been placed at more advantageous rates."

The improved feeling noticed in our last still continues, and the more favourable advices from Europe, combined with an increased demand from the home trade, has imparted more buoyancy to the market, under which prices have hardened considerably. The transactions are to a fair extent, embracing 5,000 bales, closing very firmly yesterday at the revised quotations appended. We quote:—

NEW YORK CLASSIFICATION.

The cotton market has been uniformly languid during the past week. The supply of cotton of most qualities is very abundant, and holders meet the demand freely. We can make little change in our quotations, but sales are making below them almost daily in isolated cases, and it is difficult to obtain them. Egyptian are freely offered. Brazil are steady at last week's rates. East India heavy and slightly lower. The sales to-day are estimated at 6,000 bales. A quiet market. The reported export amounts to 9,520 bales, consisting of 5,590 American, 380 Brazil, and 3,550 East India. Vessels arrived and not reported—9 from North America.

MARKETS IN THE MANUFACTURING DISTRICTS.

Compared with many previous weeks, the transactions in goods in the manufacturing districts have been on a very limited scale, especially for shipment to India and China. In some instances, stocks have increased, notwithstanding that the home trade is remarkably healthy. Raw material is still selling at high rates, and the quantity of wool on offer is small. In the iron and coal districts, very little business has been doing at depressed quotations.

MANCHESTER, May 24.—The market has been extremely dull and irregular; prices, so far as they have been tested, tending downward; but transactions can scarcely be said to have occurred, so small a week not having been remembered for a year or two; and as next week is the general holiday of the year for Manchester and neighbourhood, it is thought prices may open at a more uniformly lower level in June. The depression so far has been greater in cloth than in yarn, the prior demand for home weaving having rendered contracts for the latter of longer duration. But as this break in prices, when transmitted to India, may affect more unfavourably the now heavy condition of those markets, the prospects of a thorough recovery here are thought for the present very doubtful, especially since few, if any, recent shipments thither leave a profit. Our quotations are reduced.

BRADFORD.—There is rather a scanty business doing. Prices rule so high that buyers purchase only for present wants, and as the wants of the coming week are very considerably less than usual, the inquiries for wool are less active than for some weeks past. Noils and brokes continue in fair request. The few parcels of the new clip that have come into the market have sold for higher prices than was expected. The demand for worsted yarns for export is not so active as a week ago.——LEICESTER.—There is a tolerable amount of business doing in several departments of the hosiery trade. At Loughborough and the adjoining framework knitting districts trade is quiet. In yarns there is no important alteration to note, spinners being, on the whole, fairly employed. Wools are high in price.——NOTTINGHAM.—The lace trade in many branches is still extremely dull. Most departments of the cotton trade are quiet, particularly plain nets, which have heretofore for a considerable time been in request. In fancies, also, there is very little doing. In the silk department there is rather more doing, and as lace is more generally worn this branch will doubtless improve. Stocks on hand are light. There is a good deal of machinery working short time. The hosiery trade is in a healthy state. Many branches are by no means busy, and an improvement is anticipated in some departments of the home trade.——HUDDERSFIELD.—Business is exceedingly flat, and complaints are heard of the continued decline of trade in this district. Our local wool trade has not yet begun to be active. Stocks of goods on hand are not large, but continue to increase.——LEEDS.—The articles principally in demand were those of a seasonable character, and for good specimens of these, as well as for plain cloths, late rates were paid. Unions were also a little in demand, full prices being obtained. Stocks do not look heavy in the warehouses, with the exception of meltons, which are not in such fair inquiry as they were last year. Clothiers are still doing a satisfactory trade, though the absence of orders and the depression in the markets has justified them in curtailing their operations. ——BARNSLEY.—The linen trade, the staple manufacture of this town and its vicinity, has lately improved, and the operatives, both the hand-loom and the power-loom weavers, are well employed. The drill, damask, diaper and sheeting departments are all tolerably active, and a good number of hands are employed on some orders recently received for window-blinds.——ROCHDALE.—The market has been a great deal more animated than last week. Wools are even higher than they were then, and are very firmly held, so that manufacturers are demanding some advance for flannels and other woollen goods.——BELFAST.—There has been a moderate business doing in flax goods, at full quotations. The stocks continue light.——DONDER.—No change has taken place in prices; but the market is tolerably firm.——WOLVERHAMPTON.—Mr Griffiths observes:—The iron trade of South Staffordshire has improved a little most of the leading manufacturers having received considerable orders, and several houses of this class are very busy. The official list of prices of Staffordshire finished iron is as follows:—Common Staffordshire bars, 7*l* 10*s*, at the works; best bars, 8*l* 10*s*; sheets, 9*l*; doubles, 10*l* 10*s*; nail sheets, 8*l* 10*s*; latins, 12*l*; boiler plates, 9*l*; best and best best in proportion; common rods, 7*l* 10*s*; hoops, 8*l* 10*s*; gas strip, 8*l*; Canada plates, 12*l*; and all other sorts in proportion. Current prices of Pig Iron—Staffordshire cold blast, 4*l* 7*s* 6*d*; best native hydrate pigs, 3*l* 15*s* to 4*l* 2*s* 6*d*; first-class all mine grey forge pigs, 3*l* 10*s* to 3*l* 15*s*; good mine pigs, with a modicum of flue cinder, 3*l* to 3*l* 5*s*; mine pigs, deteriorated by cinder, 2*l* 15*s* to 3*l* 2*s* 6*d*; grey forge cinder pig iron, 2*l* 15*s* to 2*l* 17*s* 6*d*: white forge cinder pigs, 2*l* 10*s* to 2*l* 15*s*; melters, Nos. 1, 2, and 3, 2*l* 17*s* 6*d* to 3*l* 2*s* 6*d*; superior makes of all mine melting iron, 3*l* 10*s* to 4*l*, according to make and quality. Favourite Shropshire and Forest of Dean brands, 4*l* 7*s* 6*d*.

CORN.

AMERICAN GRAIN AND FLOUR MARKETS.

NEW YORK, May 9.—FLOUR AND MEAL.—The market opened dull yesterday, but a concession amounting to 5c to 10c per bbl was subsequently granted by holders, which led to a moderately active speculative inquiry, and the sales were heavy. The sales for the three days comprise 32,600 bbls, of which 19,500 bbls changed hands yesterday, including 10,000 on speculation, closing buoyantly at the decline noticed above. Canada flour continues in steady fair demand at the rates quoted in our last, and the sales aggregate 2,200 bbls, including 700 yesterday, closing at 5.60 dols to 7.50 dols per bbl. Southern flour has been in moderate request, and transactions are on a moderate scale at previous prices. The receipts have been fair, and more than suffice for the wants of the trade. We note sales for the three days of 3,800 bbls.

GRAIN.—Under the continued unfavourable accounts of the growing crops from Europe, and the buoyancy in the European markets for all kinds of grain, the market assumed a more animated appearance yesterday, when the transactions were moderately heavy, both for shipment and consumption, and prices ruled a shade firmer. The aggregate sales for the three days are 81,500 bushels, of which 51,400 bushels were placed yesterday, including 31,000 Milwaukee Club at 1.29 dol to 1.32 dol; 4,300 white Canada, 1.60 dol; 1,500 Kentucky, 1.75 dol; 1,500 Indiana, 1.60 dol; 5,600 Chicago spring, 1.29 dol; 6,500 winter red Western, 1.50 dol, closing steadily. Corn has also been in steady fair request for consumption and shipment, at about former prices; the receipts are increasing, but do not meet the wants of the trade: the sales since our last aggregate 80,000 bushels, closing heavily for Western mixed, and steady for other kinds, at 83c to 85c for white Southern, 80c to 82c for yellow ditto, 81c to 82c for round yellow, 83c to 85c for ditto white, 77c to 79c for Western mixed, and 75c to 77c for unsound. Rye continues in limited request.

EXPORT of BREADSTUFFS from the UNITED STATES to GREAT BRITAIN and IRELAND since September 1, 1859.

LONDON MARKETS.

STATE OF THE CORN TRADE FOR THE WEEK.

MARK LANE, FRIDAY EVENING.

Very limited supplies of home-grown wheat have been on offer this week in the various local markets. For both red and white qualities, the demand has continued steady, at, in most instances, an advance in the quotations of from 1*s* to 2*s* per quarter. At the outports, foreign wheats have been held for further enhanced rates; but the business doing has not increased. As the season is now over, malting barley has ruled nominal in value. Grinding and distilling sorts, however, have ruled steady, at quite previous rates. Malt has sold chiefly in retail quantities, on former terms. The oat trade has been tolerably active, at very full prices, and the value of both beans and peas has been well supported. Flour has advanced 2*s* per sack, and in this market the Town millers are now charging 50*s* per 280 lbs for the best qualities.

The weather continues remarkably vegetative. In all parts of the country the crops are making rapid progress; but the accounts in reference to the wheats state that the plant exhibits a very irregular appearance. The pastures are now very full of grass, and there is an abundance of natural food for the stock.

Wheat has risen fully 2*s* per quarter in nearly the whole of the continental markets, owing to an increased inquiry on English account. For spring corn the demand is firm at extreme rates. Only limited supplies of produce are in progress of shipment from the United States, notwithstanding the comparative firmness of the trade in this country. The supplies coming forward were somewhat extensive, and it is stated that large quantities of wheat are still in the interior of the country.

In Scotland, wheat has shown a tendency to improve in value; but the demand for it is by no means active. Most other articles have moved off steadily at full quotations. The shipments to the South have fallen off considerably.

The Irish markets have been firm for wheat, oats, and maize, the value of which is well supported. Otherwise, the trade has ruled inactive.

Several of Monday's unsold samples of English wheat were on offer in to-day's market, and for both red and white qualities the demand ruled heavy, at barely Monday's quotations. In foreign wheat scarcely any business was doing, at late rates. Barley and nearly all other kinds of spring corn were offering on easier terms. Flour moved off slowly, at about Monday's advance.

Mr Ed. Rainford states that 25 vessels have arrived off coast laden with grain since the 16th instant. The business done in floating cargoes has been limited at about previous rates.

COLONIAL AND FOREIGN PRODUCE MARKETS.

TRANSACTIONS OF THE WEEK.

For Report of This Day's Markets, see "Postscript."

Mincing Lane, Friday Morning.

Sugar.—The market opened without improvement, and prices have occasionally given way 6d per cwt, notwithstanding the rather limited supplies brought forward. Floating cargoes again sold freely on easier terms. Up to yesterday, 2,200 casks West India had changed hands. 602 casks Barbadoes, by auction, chiefly found buyers at 38s 6d to 43s 6d for low soft to good yellow, and 35s 6d to 38s for brown. Crystalised Demerara went at 43s 6d to 44s per cwt. Business, however, has been partly unsettled by the Epsom Races on Wednesday and to-day. There were 5,780 tons landed last week, and the deliveries amounted to 4,660 tons, leaving the stock at the close about 56,000 tons, against 41,520 tons last year, and 48,900 tons in 1858.

Mauritius.—On Tuesday, 2,868 bags, by auction, chiefly found buyers at steady prices: low middling grey to good yellow, 40s to 42s; grainy, 41s to 44s per cwt. Nothing has since been done by private contract.

Foreign.—1,500 boxes Havana in public sale partly found buyers: brown, 38s 6d to 39s 6d; grey and yellow, 40s to 44s; fine yellow and florettes, 45s to 46s; white bought in at 47s 6d to 48s 6d. 457 casks Cuba partly found buyers at 37s to 42s. Five floating cargoes of Havana have sold for the United Kingdom: Nos. 9 to 13½, 26s to 28s 6d; and one of Cuba at 25s 6d. On the spot, 3,000 boxes have changed hands at 39s to 43s; 4,000 bags Manilla clayed, at 36s 6d; and 250 casks Porto Rico, at 39s to 43s per cwt.

Refined.—General quotations remain unchanged, and the market is devoid of activity.

Molasses.—200 puns new Antigua have been sold chiefly at 18s per cwt.

Coffee.—Many parcels of the recent supplies from Colombo have been brought forward, and the stock in first hands is still large. Prices have given way 1s to 1s 6d for plantation, at which the greater part of 1,184 casks 660 barrels and bags found buyers: fine fine ordinary, 66s to 67s; low middling to good middling, 68s to 73s 6d; good, 75s to 76s 6d. 35 casks 1,301 barrels and bags native partly sold at 6d to 1s reduction, from 58s 6d to 59s 6d for ordinary pale to good ordinary. 542 bags ordinary brown Singapore were taken in at 58s to 58s 6d. 34 frazils good small berry Mocha realised 117s. 301 bales Alexandrie were bought in at 75s to 95s. 102 casks 757 barrels and bags Jamaica sold at 59s to 67s per cwt for fine ordinary to low middling. The deliveries for consumption have exceeded those of last year by 1,000 tons, and for export by 1,150 tons. The stock is 5,540 tons, against 6,000, 8,900, and 4,400 tons in 1859 to 1857 inclusive.

Cocoa.—453 bags Trinidad, by auction, found buyers at easier rates, from 72s to 84s per cwt for grey to good red; other kinds remain unaltered.

Tea.—The telegraphic notice received from China in the early part of the week occasioned more inquiry, but the trade and importers await the delivery of the letters. The latter refrain from selling freely. Common congou is firm, and may be quoted 1s 5d to 1s 5½d per lb. The sales yesterday comprised 12,280 packages, of which 4,980 were printed. Of the above quantity, 6,771 packages found buyers, including 3,079 boxes. The sales passed off briskly; a small advance was established on some descriptions of congou, chiefly common black-leaf and flavory kinds. Low scented caper also brought advanced rates.

Rice.—The improved demand noticed at the close of last week has not continued, and quotations are unaltered. Since Friday, however, considerable transactions are reported, including pinky Madras at 9s 7½d to 10s; good new Rangoon, 9s 10½d; Moulmein, 8s 9d; white Bengal, 10s 3d to 12s per cwt.

Imports and Deliveries of Rice to May 19, with Stock on hand.

	1860.	1859.	1858.	1857.

Stock	50100	75400	87840	34400

Rum.—The sales have been exceedingly limited since last week, and prices exhibit no change.

Spices.—101 bags common Singapore white pepper sold at easier rates, viz., 6d, a few lots 6¾d per lb. 305 bags pimento brought 3¼d to 3¾d; one pile good, 3¾d. Black Singapore pepper meets with partial inquiries by private treaty. 241 barrels Jamaica ginger sold at 4l 4s to 8l 10s for ordinary to fine; 110 bags African realised 39s to 39s 6d; 32 cases Cochin were bought in at 85s per cwt.

Saltpetre.—There has been a great deal of excitement in the market and considerable sales have been effected. On the spot, Bengal has ranged from 40s to 45s for refraction 15 to 4¾, and 45s 3d to 45s 6d for very fine up to 2¾ refraction; to arrive, 45s 3d to 45s 9d paid, according to time of selling, which is nearly 1s per cwt higher.

Imports and Deliveries of Saltpetre to May 12, with Stock on hand.

	1860.	1859.	1858.	1857.
	tons	tons	tons	tons
Imported	5500	7780	4500	6200
Delivered	5160	7580	6080	4600
Stock	4170	3150	5050	3660

Deliveries last week 170 tons.

Cochineal.—122 bags new Honduras black sold at the general valuations: low small and pasty to fair grain, 3s 4d to 4s 8d; 57 bags low Teneriffe silvers, 3s 3d to 3s 4d per lb.

Other Dyestuffs.—Sales of Cutch have been made on lower terms, viz., 26s 6d to 27s 3d for common to fair quality, and 26s to 26s 6d for heated. Gambier is firm at 17s 3d; the latter price paid for arrival. 120 bales Bengal safflower were bought in at 6l 10s to 10l per cwt.

Shellac.—Fair to good orange has sold at 10l to 10l 5s per cwt.

Sundries.—Star aniseeds were bought in at 100s, but sold yesterday at 90s to 90s 6d per cwt, being lower. Castor oil brought 5½d to 6¼d per lb for straw to middling seconds, being previous rates. New Zealand kowrie gum sold at 14s to 14s 6d per cwt.

Metals.—The few sales made this week have not established any change in prices. Foreign tin is rather more inquired after, with business in Straits at 129s to 130s. The Netherland Trading Company's sale of Banca will contain 141,950 slabs on the 28th proximo, with 20,000 more if imported before that date. Scotch pig iron has been almost stationary in price, viz., 51s 3d to 51s 6d per ton for mixed numbers. No sales are reported in spelter since last Friday.

Hemp.—Manilla remains dull. There have not been any public sales of jute this week.

Linseed.—Extensive supplies have arrived from the East Indies. Bombay can be obtained at 50s 6d; Calcutta, 48s 6d to 49s; for arrival, 50s and 47s 6d per quarter respectively. Black Sea for summer shipment can be had at 50s per quarter.

Turpentine.—1,000 barrels rough, out of the 4,800 imported, have sold at 9s. Spirits are dull at 35s to 35s 6d per cwt.

Oils.—Olive has been neglected. Linseed oil is less inquired after at 28s 3d on the spot. For forward deliveries there are sellers at 29s to 29s 6d. The transactions in rape have been moderate at 42s 6d for foreign refined; 45s for delivery in the last four months; brown, 40s and 43s per cwt. Cocoa-nut remains steady: Cochin, 45s; Ceylon, 43s. Palm is rather cheaper, viz., 45s per cwt. for fine Lagos.

Tallow.—There has been little animation in the market and moderate purchases made by the trade. 1st sort Petersburg Y.C. on the spot is quoted 52s to 52s 3d; for forward deliveries, 51s to 51 6d. There have been partial inquiries for the last three months' delivery, and the price this morning may be considered 51s per cwt.

Particulars of Tallow.—Monday, May 21.

POSTSCRIPT.

Friday Evening.

There were no public sales in Mincing lane to-day.

Sugar.—Privately further business was done in clayed Manilla at 37s per cwt. 2,660 casks West India have sold for the week.

Tea continues firm.

Saltpetre.—A small parcel of Bengal, refraction 6 per cent., sold at 45s per cwt.

Oil.—450 casks palm chiefly sold at 42s 9d to 45s 3d; and some few parcels of cocoa-nut: Cochin, 45s to 45s 3d; Ceylon, 42s 6d to 43s 3d; Sydney, 39s to 42s 6d per cwt.

Tallow.—Y. C., 52s on the spot. Town unaltered.

ADDITIONAL NOTICES.

Refined Sugar.—The home market for refined sugar has been very quiet this week, at a reduction of 6d per cwt for most descriptions of goods. Nothing doing for export. Some few sales of Dutch crushed have been made at lower prices.

Green Fruit.—Demand continues good, warm weather being in favour of consumption. Some cargoes St Michael and Valencia oranges, sold by Keeling and Hunt at public sale, were taken freely by the trade at prices in character with quality and condition. Lemons improved in value. More inquiry for nuts, owing to the Whitsun holidays. Lower prices are taken for black Spanish and Barcelona; Messina without alteration.

Dry Fruit.—Very little business doing in any article this week. The market generally is weak, stocks ample, and buyers over-cautious.

Colonial and Foreign Wool.—The sales continue to progress at full rates.

Flax.—Nothing done this week.

Hemp steady at the quotations.

Cotton.—Sales of cotton wool from Friday, 18th May, to Thursday 24th, inclusive:—150 bales Surat, at 3¾d to 4¼d for very middling Surat and good fair Sawginned; 250 bales Madras at 5d for fully fair Tinnivelly. The market has been dull, and the transactions by private contract limited, and at about previous prices. Yesterday, 990 bales Tinnivelly were offered at public sale, 420 of which were withdrawn; about 400 were sold at 3¾d to 4d for very middling, and 4¼d to 4¾d for middling fair to fair, being a decline of ¼d per lb from previous rates. 712 bales Surat and 300 Madras are advertised for public sale on Thursday, 31st inst.

Silk.—The market rather more active; prices without alteration.

Tobacco.—There has been an improved demand for middling qualities for home trade at steadier prices; more inquiry has been made for fine and coloury descriptions, and some sales effected. Two or three small parcels of middling and ordinary export qualities found buyers at present quotations.

Leather and Hides.—There has been rather more business doing in leather during the past week. At Leadenhall, on Tuesday, the supply of fresh goods was again small; but the demand, which was of a general character, was also limited in extent. Prices remain nearly unaltered. The public sales of foreign goods, this week, were entirely of tanned East India goat and sheep skins, of which not less than 360,000 were offered, and about 300,000 sold at fully previous rates.

ENGLISH OAK BARK.—At this season of the year, that of the bark harvest, the following information of its progress, extracted from the circular of Messrs. Thomas and James Powell, will be found interesting:—"During the last few days we have taken the usual means to obtain information from all parts of the country respecting the present bark harvest; and we beg to thank our friends who have so readily replied to our inquiries. With respect to the fall of oak this season, the reports, as usual, vary in different localities; but more than two-thirds of our correspondents estimate it at, or over, and the remainder at less than an average. The bark-producing counties of Sussex and Hampshire are among those where the 'fall' is below the average; while in Kent, Gloucestershire, and, with little exception, throughout the West of England and in Wales, it is larger. On one point all the communications we have received are unanimous—that the bark has stripped remarkably well; the chief danger to the quality lies in the rapid progress the trees have made, deteriorating the strength of the bark; but with this exception, in some districts only, all agree that the quality is good, the late rains not having done much injury. The prices in nearly every part of the country are lower. In Devonshire, where there was no great advance last year, the price is the same as last season; but elsewhere, almost universally, there is a reduction, varying from 10s to 30s per ton, probably an average of 20s per ton in the rinds. Nothing is settled as to the price of 'hatched bark delivered in London.' On the last point of information, as to the stocks of old bark on hand, we have various accounts; but the majority concur in stating it as not large, except in the hands of tanners."

METALS.—The metal market shows no revival, but in some instances there is still greater depression. Copper keeps dull in demand for all descriptions, with rather unfavourable prospects for the future. Iron continues to be reported in small demand from all quarters. Scotch pig varies but slightly. Tin is somewhat more inquired for, and Straits has become dearer. The annual sale of Banca is fixed for the 28th proximo, and present quantity 142,000 slabs, with an additional 20,000 afloat if it arrives in time. Spelter is neglected. Lead moves off but slowly. Tin plates are in better demand, and fetch better prices.

TALLOW.—Official market letter issued this evening:—

	s	d
Town tallow	52	0
Fat by ditto	2	8½
Yellow Russian	54	0
Melted stuff	38	6
Rough ditto	22	6
Greaves	16	0
Good dregs	7	9

Imports this week 65 casks.

PROVISIONS.

Bacon market firm at 70s f.o.b. for anything good; stocks short. Butter trade brisk. Fine Friesland fell from 112s on Monday to 108s. To-day, arrivals large, and all cleared off. French butter in firkins, if fine, makes some price. 102s was asked for Jersey, but not made. Business improving.

METROPOLITAN CATTLE MARKET.

MONDAY, May 21.—The total imports of foreign stock into London last week amounted to 5,215 head. In the corresponding week in 1859 we received 3,805; in 1858, 1,239; in 1857, 2,344; in 1856, 1,761; in 1855, 2,673; and in 1854, 3,185 head.

A very limited supply of beasts came fresh to hand from our grazing districts, and numerous buyers made their appearance from Ireland and various distant parts of England. The beef trade was, therefore, very brisk, at fully 4d per 8 lbs above last week's quotations—the best Scots having sold at quite 5s 6d per 8 lbs. Generally speaking, this was one of the dearest markets almost ever known. We were very scantily supplied with sheep, both as to number and quality. All breeds sold with great briskness, at from 10d to 1s per 8 lbs above the currencies realised on Monday last, the best Downs having produced 6s 6d per 8 lbs. Lambs moved off briskly, at 4d to 8d per 8 lbs more money. Calves were in very moderate supply, and brisk inquiry, at 4d to 6d per 8 lbs more money. The pork trade was active, at an improvement in the quotations of fully 4d per 8 lbs.

SUPPLIES.

	May 24, 1858.	May 23, 1859.	May 21, 1860.
Beasts	3616	3760	3480
Sheep and Lambs	20430	22040	22920
Calves	109	138	180
Pigs	415	310	420

THURSDAY, May 24.—Compared with Monday, a most important change has taken place in the trade here to-day. Prices have given way considerably, and much heaviness has prevailed in the demand. The supply of beasts was large, and all kinds changed hands slowly, at from 4d to 6d per 8 lbs less money. Sheep came somewhat freely to hand, and the inquiry for them was heavy, at 4d to 6d per 8 lbs decline. Lambs were a dull inquiry, and the currencies gave way 4d to 6d per 8 lbs. Calves were 4d to 6d lower, with a full average number on offer. The pork trade was in a depressed state, on easier terms; but for milch cows the inquiry was tolerably firm.

Per 8 lbs to sink the offal.

	s	d	s	d		s	d	s	d
Coarse and inferior beasts	3	8	4	0	Prime Southdown sheep	6	0	6	2
Second quality ditto	4	2	4	4	Large coarse calves	4	4	5	0
Prime large oxen	4	6	4	8	Prime small ditto	5	2	5	6
Prime Scots, &c.	4	10	5	0	Large hogs	4	0	4	6
Coarse and inferior sheep	4	4	4	8	Small porkers	4	8	5	0
Second quality ditto	4	10	5	4	Suckling calves...each	21	0	23	0
Prime coarse-woolled do.	5	6	5	10	Quarter old store pigs	23	0	30	0

Lambs, 6s 10d to 7s 8d.

Total supply—Beasts, 1,640; sheep and lambs, 10,000; calves, 350; pigs, 300.
Foreign supply—Beasts, 210; sheep, 880 calves, 196.

NEWGATE AND LEADENHALL.

FRIDAY, May 25.—The supplies of both town and country-killed meat having increased, the trade generally is less active, and Monday's advanced rates are not supported.

Per 8 lbs by the carcass.

	s	d	s	d		s	d	s	d
Inferior beef	3	4	3	6	Mutton, inferior	4	2	4	6
Middling ditto	3	8	3	10	— middling	4	8	5	0
Prime large	4	0	4	2	— prime	5	2	5	6
Prime small	4	2	4	4	Large pork	4	0	4	6
Veal	4	0	4	10	Small pork	4	1	5	0

Lambs, 5s 8d to 6s 8d.

HOP MARKET.

BOROUGH, Monday, May 21.—The growing weather of the last week has had a favourable effect on the bine, and though in some grounds the stock is very weak and backward, the general progress has been sufficient to check the business of our market. Prices are, however, maintained with considerable firmness. Mid and East Kents, 80s, 105s, 140s; Weald of Kents, 62s, 75s, 84s; Sussex, 62s, 70s, 76s.

FRIDAY, May 25.—There is a fair supply of fine Weald Kents and Sussex hops on offer. A few flies have made their appearance in Kent and Sussex.

POTATO MARKET.

SOUTHWARK WATERSIDE, Monday, May 21.—During the past week the arrivals both coastwise and by rail have been large for the season, and the weather mild, trade slow, and most sorts 10s to 15s per ton cheaper. The following are this day's quotations:—York Regents, 120s, to 140s; ditto Flukes, 120s to 140s; Lincolshire Regents, 100s to 120s; Dunbar ditto, 120s to 140s; ditto reds, 115s to 120s; Perth, Forfar, and Fifeshire Regents, 100s to 120s; ditto reds and Rocks, 100s to 120s; Irish whites, 90s to 100s per ton.

THURSDAY, May 24.—Since our last report the arrivals of home produce coastwise and by rail, have been moderate, and trade is very slow at the annexed rates:—York Regents, from 160s to 180s; ditto Flukes, 120s to 160s; Scotch ditto, 100s to 140s; ditto Cups, 110s to 130s; Dunbars, 120s to 140s; Rocks, 110s to 140s per ton.

HAY MARKETS.—THURSDAY.

SMITHFIELD.—Meadow hay, 3*l* to 4*l* 15s; clover, 4*l* to 5*l* 15s; and straw, 1*l* 6s to 1*l* 12s per load. A slow inquiry.

CUMBERLAND.—Meadow hay, 3*l* to 4*l* 17s; clover, 4*l* to 5*l* 15s; and straw, 1*l* 7s to 1*l* 14s per load. Trade rather dull.

WHITECHAPEL.—Meadow hay, 3*l* to 4*l* 15s; clover, 4*l* to 5*l* 17s 6d; and straw, 1*l* 6s to 1*l* 12s per load. A heavy demand.

LIVERPOOL MARKETS.

WOOL.

(FROM OUR OWN CORRESPONDENT.)

FRIDAY, May 25.—We continue rather quiet here, as the trade is still attending the public sales of fine colonial wools in London, which are progressing steadily at the opening rates. The arrivals here are on a moderate scale only, which tends to prices generally being well maintained.

CORN.

(FROM OUR OWN CORRESPONDENT.)

FRIDAY, May 25.—Corn market quiet but steady; wheat firm at one penny advance. Flour unchanged. Indian corn and beans continue firm. Oats and oatmeal unaltered.

METALS.

(FROM OUR OWN CORRESPONDENT.)

FRIDAY, May 25.—There is still great inactivity generally in the market for manufactured iron, but there is little change to note in prices. In Scotch pig iron there has been but limited business doing during the past week, and the market has still a downward tendency. Copper and lead have both been comparatively neglected at nominally previous rates. Most other metals remain without alteration.

The Gazette.

TUESDAY, May 22.

BANKRUPTS.

W. Bound, jun., Poole, corn merchant.
T. Holland, Rheidol terrace, Islington, manufacturer of hosiery.
L. Cook, Great Cambridge street, Hackney road, boot manufacturer.
P. Sampson, Hythe, Kent, bootmaker.
F. A. Pizzala and M. C. Greene, Hatton garden, looking glass manufacturer.
W. Wenham, late of Cannon street west, City, dealer in foreign fancy goods.

EPITOME OF RAILWAY NEWS.

TRAFFIC RETURNS.—The traffic returns of railways in the United Kingdom for the week ending May 12 amounted to 511,100*l*, and for the corresponding week of last year to 476,220*l*, showing an increase of 34,880*l*. The gross receipts on the eight railways having their termini in the metropolis amounted to 216,845*l*, and for the corresponding week of 1859 to 205,210*l*, showing an increase of 11,635*l*.

ILLINOIS CENTRAL.—The directors of this company have determined to authorise the treasurer to execute contracts to the owners of stock who may subscribe for the 8 per cent. bonds of the company, to an amount equal to the 25 per cent. uncalled upon any stock in the company held by them. The contracts were to have reference only to such shares of stock held as might be fully paid by the amount of the particular bonds subscribed for. The agents of the company were authorised to receive payments for the 8 per cent. bonds at the exchange of 4s 1d per dollar, and interest at the rate of 8 per cent. per annum would be allowed on all payments in advance until the 1st of September next, from which date the 8 per cent. bonds would bear interest.

MADRAS IRRIGATION AND CANAL COMPANY.—The directors state in their report that the progress made in their undertaking since the first ordinary meeting has been in the highest degree satisfactory. They remark:—"That the works as now planned, with their subsidiary channels, will irrigate and render cultivable vast tracts now lying waste, and will also form the natural line of communication between Madras and those tracts, as also with the extensive countries drained by the Kistnah, the Toombudra, and Pennar rivers and their tributaries, embracing the Southern Mahratta country with a large portion of the Nizam's dominions, &c., and that the Kistnah is believed to be navigable for a considerable distance, and capable of being rendered so, at a trifling expense, for 600 miles above Kurnool."

RAILWAY AND MINING SHARE MARKET.

LONDON.

MONDAY, May 21.—The railway market was rather firmer in the morning, but afterwards relapsed, and closed with an unsteady appearance. In the colonial market, Indian guaranteed were in better demand and firm; Grand Trunk of Canada stock also improved, while Great Western shares were the same as on Saturday. Foreign descriptions were generally unaltered. Great Luxembourg, however, were heavier, at 6½ to ⅝; and South Austrian and Lombardo-Venetian remained without recovery at ⅜ to ¼ dis. In American securities, New York and Erie shares advanced. New Brunswick and Nova Scotia Government debentures likewise left off ¼ per cent. higher. The transactions in mines were unimportant, and in some cases a rise took place, especially St John del Rey. No alteration occurred in joint stock banks. In miscellaneous descriptions, there was a decline in Electric Telegraph stock and in the shares of the Madras Irrigation, South Australian Land, and Red Sea Telegraph Companies. Victoria debentures, new, advanced to 106 to ¼. The Canadian loan was quoted 101¼ to ½ bonds, and 2 pm. scrip; Ocean Marine Insurance, 2¼ pm.

TUESDAY, May 22.—The railway market was rather firmer towards the close, and in several stocks an advance took place. There was no general change in colonial stocks; Grand Trunk of Canada was quoted a fraction lower at 32½ to 33. The principal feature in the foreign market was a recovery in Lombardo-Venetian, the final price being ⅛ dis to par. American railway securities were firmer, especially those of the New York Central. Mines also showed a stronger tendency, and in two or three cases an improvement was established. Joint stock banks closed about the same as yesterday. In miscellaneous descriptions, Red Sea Telegraph rallied to ¼ to ⅜ dis, while a decline occurred in Madras Irrigation. Victoria debentures, new, left off at 106¼ to ⅜; the Canadian loan, 101½ to ¾ bonds, and 2 pm. scrip.

WEDNESDAY, May 23.—Although only a moderate business was transacted in the railway market, prices generally showed firmness, with a recovery averaging from ¼ to ⅜ per cent. South-Eastern, Great Northern, Lancashire and Yorkshire, Caledonian, Great Western, and London and North-Western were principally influenced. The favourable state of the weather, and the expectation of a reduction in the Bank rate of discount, produced a satisfactory effect. The shares of the foreign lines did not fluctuate to any great extent, but Lombardo-Venetian were quoted rather better. In the various miscellaneous securities scarcely any movement occurred, though London and County Bank shares appeared slightly to improve.

THURSDAY, May 24.—The railway market again presented an improved appearance, and the final prices, although not the highest of the day, show in most stocks an advance. Indian guaranteed stocks continued steady. In foreign shares the principal movements were in South Austrian and Lombardo-Venetian. Brazilian shares were slightly firmer. In American railway securities the bonds and shares of the Illinois Central, Michigan Central, and New York and Erie improved. Mines also showed a better tendency, several descriptions being quoted higher. There was no change of importance in banking or miscellaneous shares.

FRIDAY, May 25.—The railway share market to-day was inactive, and not quite so firm as yesterday. In two or three instances, including South-Eastern and Lancashire and Yorkshire stocks, a reduction of about ¼ per cent. took place. The Indian and Canadian railway shares were quiet.

ON SPINAL AND OTHER DEFORMITIES.

PRACTICAL OBSERVATIONS on the CAUSES and TREATMENT of CURVATURES of the SPINE. Third edition, price 6s.

AND

Just published, second edition, price 1s 6d,

CASES and OBSERVATIONS illustrative of the beneficial results which may be obtained by close attention and perseverance, in some of the most unpromising instances of Spinal Deformity; with numerous Engravings. By SAMUEL HARE, F.R.C.S., &c.

"Mr Hare may take credit to himself for having effected much good in the treatment of the cases described."—BRITISH MEDICAL JOURNAL.

"Mr Hare is, we think, a sound and successful practitioner."—MEDICAL CIRCULAR.

"We unhesitatingly commend this work as a truthful and trustworthy statement of the power of scientific surgery and medicine over some of the most grievous hindrances to human activity and industry."—MEDICAL GAZETTE.

"The author has had much success in his plan of treatment, and we are of opinion that the principles on which he acts, in the treatment of these affections, are correct."—LANCET.

London: JohnChurchill; and may be had of al booksellers.

DR ROBERT ROWE ON INDIGESTION.

This day is published, price 2s 6d, the fifteenth edition,

NERVOUS DISEASES, Liver and Stomach Complaints, Low Spirits, General Debility, and Diseases of Warm Climates; the Result of Thirty Years' Practice.

By G. ROBERT ROWE, M.D.

"Dr Rowe claims with justice a priority of authorship, while he yields to none in his treatment. The value of this work is enhanced by its practical nature."—LANCET.

"We have no hesitation in placing this work among the first ranks. We entertain a high opinion of its value."—MEDICAL TIMES.

"This is a clever and useful work; contains much that is worthy of attention, and should be read by all martyrs to indigestion and other ills."—TIMES.

Also, by the same Author, 2nd edition, price 4s 6d, On some of the Important Diseases of Females and Children.

London: J. Churchill, and to be had of all booksellers.

DR. DE JONGH'S
(Knight of the Order of Leopold of Belgium)

LIGHT-BROWN COD LIVER OIL, administered with the greatest success in cases of CONSUMPTION, BRONCHITIS, ASTHMA, COUGHS, RHEUMATISM, GOUT, GENERAL DEBILITY, DISEASES OF THE SKIN, RICKETS, INFANTILE WASTING, AND ALL SCROFULOUS AFFECTIONS.

Extensive experience, and the recorded testimony of numberless eminent medical practitioners proves that a half-pint of DR DEJONGH'S Oil is equal in remedial effects to a quart of any other kind. Hence as it is incomparably the best, so it is likewise far the cheapest.

Palatableness, speedy efficacy, safety, and economy unitedly recomend this unrivalled preparation to invalids.

Opinion of A. B. GRANVILLE, Esq., M.D., L.R.C.P., F.R.S., Author of "The Spas of Germany," "On Sudden Death," &c.

"Dr Granville has found that DR DE JONGH'S Cod Liver Oil produces the desired effect in a shorter time than others, and that it does not cause the nausea and indigestion too often consequent on the administration of the Pale Newfoundland Oils. The Oil being, moreover, much more palatable, Dr Granville's patients have themselves expressed a preference for Dr De Jongh's Light Brown Cod Liver Oil."

Sold ONLY in IMPERIAL Half-pints, 2s 6d; Pints, 4s 9d; Quarts, 9s, capsuled, and labelled with DR DE JONGH'S stamp and signature, WITHOUT WHICH NONE CAN POSSIBLY BE GENUINE, by respectable chemists.

SOLE CONSIGNEES,
ANSAR, HARFORD, and CO. 77 STRAND, LONDON, W.C

BUENOS AYRES AND SAN FERNANDO RAILWAY COMPANY, Limited.—Guaranteed 7 per cent.—The Directors are prepared to receive, on or before the 1st June, Tenders for the Shares reserved for the contractors and concessionaires. The terms and forms of tender may be obtained at the Company's offices, 84 King William street, E.C.—By order of the Board, A. ELBOROUGH, Sec.
May 16, 1860.

INVERNESS AND ABERDEEN JUNCTION RAILWAY.
ISSUE OF NEW SHARES.

The Inverness and Aberdeen Junction Railway Company having, under the powers of "The Inverness and Aberdeen Junction Railway Act, 1860," resolved upon issuing further Capital to the extent of £100,000, in shares of £10 each, bearing a Preference Dividend, payable Half-yearly, at the rate of 4½ per cent. per annum, the Directors are now prepared to receive applications from the public for portions of the same.

These shares represent the only stock in the Company having any preference, and the dividend on them will be paid before any dividend is paid upon the existing or ordinary shares of the Company, the whole being amply secured by a surplus income.

Applications may be made for one or more shares to the Secretary, at Inverness, or through a Broker or Agent.—By order of the Board,
AND. DOUGALL, Secretary.
Company's office, Inverness, 30th April, 1860.

THE SCINDE RAILWAY COMPANY

CHAIRMAN.
W. P. Andrew, Esq., 26 Montague square.
GOVERNMENT DIRECTOR.
Sir James C. Melvill, K.C.B.
Sir Herbert Maddock (late Deputy-Governor Bengal).
J. Edmund Anderdon, Esq. (Director of the Bank of London).
Major J. A. Moore, F.R.S. (Director of the National Provincial Bank of England).
Harry Borradaile, Esq. (late Bombay Civil Service.)
Thomas Williams, Esq., Grove End road, Regent's Park.
Sir Frederick Arthur, Bart. (Gloucester square, Hyde Park).

AUDITORS.
Philip Anstruther, Esq. (Deputy-Chairman of the Bank of England).
George Gordon Macpherson, Esq. (Director Agra Bank).

The Directors are prepared to receive tenders of sums of not less than £100 of the unappropriated portion of the £250,000 Debentures, payable in five years, about to be issued under the guarantee of the Secretary of State for India in Council, bearing 5 per cent. interest, and convertible into Stock at par, at the option of the holder.—By order of the Board,
THOS. BURNELL, Secretary.
Gresham House, Old Broad street, April 10, 1860.

PIANOFORTES.
CRAMER, BEALE, and CO.
NEW MODEL OBLIQUE GRAND PIANO, and every description, warranted.
Lists of Prices and Terms for Hire, post free.
201 Regent street.

HARMONIUMS.
CRAMER, BEALE, and CO.
Description and List of Prices, post free. Also,
SECOND-HAND HARMONIUMS
in great variety.
201 Regent street,

FREDERICK DENT,
Chronometer, Watch and Clock Maker to the Queen and Prince Consort, and the maker of the Great Clock or the Houses of Parliament, 61 Strand, and 34 Royal Exchange. No connection with 33 Cockspur street.

EAU-DE-VIE.—THIS PURE PALE BRANDY, though only 16s per gallon, is demonstrated, upon analysis, to be peculiarly free from acidity, and very superior to recent importations of veritable Cognac. In French bottles, 34s per dozen; or securely packed in a case for the country, 35s.
HENRY BRETT and CO.,
Old Furnival's Distillery, Holborn.
To be obtained only at their Distillery.

VOLUNTEER PIPE.—RIFLE BORE.—The most delightful, economical, and permanent medium for the enjoyment of tobacco ever invented. This new pipe only to be had of the patentee. Sample pipe in case sent post free for 24 stamps.—EDWARD PILLINER, 53 Great Queen street, London, W.C.

AT HAMBLY HOUSE ACADEMY Streatham Common, Surrey, Young Gentlemen are carefully Educated for the Public Schools, Military Colleges, Professions, or Commerce, by Mr R. S. TROUSDALE, L.C.P., aided by highly qualified assistant masters.

The domestic arrangements are on the most liberal scale; and the house is very delightfully situated. The terms for pupils under ten years of age, 30 guineas per annum; ten and under fourteen, 35 guineas per annum; fourteen, 40 guineas per annum. The above amount includes board and instruction in the Latin, Greek, French, and English Languages, Writing, Arithmetic, Merchants' Accounts, History, Geography, the Use of the Globes, Astronomy, Geometry, Algebra, and the other branches of the Mathematics. A library is devoted to the instruction and amusement of the pupils during their leisure hours. Religious works are provided for Sunday perusal; and lectures on various popular subjects are occasionally delivered. German Drawing, Dancing, and Music, on the usual terms. Washing, half-a-guinea per quarter. Drilling during the summer months, at a trifling charge; and board during a vacation, four guineas. All accounts are expected to be settled quarterly. Excellent accommodation for foreigners or gentlemen of neglected education. A quarter's notice of removal is required.

JULLIEN FUND.

Committee Room—50 New Bond street.

The Committee of the Jullien Fund, fearing that the subscriptions have been materially checked by the unfortunate death of Mons. Jullien, desire to explain that a widow and others, members of his family, can be protected from want only by the kind aid of those who appreciate the great services rendered by the late lamented maestro to the cause of the musical education of the English people.

The Committee confidently appeal to that benevolence for which their countrymen are so distinguished, for such prompt and liberal additions to the subscription list as shall enable them to do some justice to the memory of M. Jullien, and at the same time afford adequate relief to his bereaved family.

COMMITTEE for the DISTRIBUTION of the JULLIEN FUND.

Mr John Mitchell	Mr W. Duncan Davison
Mr W. R. Sams	Mr Julee Benedict
Mr Thomas Chappell	Mr A. Blumenthal

HONORARY TREASURERS

Mr John Mitchell, 33 Old Bond street
Mr T. Chappell, 50 New Bond street
Mr W. R. Sams, 1 St James's street

BANKERS.

Messrs Coutts and Co., Strand
Heywood, Kennards, and Co., Lombard street
London and County Bank, Hanover square

Who, as well as the honorary treasurers, have kindly consented to receive subscriptions.

April, 25th, 1860.

ADOPTED LARGELY BY HER MAJESTY'S GOVERNMENT.

CHEAP, LIGHT, AND DURABLE ROOFING.

CROGGON'S PATENT ASPHALTE ROOFING FELT has been extensively used and pronounced efficient and particularly applicable for warm climates

1st. It is a non-conductor.

2nd. It is portable, being packed in rolls, and not liable to damage in carriage.

3rd. It effects a saving of half the timber usually required.

4th. It can easily be applied by any unpractised person.

5th. From its lightness, weighing only about 42 lbs to the square of 100 feet, the cost of carriage is small.

INODOROUS FELT, for damp walls and for damp floors, under carpets and floor cloths; also for lining iron houses, to equalise the temperature.

Price ONE PENNY PER SQUARE FOOT.

CROGGON and CO'S PATENT FELTED SHEATHING for Covering Ships' Bottoms, &c., and

DRY HAIR FELT, for Covering Steam Boilers, Pipes, &c., preventing the radiation of Heat, and saving 25 per cent. of Fuel.

Samples, testimonials, and full instructions, on application to CROGGON and CO, 2 Dowgate hill, London and at 2 Goree Piazzas, Liverpool.

A TOILETTE REQUISITE FOR THE SPRING.—Among the many luxuries of the present age, none can be obtained possessing the manifold virtues of OLDRIDGE'S BALM of COLUMBIA. If applied to the roots and body of the hair, it imparts the most delightful coolness, with an agreeable fragrance of perfume. It also at this period of the season prevents the hair from falling off, or if already too thin or turning grey will prevent its further progress, and soon restore it again. Those who really desire o have beautiful hair, either with wave or curl, should use it daily. It is also celebrated for strengthening the hair, freeing it from curf, and producing new hair, whiskers, and moustache. Established upwards of thirty years. No imitative wash can equal it. Price 3s 6d, 6s, and 11s only.—C. and A. Oldridge, 22 Wellington street, Strand, W.C.

KEATING'S COUGH LOZENGES.—Statistics shew that 50,000 persons annually fall victims to Pulmonary Disorders, including Consumption, Diseases of the Chest, and the Respiratory Organs. Prevention is at all times better than cure; be, therefore, prepared during the wet and wintry season with a supply of Keating's Cough Lozenges, which possess the virtue of averting, as well as of curing a cough or cold; they are good alike for the young or for the aged—they soothe bronchial irritation, and for improving the voice, the Preacher, Statesman, Singer, and Actor, have long patronised them.

IMPORTANT TESTIMONIAL.

Cure of Asthma of several years' standing.—"Caluscross, near Stroud, Gloucestershire.—Sir,—Having been troubled with Asthma for several years, I could find no relief from any medicine whatever, until I was induced about 2 years ago to try a box of your valuable lozenges, and found such relief from them, that I am determined for the future never to be without a box of them in the house, and will do all in my power to recommend them to my friends. If you consider the above testimonial of any advantage, you are quite at liberty to make what use of it you please.—I am, sir, your most obliged servant, W. J. Tarce."—Thomas Keating, Esq.

Prepared and sold in boxes, 1s 1½d, and tins, 2s 9d, 4s 6d, and 10s 6d each, by Thomas Keating, Chemist, &c., 79 St Paul's churchyard, London. Retail by all Druggists and Patent Medicine Vendors in the world.

N.B.—To prevent spurious imitations, please to observe that the words "KEATING'S COUGH LOZENGES" are engraven on the Government Stamp of each Box, without which none are genuine.

Post free for Two Stamps.

EXTRAORDINARY DISCOVERY

of an Entirely NEW THEORY of CURING DISEASE, being the recorded experience of 30 years' special practice in Great Britain, France, and America—with evidence of the actual effects of the latest Scientific Discoveries, denominated NEW LOCAL REMEDIES, with the adjuncts of Constitutional Treatment not yet generally known, even by the medical faculty of the British Empire, but which have been recently introduced into England. Sent free on receipt of two stamps to defray postage, &c., by W. HILL, Esq., M.A., No. 27 Alfred place, Bedford square, London, W.C.—Daily consultations from Eleven till Two, and Six to Eight Evening.

FLEET STREET.

A NEW DISCOVERY IN TEETH.

MR HOWARD, SURGEON-DENTIST 52 Fleet street, has introduced an ENTIRELY NEW DESCRIPTION of ARTIFICIAL TEETH, fixed without springs, wires, or ligatures. They so perfectly resemble the natural teeth, as not to be distinguished from the originals by the closest observer; they will never change colour or decay, and will be found superior to any teeth ever before used. This method does not require the extraction of roots, or any painful operation, and will support and preserve teeth that are loose, and is guaranteed to restore articulation and mastication; and that Mr Howard's improvement may be within reach of the most economical, he has fixed his charges at the lowest scale possible. Decayed teeth rendered sound and useful in mastication. 52 Fleet street.—At home from 1 till 5.

ANOTHER CURE OF ASTHMATIC COUGH by DR LOCOCK'S PULMONIC WAFERS.—From Mr J. Richardson, bookseller, Seaham, May 1, 1860.—"Gentlemen,—Having for some time been troubled with asthma and cough, and not being able to get any medicine that would relieve me, I was recommended to try Dr Locock's Pulmonic Wafers, and before I had finished one box I was nearly well. Whenever I get a cold and return of cough I take some of the wafers, which give me immediate relief.—I am, gentlemen, yours, &c., T. B. Brown."—To singers and public speakers, Dr Locock's Wafers are invaluable for clearing and strengthening the voice. They have a pleasant taste. Price 1s 1½d, 2s 9d, and 11s per box. Sold by all druggists.

CONSUMPTION AND ASTHMA CURED.—Dr H. JAMES discovered, while in the East Indies, a Certain Cure for Consumption, Asthma, Bronchitis, Coughs, Colds, and General Debility The remedy was discovered by him when his only child, a daughter, was given up to die. His child was cured and is now alive and well. Desirous of benefiting his fellow-creatures, he will send, post free, to those who wish it, the recipe, containing full directions for making and successfully using this remedy, on receipt of their names, with stamped envelope for return postage.—Address to O. P. Brown, 14 Cecil street, Strand.

RUPTURES.—BY ROYAL LETTERS PATENT

WHITE'S MOC-MAIN LEVER TRUSS is allowed by upwards of 200 Medical Gentlemen to be the most effective invention in the curative treatment of HERNIA. The use of the steel spring, so often hurtful in its effects, is here avoided, a soft bandage being worn round the body while the requisite resisting power is supplied by the MOC-MAIN PAD and PATENT LEVER, fitting with so much ease and closeness that it cannot be detected, and may be worn during sleep. A descriptive circular may be had, and the Truss (which cannot fail to fit) forwarded by post, on the circumference of the body two inches below the hips being sent to the Manufacturer,

Mr WHITE, 228 Piccadilly London.

Price of a single Truss, 16s, 21s, 26s 6d and 31s 6d; Postage, 1s. Double ditto, 31s 6d, 42s, and 52s 6d; postage, 1s 8d. Post-office orders to be made payable to John White, Post-office, Piccadilly.

ELASTIC STOCKINGS KNEE CAPS, &c., for VARICOSE VEINS, and all cases of WEAKNESS and SWELLING of the LEGS, SPRAINS, &c. They are porous, light of texture, and inexpensive, and are drawn on like an ordinary stocking. Price from 7s 6d to 16s each; postage, 6d.

WHITE, MANUFACTURER 228 Piccadilly, London

THE HUMAN HAIR.

Just published, price 1d, the 76th edition of

GRIMSTONE'S THREE MINUTES' ADVICE on the Growth, Cultivation, and Preservation of the Human Hair. This unique little work contains two engravings and many letters of undoubted authority, proving Grimstone's Aromatic Regenerator to be the only article that will produce a new growth of human hair, eyebrows, moustachios, whiskers, with a new growth of hair upon bald places. Sold in triangular bottles, 4s, 7s, and 11s. This size contains four of the 4s size; by post 12s, case and postage included

Grimstone's Eye-Snuff for exportation. Sold in Jars 8s per lb; or in Tin Canisters, 8d, 1s 3d, 2s 4d, 4s 6d and 8s 6d. His Medicated Eye-Snuff, samples 1s 1½d 2s 9d, and 4s 6d. This snuff is intended for Ladies or Gentlemen who are not Snuff Takers. All letters to William Grimstone, merchant, 52 High street, Bloomsbury.

A New Edition of

THE PHILOSOPHY OF MARRIAGE.

By JOSEPH KAHN,

Graduate in Medicine, Surgery, and Midwifery in the Royal and Imperial University of Vienna, Erlangen, &c., &c.

This popular work (which has been translated into four different languages) has now gone through forty-one editions of 10,000 each, and is designed to impart accurate knowledge on subjects which involve, the means of securing moral and physical happiness.

Price One Shilling, or, post free, for Twelve Stamps, direct from the Author, 17 Harley street, Cavendish square, London, W.

A Boon to Nervous Sufferers.

GIVEN AWAY.—26,000 COPIES of a Medical Book, for the benefit of Nervous Sufferers, sent, post free, by the author, secure from observation, on receipt of a directed envelope, enclosing two stamps, the Private Medical Friend, a new work on the Self-cure of Nervous Debility, Loss of Memory, Dimness of Sight, Lassitude, Indigestion, Dislike to Society, &c, which, if neglected, result in consumption, insanity, and premature death, with plain directions for perfect restoration to health and vigour. The true guide to those who desire a speedy and private cure.—By HENRY SMITH, Esq., 8 Burton crescent, Tavistock square, London, W.C.

HOLLOWAY'S PILLS, FOR THE CURE OF DROPSICAL AFFECTIONS.—The causes of Dropsy are very various. It is often engendered by the morbid state of the system. When the circulation is sluggish, impoverished, or impure, the first thing to be done to effect a cure is to correct the depraved humours of the blood, and give tone to the stomach. They are a gentle but most effective aperient and purifier. They speedily put the whole system into order, and give the patient more strength and sounder health than perhaps he ever enjoyed before at any period of his life. Printed directions for the use of the pills are given with each box.

DR KAHN CONTINUES TO deliver Daily, at Three and Eight o'clock, his popular Lecture on the "Philosophy of Marriage," at his Anatomical Museum, top of the Haymarket.

The Museum is open (for gentlemen only) from Twelve to Five, and from Seven to Ten. Admission, One Shilling.

Dr Kahn's treatise on the above subject, sent post free for twelve stamps, direct from the author, 17 Harley street, Cavendish square.

VALUABLE INFORMATION.—GRATUITOUS EDITIONS of the following LECTURES, delivered at the Royal Institute of Anatomy, Science, and Medicine, 369 Oxford street, London, by W. B. MARSTON, the Principal, are being issued, with plain directions for SELF-TREATMENT and CURE in each of them.

No. I.—NERVOUS DEBILITY (the result of youthful error), loss of memory, shortness of breath, dimness of sight, exhaustion, and general incapacity. Addressed specially to Young Men.

No. II.—MARRIAGE: Its Obligations and Impediments. Addressed to those who contemplate Marriage, and to the Married who desire Children.

No. III.—THE BRAHMIN'S ELIXIR OF LIFE: Its History—Secret Remedies of the Hindoos no Fable—Full Particulars of this Extraordinary Specific—Its Amazing Powers as a Reinvigorator of the Impaired Functions, and in all Cases of Nervous Debility.

No. IV.—THE DISEASES INFLICTED UPON MANKIND BY THE GREAT SOCIAL EVIL. With a simple means of complete Cure without Mercury.

Each Lecture, neatly printed and bound, will be sent GRATIS, on receipt of two stamps to prepay postage, or THE WHOLE FOUR, BOUND TOGETHER, with numerous additions, and full directions for SELF-TREATMENT and CURE, 160 pages, 8vo, post free, for Six Stamps. Address, Treasurer, Royal Institute, 369 Oxford street, London.

MEDICAL ADVICE.

DR LA'MERT, REGISTERED L.S.A., Honorary Member of the London Hospital Medical Society, M.D. of the University of Erlangen, &c., may be CONSULTED on all cases of Debility Nervousness, and the Secret Infirmities of Youth, and Maturity, from 11 till 2, and from 6 till 8, at his residence,

37 BEDFORD SQUARE, London.

Dr La'Mert has just published, price Sixpence, with numerous Engravings and Cases, a New Edition of his Work, entitled,

SELF-PRESERVATION

which will be sent free in a sealed envelope, Mann, 39 Cornhill, London, or by the Author to any address, for eight stamps.

---

TO THE NERVOUS AND DEBILITATED.

Just published, the 125th thousand, with numerous plates, in a sealed envelope, price 1s, sold by all booksellers, or post paid, by the Author, for 12 stamps,

MANHOOD: THE CAUSE AND CURE of PREMATURE DECLINE, with Plain Directions for Perfect Restoration to Health and Vigour. By J. L. CURTIS, 15 Albemarle street, Piccadilly, London.

CONTENTS.

INTRODUCTORY CHAPTER on the Physiological Structure and Functions of the Reproductive Organs.

CHAPTER II.—Causes of Spermatorrhœa and Impotence; Early Vicious Indulgences; Dangers of Neglect.

CHAPTER III.—A Review of the Disqualifications of Marriage; whether resulting from the Youthful Abuse, the Follies of Maturity, the Effects of Climate, or Infection.

CHAPTER IV.—Plan of Treatment, Medical and Moral, with observations on a new and successful mode of detecting Spermatorrhœa and other Urethral discharges by microscopic examination.

CHAPTER V. and VI. on the modern Treatment of Gonorrhœa and Syphilis.

The Book concludes with numerous interesting cases, to which is added the Author's receipt of a preventive Lotion.

MR CURTIS, author of the above Medical Treatise, may be consulted as usual. The efficacy and harmless nature of the remedies employed by MR CURTIS having been demonstrated by a successful practice extending over a period of 20 years nervous sufferers have a perfect guarantee that the utmost skill and experience will be made available in the treatment of their cases.

Consultations from 10 till 12 till 3, and 6 till 8. Sundays from 10 till 1.

HUBBUCK'S PATENT WHITE ZINC PAINT.

By their process, which is patented, Pure White Zinc Paint is cheaper than White Lead. It is the most durable and beautiful paint known, and does not stain or discolour with the London atmosphere.

CHEAPNESS.—Two hundred-weight of this Paint, with six gallons of Oil, covers as much surface as three hundred-weight of White Lead and twelve gallons of Oil. It is cheaper in the first instance, as well as desirable on every consideration.

ADULTERATIONS.—Prejudice is caused by some Paint Grinders selling Zinc Paint adulterated with Sulphate of Barytes, some even to the extent of thirty per cent. Whether this is sold under the name of "Improved Zinc Paint," or is candidly sold as Number Two or Three qualities, no Painter can produce good work with it. He naturally condemns Zinc Paint altogether.

That Painters have never seen the best Zinc Paint is evident, or they would not use any other paint for their best work. To prevent the prejudice which the inferior article must produce, each Cask of Pure White Zinc is stamped

"HUBBUCK, LONDON, PATENT."

THOMAS HUBBUCK and SON, WHITE LEAD, OIL, PAINT and VARNISH WORKS, 24 LIME STREET.

Messrs ALLSOPP and SONS take the opportunity of announcing to private families that their Ales, so strongly recommended by the medical profession, may be procured in Bottles and Casks, and on Draught, from all the most respectable wine and beer merchants and licensed victuallers, on "ALLSOPP'S PALE ALE" being especially asked for.

When in bottle, the genuineness of the table can be ascertained by its having "ALLSOPP and SONS" written across it upon red and white ground striped.

The Brewery, Burton-on-Trent, April 30, 1860.

TEETH.—MR ESKELL, Surgeon Dentist, 314 Regent street (facing the Polytechnic), supplies his PATENTED INCORRODIBLE TEETH, which can be matched so closely in shape and colour to those left in the mouth, and are formed so exactly to nature, that the closest observer cannot detect the difference, and in all cases they restore perfect articulation and mastication. These teeth are fixed from one to a complete set upon Mr Eskell's never-failing and painless principle of SELF-ADHESION, without extracting any teeth or stumps, or giving any pain whatever; and being incorrodible, they possess the superior advantage of never changing colour nor decaying. Mr Eskell's celebrated OSTEOPLASTIC ENAMEL for stopping Decayed Teeth is a preparation which never changes colour nor affects the colour of the tooth, and is free from any injurious properties either as regards the teeth or general health. Its application is easily performed, and without giving the slightest pain. Deficiencies of palate effectually remedied. Loose teeth fastened. Teeth regulated. Discoloured teeth restored, &c. Hours, Ten to Six. Consultation free. Charges strictly moderate.—314 Regent street, London (opposite the Polytechnic). Established 1847.

IMPORTANT NOTICE.

GLENFIELD PATENT STARCH is the only STARCH used in HER MAJESTY'S LAUNDRY.

And as some unprincipal Parties are now making and offering for Sale an Imitation of the

GLENFIELD STARCH,

we hereby caution all our Customers to be careful, when purchasing, to see that the word GLENFIELD is on each Packet, to copy which is Felony.

WOTHERSPOON and CO., Glasgow and London.

DEANE'S TWO-HOLE BLACK PENS which are unequalled for their durability and easy action, are adopted by the gentlemen of the Stock Exchange, and the principal bankers, merchants, and public companies of the city of London, besides several of Her Majesty's judges, the most eminent counsel, and the reverend the clergy. Their cheapness and popularity has induced many unprincipled people to put forth imitations of the genuine articles, which are equally useless to the purchaser, and disgraceful to the vendor. The public are therefore cautioned, and respectfully requested not to purchase any as DEANE'S GENUINE TWO-HOLE BLACK PENS, unless each pen is stamped

"G. and J. Deane, London Bridge,"

and the box, which contains exactly twelve dozen, has thereon a variously coloured label, inscribed

"G. and J. DEANE'S Two-Hole Black Pens, 46 King William street, London bridge."

HANDSOME BRASS AND IRON BEDSTEADS.—HEAL and SON'S Show Rooms contain a large assortment of Brass Bedsteads, suitable both for Home use and for Tropical Climates; handsome Iron Bedsteads with Brass Mountings and elegantly Japanned; Plain Iron Bedsteads for Servants; every description of Wood Bedstead that is manufactured, in Mahogany, Birch, Walnut-tree Woods, Polished Deal and Japanned, all fitted with Bedding and Furniture complete, as well as every description of Bedroom Furniture.

HEAL AND SON'S ILLUSTRATED CATALOGUE, containing Designs and Prices of 100 Bedsteads, as well as of 150 different articles of Bedroom Furniture, sent free by post.—HEAL and SON, Bedstead, Bedding, and Bedroom Furniture facturers 196 Tottenham court road W.

DINNEFORD'S

PURE FLUID MAGNESIA has been for many years sanctioned by the most eminent of the Medical Profession, as an excellent remedy for acidities, heartburn, headache, gout, and indigestion. As a mild aperient it is admirably adapted for delicate females, particularly during pregnancy; and it prevents the food of infants from turning sour during digestion. Combined with the Acidulated Lemon Syrup, it forms an effervescing aperient draught which is highly agreeable and efficacious.

Prepare by DINNEFORD and CO., Dispensing Chemists (and General Agents for the Improved Horse Hair Gloves and Belts), 172 New Bond street, London, and sold by all respectable Chemists throughout the empire.

NO MORE MEDICINE.—For Habitual Constipation, Indigestion (Dyspepsia), Diarrhœa, Nervous, Bilious, and Liver Complaints.

DU BARRY'S delicious Health-restoring REVALENTA ARABICA FOOD.—Certificate No. 30,418. In our practice we have been enabled to appreciate the virtues of Du Barry's Food. In its effect on chronic Dyspepsia (Indigestion), Nervousness, Constipation, Diarrhœa, Bilious and Liver Complaints, Cough, Asthma, Debility and incipient Consumption, we find it the safest remedy. Dr Ure, M.D., F.R.S.; Dr Harvey; Dr Bright, Dr Sherland; Dr Campbell.

At a cost of about a penny per meal, it speedily cures constipation, dyspepsia (indigestion), nervousness, flatulency, distension, phlegm, biliousness, liver complaints, hysteria, neuralgia, sleeplessness, acidity, congestion, blood to the head, headaches, loss of memory, indecision, nervous fancies, palpitation, heartburn, eruptions, impurities, fever, irritability, low spirits, diarrhœa, dysentery, noises in the head and ears, debility, diabetes, pains between the shoulders, cramps, spasms, nausea and sickness, sinking, fits, colds, catarrhs, cough, asthma, bronchitis, consumption, debility, gout, rheumatism, hæmorrhoids, also children's complaints, and saves fifty times its cost in medicine. It does not interfere with a liberal diet, but imparts a healthy relish for lunch and dinner, and restores the faculty of digestion and nervous and muscular energy to the most enfeebled. We extract a few of many thousand cures:

Cure No. 1,771.—Lord Stuart de Decies of many year's dyspepsia.——Cure No. 49,832.—"Fifty year's indescribable agony from dyspepsia, nervousness, asthma, cough, constipation, flatulency, spasms, sickness and vomiting, have been removed by Du Barry's excellent food."—Maria Joly, of Lynn, Norfolk.——Cure No 53,816.—Field Marshal the Duke of Pluskow, of dyspepsia, constipation, nervousness, and liver complaints, which had resisted all baths and medical treatment.——Cure No. 47,121.—Miss Elizabeth Jacobs, of extreme nervousness, indigestion, gatherings, low spirits, and nervous fancies.——Cure No. 54,816.—From the Rev. James T. Campbell Syderstone Rectory, near Fakenham, Norfolk: "In all cases of indigestion, and particularly when the liver is affected, I consider Du Barry's Revalenta Arabica food the best of all remedies."—James T. Campbell.

Sold in canisters, 1 lb, 2s 9d; 2 lbs, 4s 6d; 12 lbs, 22s; 24 lbs, 40s. Super-refined quality, 5 lbs 22s; 10 lbs, 33s. The 10 lb, 12 lb, and 24 lb canisters carriage free, on receipt of post-office order by Barry Du Barry and Co., 77 Regent street, London; Fortnum, Mason and Co. Piccadilly, London; Abbis, 60 Gracechurch street and all grocers and chemists.

FIRST-CLASS PROTESTANT EDUCATION, at the Royal Continental Collegiate Institution, Bushey heath, Herts.—In addition to all its qualities as a first-rate classical and commercial school, it is also highly recommended for a thorough French education. Some of the parents who are continually visiting France, and whose sons have scarcely been two years at this school, are most happy to assure those parents who are desirous that their children should acquire a thorough knowledge of the French language, without wishing them to neglect their English and classical education, that their sons speak far better and more grammatically than any of the sons of their friends who have spent two or three years in schools in France merely for the purpose of acquiring that language. Terms inclusive, and vary, according to age and requirements, from £40, £50, to £60 per annum—id est, four terms, each of 75 days' duration, with two months' holidays. Pupils are received any day, their term beginning from the day of their arrival. No restrictions to parents. Not one case of illness has occurred since the school has been established (1857).—Address, stating age and requirements, Professor Vellère (late of the Harrow Preparatory School), Bushey heath, Herts. The pupils wear a uniform very elegant and becoming.

THE FORTY-SEVEN SHILLING SUITS ARE MADE TO ORDER FROM Scotch Cheviot Tweeds, and Angolas, all wool, and thoroughly shrunk, by B. BENJAMIN, Merchant and Family Tailor, 74 Regent street, W. The Two Guinea Dress and Frock Coats, the Guinea Dress Trousers, and the Half-Guinea Waistcoats. N.B.—A Perfect Fit guaranteed.

LAWRENCE HYAM announces that his New Stock of Clothing for the Season of 1860, consisting of the largest and choicest variety of Spring and Summer attire ever designed, is now ready for inspection, and to which he solicits public attention and patronage. The greatest confidence may be placed in the durability and style of all garments, combined with the utmost economy in price.

LAWRENCE HYAM invites attention to his Surtout and Dress Coats, varying from 25s to 50s. The Material, Style, Fit, and make are perfect, and cannot fail to give general satisfaction.

LAWRENCE HYAM'S Spring and Summer Overcoat and Undress Jackets are first in fashion, serviceable in wear, and beautiful in design. Price, 16s, 21s, 30s, 42s, and 50s.

LAWRENCE HYAM'S Guinea Coats, 38s Suits, 15s and 17s Trousers, and 6s Vests, are "Household Words" in every family. An immense variety of the newest patterns to select from, specially made for the Spring and Summer Season of 1860.

LAWRENCE HYAM'S Ordered Department is complete in all its arrangements. The most talented cutters and best workmen only are employed, whereby perfection in Fit, Elegance, and Style, are always secured at moderate prices.

Observe—The only Establishments of Lawrence Hyam are:—City, 36 Gracechurch street; West-end, 189 and 190 Tottenham court road.

SPRING AND SUMMER ATTIRE.—E. MOSES and SON beg to state, that their preparations for Spring and Summer exceed any of their former efforts as well in extent as in variety. They have visited the principal markets both at Home and Abroad for the best and newest manufactures, and have succeeded in collecting such an assortment of goods as has never before been exhibited under one roof in this or any other country.

Their Bespoke Tailoring Departments have been supplied with an endless variety of the choicest and most popular fabrics.

Their Ready Made Clothing Stock is complete in every respect, and they venture to say that for Elegance of Style, Durability of Material and Workmanship, Tastefulness of Finish and Cheapness, it is quite unequalled, even in the Metropolis of England.

No less care has been bestowed on the Hosiery, Hat and Cap, and Boot and Shoe Departments, which have been furnished with an entirely new stock of fashionable and seasonable goods at such prices as enable the proprietors to offer their patrons very great advantages.

N.B.—E. MOSES and SON take this opportunity of announcing, that they intend giving their customers the full benefit of the abolition of the duty on silks, gloves, &c.

E. MOSES and SON, Corner of MINORIES and ALDGATE, and Corner of NEW OXFORD STREET and HART STREET.

COUNTRY BRANCHES—Bradford & Sheffield, Yorkshire.

E. MOSES and SON wish it to be particularly observed that if any article be not approved of it will be exchanged, or the money returned without hesitation.

Their Book for Spring and Summer, containing "The Growth of an Important Branch of British Industry," with rules for self-measurement, and list of prices, may be had gratis on application, or post free.

THE "INDISPENSABLE" SUIT, made in various colours and patterns, and particularly adapted for walking, riding, travelling, and business. This is universally acknowledged to be the most comfortable and serviceable suit ever introduced. Price from 35s.—To be obtained of E. MOSES and SON, Corner of MINORIES and ALDGATE, and Corner of NEW OXFORD STREET and HART STREET.

TOURISTS AND EXCURSIONISTS are specially provided for at E. MOSES and SON'S, MERCHANT TAILORS, HATTERS, HOSIERS, BOOTMAKERS, &c., Corner of MINORIES and ALDGATE, Corner of NEW OXFORD STREET and HART STREET, BRADFORD and SHEFFIELD, YORKSHIRE.

NOTICE IS HEREBY GIVEN, THAT the Annual General Meeting of the GREAT BRITAIN MUTUAL LIFE ASSURANCE SOCIETY will be held at the House or Office of the Society, No. 14 Waterloo place, London, on Tuesday, 12th day of June, 1860, at Two o'clock in the afternoon precisely; and notice is also given, that at the said Annual General Meeting the following three Directors, namely, Thomas Robinson Davison, Esq., Edwin Crosley, Esq., and Edward Booth Hewitt, Esq., and the Auditors, will go out of office, which Directors and Auditors are immediately re-eligible; and notice is farther given, that every Member intending to become a candidate for the office of Director or Auditor must signify the same by writing under his hand, to be left at the office of the Society five days at least previously to the Annual General Meeting.

Dated the 25th day of May, 1860.

By order of the Board of Directors,
C. L. LAWSON, Secretary.

14 Waterloo place, London.

NOTICE IS HEREBY GIVEN, THAT pursuant to the 30th clause of the Deed of Settlement of the GREAT BRITAIN MUTUAL LIFE ASSURANCE SOCIETY, an Extraordinary General Meeting of the Members of the said Society will be held at the house or office of the Society, No. 14 Waterloo place, London, on Tuesday, the 12th day of June, 1860, immediately after the conclusion of the business of the Annual General Meeting, which is convened for Two o'clock, in the afternoon of the same day, for the purpose of considering and passing in the affirmative or negative the following resolutions, which will be severally proposed at such meeting, viz.:—

1st. That clause 88 of the Deed of Settlement, which provides that there shall always be a Managing Director, and clauses 89 and 90, which relate to his duties and office, shall be repealed and expunged, and that the words "Managing Director" shall be expunged from the following clauses of the Deed of Settlement, viz., the 19th, 35th, 38th, 44th, 54th, 55th, 57th, 67th, 68th, and 69th clauses; and that in the 19th, 44th, 55th, 57th, 67th, 68th, and 69th clauses, the word "Secretary" be substituted for the words "Managing Director."

2nd. That the 20th clause of the Deed of Settlement shall be repealed and expunged, and that in lieu thereof the following clause shall be substituted, viz.:—

20. That at every General Meeting and Ballot which shall be held, each Member for the time being of the Society who shall have an Assurance existing on his or her own life for the whole continuance thereof, or on the life or lives of a nominee or nominees for the whole continuance of such life, or of one or more of such lives in the sum of £500 or more than £500, in respect of which Assurance one whole year's premium shall have been paid; and each Member for the time being of the Society who shall alone have an Assurance existing on the life or lives of any other person or persons for the whole continuance of such life, or of one or more of such lives, in the sum of £500 or more than £500, in respect of which Assurance one whole year's premium shall have been paid, and in respect of which he or she shall become a Member, under the provision hereinafter for that purpose contained, shall be entitled to one vote in respect of the sum of £500 so assured, and shall be entitled to an additional vote in respect of every additional sum of £500 so assured.

3rd. That the following words shall be expunged from the 12th clause of the Deed of Settlement, viz., "in respect of which assurance respectively five annual premiums at least shall have been paid," and in lieu thereof that the following words shall be substituted, viz., "in respect of which assurances respectively one whole year's premium shall have been paid."

4th. That clause 33 shall be repealed and expunged, and that in lieu thereof the following clause shall be substituted, viz:—

33. The Directors of the Society shall never consist of more than eighteen nor of less than nine.

5th. That clause 40 of the Deed of Settlement shall be repealed and expunged, and that in lieu thereof the following clause shall be substituted, viz.:—

40. That no person shall hereafter be eligible as a Director unless he shall at the time of the election be a member who shall alone have an assurance existing with the Society on his own life for the whole continuance thereof, or on the life or lives of any other person or persons as his nominee or nominees for the whole continuance of such life, or of one or more of such lives, in the sum of £1,000 at the least, or on the life or lives of any other person or persons for the whole continuance of such life, or of one or more of such lives, in the sum of £1,000 at the least in respect of which assurance he shall become a member under or by virtue of the provision hereinafter for that purpose contained, in respect of which assurances respectively one whole year's premium shall have been paid. And if any present or future Director shall at any time cease to have the qualification above mentioned his office shall thereupon become vacant.

6th. That clause 82 of the Deed of Settlement shall be repealed and expunged, and that in lieu thereof the following clause shall be substituted, viz.:—

82. That no person shall hereafter be eligible as an Auditor unless he shall at the time of the election be a member who shall alone have an Assurance existing with the Society on his own life for the whole continuance thereof, or on the life or lives of any other person or persons as his nominee or nominees for the whole continuance of such life, or of one or more of such lives, in the sum of £1,000 at the least, or on the life or lives of any other person or persons for the whole continuance of such life, or of one or more of such lives in the sum of £1,000 at the least, in respect of which assurance he shall become a member under or by virtue of the provision hereinafter for that purpose contained, in respect of which assurances respectively one whole year's annual premium shall been paid. And if any present or future Auditor shall at any time cease to have the qualification above mentioned, his office shall thereupon become vacant.

Dated the 25th day of May, 1860.

By order of the Board of Directors,
C. L. LAWSON, Secretary.

14 Waterloo place, London.

ERRORS AS TO THE PAPER DUTY.

There are two errors which should be carefully cleared away, or we shall not understand either the exact position which the House of Lords have assumed with respect to the Excise duty on paper, or the precise effect of abolishing that duty itself. We are not now speaking of the constitutional question which we discussed last week, but of the social and economical considerations which are necessarily involved in the consideration of the tax on which so much is now being written.

First. We must keep clearly before us that the tax on paper is one which is paid, we do not say by the rich classes, but by the *easy* classes. Of the paper which is used in expensive books we need not speak. We shall all agree that the wealthier part of the community pay all the duty which falls upon it. Of the duty on moderately expensive books, all the easy classes pay a portion. Again, a large amount of paper is used in packing and other miscellaneous ways; and, as the paper so used is coarse, the duty is a more important element in its price than it is in the price of better paper. But the commodities packed are not for the use of any single class. Each class gets, probably, its share, though it would be difficult to trace exactly how, and quite impossible to specify what portion of the duty on packing paper each precisely pays. As to the cheapest literature—the penny papers—we do not apprehend that there is any dream of their becoming cheaper in consequence of the reduction of the duty on paper. We believe they may become better. They are, indeed, already very good. We have heard a distinguished French statesman, well acquainted with England, say that he regarded the morality and *sensibleness* of our cheap press as one of the most remarkable indications of the diffusion of the homely virtues and homely sagacity which characterise England. Still, if the duty on paper were removed, we can conceive that the cheaper press would become better; that its information would be more extensive, and that its leading articles would be improved; and we are inclined to believe that, considering the present intense competition in the newspaper market, such is the probable expectation. But no one anticipates that the penny newspaper would become cheaper. It could not be reduced to a halfpenny; and in the actual state of our pocket money, there is nothing between the two. We think that the lower classes may be deprived, by the continuance of the paper duty, of the intellectual benefit they would receive from a better newspaper press. We think they may lose the benefit of cheaper and better school books, of cheaper and better serial compositions. But this is the whole of what they will endure. They will suffer no pecuniary burden which is worth mentioning. The paper duty which an agricultural labourer pays is simply *nought*; that paid even by a skilled artisan is but trifling. We must not, therefore, imagine that the paper duty is one which is paid by the poor; it is, in reality, paid by the comfortable, if not by the wealthy.

Nevertheless, we daily observe that many persons fall into this error. A strong impression is diffused that indirect taxation is paid by the poor, and that direct taxation is paid by the rich. In precise terms, few persons we know would go this length. When roused to real consideration, most persons are aware that many indirect taxes are paid by the rich. But many allow a prepossession of this sort to haunt their understandings, and it is frequently apparent in hasty speeches and hasty articles. Yet no misconception can be more misleading. In considering all subjects of taxation, we must carefully distinguish between the incidence of an impost and the manner in which it is levied. We must see that there are two questions, *what* people pay the tax which is under discussion, and *how* they are made to pay it. The distinction between direct and indirect taxation, of which at present we hear so much, is simply a question of the manner in which the tax-gatherer obtains his money. It does not specify, it does not attempt to specify, which are the parties to whom he comes. Some indirect taxes are, indeed, our sole means of reaching a certain portion of the lower orders. Without considerable duties on tea and sugar, we should never reach many who now pay something to the revenue of the country, and who ought to pay something. But we must carefully bear in mind that much which is called indirect taxation is paid by the rich, as well as the whole of what is called direct taxation. We must not think that the one is the poor man's quota, and that the other is the rich man's quota.

It is quite true that all indirect taxation has to some extent an accessory and unfavourable effect upon the lower classes. All restrictions on trade hamper trade, and everything which hampers trade tends less or more to diminish the demand for labour. But this is not merely a poor man's grievance; many of the rich are affected by it at least equally. Whatever hampers trade, lessens the demand not only for labour, but for *capital*. Mr Gladstone drew a pleasing picture of the rural industry which would be stimulated by the repeal of the paper duty. He wishes to see "village "mills" spring up throughout the country. But each of those mills would require capital to establish it and to maintain it. The demand for the manufacturer's capital is as much straitened by the duty as the demand for the poor man's labour.

On the whole, therefore, we see that the fairly opulent classes of the country now bear the pecuniary burden of the Excise duty on paper, and that the capitalist classes suffer from the indirect effects of that duty, whether they be great or small, at least equally with the labouring classes. The paper duty, therefore, is not a class question. It is not a question between the "unenfranchised million" and the rich. It is not a burden on the poor classes which the easy classes

wish to keep, for it is a tax paid by the easy classes themselves.

Secondly. It is an error to imagine that the French treaty requires us to do on this subject anything which it would not otherwise be advisable for us to do. The operative clause of the treaty is as follows:—Article VII. "Her Britannic "Majesty promises to recommend to Parliament to admit "into the United Kingdom merchandise imported from "France at a rate of duty equal to the Excise duty which is "or shall be imposed upon articles of the same description in "the United Kingdom. At the same time the duty "chargeable upon the importation of such merchandise may "be augmented by such a sum as shall be equivalent for the "expenses which the system of Excise may entail on "the British producer." Now this clause contains nothing which is not in accordance with the simplest, tritest, purest free trade. It binds us to nothing which it is not our interest to do. If paper cannot be manufactured as cheaply here as it is abroad, our Customs duty and our Excise duty being equivalent, let it be manufactured abroad.

It is, however, argued that France will not remove the high duty now imposed on the export of rags—the raw material—and that, therefore, we should retain a protective duty on the manufactured article—paper. But we have here only a new edition of the old corn law fallacy. The English consumers are now to have dear paper in order that the English producers may have the profit of producing that paper, just as twenty years ago we were all to eat dear bread in order that it might be produced from corn grown on our own soil. The logical answer is a very simple one. If France prohibits, by a high duty or by a direct enactment, the export of rags, that duty, in so far as it is operative, is injurious to her. If her capitalists are prevented from exporting rags when they can do so with a profit, they are deprived of that profit, the natural course of industry is impeded, and the wealth of France diminished. But, because France chooses to be foolish, England need not be foolish also. If we cannot get the French rags which we *would* have, let us, at least, have the French paper which we *can* have.

It is imagined that the doctrine of free trade presses hardly in this case on our producing classes. But this arises simply from our fixing our attention on a single class of producers. If we import paper from France, our paper makers may be injured; but we shall not obtain paper from France *gratis*. Directly or indirectly, something must be sent to France to pay for it. This something we must produce or obtain, and, to produce or obtain it, we must labour. Accordingly, though the paper-making trade in this country may suffer, some other trade will be correspondingly benefited.

We have no wish, on the present occasion, to discuss the repeal of the paper duty. We have formerly adverted to its various elements, whether social or constitutional. We have only endeavoured to clear away the two fallacies we have mentioned. We have wished to show that the repeal was not a class question, and that the French treaty binds us to nothing respecting it which good sense does not bind us to as well.

THE NEW PHASE OF THE NINE HOURS' MOVEMENT.

THE DIFFERENT EFFECT OF SHORT TIME ON PRODUCTIVE AND DISTRIBUTIVE TRADES.

The Conference of Operatives of the United Building Trades has formally determined on the renewal of the agitation for a reduction of the working day to nine hours. This measure may of course be urged on two quite distinct grounds. It may be asserted that, in the present state of the trade, the cost of labour may be increased at the expense either of the masters' profits or of the consumer, without either driving capital out of the trade in the one alternative, or diminishing the demand on the part of the consumer in the other alternative. That, however, is not the ground now taken; indeed, it seems to be definitely abandoned. Again, this measure may be urged on the ground that labour may become so much more efficient by diminishing the hours of task-work, that the productiveness of the trade will remain the same without any increase in the number of labourers employed. It may be asserted that ten hours a day is too long to get the maximum of efficiency for each hour of work, —so that by diminishing the duration of daily work ten per cent. you will increase its efficiency ten per cent., and get as much good work done in the nine hours as you formerly got in the ten. This appears to be the line now taken by Mr Potter and the Conference which supports him. Their plea and argument is this:—"We are confident that a more careful "and impartial consideration of the subject will induce you "to come to the conclusion that your interests as employers "will not be injuriously affected by the concession of the "nine hours boon to the earnest and respectful solicitation of "the men engaged in your establishment. On the other "hand, we are equally confident that the condition of the "workmen, physically, morally, and intellectually, will be "greatly improved through the effects of the proposed reduc-"tion. In this conviction we are fully sustained by the re-"sults of similar reductions of daily toil in other departments "of industry. In London, and generally throughout the "provinces, the clerks and warehousemen have agitated for "a very considerable shortening of the hours of work. Their "efforts have been completely successful, and the result has "been an immense gain to the men, without the slightest "loss to the masters. On the contrary, the establishment "of better and friendlier feelings between the employers and "the employed has not only conduced to the greater comfort "of the parties, but has also been productive of no small "pecuniary advantages to the employer. The operative "builder's hours of toil are at least as many as the clerk's "and warehouseman's, the distance between his home and "his place of work is in general longer, his right to mental "improvement as sacred, his need greater, and the claims of "his family to his personal superintendence as obvious and "urgent."

Now, it is very important to note that the illustration drawn from the economy of labour effected in the great distributive operations by the shortening of the hours of work, by no means applies to the great producing operations. It is true that shopmen, clerks, and warehousemen have been spared much needless work by the "early closing move-"ment," and that their employers have not suffered in consequence. But the reason no doubt is, not so much that their labour has been rendered more efficient, as that the consumers have been thereby induced to compress into shorter time what before was spread over a longer time. In all distributive operations there is much *waste* of labour caused by the irregularity of the demand. Idle minutes intervene between periods of great pressure, and, as customers are not at the beck of the tradesman, it is impossible for him to prevent this. Any compression of the hours of sale obliges the buyers to compress more closely their hours of purchase, and so causes a more equal density in business transactions throughout the day. It is not only, and probably not chiefly, because the warehouseman or shopman works better, but because the calls for his work are less interrupted, that labour is economised without any loss to the master in the number of his transactions by a shortening of the hours of work.

Of course this analogy has no application to productive trades like the various branches of the building trade. The amount of work done depends only on the time, capacity, and industry of the workman. If his hours of work are shortened without any proportionate increase in his capacity and disposition for work, there will be a real loss of industrial products; the employers will get less at the same cost as before; there will be no economy of labour to balance the loss of time. The Conference of Building Trades cannot, therefore, justly rely on the analogy of the early closing movement in the distributive trades to prove that their masters will not lose by the step they advocate. They will still have to show that ten hours' work is so much beyond the limit of the most efficient labour in average workmen, that if you diminish the strain on their powers by striking off the tenth hour, every other hour will be more productive by six or seven minutes' work than it was before.*

* Since this was written the report of the Committee of the House of Commons on Mr Mackinnon's Masters and Operatives' Bill has appeared. Mr George Potter states, in his evidence there given, that the change from 10 to 9 hours would, in his opinion, cause a loss of about 7½ per cent. of the work, though not of so much as 10 per cent. How, then, can he honestly tell the masters that "their interests as employers will not be injuriously affected by the concession of the nine hours' boon"? It clearly will be injuriously affected to the amount of 7½ per cent. on the value of the work.

The experience of the master-builders is certainly by no means favourable to this proposition. They scarcely think it worth refeting; and if the workmen have reason to believe it true, they should appeal to more apposite cases than the results of the early closing movement in the shops and warehouses of London.

We do not, of course, for a moment deny the right of the men to combine for any concession which they think conducive to their own physical and moral advantage, if they are in a position to get it; but we do wish them to face the question in its true light. If it does involve either a loss of profit to the employer, or a greater cost to the consumer, let them not argue as though it did not,—as though it were a question of economy of labour. There is no reason why they should not, —if they can do it successfully,—stipulate for a larger proportion of the product they have helped to produce. Or if the market be a rising market, there is no reason why they should not share the advantage of the rise with their employers. But if, as we believe, neither of these conditions are true at the present time:—if neither is the profit of the building trades at the present prices such that the operatives insist on abstracting some of it in higher wages without causing capital to be withdrawn from those trades,—nor is the demand so increasing as to bear a rise of prices without a diminution in the demand,—then the only plea on which the operatives can now ask for shorter time is that which we have discussed,—viz., that it would not really increase the cost of labour to the employer. And if this be untrue, then let the men wait for an opportunity when they can reasonably expect to gain a step either on their masters, or on their masters' customers, and not attempt to do so, under false pretences, at a time when neither profits are high, nor the demand increasing.

An able writer and thinker, in whom Unionists will be more inclined to place trust than in us, has very distinctly defined the limits within which combinations and strikes may work with effect,—often with good effect. We allude to Mr Dunning, for nineteen years the Secretary to the Bookbinders' Trade Society, who, in his speech at the Social Science meeting last year at Bradford, defined very clearly what it was possible and what it was impossible for strikes or combinations to effect. We entreat those who are now urging the Operative Builders to an ineffectual strike, on what we believe to be completely untenable ground, to weigh well Mr Dunning's words:—

> Wages were determined by the supply of labour permanently in the market. *If it permanently much exceeded the demand, nothing could prevent the reduction of wages; and, conversely, if the demand permanently much exceeded the supply, nothing could prevent their rise. These two extremes always at all times compelled their respective results.* In these two extreme points all contention was hopeless. No trade combination, however well organised, on the one hand, could prevent reduction; nor any legislative enactment, however stringent (of which there were many instances), on the other, could prevent their rise. Mistake often arose here. *As no union could prevent the fall of wages, or was necessary to occasion their rise in these extreme points,* it was sometimes thought that union among workmen was not 'necessary' under any circumstances.....The supply of labour in a trade might be greater at one time than another—indeed, for a time, far exceed the demand for it; and yet that state might not be its permanent condition. In other words, the trade might be for a good while "slack." If a reduction of wages took place during this period, it was very likely to remain so when the trade got "busy," and yet the temporary slackness in itself would by no means be adequate to compel this reduction, and indeed ought not to have produced it. The undue competition among employers, bidding each under the other, intending to make up the difference out of the wages of their men—not from any compelling necessity in the trade, but from mere rivalry—would inevitably cause a reduction of wages, where such employers had influence, which, if not checked, might extend to the whole; not, again, from any compelling necessity arising from over-supply, but from taking advantage of the immediate necessities of their men being greater than their own.....If either party possessed an advantage over the other in the bargain, this position of mutual interest was changed to one of opposition, in which the weaker party was sure to be deprived of some portion of what was justly due to him. For example, suppose there was an estate to sell, and it was known it must be sold in a fortnight; come what will, it must be sold in that time. If the property were large, the seller would be sure to lose some thousands of pounds in these circumstances. Not that there was any blame to be attached to the buyer, but such would be the fact. In this position, as bargainers for the sale and purchase of labour, stood the employer and employed. Singly, the employer could stand out longer in the bargain than the journeyman; and as he who could stand out the longest in the bargain would be sure to command his own terms, the workmen combined to put themselves on something like an equality in this respect with their employers in the bargain for the sale of their labour.

Trade has been temporarily "slack" in the building trades for some time back, and possibly the existence of trade combinations may have prevented a temporary fall of wages which would otherwise have taken place, the loss being borne for the time by the profits of employers. But at such a time to insist on what will in effect be an advance of wages, is a step which Mr Dunning's own exposition of the functions of Trades' Unions condemns as decisively as their bitterest opponents could do. It is an ignorant step, which blind leaders are urging on blind followers with the ditch close before them.

THE FORLORN HOPE OF THE NEAPOLITAN GOVERNMENT.

We learn that the entrance of Garibaldi into Palermo has been followed by what seems a strange anti-climax at Naples,—a ministerial crisis. The Ministers who have for so long authorised the police to supersede the law have resigned; and there is talk of the formation of a Liberal Government. The King of Naples must be strangely credulous if he supposes for a moment that a change of this kind can in the least stay the progress of a revolution which has been generated entirely by the continuous and industrious bad faith of the ruling family. Does he imagine that his temporary selection of more respectable instruments,—even supposing men of any respectability to be willing to lend themselves to his purposes,—can at this late date inspire the Neapolitan people with any confidence in his government,—can restore the faith which has been so long and so utterly lost in the honesty of his family? A Liberal Government would be a far less solid guarantee of individual liberty than a good constitution and good laws; yet neither a good constitution nor good laws have proved the smallest guarantees of liberty in the hands of rulers who have used them only for show-purposes, and superseded them by a system of perfectly arbitrary police-government whenever they have dared. There are few Governments in the world which have so successfully uprooted all faith in their integrity as the Neapolitan; and we need not say that the kind of concession implied in a change of Ministry is no practical concession at all except on the hypothesis that the ruler is honest, and that the act of to-day is a pledge of the policy of to-morrow.

How flagrantly and insanely treacherous the Neapolitan Government has been, one recent act of their's alone will prove. On the 2d November last, the "Official Journal of "Sicily" reproduced in its columns an article which had been put at the head of the "Official Journal of the Kingdom of the Two Sicilies" by way of a manifesto, calling upon the administrative officers of the Government of all ranks, in the name of the King, and at the formal command of the young Monarch, for the rigid observance of the laws. "Plunged as he is in the innumerable cares of govern- "ment," it had said, "His Majesty never ceases to direct "that the heads of the public administration and their subal- "terns should exert their utmost vigilance to secure the scru- "pulous observance of the laws, so that it may be well "established that if our codes are excellent, excellent also is "their application."

The Superintendent of the Province of Catana, one of the few high officers in Sicily who, being himself honest, wished to believe in the honesty of the Government, was taken in by the precision of this announcement, and wrote thus to the Lieutenant-General of Sicily:—

> "Catana, Nov. 8, 1859.
>
> "EXCELLENCY,—In the 'Official Journal of Sicily' of the "the 2d instant there occurs the following article, of which "the importance is so much the greater that it is extracted "from the official paper of the kingdom. [Here the article "is quoted.] Having shown the official importance of this "document, I have come to the conclusion that it is my duty to "address myself to your Excellency, to know whether the "administrators of the provinces of Sicily should in future "renounce the *discretionary powers* with which they are in-

rested, and conform themselves to the scrupulous observance of the law.

(Signed) "PRINCE DE FITALIA, Superintendent."

The answer came not from the Lieutenant-General of Sicily, to whom the letter was addressed, but from the wretch who, as we showed in our last number, has so long superseded the regular Government of Sicily—the director of police, Maniscalco. It ran as follows:—

"Palermo, Nov. 16, 1859.

"SIR,—In reply to your letter of the 8th instant, I hasten "to inform you that when the Government thinks it necessary to address itself to its agents, it does so directly, and "by ministerial approaches. You will, therefore, continue, "as in time past, to regulate your conduct by the only orders "which proceed from this Royal Lieutenancy and Secretariat of State.

"For the Lieutenant-General,

"MANISCALCO, Director of Police."

Here, then, we have a Government putting forth with one hand official directions to its officers to adhere strictly to the law, and checking them sharply with the other when they have shown any wish to attend to those directions,—attempting to advertise ostentatiously the strict legality of its ends and aims, while it scornfully rebukes any officer who is so weak as to take it at its word. What can the formation of a Liberal Administration mean in the case of such rulers as these, except that this is the only trick left untried which, in such an emergency as the present, has met with success. Unfortunately for the King of Naples, the last rehearsal of this manœuvre is too recent, and was too fatally successful to render any repetition of it at all likely to succeed. The entry of Garibaldi into Palermo is, we trust, the beginning of the end. The strongholds of the Neapolitan army in Sicily are Palermo and Messina; these once mastered, Sicily is free; and Sicily once free, Calabria can hardly escape the infection of revolution. If Italy is left to herself, it is scarcely credible that either the King of Naples or the Pope can stand their ground; and that Italy shall be protected against the interference of any non-Italian Power, ought now to be the great care of England, and of all who profess to respect the cause of Italy.

THE ACTUAL WORKING OF THE PRESENT LAW OF BANKRUPTCY.

THE revelations of the Court of Bankruptcy cannot be expected to be the pleasantest which we can conceive. Nothing successful ever comes there. It contains the *debit* side to the greatness of our commerce. We see elsewhere the traces of the energies it awakens and the blessings it confers. We read there a record,—a very imperfect and incomplete record, no doubt,—of the vices which it fosters and the risks by which it is attended. A return recently issued enables us to give some notion of that record to our readers.

It appears, that of the two causes of bankruptcy, misfortune and misconduct, misconduct is by far the more frequent. In the table headed "Apparent Causes of Bankruptcy," we have the following items for the year 1858, the last of which we have the details:—

Reckless and unsound speculations	457
Interest discounts, accommodation bills, and suretyship	145
Incompetence, neglect, personal extravagance	432
Unavoidable misfortunes	197
	1,231

A few persons under the head "suretyship" may not be properly chargeable with misconduct, and it is rather severe upon them to group their cases with those of persons ruined by accommodation bills and reckless borrowing; but, with this exception, not even a sixth of the whole number of bankrupts were ruined by unavoidable misfortune. And we must remember that "misfortune" means, in the language of the law courts, such misfortune as a reasonable and experienced man could have foreseen and avoided. All the other cases, with the single exception of the sureties to whom we have just referred, were ruined by speculations and transactions which they never ought to have commenced, and which they ought to have known would fail.

It may, indeed, be alleged with some plausibility, that these figures do not tell the whole truth; that cases of unavoidable misfortune very often do not enter the Bankruptcy Court; that the creditors spare an innocent trader the shame and the expense which attend legal publicity, and some private arrangement is agreed upon. And we quite admit that there are some cases too *good* for the Bankruptcy Court. But we must also remember that there are others too *bad* for it. There are some which all parties are interested in "hushing up," and which are kept out of Court in consequence. Besides, of those which do come into Court, the worst is often not known. Every man of business knows cases of bankrupts whose failures have been ascribed to unavoidable misfortune, and who have been rather complimented than otherwise by the Commissioner, yet whom he nevertheless knows to be rascals, and knows to have been ruined by their rascality. The statistics of the Bankruptcy Court are defective on both sides; they do not include some of the very best, they do not include or do not detect some of the worst cases of failure; but we have no reason to think that the moral impression which they give is incorrect. Indeed, we apprehend that it is, in the long run, fairly just.

The scale of the operation of the Bankruptcy jurisdiction is remarkable. The debts proved were, in 1858, 8,215,629*l.*, an amount as large as the produce of an eightpenny income tax over the whole country. It is interesting to see how this large total is distributed over the country. The records of the different Courts are these:—

	£
London	3,926,947
Bristol	242,347
Birmingham	646,989
Manchester	623,574
Liverpool	1,251,400
Leeds	1,142,916
Newcastle-on-Tyne	813
Exeter	93,643
	8,215,629

showing, as we might anticipate, that the failures in trade occur in the places where trade is chiefly carried on. Every dashing speculator, every man skilled in the manipulation of accommodation bills, goes to a large place; and these are the sort of men who fail. We see that, notwithstanding the common notion that the trade of the North is more hazardous than the trade of the South, "London" has at least its share of wild speculators and of bankruptcies.

We have stated that 8,215,629*l.* is the amount of debts on which dividends have been proved. The amount of dividends ordered and debts paid in full, taken together, is 961,910*l.*,—about 2*s* 3*d* in the pound on the whole. The amount of the debts which were *not* paid by the bankrupts is 7,253,719*l.*, or 17*s* 9*d* on the whole,—a deficit neither satisfactory to the creditors nor creditable to our commercial morality.

It is not, however, fair to charge the whole of this great deficit to the bankrupts themselves; some part is due to the maladministration of the Court, at least so the figures seem to show. The assets received by the official assignee were 1,785,263*l.*, *nearly double the amount divided.* This is principally explained by two rather suspicious items:—

	£
Special charges and deductions	318,729
Expenses	409,852
	728,581

which is an enormous charge on the distribution of 961,000*l.* It is partly with a view of diminishing the legal expenses that the Bill now before the House of Commons will practically enable the creditors themselves to manage the estate. The administration of a bankrupt's estate is one of the most difficult operations in business—one of the most confused, complicated, and miscellaneous. It is not surprising, therefore, that it should have been found to exceed the powers of a court of justice, which must be guided by routine and precedent, which cannot have the special knowledge necessary for special cases, which will apply, if possible, one rule to the most different cases. We have no doubt that, if the Bill becomes law, the amount of assets received will be larger than it now is, and that the cost of collection and distribution will be much smaller. We wish we could think it would lessen the number of bankruptcies, and diminish the sum total of fraud and misconduct which that number indicates, but this is beyond the competence of any law.

[We take this incident, and the letters which establish it, from the pamphlet, "La Torture en Sicile," which we quoted at length last week.]

INDIAN FINANCE AND THE MADRAS PROTEST.

[The following letter, from one of the highest authorities on Indian Finance, is one of a series which we hope to receive at intervals of two or three weeks from the same high authority.—Ed. Econ.]

TO THE EDITOR OF THE ECONOMIST.

CALCUTTA, April 23, 1860.

SIR,—The printed reports of the several speeches delivered by Mr Wilson before the Legislative Council of India will ere this have reached you. Hence you will have perceived that some great measures have been definitely proposed, and others sketched out or indicated. You will have doubtless observed from the public papers that, from the first, English opinion in India has been almost unanimous in favour of the measures. There appeared, indeed, to be an unanimity almost without precedent in Anglo-Indian history. The official and non-official, the military man and the civilian, the covenanted and uncovenanted, seemed on this point at least to have laid aside all differences of opinion. Soon afterwards, indeed,—that is in the beginning of April,—the Madras Government made a protest against the measures of additional taxation; and that protest having been published by the order of the Madras Governor himself, the justice or otherwise of the protest, and the expediency or otherwise of the measures, have been closely criticised. As yet, however, European opinion at Calcutta still favours the introduction of Mr Wilson's financial scheme. Similar views apparently prevail among the European community at Madras. Of Bombay it is difficult to speak with equal confidence at this moment. But, generally, the opinion of the non-official European community in India is on Mr Wilson's side. It is more difficult to judge of the opinion of the official community; but among them also Mr Wilson commands the confidence of a large portion at least, and it is probable that the vast majority are of the same opinion as their non-official countrymen. It is true, no doubt, that some Madras officials of considerable rank and influence opposed a measure of taxation in some respects based on the same principle as Mr Wilson's plan. But those adverse opinions were expressed in reference to a licence tax proposed before Mr Wilson came out to India. It by no means follows that the same opinions would be expressed now. The fact is, that the full and explicit explanations given by Mr Wilson before the Legislative Council have strengthened his cause greatly. He has placed himself *en rapport* with public opinion; and public opinion has supported him in a manner almost without a parallel in Indian history. And, despite the severe trial occasioned by the Madras protest, this support is still continued. It may appear strange that when Mr Wilson begins his Indian career by the introduction of three large taxes, the chief of which is the first important tax ever attempted in India to be levied on Europeans, and is, indeed, one of the few taxes which could be devised to press on Europeans and natives with equal weight, it should be precisely European opinion that gives Mr Wilson the most unqualified support. Yet such is the fact. This fact may, indeed, be accounted for in various ways. An impression had become strong and general that the events of 1857 and 1858 had caused a bill to be run up such as the Exchequer of India could hardly pay, and had entailed an expenditure the burden of which must sooner or later break the back of the Imperial finances. It was, therefore, felt that a first-rate financier from England would be an important aid to the Indian Government, distracted as it was with manifold cares,—administrative, political, and military. When, therefore, Mr Wilson showed by facts and figures, so clear that he who runs may read them, that the financial position is even worse than was supposed; that strenuous efforts had been made to reduce expenditure; that these efforts had been crowned with a large measure of success; that, notwithstanding this, a deficit of several millions existed even after the re-establishment of peace,—then every Englishman in India felt that an effort ought to be made, and that he as an individual ought to contribute thereto. And, when it was clear that Mr Wilson brought with him all the economic and financial knowledge which the experience of England could suggest, every Englishman was disposed to submit to the new taxes. When once this conviction was produced, the English in India evinced that patriotism and good sense which distinguishes our nation everywhere. Thus it is that Mr Wilson has become the Dictator of Finance in India, and that this dictatorship has remained unshaken even by the shock of the Madras protest.

The Legislative Council of India is as yet composed entirely of official members. Whether the intention of the Act of Parliament which constituted this Council contemplated that the position of the Council should become so very important as it has actually become, may be doubted. But the fact is, that the Council is fast attracting to itself some of the functions which appertain to a Parliament. When the procedure of the Council was settled in detail, it was expected to become the germ of an Indian Parliament. The germination has been, indeed, somewhat rapid. When the Supreme Government of India proposed to levy certain taxes, the Madras Government protested against those taxes. This protest was sent to the member of the Council who is appointed (under the Act) by the Madras Government, and who is supposed to represent the Madras Presidency. He did not, however, consider it his duty to lay the paper before the Council. The conduct of the Council, indeed, has been eminently temperate and judicious. Without at all compromising their own lawful position, they have lent valuable support to the Government, and have declared their general confidence in the new Budget. They are men of undoubted experience and known moderation of views; and their concurrence is of great practical utility in the introduction of the measures. It is notorious that Anglo-Indian institutions here, as elsewhere, follow the rule of *vestigia nulla retrorsum*. There is every probability that the Legislative Council will become enlarged and extended, and there is a general expectation that non-official Europeans, and perhaps natives, will be admitted to sit. The admission of natives would probably not for some time have much practical effect, as they seldom, when associated with Europeans, evince much independence of opinion. But the admission of Europeans would be of real importance. And certainly their recent conduct, their consistent and cordial support of the fiscal measures of Government in this financial crisis, notwithstanding that those measures fell upon themselves, and the example they hereby set to their native fellow-subjects of willingness to contribute to the support of the State, ought not to be forgotten by the Government, and does certainly show that members of this community would be fitted to sit in the Legislative Council. But, whether this addition to the Council take place or not, it is clear that the constitution of this limb of the body politic does merit the attention of the Government both at home and in India.

As regards the Madras protest, deep regret is felt, in the Bengal Presidency at least, that it should have emanated from Sir Charles Trevelyan. Great hopes were deservedly entertained of the Madras Governor. Personally, no public man in India is more esteemed and respected. He was known to be a true friend to the natives of all classes,—a point of consequence now that the popularity of the British rulers with the people of India has been waning. Versed in all civil affairs, he was supposed to possess great experience in the administrative affairs of the army, and a competent knowledge of military affairs generally. He possesses special aptitude for the organisation of police, which is at this time one of the crying wants of India. He has carried out in the best possible spirit the reforms of the land tax; he has shown an earnest interest in the advancement of the public works, so much needed in the Madras Presidency. He is the friend of popular education. During his recent tour in the interior of his Government, he has evinced a practical and thoughtful spirit which cannot too highly be commended. He is believed to combine in an unusual degree the practical experience of India and of England. It appears, therefore, that his knowledge, capacity, and energy would have been of special service to the Government of India in carrying out the new measures of taxation in the Southern Peninsula.

The protest itself seems mainly to rest on two considerations—firstly, that new taxes are unnecessary, as the deficit could be met by reduction of expenditure; and, secondly, that to impose them would arouse discontent in Southern India. The ground once taken up by some parties in Madras (but *not* by the mercantile community at Madras), that Madras ought not to be taxed to pay for the expenses

of a rebellion in Bengal, is not now maintained with any force. It has been shown that the Empire is one and indivisible, and that Madras was also obliged to incur an additional expenditure, which occasioned a deficit and contributed to swell the debt.

Now, inasmuch as Sir Charles Trevelyan has been making laudable efforts to reduce military expenditure in Madras, it is not unnatural that he should expect to hear of similar efforts being made in Bengal. As he was evidently not acquainted, when the protest was written, with the reductions that had been going on in Bengal, he appears to have concluded that this had yet to be done; and that if it were now done, the deficit might be covered, and the imposition of new taxes avoided. But he will now have learnt that this actually *has* been done in Bengal, and with great success; *that vast military reductions have already been made;* that more are still in hand; and that, notwithstanding all these reductions, present and prospective, there is still a deficit of several millions in the Indian Exchequer; and this, too, in time of peace. It has been shown that within the last year and a half 3½ millions of military expenditure have been reduced; that 1½ millions are being reduced; that 1 million more may be reduced during the next year; making up 6 millions of reduction in the 2½ or 3 years. Surely these facts speak volumes for the economical activity of the Indian Government. After this, one more million *perhaps* may be reduced, raising the aggregate to seven millions, which would bring the military expenditure down to 13 millions, or one million below the *minimum* calculated in England for the Indian army, and only two millions in excess of the military expenditure as it stood before 1857. Considering the great increase of European troops, the last named excess will appear comparatively small. But still there *will* inevitably be an addition of two or three millions to our military expenditure. Then it has been shown that there can be no reduction in the civil expenditure, inasmuch as public works and education have for some time past already been stinted in funds, and will require increased expenditure. If possible, too, it will be desirable to expend more money on the improved organisation of the police. And then two millions have been added to the interest of debt. The revenues have very fortunately proved buoyant, but still there remains a deficit of several millions. How, therefore, can this be met by any other means than new taxes? Such is the gist of the answer to the Madras protest in this respect.

Then, as to popular discontent. No doubt the Madras people will dislike the new taxes. But then, Sir Charles Trevelyan has shown by the records of his recent tour that the people are thriving and prosperous. Their land tax has been of late beneficially moderated. It would thence appear that they might be able to bear some moderate burdens in addition to those they have at present. The new taxes are not in themselves immoderate or oppressive. It may be hoped that the people, finding this to be the case, would cease soon from any discontent they might feel at first. In order to prevent any misunderstanding of the intentions of Government, Mr Wilson has caused expositions of the new taxes to be prepared for the express information of natives, which are now being translated into all the vernaculars of India. It may be hoped, then, that if a storm were to threaten, the horizon would soon be cleared. And, after all, if there be trouble looming in the distance, the Government must face it. The prestige of Government is great at this moment. The European force is large everywhere. The native army is not concerned nor interested in this fiscal question. The native Chiefs and independent Princes throughout the continent are probably more loyal than they have been for many years past. Lord Canning's viceregal progress has had the happiest effect on them. The civil servants who will have to carry out the measures will do their utmost to make the taxes to which Government has pledged itself work smoothly in practice. European public opinion is with the Government; and with all classes of Englishmen combined, there will be a firm and resolute front. It is clear to all that the house must not be divided against itself; that every question must be decided by some ultimate authority; that in India, the Supreme Government is such an authority; and that the decision having been declared, it is the duty of every man to give effect to it, be his opinions what they may. There is every reason to hope that no trouble will arise: if such do arise, it must be met or put down, for this is no time to retract or vacillate. And, after all, any such risk would be unimportant as compared with the unseen, though real and invidious danger which the State boat would incur if it gradually drifted, during peace, down the stream of Debt towards the rapids and breakers of Insolvency!

While, however, the protest itself has occasioned regret to the well-wishes and admirers of Sir Charles Trevelyan at the Bengal Presidency (and they are many), the publication of such papers under direction of the Madras Governor himself has excited surprise. If the Governor thought the new taxes impolitic, he was right in communicating that opinion to the Supreme Government. If he anticipated a rebellion, he was right in expressing his apprehension. But in all countries such communications from a Subordinate Government to a Supreme Government are confidential. To publish them is to destroy the unity of the general Government, to compromise the public service, and to weaken the administrative authority of the State over its subjects. The publication of the protest, indeed, amounts to an appeal to public opinion made by the Madras Government against the Supreme Government. Now, irrespectively of the merits of the question at issue, even if the Madras Government were right in its opinion, this is not the way to urge such opinion. Whether the Supreme Government and the Legislative Council be open to persuasion or not, they could hardly be taken by storm in such a manner as this. If the Madras Government is to be openly and avowedly at issue with the Supreme Government, on a policy of the very first importance, how is the Queen's Government in India to be carried on?—how are the component parts of the Indian Empire to hang together?—how is discipline (as much needed in administrative as in military matters) to be maintained? Such a situation as the present, which would be difficult enough for any Government in any country, becomes peculiarly embarrassing to the Supreme Government in India. The ruling race in this country should ever remember (what, indeed, they are apt too often to forget) that, whatever they do, they are acting in the presence of the enemy, as a military man would say. Among the vast subject population of India, there are parties (many and large) ready to make political capital out of the weaknesses and dissensions of the British. If we cherish serious differences among ourselves, and if we display them to the whole world, then the natives will say (as they have been heard to say) that we are setting fire to our own house. Happily, despite the Madras protest, general unanimity as yet prevails. But the natives will assuredly think that the torch of discord has been lighted. And the disaffected will watch the result with a sinister satisfaction. Such ideas travel slowly, and perhaps, as yet, have not reached distant places in the interior. But there can be no doubt that the natives at the Presidency capitals are freely discussing how the Supreme Government can possibly carry out the new fiscal measures if the Madras protest is allowed to stand. Some native newspapers actually write about combinations, about the strength of union and numbers, and about monster meetings. The British Indian Association have presented a petition to the Legislative Council, adopting very much the terms of the Madras protest. But, surely, these are not the sentiments which we should desire to put into the mouths of our Indian fellow-subjects. Those parties averse to the taxes (and they must of course be legion) are encouraged to hope that, after all, the Supreme Government will be stayed from its declared purpose. Yet, such a spectacle of indecision (if it were to occur) would be fatal to the prestige of British power in India. The Supreme Government has declared its policy, and is pledged thereto. Nothing short of the most serious considerations should induce it to recede. Even if trouble is to be anticipated, preparation should be made to meet it. There would be a choice of difficulties, and of those difficulties retrogression would be by far the greatest. If the central authority were to be weakened in the eyes of the natives,—if even passive and moral resistance were in any case to be permitted,—then no man can say what trouble might arise, or what outbreak might occur, in the carrying out of the new taxes. Probably every local Governor in India may feel confident that his province will behave well, if the other parts of India are kept quiet. But if once the bands of the Empire were to be loosened, then who shall answer for any province, or for the conduct of any

among the numerous races of our subjects? A unity of purpose, a strength of will, as firm as the Himalayan mountains, are necessary in order that British dominion may be established in the minds of the natives. This much is absolutely needed on the present occasion, and if the Government is true to the national interests and character, this much will be secured. And if it be secured, then there is a fair and reasonable hope that the new taxes will be quietly carried out.

The Indian Government will apparently have to proceed to action in furtherance of these measures before an answer can be received from home. Public opinion here relies on the positive and consistent support of the Home Authorities. And it will be well if the English Government take the opportunity of settling definitely the relations between the Supreme Government of India and the Government of the minor Presidencies, in such a manner that a juncture like the present shall not recur. If India is to be made an aggregate of Local Governments, then that is intelligible. But if there is to be one Supreme Government over all, then its authority must be placed beyond the possibility of dispute.

These remarks on the episode occasioned by the action of the Madras Government have extended to such length, that I have been unable to say anything regarding the taxes themselves, and the other measures of financial reform, of currency, and administrative improvement. To these I may advert in a future letter. R. T.

THE BOARD OF TRADE RETURNS FOR APRIL.

The Board of Trade Returns for the first four months of 1860 show our export trade to be nearly stationary as compared with last year. The declared value of the exports for the four months is 41,834,347*l*, as compared with 41,851,524*l* last year, and 32,961,723*l* in 1858 (the year which succeeded the commercial crisis of 1857). In the month of April this year there was a slight increase on the same month in last year. The declared values are as follows:—April, 1860, 11,352,440*l*; April, 1859, 11,330,730*l*; April, 1858, 9,451,433*l*.

The chief feature of the exports is the steady increase in the exports to China, and the Hanse Towns; while the more important among the exports to British India show a decided falling off. The exports to China, in the face of the now certain war, show so decided a tendency to increase, that it is worth while to take them out separately.

Declared Value of Exports to China and Hong Kong.

	Month ended 30th April—			Four months ended 30th April—		
	1858.	1859.	1860.	1858.	1859.	1863.
	£	£	£	£	£	£
Cottons	119,388 ...	103,123 ...	351,866 ...	528,706 ...	658,162 ...	1,190,624
Cotton yarn ...	17,703 ...	18,212 ...	18,350 ...	93,823 ...	167,595 ...	188,931
Lead—Pig, rolled and sheet	3,470 ...	6,185 ...	4,139 ...	16,157 ...	31,430 ...	21,994
Woollens cloth of all kinds...	82,686 ...	13,689 ...	81,680 ...	40,460 ...	86,053 ...	189,564
Worsted stuffs..	20,985 ...	12,729 ...	76,145 ...	59,082 ...	88,417 ...	177,735
	180,232 ...	153,938 ...	512,180 ...	741,228 ...	1,031,655 ...	1,768,798

The increase of trade here exhibited, both as regards this month, and the four months, is very remarkable; the increase in the woollen exports being even greater in proportion than in those of cotton goods.

The cotton exports show a tendency to recover this month; although there is a decline in the exports of the four months, as compared with last year, there is an increase in those of this month, as compared with the same month last year. They are valued as follows:—

Month ended April 30.		
1858.	1859.	1860.
£	£	£
2,507,137	2,939,953	3,502,584

And even to the British East Indies, while the cotton exports of the four months have fallen off, as compared with last year, by 900,000*l*, those of the month of April have increased by nearly 20,000*l*, as compared with April 1859.

The table giving the computed real value of the imports is made up only to the end of March. Even in that one month, however, we see the effect of the budget and treaty in the increased value of our imports. The great increase is, indeed, due, not to the budget, but to the enormous increase in our imports of cotton, which for the month of March alone are worth three millions sterling more than in 1858, and two millions and a half sterling more than in 1859. But, besides this enormous increase, there is an increase on many of the articles relieved by the treaty, which is no doubt due mainly to the treaty. Against these increases, however, is to be set a falling off in other articles,—so that on the whole the increased value of the raw cotton received represents within half a million the whole increase in the value of our imports in March, 1860, on that of March, 1859. The computed real value is:—

Month ended March 31.			Three months ended March 31.		
1858.	1859.	1860.	1858.	1859.	1860.
£	£	£	£	£	£
8,012,310 ...	9,843,015 ...	12,859,594 ...	18,124,410 ...	23,298,064 ...	28,731,063

The increase in the receipts of raw cotton, of coffee (especially from Ceylon), of timber, of wine and brandy, is very marked.

DEPOSIT RECEIPTS.

TO THE EDITOR OF THE ECONOMIST.

May 28, 1860.

Sir,—Would you kindly inform me if a banker would be justified in setting off the overdrawn balance on a current account against the amount due from the person keeping such account upon a deposit receipt?—Yours, faithfully, A. B.

[We conceive there can be no doubt that the banker could make this set off. The deposit receipt is simply evidence of a debt due from the banker to his customer; and before the banker pays it, he may set off whatever the customer happens, on the other hand, to owe him.—Ed. Econ.]

Erratum.—In our last impression, in the article upon the Revenue, p. 559, col. 2, line 35 from top, for "We have for the year 1860-61," read, "We have for the year 1861-62."

Agriculture.

STEAM PLOUGHING.

To move the soil by means of steam power has now become an every day operation on not a few farms in this country. Fowler's steam plough is used by many farmers, and amongst them by Mr Richard Stratton, the well-known Shorthorn breeder, at Broad Hinton. Mr Smith's digging machine is also come a good deal into use, and that gentleman, as energetic with his pen as with his steam cultivation, has published a letter on the subject wherein he complains of the discouragements he has received from the Royal Agricultural Society, against which he sets off "the encouragement and support he has received from his neighbours and brother farmers in general." The latter is by far the best test of the merits of his machinery, though we believe much has yet to be done before steam cultivation will come into general use. Let us glance, however, at Mr Smith's "encouragements." He gives a tabular result of his operations, showing that "the seed beds for 43 crops on the heavy and light land have been prepared by 88 operations, and the average cost for each crop has been 9s 4d per acre; the seed beds for 17 crops on heavy land have required 39 operations, and have averaged for each crop 10s 10d per acre; and the seed beds for 26 crops on light land have required 49 operations, and have averaged for each crop 8s 4d per acre." The differences, as compared with horse labour, are stated to be: four crops on light land, requiring 11 operations, cost 12s 3d per acre for each crop; and seven crops on heavy land, requiring 18 operations, cost 21s 4d per crop per acre.

But a still greater advantage over ploughing is said to be the complete pulverisation the soil undergoes through the action of the atmosphere, rain, and frost when turned up roughly by the steam cultivator. In the culture of clay land this plan seems most useful; the weeds are kept near the surface, and soon vegetate, so that they may be destroyed, the manure filters into and is amalgamated with the soil better than where the land is turned over with a plough, and the land crumbles down gradually, and does not harden after rain as is so often the case on strong clay. Professor Voelcker has made a chemical examination of Mr Smith's farm, and has reported upon it. The Professor says:—"Mr Smith's plan of cultivation altogether avoids the temporary injury which a wholesale turning up of the subsoil is sure to produce in almost every instance. In all three subsoils [taken from the farm] a large proportion of mineral food exists in an unavailable condition. Mr Smith's subsoil implement provides for the admission of abundance of air into the subsoil. Mineral food thereby is gradually rendered soluble and prepared for assimilation by plants. By breaking up the land thus treated the second year, a good deal of aërated and partially prepared subsoil is mixed with the surface, and thus a constant supply of new mineral food is provided without the inconvenience and *temporary loss* which the opposite plan of burying a fine tilth under a mass of unmitigated clay is sure to occasion." It must, however, be noticed that by the ordinary system of horse culture, the tilth is never buried by a prudent farmer. If a deep furrow is made in the autumn, it is turned back again in the early spring, after the atmospheric changes have been in operation during the winter.

It would seem that in Dr Voelcker's opinion clay land may be constantly cropped without fear of exhaustion; for he says:—"In their natural state, clay soils are the most obdurate and unpro-

ductive; but, nevertheless, they contain inexhaustible stores of mineral riches required for the growth of cultivated plants. They, moreover, possess, when properly pulverised, in an eminent degree, the power of absorbing moisture and fertilising gases from the atmosphere. Thus, mineral and atmospheric food are furnished in almost unlimited extent to the crops we grow. To talk of ultimate exhaustion of such soils appears to me as unreasonable as the fear entertained by some speculative persons with respect to the ultimate exhaustion of our English coal-fields." The difficulty of preparing such land with efficiency and economy by manual or horse labour, is the obstacle "which prevents the cultivator growing year after year splendid crops of corn and roots without manure." Mr Smith's plan of preparing the land is in accordance with the Professor's views; and he adds:—"I have long maintained that steam cultivation is indispensable in the manages ment of clay land; that it is undesirable to bring up much of the subsoil at one time; that putting up the land into ridges before the frost sets in, and subsoiling between the ridges, completely alter the character of clay land; and that many heavy soils will yield abundant crops with scarcely any manure, when due care is bestowed upon the mechanical preparation of the land."

Literature.

ROBERT OWEN AND HIS SOCIAL PHILOSOPHY. By WILLIAM LUCAS SARGANT, Author of "Social Innovators," &c. Smith, Elder, and Co.

(SECOND NOTICE.)

HAVING outlived all his contemporaries before any one thought of writing his biography, Owen himself is the sole authority for the history of his early life; and it is difficult to place implicit reliance on his account of his youthful excellence and intelligence. It is evident, however, that he was even in childhood remarkable for the energy which distinguished his mature years, and for the inordinate self-esteem which never deserted him on this side the grave. At ten years old he was sent from his Welsh home to a draper in Stamford. At fourteen he left that place for a similar situation in London. At nineteen he refused the offer of partnership from his first employer, and established a minute spinning mill in Manchester. At twenty he was made manager of a large factory, with a salary of 300*l* a year, and the prospect of a partnership; in which, however, he was disappointed. Six years later we find him, as manager of an establishment at Chorlton, going down to Scotland on business. Here he fell in, and fell in love, with a Miss Dale, daughter of the owner of an extensive concern at New Lanark. By his own account—for Owen appears to have been vain of his personal attractions—the young lady was much in love with him; and, learning this, he resolved to make her father's acquaintance, and presented himself at Mr Dale's counting-house as an intending purchaser of the New Lanark concern. Those were the golden days of the cotton manufacture—days in which men without money might make their fortunes by it, and in which more than one operative, by thrift, industry, and sense, became a millionaire. Owen and his partners, though possessed of little capital, purchased Mr Dale's valuable mills; the price agreed on being 3,000*l* a year for twenty years. In this romantic manner commenced Owen's connection with the concern which made his reputation—a connection which lasted for nearly a quarter of a century, with ample profit to successive partners, and still greater advantage to the working people.

Owen entered on the management on the 1st of January, 1800, having shortly before married the lady of his choice. He found the people, whose "governor" he chose to consider himself, in a terrible condition; and he applied himself to their reformation not only with zeal, but with more discretion than those who knew him in after life would have supposed him to possess. He had the good fortune to own their cottages as well as the works; but the double powers of landlord and employer were not too great for the difficulties to be encountered. The adult labourers were the refuse of the country; habitual drunkards, and addicted to almost unlimited pilfering. The children—forced upon the manufacturers by the parish at the useless and helpless age of six—were employed in the factory from six in the morning till seven in the evening, which destroyed health, and rendered education impossible. Under such a system, of course, they lived in wretchedness, and grew up to vice. Following out his moral theories, Owen resolved to govern this unruly population by kindly treatment without recourse to punishment. He got rid of one of the worst evils, by refusing to take any more parish apprentices. By a system of checks, rendering detection easy, he gradually put a stop to depredation, without resorting to legal prosecutions. By instituting good shops, where commodities were sold at cost price, he achieved a great improvement in the physical condition of the work-people. In 1806, when the American Government stopped the exportation of cotton, and his mill was consequently closed for four months, he paid full wages to all the work-people. This sacrifice cost his partners—rather than himself—7,000*l*; but it won the hearts of the people, and overcame their prejudices against Owen's plans. But in 1809 those plans were carried so far as to alarm his partners and cause a dissolution of the firm. Owen then found new partners, and purchased the concern for 84,000*l*—the profits during these ten years having been 6,000*l* a year besides interest. In 1813, Owen quarrelled with his new partners, and formed a society of philanthropists, including Jeremy Bentham, who purchased the concern for 114,000*l*—a price which proves how profitable it had been under his management. Of this sum, Owen himself received 70,000*l* as the purchase money of his share in the former partnership. Under the new arrangement, all profits above five per cent. on the capital were to be devoted to the benefit of the work-people, and Owen was left to carry out his philanthropic schemes without further molestation.

It was about this time that he came forward as a public advocate of his peculiar doctrines on education—on the formation of character—and on the organisation of society. He made many friends in high quarters, and his practical success at New Lanark commanded an attention which his writings certainly did not deserve. The Duke of Kent was his firm friend; the late Czar was one of his visitors. He began with moderation and sobriety, though his economical theories were from the beginning utterly unsound. For instance, he attributed the distress of 1816 and the following years to an excess of general production, in consequence of the immense increase of productive power caused by machinery. A man who could commit an error so gross as this showed himself unfit for the office of a social regenerator. But some of his practical suggestions, relative to matters on which experience qualified him to speak, were just and valuable. He strongly urged the remission of the import duty on cotton, and the limitation of the hours of infant labour; and contributed not a little to the accomplishment of the latter object. But in 1817 success had evidently begun to turn his head. On the 14th August of that year, he brought forth his strange scheme of co-operative villages, as a remedy for all the evils of society—a scheme of which all the details had been carefully elaborated; the only things that had altogether escaped the author's consideration being the possibility of the plan as a whole, and the truth of the assumption on which it rested. The meeting before which this plan was propounded, as ignorant as himself upon these essential points, heard him with patience and interest. At this time, Owen says characteristically, "I was by far the most popular individual in the civilised world." Perhaps at this time he had some chance of doing serious mischief by his crude but seductive projects. His next step destroyed his influence for ever. Another meeting was held on the 21st of the same month, and on that occasion, in language so full of extravagance and self-conceit as inevitably to disgust even those who shared the opinions he put forth, Owen denounced religion as the source of all the evils that afflict mankind. From that time forth, he sank for ever from the factitious importance he had achieved; and though he retained the regard of some of his distinguished friends, he subsided henceforth into the insignificance of a platform preacher, and a dreamer of Utopian dreams. He retained, however, the management of New Lanark until 1824, and his connection with it did not finally terminate until five years later.

Of Mr Owen's Communistic experiments, and those instituted by others under his advice, we have here a very imperfect account. One such experiment was made in Scotland, not under his immediate supervision, and failed for the reason which must be fatal to all distinctly Communistic schemes—to all schemes in which remuneration bears no proportion to work. The skilful were dissatisfied at being on an equality with the unskilled; the industrious complained that the idle were as well fed as they were; and the conductors of the establishment were compelled to break it up in disgust and disappointment. A similar fate attended the American colony founded under Owen's own direction. Schemes of this kind never succeed, except—as in the case of the Moravians, Rappists, and others—under the stimulus of religious impulse, and under an authority secured by religious sanctions. And in almost all cases where such communities have been successfully maintained for any length of time, checks on marriage and multiplication have existed, amounting either, as among the "Shakers," to positive prohibition, or, as among the Rappists, to severe discouragement. No Owenite community ever did—or could—live long enough to be subjected to the trials arising from rapid increase of numbers on a limited extent of soil.

The creation of the "Labour Exchange," in Gray's inn road, was one of Mr Owen's last blunders. This institution was established in 1832. Its principle was that, as all commodities are produced by labour, *and as labour therefore constitutes their sole cost*, they ought to be exchanged against one another at a rate proportioned to the labour expended on each. To say nothing of objects absolutely limited in supply, of which the value does not depend on cost of production at all, there is another fallacy; inasmuch as accumulated past labour, or *capital*, is an element in cost of production as well as present labour immediately employed. Passing over this, we come to a second point—that the *quality* of labour is as important an element in cost of production as its quantity. Duly conscious of this, Owen attempted to meet the difficulty thus created by recognising one hour's labour of one quality as equivalent to more than one hour's labour of another quality, and distributing his "labour notes" exchangeable for goods according to a graduated scale; thus virtually reducing the plan to a system of *arbitrary valuation* of commodities, excluding from consideration the capital employed in their production, in place of that *natural*

valuation which is effected by the process of competition. But even this was more than Socialism could achieve, and, after much heartburning, quarrelling, and damago to his cause, Mr Owen submitted to another failure and a loss of 2,500*l*.

After this, the cause of Socialism went steadily down hill. The disciples of Mr Owen were disheartened by one proof after another of their master's total incapacity for the direction of the schemes he persuaded them to adopt, and by the heavy losses which he caused them to incur. At one time they had a regular system of branch societies, and lecturers attached thereto, spread all over the country. But the failure of Queenwood—the last experiment of a Communistic Society—finally broke the spirit and opened the eyes of the most devoted of the Communists; and Mr Owen was left to preach his new gospels to curious but unbelieving audiences. In his old age he fell in with a table-rapping impostor, and greedily swallowed the most extravagant fables of the "Spiritualists," which he mingled with his announcements—annually made and annually falsified—of an immediate Socialist millenium, until, after a life of restless motion and activity, he returned to die in his native village, in the extremity of old age, on the 17th of November, 1858.

Mr Sargant has written in many ways a disappointing book. He fails to give his readers either a defined notion of Robert Owen's character, or a clear account of his experiments and extravagances. It is but just, however, to him to acknowledge the difficulties imposed by the absence of reliable materials on the biographer of the apostle of English Socialism, and the diligence and painstaking which his work displays. We make no other complaint of him than that his mind is deficient in the power of grasping and comprehending a perplexed and confused subject, and his style wanting in precision and lucidity; and that he has adopted a line of study in which clearness of comprehension, precision, and lucidity of statement, are of all faculties the most essential. We believe that Mr Owen's more rational followers will be satisfied with the ample justice which has been rendered to their master; and, knowing as they know the chaos of unintelligible confusion from which Mr Sargant had to select his materials, will rate his actual achievement higher than, were it not for this reason, it would deserve.

Foreign Correspondence.

(FROM OUR CORRESPONDENT.)

PARIS, Thursday.

The Superior Council of Commerce is continuing with commendable diligence its inquiry for fixing the specific duties to be imposed under the commercial treaty on British productions imported into this country; but it has not yet got through that part of the investigation which is relative to iron, and to the trades which use iron and steel. The evidence received is taken down in short-hand, and is printed for the use of the members of the Council, but is not published for general information. The absence of publicity is, certainly, greatly to be deplored, as the inquiry directly concerns a large portion of the public, and is of interest for all; and as, besides, publicity would (as almost always happens in such matters) draw forth facts and opinions which would be useful to the Council. Although, however, the reports of the proceedings of the Council are not published, I have been favoured with the opportunity of making a hasty perusal of them. The ironmasters who have been examined appear to take for granted, as a matter of course, that they are entitled to such protection as will enable them to undersell English iron; and they give not the slightest thought to the interests of consumers. They enter into elaborate calculations to show that the different descriptions of iron they produce cost so much; that the corresponding sorts produced in England and brought into France will, carriage and incidental expenses included, cost so much less; and they claim as a thing of undoubted right that the duty to be imposed on the English iron shall be the very utmost the treaty allows (Art. 17), or, at all events, such as shall maintain that iron dearer than theirs. Even with such a concession, several ironmasters express the opinion that not a few of the ironworks in France are destined under the operation of the treaty to disappear before long. One of the ironmasters of the department of the Haute Marne, M. Peltereau de Villeneuve by name, made a very singular statement, namely, that in consequence of the treaty, he and his fellows will be obliged to require a reduction of 40 per cent. in the wood they consume (charcoal being exclusively used in that department), and that this reduction will cause a depreciation of 68,000,000f in the capital invested in forests in the Haute Marne alone! On the other hand, M. E. Pereire demonstrated, both by argument and figures, that cheap iron is absolutely indispensable for the railways, which require to be executed in France, inasmuch as (all the great and most of the secondary arteries being finished) those lines will not be able to obtain much traffic. He stated one very striking fact, namely, that if, when railways began to be constructed in France, the introduction of English rails and iron had been allowed on the terms which the treaty imposes, 1,000 additional kilometres (625 miles) might have been constructed for the same expense, purchase of lands included, as the existing 8,000 kilometres have occasioned. Yet he showed that if the duty of 30 per cent. *ad valorem* on rails be maintained, which will make 6f or 7f per 100 kilogrammes (2 cwts), "English rails will not be brought into France." He said:—"We shall have a guarantee that the sum of 240f to 260f, which is the normal price, will not be exceeded when the tariff shall be lowered from 12f to 7f or 6f. This reduction will prevent an exaggerated rise in price, but we must not count on having English rails, and the result desired from the treaty will not be obtained." M. E. Pereire further said:—"The best thing that can be done for French ironmasters who are intelligent, and capable, and have establishments well mounted, is to adopt frankly the reduction of the duties on cast iron. That is the point to which, as I believe, you ought to turn your attention. By so doing, you will cause the treaty of commerce to produce useful results; by not doing it, you will remain as you were before the treaty. You will have bad ironworks, which will vegetate and will embarrass the larger ones from the reason that, by the dearness of price, they will prevent the development of great works and an increase in the employment of iron. Reduce the price of iron, and you will kill the works placed in bad condition. They must in fact die one day or the other, because French enterprise cannot be condemned to pay 30 per cent. dearer than English; and 30 per cent. is a great deal in these matters. Thus, then, all the enterprises which have need of iron will suffer, and will do solely to preserve ironworks which cannot live, which will have a precarious existence, and will end by succumbing."

In the course of his evidence, M. E. Pereire mentioned a fact which is worthy of attention; it is that in France "locomotives, iron bridges, tools, in a word all the articles in which workmanship, invention, and skill in execution are of more importance than the cost of the raw material," *are better than in England*, and that in consequence, in the vast orders, amounting to millions sterling, which he had to give for the Russian railways, France was preferred for those objects. Another witness stated that, though common sorts of sheet iron used in shipbuilding are better and cheaper in England than in France, the superior sorts of France are equal to, and not dearer, than those of the same quality in England.

The Council is conducting its inquiry with great impartiality. Several Englishmen have appeared before it, and their evidence has been received with the greatest attention. Among these gentlemen are Messrs J. Smith, R. Jackson, W. A. Matthews, J. Spence, Biddulph, Budd, Fletcher, and Wagner. The first three were delegates of the Chamber of Commerce of Sheffield; the last two from Birmingham.

Considerable sensation has been caused in the Protectionist camp by the presentation to the Emperor of a petition of the manufacturers and printers of cotton goods of Rouen, praying that *cotton yarn may be imported at a duty not exceeding 5 per cent.* The petitioners represent that, though cotton spinners have obtained exemption from duty on the raw material they employ, they, instead of diminishing the price of their yarn 25c per kilogramme as they ought to have done, have actually increased it; and have thereby placed the weavers and printers of cotton goods in a most awkward position,—in fact have exposed them and their workmen to ruin. They remark that the conduct of the spinners is peculiarly unjust, seeing that they only employ one man where the others employ twenty-six. The spinners at Rouen have, it appears, attempted to throw ridicule on this petition, and assert that since January the price of thir yarn has fallen. But, whatever the spinners may say, the petition proves that their *confreres* consider themselves aggrieved; and this is a fact of great importance, for it shows that even manufacturers are beginning to become alive to the great truth that the "protection" which they have been so energetically supporting for years is a "delusion and a snare."

M. Michel Chevalier delivered a few days ago, at a banquet at Montpellier, a speech on the subject of the treaty of commerce between France and England. This discourse, which was marked with all that loftiness of view and felicity of language for which the great French commercial reformer is famous, maintained that though the treaty does not establish free trade, it does as much as the state of public opinion in France with regard to Customs reforms renders possible; that it throws open the door for future improvement; that by drawing closer the material interests of France and England, it will render war between them, if not impossible, at least very difficult; and that, as regards the internal condition of France, it will produce great material and not a few political advantages.

A note on the subject of the attacks made by the *Times* on the projected Isthmus of Suez Canal has been communicated to me. This note, after stating that Mougel Bey, one of the chief engineers of the Company, who has recently arrived from Egypt, has given

a very satisfactory account of the state of the enterprise, and of the conditions in which it can be executed, sets forth these points: 1. The nature of the ground has been ascertained to be such that fallings in of earth are little to be feared, and, consequently, the slopes can be considerably reduced; 2. As to the moving sands, on which great stress is laid, they can be fixed (as has been done with the downs of Gascony) by the plantation of shrubs and hardy trees; and, besides, the inconvenience caused by these sands is exaggerated, as is proved from the fact that various circumstances show that the ground is pretty nearly about what it was in Biblical times; 3. The statement as to the dearness of the stone to be employed is erroneous, as it has been ascertained that stone of the best quality can be obtained in abundance on the line of the canal, especially at Djebell Geneff, and that the cost of it will not be 14f the metre, nor even 12f. In consequence of this stone being obtainable, the contract which had been originally entered into for working the quarry of Merx, near Alexandria, has been broken off. 4. The sum stated to be the daily expense of procuring potable water is exaggerated. The wells sunk supply water good enough to make mortar, and to be employed in cultivation, likewise for the drink of animals; measures, too, are to be taken to render it potable, until the waters of the Nile can be obtained for the workmen. 5. Stress is laid on the importance of the expenses, but the directors have reduced them from 200,000,000f to 133,000,000f; and an eminent contractor has accepted the latter sum; so that it will only be by keeping his outlay within it that he will be able to make profits. 6. By changing the proposed entrance at Suez, a saving of several million francs can be effected. At Said, the roadstead is calmer than at Alexandria, and this is a circumstance which will probably permit the jetties to be shorter and less massive than originally intended. The note, after declaring that even if the project of M. Lesseps should fail, he will retain the honour of having conceived it, says:—

"We cannot understand how it is that, after long discussions and important labours of the first engineers of Europe on the subject of this canal, the *Times* should pay attention to the complaints of some disappointed speculators at Alexandria. If the works have not made greater progress than they have done, that is owing to the political obstacles which the Company has had to encounter. But the project is now in course of realisation; and we shall soon see that the supposition, based on erroneous calculations, that the canal is impracticable, is unfounded. No money is asked for in England,—none is wanted. And the French shareholders have no need of the *Times* to defend their pecuniary interests,—they are perfectly competent to do that themselves."

Quotations on the Bourse are somewhat lower this week, notwithstanding a noted speculator has made strenuous efforts to cause a rise:—

The report of the markets is as follows:—

Flour.—In consequence of very unfavourable weather, and a rise in most of the corn markets, prices at *Paris* have risen considerably. Yesterday, superior were 62f 50c to 63f the sack of 150 kilogs; good, 61f to 62f; other sorts, 59s to 60f. The four marks were 61f and 61f 50c for June; 63f for July; 64f and 64f 25c for July and August; 64f 50c for August alone; 65f for August and September.

Wheat has risen at *Paris*, the quotations yesterday having been: choice, 36f 50c to 37f 50c the sack of 120 kilogs; other sorts, 34f to 36f 50c. In 92 provincial markets there has been a rise of from 11c to 1f 25c the hectolitre; in 28 a fall of from 12c to 1f; and 14 have remained unchanged.

Cotton.—The sales at *Havre*, in the week ending Friday, were only 3,821 bales, and prices remained unchanged. The arrivals were 10,603 bales. This week a fair amount of business has been done, and yesterday low New Orleans was 88f the 50 kilogs.

Sugar.—At *Havre*, in the early part of the week ending Friday, business was dull, but after the promulgation of the new law 210 casks French West India disposable went at 49f the 50 kilogs duty paid (new duties), and 10 ditto, "choice," at 49f 50c. The reduction of duty being 12f in favour of purchasers, these prices show a fall of 1f. This is owing to arrivals having been very numerous—namely, upwards of 4,000 hogsheads French West India, and about 3,000 bales Reunion. This week sales have not been numerous: French West India, 48f and 48f 50c; Reunion, 55f. At *Bordeaux*, last week, the principal transactions were recorded in last Economist. Quotations at the close were (new duties) 48f 50c the 50 kilogs French West India; 49f 50c to 50f Reunion. This week, nothing has been done. At *Nantes*, last week, the sole sales were those of Reunion recorded in last Economist. No sales this week.

Coffee.—In the week ending Friday, at *Havre*, business was animated and prices were firm. 120 sacks Hayti Port-au-Prince went at 83f 50c the 50 kilogs in bond; 1,000 sacks ditto for delivery, 83f; 450 sacks Gonaïves disposable, 84f 50c to 85f; 300 sacks Cape disposable, 84f; 100 ditto for delivery, 84f; 220 sacks Rio, not washed, 74f; 1,016 sacks and some smaller lots Porto Rico, 95f to 98f; 100 casks Goudeloupe, 147f 50c duty paid (old duties); 200 sacks Ceylon native for delivery, 131f 50c; 800 sacks ditto triage for delivery, 133f; 150 ditto disposable, 135f; 1,038 sacks Java, 140f duty paid (old duties); 650 sacks Manilla, 108f duty paid (new duties); 5,076 Macassar, 110f duty paid (new duties); 50 Java yellow, 114f 20c duty paid (new duties). Various lots of damaged Hayti, Java, Macasser, and Manilla were also sold. The arrivals were nearly 13,000 bales. This week there have been numerous sales: Santos, 79f; Mocha, 121f to 132f; Ceylon native triage, 133f duty paid (old duties); ditto, 110f (new duties); Malabar, 111f (new duties); St. Marc, 110f (new duties); Java, 115f duty paid; Hayti Cape, 82f to 84f Gonaïves, 85f. At *Bordeaux*, last week, in addition to those recorded in last Economist, some large sales of Java and Manilla were made, and closing quotations were, per kilogramme, *new duties:* French West India, 2f 75c to 2f 90c; Reunion, 2f 80c to 2f 90f; Mocha, 2f 90c to 3f; ditto triage, 3f 10c to 3f 20c; Mysore and Malabar, 2f 35c to 2f 40c; Ceylon native triage, 2f 16c to 2f 20c; plantation, 2f 42c to 2f 45c; Java, 2f 30c to 2f 35c; Demerara, 2f 42c to 2f 45c; Manilla, 2f 22c to 2f 25c; Costa Rica, 2f 25c to 2f 30c; Macassar, 2f 20c to 2f 25c. This week the sole sale has been a lot of Malabar triage, 139f. At *Nantes*, in the week ending Saturday, no other transactions of importance took place than those mentioned in our last number. Nothing done this week. At *Marseilles*, last week, about 2,000 sacks Rio went at 70f to 76f the 50 kilogs; 2,400 Hayti Port-au-Prince, at 80f; 1,300 sacks Porto Rico, 95f; a lot of Mocha, 115f:—In addition, several lots of damaged Hayti and other sorts were sold by auction.

Indigo.—At *Havre*, in the week ending Friday, not fewer than 600 cases Bengal were sold at 10c to 72c above the new estimates. The arrivals were 113 cases. This week there have been some sales of Bengal, part at prices kept secret, part at 11f 15c the ½-kilog. At *Bordeaux*, last week, 77 cases of Bengal Kurpah and other sorts were sold at firm prices. No sales have been made this week.

Hides.—Business at *Havre*, in the week ending Friday, was limited: 400 Buenos Ayres salted went at 86f the 50 kilogs duty paid; 103 Martinique salted, 72f 50c; 100 New York ditto, 69f; 500 Lima drysalted, 85f; 290 Pernambuco drysalted, 105f to 107f; 460 horse dry La Plata, from 10f to 12f 50c duty paid. The arrivals were about 17,000. This week little has been done: Monte Video salted, 80f to 85f; Buenos Ayres salted, 85f; horse La Plata, 14f each.

Wool.—The sales at *Havre*, in the week ending Friday, were 11 bales Buenos Ayres, unwashed, at 2f 35c to 2f 40c the 50 kilogs; 50 bales Russian, washed, 7f 50c to 8f; 6 bales sheep skins, La Plata, unwashed, 1f 35c to 1f 50c. The arrivals were about 1,000 bales. This week Monte Video, unwashed, has been at 2f 60c to 2f 80c; Buenos Ayres, 2f 5c; ditto, 2f 55c to 2f 80c.

Tallow.—At *Havre*, in the week ending Friday, 79 casks Buenos Ayres were sold at 63f 50c the 50 kilogs duty paid. No arrivals. This week, 100 pipes Buenos Ayres have gone at 65f duty paid. At *Paris*, yesterday, business was not very active, and quotations were 137f 5c—a rise of 50c.

Spirits.—At *Paris*, yesterday, 3-6 of 90 deg. first quality was 115f the hectolitre; Montpellier of 86 deg., 140f. At *Bordeaux*, the day before yesterday, 3-6 Languedoc were 135f; and ditto beetroot, first quality, 108f.

Correspondence.

BALANCE OF TRADE.

TO THE EDITOR OF THE ECONOMIST.

Sir,—I have read with much interest your admirable remarks upon the true nature of the balance of trade, contained in your article of Saturday last (May 19) upon the mistakes made upon that subject by the "Edinburgh Review," Sir Archibald Alison, and "Blackwood's Magazine."

There is one passage, however, to which, as a candid, though strong opponent of Sir Archibald's views on statistical subjects, I would draw your attention. You say:—"But if this defence is anything, except an ingenious after-thought, why did the historian never drop a hint that he was placing side by side figures which could not honestly lie in any such juxtaposition?"

Now, I have observed that when Sir Archibald first commenced a comparison between the exports and imports, he did explain very clearly that he was comparing the "official" value of the imports with the "declared" value of the exports;—for in volume vi., page 279 (note), he gives a table of the exports and imports from 1837 to 1842, and adds:—"It is true, the imports here are calculated according to the official, and the exports according to the declared value. But that the official value of the imports was not materially different from the real, is proved by the fact that from 1797 to 1819 the official value of exports exceeded their real value. In 1819, for the first time, the scale turned: the official value of exports in that year was 33,534,176*l*, the real value 35,208,321*l*. So great and decisive had since that time been the effect of the contraction of the currency in lowering the prices of manufactured goods, that in 1840 the official value of exports was 102,705,372*l*, the real value only 51,406,430*l*."

I am anxious that your admirable and conclusive article should not lie under the faintest imputation of unfairness, and the admission of Sir

Archibald's having previously announced his mode of comparison in no way derogates from your decisive argument upon the subject.—I remain, your obedient servant,

A CONSTANT READER.

The market remains steady, under a continued fair demand, and prices are still in favour of the seller. The sales aggregate about 5,500 bales, closing steadily at the appended rates. We may remark, however, that our quotations for good middlings and above are inside prices. We quote:—

NEW YORK CLASSIFICATION.

We have to report a week of much depression in the cotton market. The trade have limited their purchases below the average consumption; and though there has been a fair demand for export, the amount of stock offering has been greatly in excess. The week's amount of sales is swelled by the addition of 10,000 bales forwarded into the country direct from the ship during the month. The market has shown great irregularity in prices, and the buyer has had a decided advantage. We have reduced our quotations in some grades of American ⅛d to ¼d per lb. The better qualities with full staple maintain their position. There is little change in Egyptian, few holders being willing to concede. Brazil are difficult to sell. East India are slightly lower. The sales to-day are 7,000 bales. The market dull. The reported export amounts to 10,050 bales, consisting of 3,250 American, 240 Brazil, and 6,560 East India.

MARKETS IN THE MANUFACTURING DISTRICTS.

Owing to the dull advices received both from India and China, a very limited business has been passing in goods this week for shipment to the East. Continental buyers have continued to purchase cautiously, but there has been no disposition shown by the manufacturers to force sales. Stocks keep very low for the time of year, and the wool trade is somewhat firm, especially as regards price. In the iron and coal districts, very little has been doing.

MANCHESTER, May 31.—That inactive condition which was originally due to the absence of Eastern demand, has now further extended to our other departments in consequence of the Whitsuntide holidays. Quotations are perfectly nominal, and transactions have been chiefly confined to a few purchases of water twist for the Levant, and partly, it is presumed, for China. Shirtings in 36-inch, 40-inch, and 45-inch widths, have all now fallen very considerably, madapollams in the next degree, and jaconnets very little. Longcloths and T'cloths have been weaker on the whole, though to what extent it is difficult to say. ⅞ printers maintain former values, so far very successfully. Mule yarn

for India is not tested; a little has been done for Germany in the better spinnings at about ⅛d to ¼d less. Home yarns are flat.

Bradford.—Wool—The demand is chiefly for bright-haired wools. Noils and brokes are taken off as produced. Yarns—The business passing has been very small. Prices continue firm, with an upward tendency, which is more particularly the case with the better class of yarns. Pieces—Manufacturers complain of the difficulty of obtaining any advance on their goods, and unless higher prices can be realised, there is a probability that looms will be stopped.——Leeds.—The few articles in request were cleared off at late rates, and there is no disposition to lower prices. The flax trade is rather quieter, but for some descriptions of yarns there is a good market for export purposes.——Rochdale.—Manufacturers are doing a good steady business.——Halifax.—Business has been rather dull. A fair amount of wool has changed hands, and full rates are asked and given. All descriptions of wools, and also noils and brokes, are in fair request, and prices firm. We have no change to note with regard to other branches of local trade. There is only a languid demand either for yarns or pieces, but still machinery is kept going.——Leicester.—There has not been much doing in the hosiery trade, in consequence of the holidays. There are, however, several orders in the market, and business in several departments is in a satisfactory condition.——Nottingham.—The fancy trade continues dull, but more is expected to be done in this branch shortly. Some departments of the silk lace trade are improving. Upon the whole, however, trade still remains in a very quiet state, and manufacturers produce for the most part to order, so that stocks may be kept down.——Glasgow.—The wool trade is in a healthy state, at full quotations.——Dundee.—Yarns are in moderate request; but the transactions in linen goods are by no means numerous.——Belfast.—We have no change to notice in the value of any article. Buyers continue to operate cautiously.——Wolverhampton.—The iron market is heavy, but no actual decline has taken place in prices.

CORN.

AMERICAN GRAIN AND FLOUR MARKETS.

New York, May 15.—Flour—The market was dull, especially State and Western brands, under the influence of augmented receipts and the discouraging advices from Europe. The market closed at a decline of about 10c per bbl. The sales footed up about 9,000 to 10,000 bbls, closing within the following range of prices:—Superfine State, 5 dols 27½c to 5 dols 30c; extra State, 5 dols 35c to 5 dols 50c; superfine Western, 5 dols 27½c to 5 dols 30c; common to choice Western extra, 5 dols 45c to 7 dols 20c: St Louis extras, 6 dols 50c to 7 dols 80c; mixed to straight Southern, 6 dols 20c to 6 dols 55c; straight to good extra ditto, 6 dols 60c to 7 dols 75c; choice extra family and bakers' brands, 7 dols 75c to 8 dols 50c; rye flour, 3 dols 40c to 4 dols 20c; corn meal, 3 dols 70c to 4 dols. Canadian flour was in fair demand, with sales of 600 to 700 bbls at 5 dols 65c to 7 dols 50c for good to extra brands. Southern flour was heavy and lower, while the sales embraced about 2,000 bbls, closing within the range of the above quotations. Wheat dull, and was from 2c to 3c per bushel lower, with sales of about 18,000 bushels, including white, Western at 1 dol 60c, red Racine at 1 dol 26c, extra Milwaukee Club at 1 dol 28c to 1 dol 29c, and Chicago spring at 1 dul 25c to 1 dol 26c. Corn was heavy and decidedly lower.

LONDON MARKETS.

STATE OF THE CORN TRADE FOR THE WEEK.

Mark Lane, Friday Evening.

Most of the leading markets held during the week have been but moderately, in some instances, scantily, supplied with wheat, in, for the most part, fair condition. For good and fine samples, the demand has been steady, but far from active, at previous quotations. All other kinds, however, have met a dull inquiry, at barely late rates. The transactions in foreign wheat at the outports have fallen off; nevertheless, importers have shown no disposition to press sales. The barley trade has become in a depressed state, owing to heavy importations from the Continent, and the currencies have given way from 1s to 2s per quarter. All kinds of malt have sold slowly at previous quotations. In oats, very little has been passing, on easier terms. Beans and peas, however, have sold on former terms. About an average business has been passing in flour, at the late improvement in value.

The Continental markets have been tolerably firm for both red and white wheat, at the late advance. The business doing in it, however, on English account has not increased. Spring corn has come forward freely, and large purchases have been made for immediate shipment. In the United States, there has been no movement of importance either in wheat, flour, or Indian corn. The shipments to England still continue very moderate, although the stocks at the various ports are seasonably good.

The supplies of wheat in stack in this country are, for the most part, represented as limited; hence, it is assumed by some of the growers that we shall have higher quotations for that description of produce. We, however, are of opinion that there are no real grounds for assuming that wheat will assume a much higher range than at present, even though consumption is progressing at a rapid rate.

The Scotch markets have been wholly devoid of animation. Wheat has continued somewhat steady in price; but the dealings in barley and all other articles have been much restricted. Very little grain has been shipped to the South.

In Ireland, wheat has met a very inactive demand at barely previous rates. Other descriptions of produce have moved off heavily, and the quotations have had a drooping tendency.

Only a limited quantity of English wheat was on sale here to-day, nevertheless, all kinds moved off slowly at Monday's currency. Foreign wheat was dull, but not cheaper. In the value of all other produce scarcely any change took place.

Mr Edward Rainford states that 17 vessels have arrived off coast since the 25th ult., laden with grain. The business done in floating cargoes has been to a moderate extent, at full prices.

COMPARATIVE EXCHANGES.

The quotation of gold at Paris is about at par, and the short exchange on London is 25.12½ per 1*l* sterling. On comparing these rates with the English Mint price of 3*l* 17s 10½d per ounce for standard gold, it appears that gold is about 2-10ths per cent. dearer in Paris than in London.

By advices from Hamburg the price of gold is 422½ per mark, and the short exchange on London is 13.3⅜ per 1*l* sterling. Standard gold at the English Mint price is, therefore, at about the same price in London and Hamburg.

The course of exchange at New York on London for bills at 60 days' sight is 109⅜ to 109¾ per cent., which, when compared with the Mint par between the two countries, shows that the exchange is slightly in favour of England; but, after making allowance for charges of transport and difference of interest, the present rate leaves scarcely any profit on the importation of gold from the United States.

The Bankers' Gazette.

BANK RETURNS AND MONEY MARKET.

BANK OF ENGLAND.

(From the GAZETTE.)

AN ACCOUNT, pursuant to the Act 7th and 8th Victoria, cap. 32, for the week ending on Wednesday, the 30th day of May, 1860.

ISSUE DEPARTMENT.

	£		£
Notes issued	29,620,550	Government Debt	11,015 100
		Other Securities	3,459,900
		Gold Coin and Bullion	15,145,550

Dated the 31st May, 1860. M. MARSHALL, Chief Cashier.

THE OLD FORM.

The above Bank accounts would, if made out in the old form, present the following result:—

Liabilities.	£	Assets.	£
Circulation (including Bank post bills)	22,117,101	Securities	29,484,374
Public Deposits	7,489,290	Coin and Bullion	15,892,112
Private Deposits	12,551,247		
	42,157,638		45,376,486

The balance of Assets above Liabilities being 3,218,848*l*, as stated in the above account under the head REST.

FRIDAY NIGHT.

The preceding accounts, compared with those of last week, exhibit—

An INCREASE of Circulation of	£199,696
A DECREASE of Public Deposits of	177,243
A DECREASE of Other Deposits of	18,601
No change in be amount of Government Securities.	
A DECREASE of Other Securities of	103,243
An INCREASE of Bullion of	47,917
A DECREASE of Rest of	59,178
A DECREASE of Reserve of	176,288

The changes shown in this return are of an unimportant character.

Subjoined is our usual weekly table, affording a comparative view of the Bank returns, the Bank rate of discount, the price of Consols, the price of wheat, and the leading exchanges, during a period of four years, corresponding with the present date, as well as ten years back, viz., in 1850:—

At corresponding dates with the present week	1850.	1857.	1858.	1859.	1860.
Circulation, including bank post bills	£ 20,413,863	£ 19,790 783	£ 20 900,692	£ 21,876,060	£ 22,117,101

Price of Consols	96⅝	95¾	97⅞	93	95
Average price of wheat	40s 2d	57s 8d	44s 8d	53s 6d	52s 6d
Exchange on Paris (shrt)	25 50 57½	25 25 30	25 2½ 7½	25 5 12½	25 12½ 17½
— Amsterdam ditto	12 3 3½	11 17 18	11 14½ 15	11 12 13	11 14½ 14¾
— Hamburg (3months)	13 12½	13 8 8½	13 6¾ 7	13 3½ 4½	13 5½ 5¾

At the corresponding period of the year 1850, there was a great Socialist agitation in Paris and throughout France, in connection with the debates in the Assembly on the Electoral Bill. This Bill, however, was welcomed by the capitalists, and the funds were improving. In the United States an expedition against the Spaniards in Cuba was in course of organisation.

In 1857, the drain of silver to the East had increased so largely that the next packet was expected to take nearly a million. The rate of discount was consequently as high as 6½ per cent. The bullion in the Bank of France, long kept up by purchases at an artificial price, was at length increasing, although the deficiency in the silk crop had been placed beyond doubt.

In 1858, first-class bills were discounted as low as 2½ per cent.; but extreme caution continued to be displayed in financial and commercial circles.

In 1859, the French and Sardinian armies in Italy had gained repeated successes over the Austrians. The definitive report of the French Minister of Finance relative to the loan of 20,800,000*l* showed that the subscriptions had reached an aggregate of 100,382,000*l*. Prussia had announced a 5 per cent. home loan. The Bank of England had lowered their *minimum* rate of discount from 4½ to 3½ per cent.

The amount of the "other" deposits, as compared with the "other" securities, showed, in 1850, a deficiency of 544,310*l*; in 1857, a deficiency of 9,077,026*l*; in 1858, a deficiency of 419,016*l*; and in 1859, a deficiency of 2,370,702*l*. In 1860, the deficiency is 7,282,184*l*.

The tendency of the rates of discount is still drooping. The demand for money during the present week has been slack, and the Bank of England have lost nearly the whole of their business, apart from that carried to them by their regular customers. In the open market it has been easy to get the best short bills discounted at 3¾ per cent., although many houses continue loth to do business below 3⅞ or 4. It would appear, however, that the supply of money is being gradually reduced, and the time is at hand when, owing to the accumulation of money in that establishment, the Bank will be called upon to commence their quarterly advances. It is believed that any application to this effect would be entertained now.

In the Stock Exchange, owing to the continued sales of stock, money is in good demand on English Government securities at 4 to 4½ per cent.

The only arrivals of specie announced this week have consisted of 186,000*l* by the Atrato, from the West Indies; and 23,000*l* by the Illinois, from New York. The arrival of the latter vessel was notified this day.

The bullion operations at the Bank since the date of the return given above have been limited to a purchase of 5,000*l*.

It is believed that the shipments of specie and bullion by the steamer Ceylon, which will leave Southampton on the 4th inst., will reach about 300,000*l*,—principally silver for China.

The movements in bullion and in the Indian Government paper are thus noticed by Messrs Pixley, Abell, and Langley:—

Gold.—Scarcely anything has been doing in gold during the past week, the only arrivals having been the Atrato, from the West Indies, with 94,000*l*, and the City of Manchester, from New York, with 60,000*l*; the former amount bring refinable, has been taken for the Continent; the latter remains to be dealt with. Some further sums have been sent into the Bank; and the present state of the exchanges will tend to prevent any arrivals of gold from being sent to the Continent. The Tagus has taken 30,000 to the Peninsula.

Silver.—There has been rather a better demand for silver for the past few days; and the outgoing mail to India and China will take out about 250,000*l*. The Atrato brought about 40,000*l* from the West Indies, and this has been sold at 61⅛d per oz standard. Some rather large amounts have been imported from the Continent, and we now quote the price as 61⅛d to 61¾d per oz standard.

Mexican Dollars.—The Atrato brought about 50,000*l*, which have been sold at 62¼d per oz; the price has since become a little flatter, and some amounts have been done at 62⅛d per oz. Arrivals have also taken place from the United States, and buyers for the China market have thus been able to complete their orders.

Exchange on India is without change at 2s to 2s 0¼d for 60 days' sight bank drafts on Bombay and Calcutta. Madras, 1s 11⅞d to 2s. Bills with documents, 1s 11½d.

India Government Loan Notes remain without change, and we quote them nominal 102¾ to 103 for 5¼ per Cents., and 97¾ to 98 for 5 per Cents.

Quotations for Bullion.—Gold—Bar gold, 77s 9d per oz std; bar gold, fine, 77s 9d per oz std; bar gold, refinable, 78s per oz std; Spanish doubloons, 76s 6d per oz, last price; South American doubloons, 74s per oz, last price; United States gold coin, 76s 3½d per oz, last price. Silver—Bar silver, 5s 1⅛d per oz std; bar silver, containing 5 grs of gold, 5s 1⅞d per oz std; fine cake silver, 5s 6¼d per oz; Mexican dollars, 5s 2¼d per oz; Spanish dollars (Carolus), 6s 2d per oz, last price; five-franc pieces, 4s 11⅛d per oz, last price.

An instalment of 25 per cent., making 50 per cent. paid, fell due to-day on the Brazilian Four-and-a-Half per Cent. Loan of 1,373,013*l*.

Monday next is the last day allowed for sending in the June Exchequer Bills for renewal. The rate of interest is

to be the same as that now paid, viz., 1½d per 100*l* per day, or 2*l* 5s 7d per cent. per annum. The new bills will be issued on the 13th of June.

The following are the days appointed for the shutting and reopening of the transfer books at the Bank of England and East India House, viz. :—

India Five per Cent. Stock	Friday,	—	8	Tuesday,	—	17

A painful impression has been occasioned in Stock Exchange and other circles, by a new case which has arisen in connection with the transactions of Pullinger in that establishment. A Stock Exchange house of high respectability—that of Messrs R. S. and J. S. Scrimgeour and Co.—is found to have had dealings to a limited amount with Pullinger. It appears that the principal transaction in respect of which the firm is visited with censure occurred as far back as the year 1856, and consisted of a purchase of 5,000*l* Turkish 6 per Cent. stock. The stock was paid for at the next settlement, and taken up by the brokers, who held it until March last for account of Pullinger, sending him contract notes at each fortnightly settlement. In March last the transaction was finally closed at a heavy loss to Pullinger. The original purchase was effected prior to the issue of the notice from the Stock Exchange Committee warning the members against transacting business for clerks without the knowledge of their employers; but the subsequent continuance of the transaction has brought the firm within the scope of the Stock Exchange rule. The Committee have this day decided that the firm be suspended until March next. The decision stands for confirmation on Monday. The affair has excited more attention because the two partners are brothers of the manager of the Union Bank of London.

It is officially announced that the half-yearly report of the Directors of the Peninsular and Oriental Steam Navigation Company will recommend the usual dividend of 3½ per cent.

The Scinde Railway Company have paid to the credit of the Secretary of State for India in Council the sum of 178,000*l* on account of debentures up to this date.

A call of 2*l* per share will be payable on the shares in the Punjaub Railway on the 28th of June. Payments in anticipation continue to be received.

At the meeting of the shareholders in the Ionian Bank, held yesterday, the Directors' report stated that the Charter of the institution has been renewed by the Ionian Government for a further period of 20 years. The operations of the year 1859 show a net profit of 11,406*l*. By the addition of 13,181*l*, the balance to the credit of profit and loss on the 1st of January, 1859, the total available is increased to 24,587*l*. From this is to be deducted 7,500*l*, the amount of two half-yearly dividends at the rate of 5 per cent. per annum, leaving 17,087*l* to the credit of profit and loss on the 1st January, 1860.

At the annual meeting of the Trust and Loan Company of Upper Canada yesterday, a dividend at the rate of 8½ per cent. per annum was declared, as recommended in the Directors' report.

The annual report of the Directors of the Bank of British North America, to be submitted at the meeting on the 5th of June, states that they "have found it advisable to make further provision out of the profits of 1859, to cover deficiencies which may occur in the realisation of securities held against the doubtful debts of the preceding two years, in consequence of which the net available profit of the last year is reduced to 61,112*l* 5s 3d, and the dividends declared at Midsummer and Christmas last having amounted to 60,000*l*, an addition of 1,112*l* 5s 3d has been made to the rest or undivided net profit, which amounted to 123,868*l* 13s 11d on 31st December, 1859." The Directors have declared a half-yearly dividend, payable on and after the 5th July next, at the rate of 6 per cent. per annum, free of income tax.

The report of the Directors of the African Steam Ship Company recommends, after various appropriations, a half-yearly dividend of 7s per share, being at the rate of 7 per cent. per annum.

The prospectus of the Imperial Thessalian Mining Company, Limited, is in circulation. The mining property which it is proposed to work is situated in the provinces of Thessaly and Epirus. The concession from the Turkish Government is of an exclusive character, and involves the payment of only a small annual sum in lieu of all royalties. Large smelting works have been erected on the slopes of Mount Pelion, about three-quarters of a mile from the sea-coast, and form the subject of a special report from Mr W. B. Bray, C.E. It is mentioned that the ores of galena yielded by the mines are very rich, averaging from thirty to forty per cent. The mineral veins yield on an average about 35 per cent. of mixed metal, consisting of lead, silver, and gold. The purchase money for the entire concession, smelting works, and other property, is 30,000*l* in fully paid-up shares at par, and 20,000*l* in cash. The Pelion mines are stated to be now working at a profit. The Company's capital consists of 100,000*l*, in shares of 2*l* each.

It appears that the allotment of the shares in the Thames and Mersey Marine Insurance Company cannot be effected until next Monday at the earliest, the labour having proved very heavy.

The project announced last week under the title of the Himalayan Tea Company has been withdrawn.

The quotations for shares in new undertakings this afternoon were as follows:—Ocean Marine Insurance, 2 to 2¼ prem.; Universal Marine Insurance, ¼ to ⅜ prem.; Thames and Mersey Marine, 1¾ to 1⅞ prem.; London and Provincial Marine, ⅜ to ¼ dis.; London and South African Bank, ½ to ¼ dis.; and Thessalian Mining, ¼ to ⅜ prem.

At Paris to-day the 3 per Cent. Rentes closed at 69.60 for money, and 69.55 for the pending settlement, being ¼ per cent. higher than yesterday, and ⅜ to ½ per cent. higher than on last Friday. The rise to-day appears to have been caused by the issue of a new pacific manifesto from the French Government.

The English funds showed a tendency to improvement during part of the week, but have since given way, in consequence of the continued distrust inspired by the state of politics on the Continent. It is also remarked that bankers and other holders continue to sell, so that the supply of stock in the market is considerable. The closing quotations of Consols this afternoon were 95, "sellers," for money and next Wednesday's settlement, and 95¼, "buyers," (or equal to 93¾, "buyers," ex dividend), for the 10th of July. Subjoined is our usual list of the highest and lowest prices of Consols every day, and the closing prices of the principal English and foreign stocks last Friday and this day:—

The market for British railway stocks has been firmer, owing chiefly to the highly favourable character of the traffic returns. A slight improvement has taken place in most of the principal stocks. Lancashire and Yorkshire stock has risen 1 per cent.; Caledonian, Great Northern, Great Western, London and North-Western, and York and North Midland, ½ per cent.; and Midland, North British, and Ber-

wick, ¼ per cent. Subjoined is our usual list of the closing prices of the principal shares last Friday and this day :—

COMMERCIAL EPITOME.

FRIDAY NIGHT.

Only a limited quantity of English wheat was on sale in to-day's market; nevertheless, both red and white qualities moved off slowly at Monday's currency. Foreign wheat was held at very full prices, but the demand for it was wholly confined to retail parcels. There was rather more inquiry for spring corn, and the value of flour was well supported. The imports from abroad are moderate, viz., 12,270 quarters of wheat, 4,930 barley, 8,380 oats, and 1,670 sacks of flour.

Very little change took place in the value of produce at Liverpool this morning.

At New York, on the 18th ult., flour was offering on easier terms, and other articles were neglected. Canadian advices to the same date bring lower prices for flour.

Messrs Pietroni, Draper, and Co., furnish the annexed particulars, in reference to the corn trade at Odessa, to the 18th ult. :—

The reports respecting the prospects of the crops continue to be very favourable, and we hope to have an abundant harvest. The position of our market offers nothing at present of particular interest. After a period of activity caused by the purchases made for Naples, our market has again become quiet, and a pretty considerable fall has followed. Prices current, free on board :—Wheat, Polish, 41s 9d per 492 lbs; ditto, Sandomirka, 42s 3d per 480 lbs; ditto, Ghirka, 42s 6d per 492 lbs; rye, 23s 9d per 448 lbs; maize, 28s 6d per 492 lbs; barley, 17s 9d per 400 lbs; oats, 13s 9d per 300 lbs; linseed, sifted, 46s 3d per qr; ditto, unsifted, 44s per qr; rapeseed, 25s 6d per qr; peas, green, 32s per qr. Shipments from Odessa from 1st to 30th April, 1860, to United Kingdom :—Wheat, 56,424; maize, 86,896; barley, 8,747 chetwerts. Total to United Kingdom since 1st January :—Wheat, 120,418; maize, 326,098; barley, 48,688 chetwerts.

The following report of the corn trade at Alexandria has been forwarded by Messrs Briggs and Co. It is dated May 19 :—

An active business has been transacted in our corn markets during the past week, and prices in general are well maintained. Wheat is firm, and without arrivals of Behera quality. In the value of beans an advance of about 4d to 6d per quarter f.o.b. will be observed over our last quotations. Indian corn, on the other hand, has declined to the extent of nearly 6d per quarter f.o.b. Contracts are said to have been entered into for delivery of Saide wheat in September and October to the amount of 5,000 ardebs at T. P. 85½, equal to about 33s 6d per quarter f.o.b. The following are the sales since our last advices of the 12th instant, and present prices, free on board, viz. :—Wheat, Saide, 1,000 quarters, 37s to 37s 6d; ditto, Behera, 35s 6d to 36s 6d; beans, Saide, 3,180 qrs, 28s 8d to 29s 2d; ditto, Behera, 3,500 qrs, 27s to 28s; Indian corn, 1,220 qrs, 26s 3d to 26s 10d; barley, 790 qrs, 20s 4d to 20s 8d per quarter.

There has been a fair extent of business transacted in the Liverpool cotton market during the week, the sales amounting to 55,000 bales, and including 1,000 bales on speculation, 10,000 bales for export, and 44,000 bales to spinners, but quotations are reduced ⅛d to ¼d per lb since Friday last. To-day the sales are 7,000 bales, with a dull market. The stock in Liverpool is reaching a tremendous cipher, and the crop prospects in America remain very favourable, so that holders are very willing to meet buyers readily; but in order to effect sales, so large is the choice, that large concessions have to be made.

The New York cotton market on the 18th ult. was firm, and middling Uplands had sold at 11⅛c.

The state of the cotton trade at Alexandria, to the 19th ult., is thus reported by Messrs Briggs and Co. :—

Our cotton market has been a little more quiet, but prices are somewhat higher, and the absence of good qualities becomes daily more apparent, although our stock is still computed at 4,500 to 5,000 bales. Arrivals from the interior are now very small. The operations since the 11th have been as follows, prices quoted per lb f.o.b. :—595 bales very low ordinary to middling, 6½d to 8.42d; 165 bales good middling to fair, 8.56d to 8.85d; 80 bales fully fair, 9.40d; total, 840 bales. Freight by steamers, 5-16d per lb in full, with very little offering. Exchange commenced at 96½, and closes at 96¾.

The public sales of tea held this week have gone off slowly. Congou has supported previous rates, but the value of other kinds has had a drooping tendency.

The annexed report of the tea and silk markets in China is dated Kong Kong, April 14 :—

Tea—During the fortnight two chops of congou have been settled, leaving a stock of five chops in the market, for which exorbitant prices are asked. The new Tayshan teas are now not expected in any quantity for about a fortnight or three weeks; the delay is caused by some disputes about the inland duties. Great competition is said to be going on among the native dealers in the country, and extreme rates are looked for. Purchases during the fortnight are :—Congou, two chops, at 29½ to 35 taels; scented caper, 2,000 boxes low mixed leaf, at 15 to 17 taels; gunpowder, 2,500 boxes mixed glazed leaf, at 16½ to 17 taels; Canton-packed Pouchong and Oolong, 6,000 half-chests ordinary coarse leaf, at 15 to 16 taels, for the colonies and America. Foochow advices are to the 4th inst. Tea—Only a very small business has been done during the fortnight, owing to the inferior character of the tea now on the market. Arrivals have been a few hundred chests of very ordinary quality. Stocks are decreasing, and are estimated at about 4,000 chests, mostly very common kinds. The general departure of the teamen for the interior commenced on the 1st inst. Sales for the fortnight are :—Congou, 2,900 chests, from 10.5 taels short for low dusty kinds to 22¾ taels for fair medium; the chief purchases being for England at 10.5 taels to 17 taels. Oolong, 230 chests, at 15 taels to 17 taels. Pekoe, 120 chests, old and heated, at 23.5 taels. Prices show no alteration of any importance. Shanghai advices are to the 9th inst. Silk—During the fortnight 2,000 bales have been settled at a reduction of 10 taels to 15 taels, making the total settlement for the season 58,500 bales. Stock, 3,000 bales, and about 1,500 piculs unpacked. Quotations are as follows :—Taatlee, No. 3, 410 taels; ditto, No. 4, 390 taels; ditto inferior, 365 taels to 385 taels; Taysaam, No. 3, 340 taels; ditto, No. 4, 325 taels; ditto, inferior, 310 taels to 320 taels. The total export of silk from China to Europe is 58,820 bales, against 67,640, or a decrease for this season of 8,820 bales. Tea—Transactions have been on the most limited scale. Black teas were quite neglected, the kinds in the market being of very low quality, and the supply of country tea had ceased. Settlements are Congou, Ringchow, 2,000 chests common to fine, at 26 to 32½ taels; Shanghai packed and rubbish, 2,600 chests, at 16 to 20; pekoe, 300 chests, at 34½. Green Teas—Settlements amounted to only 6,200 half-chests, at previous quotations for most descriptions. Prices were firm in consequence of the small selection in the market, and arrivals had been very small. Stocks are estimated at—Black, 7,000 chests, against 10,000 chests last season; green, 4,000 half-chests, against 18,000 half-chests. Total export of tea from China to Great Britain is 73,406,500 lbs, against to same time last year 62,285,500 lbs, or an increase of 21,120,900 lbs for this season. To the United States the export is 29,167,500 lbs, against 26,956,200 lbs last year, or an increase for 1859-60 of 2,211,300 lbs.

The amount of business doing in the sugar market has been much restricted, and, in most instances, raw qualities have receded in value from 6d to 1s per cwt. Refined goods have been held at full prices.

Large quantities of coffee having been on offer, dealers have purchased cautiously, and the quotations have had a drooping tendency.

Messrs Heale and Co., of Ceylon, have forwarded the annexed coffee report, under date the 30th April :—

The weather has been very favourable for shippers, and nothing but the scanty supply of tonnage has prevented our exports of coffee to date reaching much higher figures than the following :—

PLANTATION COFFEE.

To Great Britain .....cwts	251,579	against last year, cwts		233,886
Foreign Ports	16,859	—	—	25,893
Australia and India.....	6,499	—	—	6,944
	274,937			266,723

NATIVE COFFEE.

To Great Britain.....cwts	65,590	against last year, cwts		43,519
Foreign Ports.....	54,064	—	—	100,202
Australia and India.....	2,035	—	—	11,150
	121,689			154,871

We have again to report an absence of transactions in native coffee, excepting to the most trivial extent. The Kandy crop is now at an end, and the new Ouvah and Badullah pickings do not as yet arrive in any quantity. In plantation coffee we believe there has been nothing done since our last. The accounts we receive from the interior, as to the prospects for the ensuing season, are generally favourable, but it is too early yet to form any opinion as to the extent of the forthcoming crop. Plantation coffee, low, 11s 3d per bbl; do. mountain, 11s 6d to 11s 9d per bhl. Native coffee, unpicked, 42s per cwt; do. picked and dried, 45s per cwt.

We have very little change to notice in the value of rice. Saltpetre has mostly supported previous rates, but the demand for it has fallen off.

The public sales of colonial wool have been brought to a close to-day. The biddings have continued steady, at full prices.

The transactions in rum have rather increased, but both brandy and grain spirits have been a slow inquiry.

Metals, almost generally, have ruled heavy, and Scotch pig iron has sold at 50s 6d to 50s 9d.

Linseed oil has sold at 28s 3d and 28s, with a slow inquiry. Most other oils, however, have commanded extreme rates. Tallow has continued in very moderate request, and, to-day, P.Y.C., on the spot, has sold at 52s 3d to 52s 6d per cwt. The deliveries continue limited.

COLONIAL AND FOREIGN PRODUCE MARKETS.

TRANSACTIONS OF THE WEEK.

FOR REPORT OF THIS DAY'S MARKETS, SEE "POSTSCRIPT."

MINCING LANE, FRIDAY MORNING.

SUGAR.—When the market opened after the usual Whitsun holidays on Wednesday, there were numerous public sales, and, as the demand did not show any improvement, prices occasionally receded 6d per cwt. Since then the market has been flat, the trade buying only to meet their actual wants, and the continued increase in stock weakens confidence. Up to yesterday, 1,060 casks West India found buyers, including some parcels by auction. Barbadoes went as follows: low to good brown, 34s 6d to 37s 6d; soft yellow and grey, 38s to 39s 6d; middling to fine yellow, 40s to 44s per cwt. Notwithstanding the satisfactory deliveries (4,600 tons last week), the stock has been further augmented by the recent heavy landings, and it is now 52,200 tons, or 13,000 tons above the preceding season's at corresponding date.

Mauritius.—Of 12,687 bags, a considerable portion sold, but at irregular prices, and the brown qualities were taken by exporters: grey and yellow, 38s to 41s 6d; low to good brown, 32s to 37s 6d; grainy kinds, low to fine strong dry, 39s 6d to 45s; crystallised sold steadily at 42s to 47s per cwt.

Bengal.—40 bags very low soft brown went at 31s to 31s 6d per cwt.

Madras.—1,105 bags about one-fourth part sold: native brown and yellow, 33s to 35s; soft date kinds bought in at 30s to 31s per cwt.

Penang.—210 bags sold at 37s to 39s per cwt for soft brown and greyish yellow.

Java.—295 baskets were taken in at 48s to 51s per cwt for grainy white, 16s and 18s 4d duty.

Manilla.—4,800 bags have been sold by private contract: unclayed, 32s 6d to 33s; clayed, 37s per cwt.

Other Foreign.—3,445 boxes Havana, by auction, were about two-thirds taken in, the remainder, including washed, sold at previous rates: sound from 37s 6d to 43s 6d for brown and yellow; fine yellow and grey, 44s 6d to 46s. 711 casks 529 barrels Porto Rico partly found purchasers at 37s to 45s 6d for brown to fine yellow, and 287 casks Cuba at 36s 6d to 42s for soft brown to good yellow. Two floating cargoes of Havana have sold for the United Kingdom, Nos. 11½ to 12½, at 27s 3d to 27s 9d per cwt.

Refined.—The market has been unsettled, with rather a downward tendency. Common grocery goods cannot be generally obtained under 51s 6d to 52s. Crushed is steady at 47s 6d to 50s; pieces, 43s to 47s per cwt.

MOLASSES.—A parcel of Cuba muscovado, at 17s 6d per cwt, is the only sale reported.

RUM.—Considerable transactions have taken place in East India at 1s 6½d to 1s 7d, including Mauritius at the latter price. West India remains quiet, but all kinds are the same as last quoted. The stock has been increased to 26,450 puns, or nearly 4,100 puns over that of 1859 at the same date.

COCOA.—322 bags Trinidad partly sold at about former rates: grey to fine red, 74s to 97s 6d. There have been considerable arrivals. 230 bags Grenada went at 61s to 66s; a small lot fine, 71s 6d per cwt.

COFFEE.—There have again been very large public sales of plantation Ceylon, and the palish qualities occasionally sold at 1s decline, but yesterday, the demand improved, stimulated by the Rio advices. 1,550 casks 2,190 barrels and bags nearly all found buyers: fine ordinary to middling, 65s to 71s 6d; good middling to good bold colourey, 72s to 78s. 188 casks 1,400 bags native brought 59s to 60s 6d for good ordinary to superior quality. A few parcels Jamaica realised the previous value. 1,820 bags Rio principally sold at relatively steady rates: ordinary to good ordinary, 55s to 58s 6d. 322 packages East India partly sold: Mysore, 62s to 63s 6d; good bold Singapore Java, 64s to 64s 6d. By private contract, some ordinary Java bought in last week has sold at 58s per cwt.

TEA.—The market has been unsettled by the large public sales of 30,186 packages, which commenced on Wednesday. Up to yesterday, 9,605 packages had sold, including several parcels offered "without reserve." Congous, generally, supported their former value, but other kinds were dull. Green, occasionally, went cheaper, and some common to fair flowery pekoe sold at 2d to 3d per lb under the previous quotations. The sales will conclude to-day.

RICE.—A moderate business has been done privately, including some new Bassein at 9s 3d short prompt. By auction, 2,730 bags white Bengal found buyers: fine, 14s to 14s 6d; middling, rather broken, 11s per cwt.

IMPORTS and DELIVERIES of RICE to May 26, with STOCK on hand.

	1860. tons	1859. tons	1858. tons	1857. tons
Imports	11300	9250	46850	22920
Deliveries for home use...	27140	11120	13420	14850
Exported	7950	10300	6580	27610
Stock	49000	73900	90100	35200

SALTPETRE.—There has been a reaction in the market, and buyers generally appear unwilling to make further purchases at the high rates lately paid, still there are few parcels offering. Bengal, refraction 14¾ has sold at 40s per cwt.

IMPORTS and DELIVERIES of SALTPETRE to May 26, with STOCK on hand.

	1860. tons	1859. tons	1858. tons	1857. tons
Imported	5700	7910	4555	6530
Delivered	5310	8050	6330	4750
Stock	4250	2810	4850	3880

Deliveries last week 140 tons.

LIMA WOOD.—600 tons sold upon moderate terms, chiefly at 11*l* 10s to 11*l* 12s 6d per ton for fair Manzanilla.

SHELLAC.—Button kinds have sold upon easier terms, ranging from 7*l* 17s 6d to 9*l* 17s 6d per ton.

DYES.—Sundry parcels of goods were brought forward yesterday, but the usual public sales are postponed until next Thursday, on account of the Whitsun holidays.

METALS.—The various markets continue entirely devoid of animation. About 200 tons spelter sold yesterday at 20*l* 2s 6d per ton, previous to which no business was reported. Foreign tin has been steady, although British keeps quiet, and tin plates sell rather slowly. Banca quoted 137s; good Straits, 130s per cwt. No change has taken place in copper. All kinds of iron are dull. Scotch pig has further declined, and the latest contracts in mixed numbers were at 49s 9d to 50s per ton.

HEMP.—Of 1,210 bales common roping Manilla by auction, on Wednesday, the sound portion was bought in at 22*l* to 22*l* 10s. The jute offered sold more readily, and 3,000 bales went at 12*l* 10s to 23*l* for ordinary to fine marks, the latter being occasionally rather dearer. There is less desire shown by the importers to sell than of late, and a good demand exists privately.

HIDES.—87,350 East India, offered by auction, about half sold at previous rates. Heavy sorts sold at ¼d to ½d per lb advance.

OILS.—The market is quiet. Of 125 tuns sperm by auction yesterday, 100 tuns were bought in at 94*l* 15s to 95*l*. Some fair quality sold at 90*l* 15s to 92*l* 10s. Pale seal was bought in at 36*l* per tun. Cocoanut has been more inquired after: Ceylon in public sale realised higher rates, from 42s to 44s; Cochin quoted 45s to 45s 6d per cwt. The inquiry for linseed has been less animated, and the market is easier, viz., 28s to 28s 3d on the spot. Palm is firm at 45s per cwt. Rape has advanced, the continental crops having sustained injury by the late storms: foreign refined, 42s 6d to 43s; brown, 40s 6d per cwt.

LINSEED.—A great deal of business has been done in East India afloat. Bombay, c. f. and i., 50s to 50s 6d; Calcutta, 47s 6d to 48s. A cargo of Odessa has sold at 49s 6d per qr.

TURPENTINE.—500 barrels of rough have sold at 9s. Unusually large transactions have taken place in spirits at 35s 6d, and now 36s per cwt demanded.

TALLOW.—A further advance of 6d to 9d has been paid for late deliveries, and the trade have bought more freely. The last sales for delivery in October to December were at 51s 0d, and 52s 3d per cwt for first sort Y. C. on the spot. The deliveries keep below the average of former season's. At the public sales, yesterday, 183 casks South American were mostly bought in at 52s to 53s. 300 casks Australian sold: sheep, 49s 9d to 53s; beef, 51s to 51s 3d. 130 cases East India, 53s per cwt.

PARTICULARS OF TALLOW.—Monday, May 28.

POSTSCRIPT. FRIDAY EVENING.

SUGAR.—The sales to-day, comprising 640 casks West India, 6,646 bags Mauritius, 297 bags Madras, and 2,014 bags Penang, went off without material alteration in prices. The week's business in West India amounts to 2,540 casks. 1,400 boxes Havana changed hands privately, and 300 casks foreign muscovado, the latter at 36s 6d per cwt.

COFFEE.—480 casks 160 bags plantation Ceylon, and 85 casks 432 bags native, went off at about the former value. 175 bales Mocha partly sold at 113s to 117s per cwt for short berry, clean garbled.

COCOA.—340 bags Trinidad were taken in above the value.

TEA.—The sales closed with more spirit, and the remaining 4,800 packages sold.

RICE.—680 bags middling white, by auction, sold at 11s 6d to 12s. Privately, 17,000 bags are reported at 9s 6d per cwt, short prompt.

SPICES.—17 cases brown nutmegs brought 1s 4d to 1s 6d; 9 cases mace, 1s to 1s 1d per lb. 33 cases superior Cochin ginger were bought in at 5*l* 7s per cwt.

SALIPETRE.—1,253 bags Bengal sold steadily: refraction 13 to 4¼, 40s 6d to 45s 6d. 366 bags Bombay, 46¾ to 44½, 34s 6d to 35s per cwt. More inquiry prevailed privately.

METALS.—Spelter sold at 20*l* per ton, ex ship.

TALLOW.—Town was advanced to 52s 9d, against 52s per cwt last Friday.

ADDITIONAL NOTICES.

REFINED SUGAR.—The home market for refined sugar has been very quiet this week. No material alteration to note as respects prices. For export, nothing doing. Some few sales of Dutch crushed have been made, f.o.b. in Holland, not worth quoting.

GREEN FRUIT.—Sales have been of an extensive character, and the market is cleared of St Michael oranges, the season for which is closed. Some cargoes sold by Keeling and Hunt, as well as Valencia fruit, were taken freely by the trade. Lemons of sound quality improved in value. Nuts of all kinds in better demand, the reduction in price assisting consumption.

DRY FRUIT.—The market for all descriptions is completely stagnant but quotations are unaltered.

ENGLISH WOOL.—There is more business doing, particularly in deep-grown wools.

COLONIAL WOOL.—The colonial sales closed this day at very full rates. The low wool sales commenced this day; prices about the same as last sales.

FLAX.—Market firm.

HEMP steady, but only a few transactions have taken place throughout the week.

COTTON.—Sales of cotton wool from Friday, 25th, to Thursday, 31st ult. inclusive:—500 bales Surat, at 3⅜d to 5⅜d for very middling Oomrawattee to good fair Broach; 400 bales Madras, at 3¾d for fully fair Western, and 5¼d for good fair Tinnivelly. By private contract, a fair amount of business has been transacted, good fair Surat and Tinnivelly, from their scarceness, bringing fully previous rates; whilst fair Compta has been sold at 3⅝d per lb, being about ⅛d per lb decline from late nominal quotations. Western Madras brought full prices. Yesterday, 700 Surat and 1,000 Madras were offered at public sale. Of the former, 530 bales, mostly ordinary to fair Compta, were sold at 3⅛d to 3½d per lb; of the latter, 600 bales were sold, viz., 400 middling to fair Western, 3⅜d to 3½d and ⅝d; and 200 Tinnivelly, very middling to fully fair, at 3⅝d to 4⅛d; the decline generally being about ⅛d per lb.

SILK.—There has been more doing this week, chiefly in China silk, on which the recent fall has recovered itself. In Bengal silk no change. Unfavourable reports of the approaching crops of silk has been the cause.

TOBACCO.—A steady consumptive demand has existed. Purchases have preponderated of middling and common descriptions for the home trade, at irregular prices. For exportation, sales were confined to one or two limited parcels of good middling and common at concessions on previous rates.

LEATHER AND HIDES.—In the absence of a leather market at Leadenhall this week, according to the usual custom at Whitsuntide, there is no alteration to report. A moderate amount of business for the time of year has been doing at former prices. Good light English butts have been in request. The public sale of last week consisted of East India tanned goat and sheepskins, of which a large proportion was sold at about the rates of the previous sale. At that of this week, there was but little alteration in the price of salted hides, with a very moderate demand in East India kips; the best of light average were ½d per lb lower; for other sorts there was more inquiry. About 56,000 kips were sold out of 87,000 offered. 5,066 Singapore buffaloes were sold at 3⅝d to 4¼d per lb.

METALS.—The stagnation prevailing is the common subject of remark, and hence there is little to report. Copper is much neglected, and consumers are reckoning upon lower prices shortly. Iron shows no improvement in manufactured, whilst Scotch pig is again lower—say 50s per ton cash for g.m.b. Tin keeps steady at late quotations, and lead is in much the same position. Spelter gets but small attention. Stock on 31st ult., 3,495 tons. Tin plates keep in good demand.

TALLOW.—Official market letter issued this evening:—

	s	d
Town tallow	52	9
Fat by ditto	2	9
Yellow Russian	53	9
Melted stuff	38	6
Rough ditto	22	6
Greaves	10	0
Good dregs	7	0

Imports this week 990 casks.

PROVISIONS.

Bacon a shade higher. Sales slow. Butter market the same.

METROPOLITAN CATTLE MARKET.

THURSDAY, May 31.—Our market to-day was very moderately supplied with beasts, and all breeds changed hands steadily, at fully Monday's currency. Sheep, the show of which was by no means extensive, moved off freely at extreme rates; in some instances prices were 2d per 8 lbs higher. The lamb trade was firm, but no change took place in the quotations. We have to report a firm sale for calves, at full currencies.

Per 8 lbs to sink the offal.

	s	d	s	d		s	d	s	d
Coarse and inferior beasts	3	10	4	2	Prime Southdown sheep	5	10	6	2
Second quality ditto	4	4	4	8	Large coarse calves	4	6	5	0
Prime large oxen	4	10	5	0	Prime small ditto	5	2	5	6
Prime Scots, &c.	5	2	5	4	Large hogs	4	0	4	6
Coarse and inferior sheep	4	4	4	8	Small porkers	4	8	5	0
Second quality ditto	4	10	5	4	Suckling calves...each	2	0	24	0
Prime coarse-woolled do.	5	6	5	10	Quarter old store pigs	23	0	30	0

Lambs, 6s 0d to 7s 6d.

Total supply—Beasts, 856; sheep and lambs, 7,500; calves, 250; pigs, 290.
Foreign supply—Beasts, 230; sheep, 855 calves, 149.

NEWGATE AND LEADENHALL.

FRIDAY, June 1.—These markets were fairly supplied with all kinds of meat, and the trade generally ruled steady at full prices:—

Per 8 lbs by the carcass.

	s	d	s	d		s	d	s	d
Inferior beef	3	4	3	6	Mutton, inferior	4	0	4	6
Middling ditto	3	8	3	10	— middling	4	8	5	2
Prime large	4	0	4	2	— prime	5	4	5	6
Prime small	4	4	4	6	Large pork	4	0	4	6
Veal	4	0	4	10	Small pork	4	8	5	0

Lambs, 5s 10d to 6s 8d.

HOP MARKET.

BOROUGH, Monday, May 28.—The market remains without any material change since our last report, the demand being moderate, and prices steady. The bine progresses favourably, and the duty has been backed at 180,000*l*. Our currency is as follows:—Mid and East Kents, 80s, 105s, 140s; Weald of Kents, 62s, 75s, 84s; Sussex, 62s, 70s, 76s.

FRIDAY, June 1.—Our market is flat; but no change has taken place in prices. Duty, 180,000*l*.

POTATO MARKET.

SOUTHWARK WATERSIDE, Monday, May 28.—During the past week the arrivals both coastwise and by rail have been large for the season, which, combined with fine mild weather, has caused a great reaction in the trade. The following are this day's quotations:—York Regents, 90s, to 120s; ditto Flukes, 90s to 120s; Lincolnshire Regents, 80s to 100s; Dunbar ditto, 100s to 120s; ditto reds, 100s to 110s; Perth, Forfar, and Fifeshire Regents, 80s to 100s; ditto reds and Rocks, 90s to 100s; Irish whites, 80s to 90s per ton.

THURSDAY, May 31.—Limited supplies of home produce have come to hand at this market since Monday last, both coastwise and by land carriage, but generally in seasonable condition. Trade is dull at about previous quotations:—York Regents, from 100s to 180s; ditto, Flukes, 120s to 160s; Scotch Regents, 100s to 140s; ditto Cups, 110s to 130s; Dunbars, 120s to 160s; Rocks, 110s to 140s per ton.

HAY MARKETS.—THURSDAY.

SMITHFIELD.—Meadow hay, 3*l* to 4*l* 15s; clover, 4*l* to 5*l* 15s; and straw, 1*l* 6s to 1*l* 14s per load. Trade dull.

CUMBERLAND.—Meadow hay, 3*l* 3s to 4*l* 16s; clover, 4*l* to 5*l* 15s; and straw, 1*l* 6s to 1*l* 14s per load. A heavy demand.

WHITECHAPEL.—Meadow hay, 3*l* to 4*l* 14s; clover, 4*l* to 5*l* 15s; and straw, 1*l* 6s to 1*l* 14s per load. Trade heavy.

LIVERPOOL MARKETS.

CORN.

(FROM OUR OWN CORRESPONDENT.)

FRIDAY, June 1.—Wheat, moderate consumptive demand at Tuesday's rates. Indian corn and beans pressed, and 6d per qr less would buy. Oats and oatmeal without change. Attendance at market limited.

METALS.

(FROM OUR OWN CORRESPONDENT.)

FRIDAY, June 1.—There has been little animation during the past week in manufactured iron, with little or no variation to note in prices. The transactions in Scotch pig iron have been only on a moderate scale, and, on the whole, the market has slightly declined. Copper is in limited demand at present quotations. The lead market continues dull, and most other metals very quiet.

The Gazette.

TUESDAY, May 29.

BANKRUPTCY ANNULLED.

S. Adams, Ware, banker.

BANKRUPTS.

R. Barnes, Norwich, shoemaker.
J. A. Axtell, W. R. Knights, and W. Axtell, White's ground, Bermondsey, and St Neots, tanners.

EPITOME OF RAILWAY NEWS.

TRAFFIC RETURNS.—The traffic returns of railways in the United Kingdom for the week ending May 19 amounted to 511,430*l*, and for the corresponding week of last year to 472,310*l*, showing an increase of 39,120*l*. The gross receipts on the eight railways having their termini in the metropolis amounted to 217,331*l*, and for the corresponding week of 1859 to 200,365*l*, showing an increase of 16,966*l*.

RAILWAY AND MINING SHARE MARKET.

LONDON.

MONDAY, May 28.—In the railway market the business transacted to-day was very limited. There was, however, a better feeling, and most of the leading British stocks left off a fraction higher than on Saturday, except Great Western, which slightly declined. In the colonial market there was also an absence of business, and the only important change was a further reduction in Grand Trunk stock to 31½ to 32. Foreign shares were steady; South Austrian and Lombardo-Venetian advanced to par to ¼ pm. In American railway securities the bonds of the New York and Erie were firmer. The principal feature in mines was another rise in Stray Park. In joint stock banks, Australasia were flat, while City Bank improved. In miscellaneous descriptions there was an advance in Madras Irrigation.

TUESDAY, May 29.—The railway market showed increased firmness to-day, although the general transactions were small. Lancashire and Yorkshire was especially in demand, and advanced ¾ per cent. Most of the other leading English stocks closed ¼ to ½ higher. North British was exceptionally flat. The arrangements for the approaching settlement constituted the chief business of the day. In the colonial market there was a better inquiry for Indian guaranteed stocks, at an occasional advance. Grand Trunk of Canada also rallied to 31¾ to 32½, while Buffalo and Lake Huron receded. French shares improved. South Austrian and Lombardo-Venetian left off without change at par to ¼ pm. American railway securities were steady. Mines were inactive, and in several cases a decline took place; Stray Park especially exhibited a reaction. Joint stock banks and miscellaneous securities generally closed the same as yesterday.

WEDNESDAY, May 30.—The principal business in the railway market to-day was in connection with the settlement, the general transactions being unimportant. In the morning prices slightly improved, but a reaction took place with Consols, and the appearance at the close was rather unfavourable. The present quotations, although for the new account in June, were little higher than yesterday. In the colonial market, Great Western and Grand Trunk of Canada improved. Foreign shares were quiet; South Austrian and Lombardo-Venetian were flatter, leaving off ¼ dis. to par. In American railway securities the shares of the New York Central advanced, while those of the Illinois Central were quoted lower. British mines were heavy. In foreign adventures a fresh rise took place in St John del Rey. Union Bank of London shares again declined, the final price being 24¼ to ¾. In the miscellaneous market, Canada Land improved. Victoria debentures (new) were last quoted 106½ to ¾; the Canadian loan, 101½ to ¾ bonds, and 2¼ pm. scrip.

THURSDAY, May 31.—The railway market was steady in the morning, but afterwards gave way with Consols. Most of the principal stocks closed ¼ to ½ per cent. lower than yesterday. The foreign market showed increased heaviness, especially as regards French shares. South Austrian and Lombardo-Venetian have likewise declined to ¼ to ½ dis. Pernambuco left off 1½ to ¾ dis., and San Paulo ⅝ to ¾ dis. Illinois Central shares are quoted better. The principal change in mines was a reduction in Stray Park and St John del Rey. Joint stock banks were quiet. In miscellaneous descriptions, Crystal Palace stock and Royal Mail Steam shares improved. Victoria debentures, new, were last quoted 106½ to ¾; the Canadian loan, 101½ to ¾ bonds, and 2¼ to ½ pm. scrip; Ocean Marine Insurance, 2 to ¼ pm.; Universal, ½ pm.; London and Provincial, ¼ to ½ dis.; the new Thames and Mersey, 1½ to 1¾ pm.; London and South African Bank, ⅝ to ¾ dis.; and Bank of Turkey, 1½ to 1¾ dis.

FRIDAY, June 1.—Business in the railway share market was almost at a standstill, and general dulness prevailed. Prices in a few instances, including Great Western, Midland, and South-Eastern stocks, were quoted ¼ to ½ per cent. lower than yesterday afternoon. London and North-Western stock was quoted at 100¾ to 100½; Great Western, 68¾ to 69¼; Midland, 116¼ to ¾; Lancashire and Yorkshire, 104½ to ⅝; South-Eastern, 84½ to 85½; Eastern Counties, 54 to ½; Great Northern, 115½ to 116½; and Caledonian, 90¼ to ¾. Lombardo-Venetian Railway shares were dull, at ¼ to ½ dis.

STRAND THEATRE.—A new comedy was produced on Monday night. It is well put upon the stage, admirably played, and is in all respects successful. The plot, like all plots with which Mr Palgrave Simpson deals, is ingenious and well constructed, and the scope of the work is sufficiently indicated by its title—"Appearances."

DR KAHN CONTINUES TO deliver Daily, at Three and Eight o'clock, his popular Lecture on the "Philosophy of Marriage," at his Anatomical Museum, top of the Haymarket.

The Museum is open (for gentlemen only) from Twelve to Five, and from Seven to Ten. Admission, One Shilling.

Dr Kahn's treatise on the above subject, sent post free for twelve stamps, direct from the author, 17 Harley street, Cavendish square.

MEDICAL ADVICE.

DR LA'MERT, REGISTERED L.S.A., Honorary Member of the London Hospital Medical Society, M.D. of the University of Erlangen, &c., may be CONSULTED on all cases of Debility Nervousness, and the Secret Infirmities of Youth, and Maturity, from 11 till 2, and from 6 till 8, at his residence,

37 BEDFORD SQUARE, London.

Dr La'Mert has just published, price Sixpence, with numerous Engravings and Cases, a New Edition of his Work, entitled,

SELF-PRESERVATION

which will be sent free in a sealed envelope, Mann, 39 Cornhill, London, or by the Author to any address, for eight stamps.

CONTENTS

SECTION I.—The Physiology of the enerative Organs.
SECTION II.—Puberty—Manhood—The Morale Generative Physiology—True and False Morality.
SECTION III.—Marriage in its Moral, Social, and Physical Relations—Its Expectancies and Disappointments—Advantages of Physical contrasts in securing Healthy offspring.
SECTION IV.—Spermatorrhœa and Impotence—The Causes of Sterility in both sexes—Self-inflicted miseries.
SECTION V.—The Vices of Schools—Effects of certain pernicious habits on the mental and generative faculties—Importance of Moral Discipline.
SECTION VI.—Treatment of nervous and generative debility—Impotence and sterility—Dangerous results of various hazardous specifics—The Author's principles of treatment; medical, dietetic, and general, derived from twenty years' successful practice

TO THE NERVOUS AND DEBILITATED.

Just published, the 125th thousand, with numerous plates, in a sealed envelope, price 1s, sold by all booksellers, or post paid, by the Author, for 12 stamps,

MANHOOD: THE CAUSE AND CURE of PREMATURE DECLINE, with Plain Directions for Perfect Restoration to Health and Vigour. By J. L. CURTIS, 15 Albemarle street, Piccadilly, London.

CONTENTS.

INTRODUCTORY CHAPTER on the Physiological Structure and Functions of the Reproductive Organs.
CHAPTER II.—Causes of Spermatorrhœa and Impotence; Early Vicious Indulgences; Dangers of Neglect.
CHAPTER III.—A Review of the Disqualifications of Marriage; whether resulting from the Youthful Abuse, the Follies of Maturity, the Effects of Climate, or Infection.
CHAPTER IV.—Plan of Treatment, Medical and Moral, with observations on a new and successful mode of detecting Spermatorrhœa and other Urethral discharges by microscopic examination.
CHAPTER V. and VI. on the modern Treatment of Gonorrhœa and Syphilis.

The Book concludes with numerous interesting cases, to which is added the Author's receipt of a preventive Lotion.

MR CURTIS, author of the above Medical Treatise, may be consulted as usual. The efficacy and harmless nature of the remedies employed by MR CURTIS having been demonstrated by a successful practice extending over a period of 20 years nervous sufferers have a perfect guarantee that the utmost skill and experience will be made available in the treatment of their cases.

Consultations from 10 till 11 3, and 8 till 8. Sundays from 10 till 1.

ADOPTED LARGELY BY HER MAJESTY'S GOVERNMENT.

CHEAP, LIGHT, AND DURABLE ROOFING.

CROGGON'S PATENT ASPHALTE ROOFING FELT has been extensively used and pronounced efficient and particularly applicable for warm climates

1st. It is a non-conductor.
2nd. It is portable, being packed in rolls, and not liable to damage in carriage.
3rd. It effects a saving of half the timber usually required.
4th. It can easily be applied by any unpractised person.
5th. From its lightness, weighing only about 42 lbs to the square of 100 feet, the cost of carriage is small.

INODOROUS FELT, for damp walls and for damp floors, under carpets and floor cloths; also for lining iron houses, to equalise the temperature.

Price ONE PENNY PER SQUARE FOOT.

CROGGON and CO'S PATENT FELTED SHEATHING for Covering ships' Bottoms, &c., and

DRY HAIR FELT, for Covering Steam Boilers, Pipes, &c., preventing the radiation of Heat, and saving 25 per cent. of Fuel.

Samples, testimonials, and full instructions, on application to CROGGON and CO, 2 Dowgate hill, London and at 2 Goree Piazzas, Liverpool.

AT HAMBLY HOUSE ACADEMY Streatham Common, Surrey, Young Gentlemen are carefully Educated for the Public Schools, Military Colleges, Professions, or Commerce, by Mr R. S. TROUSDALE, L.C.P., aided by highly qualified assistant masters.

The domestic arrangements are on the most liberal scale; and the house is very delightfully situated. The terms for pupils under ten years of age, 30 guineas per annum; ten and under fourteen, 35 guineas per annum; fourteen, 40 guineas per annum. The above amount includes board and instruction in the Latin, Greek, French, and English Languages, Writing, Arithmetic, Merchants' Accounts, History, Geography, the Use of the Globes, Astronomy, Geometry, Algebra, and the other branches of the Mathematics. A library is devoted to the instruction and amusement of the pupils during their leisure hours. Religious works are provided for Sunday perusal; and lectures on various popular subjects are occasionally delivered. German Drawing, Dancing, and Music, on the usual terms. Washing, half-a-guinea per quarter. Drilling during the summer months, at a trifling charge; and board during a vacation, four guineas. All accounts are expected to be settled quarterly. Excellent accommodation for foreigners or gentlemen of neglected education. A quarter's notice of removal is required.

ON SPINAL AND OTHER DEFORMITIES.

PRACTICAL OBSERVATIONS on the CAUSES and TREATMENT of CURVATURES of the SPINE. Third edition, price 6s.

AND

Just published, second edition, price 1s 6d,

CASES and OBSERVATIONS illustrative of the beneficial results which may be obtained by close attention and perseverance, in some of the most unpromising instances of Spinal Deformity; with numerous Engravings. By SAMUEL HARE, F.R.C.S., &c.

"Mr Hare may take credit to himself for having effected much good in the treatment of the cases described."—BRITISH MEDICAL JOURNAL.

"Mr Hare is, we think, a sound and successful practitioner."—MEDICAL CIRCULAR.

"We unhesitatingly commend this work as a truthful and trustworthy statement of the power of scientific surgery and medicine over some of the most grievous hindrances to human activity and industry."—MEDICAL GAZETTE.

"The author has had much success in his plan of treatment, and we are of opinion that the principles on which he acts, in the treatment of these affections, are correct."—LANCET.

London: John Churchill; and may be had of all booksellers.

VALUABLE INFORMATION.—GRATUITOUS EDITIONS of the following LECTURES, delivered at the Royal Institute of Anatomy, Science, and Medicine, 369 Oxford street, London, by W. H. MARSTON, the Principal, are being issued, with plain directions for SELF-TREATMENT and CURE in each of them.

No. I.—NERVOUS DEBILITY (the result of youthful error), loss of memory, shortness of breath, dimness of sight, exhaustion, and general incapacity. Addressed specially to Young Men.

No. II.—MARRIAGE: Its Obligations and Impediments. Addressed to those who contemplate Marriage, and to the Married who desire Children.

No. III.—THE BRAHMIN'S ELIXIR OF LIFE: Its History—Secret Remedies of the Hindoos no Fable—Full Particulars of this Extraordinary Specific—Its Amazing Powers as a Reinvigorator of the Impaired Functions, and in all Cases of Nervous Debility.

No. IV.—THE DISEASES INFLICTED UPON MANKIND BY THE GREAT SOCIAL EVIL. With a simple means of complete Cure without Mercury.

Each Lecture, neatly printed and bound, will be sent GRATIS, on receipt of two stamps to prepay postage, or THE WHOLE FOUR, BOUND TOGETHER, with numerous additions, and full directions for SELF-TREATMENT and CURE, 160 pages, 8vo, post free, for Six Stamps. Address, Treasurer, Royal Institute, 369 Oxford street, London.

KEATING'S PALE NEWFOUNDLAND COD LIVER OIL, perfectly pure, nearly tasteless, and free from adulteration of any kind, having been analysed, reported on, and recommended by Professors Taylor and Thomson, of Guy's and St Thomas's Hospitals, who, in the words of the late Dr Pereira, say, that "The finest oil is that most devoid of colour, odour, and flavour," characters this will be found to possess in a high degree. Half-pints 1s 6d, Pints 2s 6d, Quarts 4s 6d, and Five-pint Bottles 10s 6d, Imperial Measure.

79 St Paul's churchyard, London.

HUBBUCK'S PATENT WHITE ZINC PAINT.

By their process, which is patented, Pure White Zinc Paint is cheaper than White Lead. It is the most durable and beautiful paint known, and does not stain or discolour with the London atmosphere.

CHEAPNESS.—Two hundred-weight of this Paint, with six gallons of Oil, covers as much surface as three hundred-weight of White Lead and twelve gallons of Oil. It is cheaper in the first instance, as well as desirable on every consideration.

ADULTERATIONS.—Prejudice is caused by some Paint Grinders selling Zinc Paint adulterated with Sulphate of Barytes, some even to the extent of thirty per cent. Whether this is sold under the name of "Improved Zinc Paint," or is candidly sold as Number Two or Three qualities, no Painter can produce good work with it. He naturally condemns Zinc Paint altogether.

That Painters have never seen the best Zinc Paint is evident, or they would not use any other paint for their best work. To prevent the prejudice which the inferior article must produce, each Cask of Pure White Zinc is stamped

"HUBBUCK, LONDON, PATENT."

THOMAS HUBBUCK and SON, WHITE LEAD, OIL, PAINT and VARNISH WORKS, 24 LIME STREET.

Messrs ALLSOPP and SONS take the opportunity of announcing to private families that their Ales, so strongly recommended by the medical profession, may be procured in Bottles and Casks, and on Draught, from all the most respectable wine and beer merchants and licensed victuallers, on "ALLSOPP'S PALE ALE" being especially asked for.

When in bottle, the genuineness of the table can be ascertained by its having "ALLSOPP and SONS" written across it upon red and white ground striped.

The Brewery, Burton-on-Trent, April 30, 1860.

TEETH.—MR ESKELL, Surgeon Dentist, 314 Regent street (facing the Polytechnic), supplies his PATENTED INCORRODIBLE TEETH, which can be matched so closely in shape and colour to those left in the mouth, and are formed so exactly to nature, that the closest observer cannot detect the difference, and in all cases they restore perfect articulation and mastication. These teeth are fixed from one to a complete set upon Mr Eskell's never-failing and painless principle of SELF-ADHESION, without extracting any teeth or stumps, or giving any pain whatever; and being incorrodible, they possess the superior advantage of never changing colour nor decaying. Mr Eskell's celebrated OSTEOPLASTIC ENAMEL for stopping Decayed Teeth is a preparation which never changes colour nor affects the colour of the tooth, and is free from any injurious properties either as regards the teeth or general health. Its application is easily performed, and without giving the slightest pain. Deficiencies of palate effectually remedied. Loose teeth fastened. Teeth regulated. Discoloured teeth restored, &c. Hours, Ten to Six. Consultation free. Charges strictly moderate.—314 Regent street, London (opposite the Polytechnic). Established 1847.

PIANOFORTES. CRAMER, BEALE, and CO. NEW MODEL OBLIQUE GRAND PIANO, and every description, warranted. Lists of Prices and Terms for Hire, post free. 201 Regent street.

HARMONIUMS. CRAMER, BEALE, and CO. Description and List of Prices, post free. Also, SECOND-HAND HARMONIUMS in great variety. 201 Regent street,

JOSEPH THORLEY, the Inventor and Sole Proprietor. Offices, 77 Newgate street, London.

A pamphlet sent free by post on application.

ICE, AND REFRIGERATORS FOR preserving Ice and cooling Wine, Butter, Cream, Water, Jellies, and provisions of all kinds, manufactured by the WENHAM LAKE ICE COMPANY (now removed to 140 Strand, W.C.), of the best make and at the lowest cash prices. No agents are appointed in London for the sale of the Company's Ice or Refrigerators. Pure spring-water Ice, in blocks, delivered to most parts of town daily, and packages of 2s 6d, 5s, 9s, and upwards, forwarded any distance into the country by "goods" train, without perceptible waste. Wine-coolers, ice-cream machines, ice planes for sherry-cobblers, freezers, moulds, &c. Detailed printed particulars may be had, by post, on application to the Wenham Lake Ice Company, 140 Strand, London, W.C.

CAUTION.—FORD'S EUREKA SHIRTS.—As spurious shirts are advertised and sold as "Ford's Eureka's," none are genuine unless stamped thus:—"R. FORD'S EUREKA SHIRT, 38 POULTRY, LONDON."

Best Quality:—Six, for 42s.
Second Quality:—Six, for 35s.
Richard Ford, 38 Poultry, Bank, London, E.C.

SAUCES.—CONNOISEURS have Pronounced LEA and PERRINS' "WORCESTERSHIRE SAUCE" one of the best additions to Soup, Fish, Joints, and Game. The large and increasing demand has caused unprincipled traders to manufacture a spurious article; but the "GENUINE" all bear Lea and Perrins' name on Bottle, Label, and Stopper.

Sold by Crosse and Blackwell, London, and all respectable Oilmen and Grocers. Sole manufacturers—Lea and Perrins, Worcester.

HARVEY'S FISH SAUCE.—Notice of Injunction.—The admirers of this celebrated Fish Sauce are particularly requested to observe that none is genuine but that which bears the back label with the name of WILLIAM LAZENBY, as well as the front label signed "Elizabeth Lazenby," and that for futher security, on the neck of every bottle of the Genuine Sauce will hencetorward appear an additional label, printed in green and red, as follows:—"This notice will be affixed to Lazenby's Harvey's Sauce, prepared at the original warehouse, in addition to the well-known labels, which are protected against imitation by a perpetual injunction in Chancery of 9th July, 1858."

6 Edwards street, Portman square, London.

CROSSE AND BLACKWELL, Purveyors in Ordinary to Her Majesty, invite attention to their PICKLES, SAUCES, TART FRUITS, and other Table Delicacies, the whole of which are prepared with the most scrupulous attention to wholesomeness and purity. C. and B. have for many years enjoyed the high honour of supplying Her Majesty's Table with their Manufactures. A few of the articles most highly recommended are—Pickles and Tart Fruits of every description, Royal Table Sauce, Essence of Shrimps, Soho Sauce, Essence of Anchovies, Orange Marmalade, Anchovy and Bloater Pastes, Strasbourg, and other Potted Meats, Calf's-foot Jellies of various kinds for table use, M. Soyer's Sauces, Relish, and Aromatic Mustard, Carstairs' Sir Robert Peel's Sauce, and Peyne's Royal Osborne Sauce. To be obtained of all respectable oilmen, grocers, &c., and wholesale of Crosse and Blackwell, 21 Soho square, London.

FREDERICK DENT, Chronometer, Watch and Clock Maker to the Queen and Prince Consort, and the maker of the Great Clock or the Houses of Parliament, 61 Strand, and 34 Royal Exchange. No connection with 33 Cockspur street.

JULLIEN FUND. Committee Room—50 New Bond street.

The Committee of the Jullien Fund, fearing that the subscriptions have been materially checked by the unfortunate death of Mons. Jullien, desire to explain that a widow and others, members of his family, can be protected from want only by the kind aid of those who appreciate the great services rendered by the late lamented maestro to the cause of the musical education of the English people.

The Committee confidently appeal to that benevolence for which their countrymen are so distinguished, for such prompt and liberal additions to the subscription list as shall enable them to do some justice to the memory of M. Jullien, and at the same time afford adequate relief to his bereaved family.

COMMITTEE for the DISTRIBUTION of the JULLIEN FUND.

Mr John Mitchell	Mr W. Duncan Davison
Mr W. R. Sams	Mr Julea Benedict
Mr Thomas Chappell	Mr A. Blumenthal

HONORARY TREASURERS

Mr John Mitchell, 33 Old Bond street
Mr T. Chappell, 50 New Bond street
Mr W. R. Sams, 1 St James's street

BANKERS.

Messrs Coutts and Co., Strand
Heywood, Kennards, and Co., Lombard street
London and County Bank, Hanover square

Who, as well as the honorary treasurers, have kindly consented to receive subscriptions.

April, 25th, 1860.

A TOILETTE REQUISITE FOR THE SPRING.—Among the many luxuries of the present age, none can be obtained possessing the manifold virtues of OLDRIDGE'S BALM of COLUMBIA. If applied to the roots and body of the hair, it imparts the most delightful coolness, with an agreeable fragrance of perfume. It also at this period of the season prevents the hair from falling off, or if already too thin or turning grey, will prevent its further progress, and soon restore it again. Those who really desire to have beautiful hair, either with wave or curl, should use it daily. It is also celebrated for strengthening the hair, freeing it from scurf, and producing new hair, whiskers, and moustache. Established upwards of thirty years. No imitative wash can equal it. Price 3s 6d, 6s, and 11s only.—C. and A. Oldridge, 22 Wellington street, Strand, W.C.

THE BEST REMEDY FOR INDIGESTION.

NORTON'S CAMOMILE PILLS are confidently recommended as a simple but certain remedy for Indigestion, which is the cause of nearly all the diseases to which we are subject, being a medicine so uniformly grateful and beneficial, that it is with justice called the "Natural Strengthener of the Human Stomach." NORTON'S PILLS act as a powerful tonic and general aperient; are mild in their operation; safe under any circumstances; and thousands of persons can now bear testimony to the benefits to be derived from their use.—Sold in Bottles at 1s 1½d, 2s 9d, and 11s each, in every town in the kingdom.

CAUTION!—Be sure to ask for "NORTON'S PILLS," and do not be persuaded to purchase the various imitations.

MR LEWIS AND SON, 113 Strand.—The Royal Lewisian Systems of Writing, Arithmetic, Bookkeeping, and Shorthand, as taught for upwards of fifty years by Mr Lewis, the real inventor and first teacher of these world-renowned and only intelligible systems, insures perfection in any of the above branches after a few easy and interesting lessons Persons unable to take the lessons may obtain the inventor's works for self-instruction at his only institution, 113 Strand

IMPORTANT NOTICE.

GLENFIELD PATENT STARCH is the only STARCH used in HER MAJESTY'S LAUNDRY.

And as some unprincipal Parties are now making and offering for Sale an Imitation of the GLENFIELD STARCH,

we hereby caution all our Customers to be careful, when purchasing, to see that the word GLENFIELD is on each Packet, to copy which is Felony.

WOTHERSPOON and CO., Glasgow and London.

DEANE'S TWO-HOLE BLACK PENS which are unequalled for their durability and easy action, are adopted by the gentlemen of the Stock Exchange, and the principal bankers, merchants, and public companies of the city of London, besides several of Her Majesty's judges, the most eminent counsel, and the reverend the clergy. Their cheapness and popularity ha induced many unprincipled people to put forth imitations of the genuine articles, which are equally useless to the purchaser, and disgraceful to the vender. The public are therefore cautioned, and respectfully requested not to purchase any as DEANE'S GENUINE TWO-HOLE BLACK PENS, unless each pen is stamped "G. and J. Deane, London Bridge," and the box, which contains exactly twelve dozen, has thereon a variously coloured label, inscribed "G. and J. DEANE'S Two-Hole Black Pens, 46 King William street, London bridge."

HANDSOME BRASS AND IRON BEDSTEADS.—HEAL and SON'S Show Rooms contain a large assortment of Brass Bedsteads, suitable both for Home use and for Tropical Climates; handsome Iron Bedsteads with Brass Mountings and elegantly Japanned; Plain Iron Bedsteads for Servants; every description of Wood Bedstead that is manufactured, in Mahogany, Birch, Walnut-tree Woods, Polished Deal and Japanned, all fitted with Bedding and Furniture complete, as well as every description of Bedroom Furniture.

HEAL AND SON'S ILLUSTRATED CATALOGUE, containing Designs and Prices of 100 Bedsteads, as well as of 150 different articles of Bedroom Furniture, sent free by post.—HEAL and SON, Bedstead, Bedding, and Bedroom Furniture facturers 196 Tottenham court road W.

DINNEFORD'S PURE FLUID MAGNESIA has been for many years sanctioned by the most eminent of the Medical Profession, as an excellent remedy for acidities, heartburn, headache, gout, and indigestion. As a mild aperient it is admirably adapted for delicate females, particularly during pregnancy; and it prevents the food of infants from turning sour during digestion. Combined with the Acidulated Lemon Syrup, it forms an effervescing aperient draught which is highly agreeable and efficacious.

Prepared by DINNEFORD and CO., Dispensing Chemists (and General Agents for the Improved Horse Hair Gloves and Belts), 172 New Bond street, London, and sold by all respectable Chemists throughout the empire.

NO MORE MEDICINE.—For Habitual Constipation, Indigestion (Dyspepsie), Diarrhœa, Nervous, Bilious, and Liver Complaints.

DU BARRY'S delicious Health-restoring REVALENTA ARABICA FOOD.—Certificate No. 36,418. In our practice we have been enabled to appreciate the virtues of Du Barry's Food. In its effect on chronic Dyspepsia (Indigestion), Nervousness, Constipation, Diarrhœa, Bilious and Liver Complaints, Cough, Asthma, Debility and incipient Consumption, we find it the safest remedy. Dr Ure, M.D., F.R.S.; Dr Harvey; Dr Bright, Dr Shorland; Dr Campbell.

At a cost of about a penny per meal, it speedily cures constipation, dyspepsia (indigestion), nervousness, flatulency, distension, phlegm, biliousness, liver complaints, hysteria, neuralgia, sleeplessness, acidity, congestion, blood to the head, headaches, loss of memory, indecision, nervous fancies, palpitation, heartburn, eruptions, impurities, fever, irritability, low spirits, diarrhœa, dysentery, noises in the head and ears, debility, diabetes, pains between the shoulders, cramps, spasms, nausea and sickness, sinking, fits, colds, catarrhs, cough, asthma, bronchitis, consumption, debility, gout, rheumatism, hæmorrhoids, also children's complaints, and saves fifty times its cost in medicine. It does not interfere with a liberal diet, but imparts a healthy relish for lunch and dinner, and restores the faculty of digestion and nervous and muscular energy to the most enfeebled. We extract a few of many thousand cures:

Cure No. 1,771.—Lord Stuart de Decies of many year's dyspepsia.——Cure No. 40,832.—"Fifty year's indescribable agony from dyspepsia, nervousness, asthma, cough, constipation, flatulency, spasms, sickness and vomiting, have been removed by Du Barry's excellent food."—Maria Joly, of Lynn, Norfolk.——Cure No. 53,816.—Field Marshal the Duke of Pluskow, of dyspepsia, constipation, nervousness, and liver complaints, which had resisted all baths and medical treatment.——Cure No. 47,121.—Miss Elizabeth Jacobs, of extreme nervousness, indigestion, gatherings, low spirits, and nervous fancies.——Cure No. 54,816.—From the Rev. James T. Campbell, Syderstone Rectory, near Fakenham, Norfolk: "In all cases of indigestion; and particularly when the liver is affected, I consider Du Barry's Revalenta Arabica food the best of all remedies."—James T. Campbell.

Sold in canisters, 1 lb, 2s 9d; 2 lbs, 4s 6d; 12 lbs, 22s; 24 lbs, 40s. Super-refined quality, 5 lbs 22s; 10 lbs, 33s. The 10 lb, 12 lb, and 24 lb canisters carriage free, on receipt of post-office order by Barry Du Barry and Co., 77 Regent street, London; Fortnum, Mason and Co. Piccadilly, London; Abbis, 60 Gracechurch street and all grocers and chemists.

Observe the only Establishments of Lawrence Hyam are:—City, 36 Gracechurch street; West-end, 189 and 190 Tottenham court road.

SPRING AND SUMMER ATTIRE.—E. MOSES and SON beg to state, that their preparations for Spring and Summer exceed any of their former efforts as well in extent as in variety. They have visited the principal markets both at Home and Abroad for the best and newest manufactures, and have succeeded in collecting such an assortment of goods as has never before been exhibited under one roof in this or any other country.

Their Bespoke Tailoring Departments have been supplied with an endless variety of the choicest and most popular fabrics

Their Ready Made Clothing Stock is complete in every respect, and they venture to say that for Elegance of Style, Durability of Material and Workmanship, Tastefulness of Finish and Cheapness, it is quite unequalled, even in the Metropolis of England.

No less care has been bestowed on the Hosiery, Hat and Cap, and Boot and Shoe Departments, which have been furnished with an entirely new stock of fashionable and seasonable goods at such prices as enable the proprietors to offer their patrons very great advantages.

N.B.—E. MOSES and SON take this opportunity of announcing, that they intend giving their customers the full benefit of the abolition of the duty on silks, gloves, &c.

E. MOSES and SON, Corner of MINORIES and ALDGATE, and Corner of NEW OXFORD STREET and HART STREET.

COUNTRY BRANCHES—Bradford & Sheffield, Yorkshire.

E. MOSES and SON wish it to be particularly observed that if any article be not approved of it will be exchanged, or the money returned without hesitation.

Their Book for Spring and Summer, containing "The Growth of an Important Branch of British Industry," with rules for self-measurement, and list of prices, may be had gratis on application, or post free.

THE "INDISPENSABLE" SUIT, made in various colours and patterns, and particularly adapted for walking, riding, travelling, and business. This is universally acknowledged to be the most comfortable and serviceable suit ever introduced. Price from 35s.—To be obtained of E. MOSES and SON, Corner of MINORIES and ALDGATE, and Corner of NEW OXFORD STREET and HART STREET.

TOURISTS AND EXCURSIONISTS are specially provided for at E. MOSES and SON'S, MERCHANT TAILORS, HATTERS, HOSIERS, BOOTMAKERS, &c., Corner of MINORIES and ALDGATE, Corner of NEW OXFORD STREET and HART STREET, BRADFORD and SHEFFIELD, YORKSHIRE.

HOLLOWAY'S OINTMENT AND PILLS.—Ulcers, Wounds, Sprains.—Bad legs, old wounds, and sprains, whether recent or chronic, yield with surprising celerity to the cooling, healing, and curative properties of this invaluable ointment. It may be relied upon in all such cases as have baffled the skill of our best hospital surgeons; no matter the length of time the malady has endured, the ointment, assisted by a course of Holloway's pills, will quietly but certainly reach the core of the complaint and thoroughly eradicate it, without additional impediments to pleasure or business. These remedies will overcome the worst forms of disease, and the foulest state of the blood; while in glandular swellings, scurvy, and all diseases of the skin, they are equally irresistible.

CONSUMPTION AND ASTHMA CURED.—Dr H. JAMES discovered, while in the East Indies, a Certain Cure for Consumption, Asthma, Bronchitis, Coughs, Colds, and General Debility The remedy was discovered by him when his only child, a daughter, was given up to die. His child was cured and is now alive and well. Desirous of benefiting his fellow-creatures, he will send, post free, to those who wish it, the recipe, containing full directions for making and successfully using this remedy, on receipt of their names, with stamped envelope for return postage.—Address to O. P. Brown, 14 Cecil street, Strand.

RUPTURES.—BY ROYAL LETTERS PATENT

WHITE'S MOC-MAIN LEVER TRUSS is allowed by upwards of 200 Medical Gentlemen to be the most effective invention in the curative treatment of HERNIA. The use of the steel spring, so often hurtful in its effects, is here avoided, a soft bandage being worn round the body while the requisite resisting power is supplied by the MOC-MAIN PAD and PATENT LEVER, fitting with so much ease and closeness that it cannot be detected, and may be worn during sleep. A descriptive circular may be had, and the Truss (which cannot fail to fit) forwarded by post, on the circumference of the body two inches below the hips being sent to the Manufacturer.

Mr WHITE, 228 Piccadilly London.

Price of a single Truss, 16s, 21s, 26s 6d an 31s 6d; Postage, 1s. Double ditto, 31s 6d, 42s, and 52s 6d; postage, 1s 8d. Post-office orders to be made payable to ohn White, Post-office, Piccadilly.

ELASTIC STOCKINGS KNEE CAPS, &c., for VARICOSE VEINS, and all cases o WEAKNESS and SWELLING of the LEGS, SPRAINS, &c. They are porous, light of texture, and inexpensive, and are drawn on like an ordinary stocking. Price rom 7s 6d to 16s each; postage, 6d,

WHITE, MANUFACTURER 228 Piccadilly, London

Post free for Two Stamps.

EXTRAORDINARY DISCOVERY of an Entirely NEW THEORY of CURING DISEASE, being the recorded experience of 30 years' special practice in Great Britain, France, and America—with evidence of the actual effects of the latest Scientific Discoveries, denominated NEW LOCAL REMEDIES, with the adjuncts of Constitutional Treatment not yet generally known, even by the medical faculty of the British Empire, but which have been recently introduced into England. Sent free on receipt of two stamps to defray postage, &c., by W. HILL, Esq., M.A., No. 27 Alfred place, Bedford square, London, W.C.—Daily consultations from Eleven till Two, and Six to Eight Evening.

THE HUMAN HAIR

Just published, price 1d, the 76th edition of GRIMSTONE'S THREE MINUTES' ADVICE on the Growth, Cultivation, and Preservation of the Human Hair. Sold in triangular bottles, 4s, 7s, and 11s. This size contains four of the 4s size; by post 12s, case and postage included

Grimstone's Eye-Snuff for exportation. Sold in Jars 8s per lb; or in Tin Canisters, 8d. 1s 3d, 2s 4d, 4s 8d and 8s 6d. His Medicated Eye-Snuff, samples 1s 1½d 2s 9d, and 4s 6d. This snuff is intended for Ladies or Gentlemen who are not Snuff Takers. All letters to William Grimstone, merchant, 52 High street, Bloomsbury.

A New Edition of

THE PHILOSOPHY OF MARRIAGE. By JOSEPH KAHN, Graduate in Medicine, Surgery, and Midwifery in the Royal and Imperial University of Vienna, Erlangen, &c., &c.

This popular work (which has been translated into four different languages) has now gone through forty-one editions of 10,000 each, and is designed to impart accurate knowledge on subjects which involve, the means of securing moral and physical happiness.

Price One Shilling, or, post free, for Twelve Stamps, direct from the Author, 17 Harley street, Cavendish square, London, W.

A Boon to Nervous Sufferers.

GIVEN AWAY.—26,000 COPIES of a Medical Book, for the benefit of Nervous Sufferers, sent, post free, by the author, secure from observation, on receipt of a directed envelope, enclosing two stamps, the Private Medical Friend, a new work on the Self-cure of Nervous Debility, Loss of Memory, Dimness of Sight, Lassitude, Indigestion, Dislike to Society, &c., which, if neglected, result in consumption, insanity, and premature death, with plain directions for perfect restoration to health and vigour. The true guide to those who desire a speedy and private cure.—By HENRY SMITH, Esq., 8 Burton crescent, Tavistock square, London, W.C.

DR. DE JONGH'S (Knight of the Order of Leopold of Belgium) LIGHT-BROWN COD LIVER OIL, administered with the greatest success in cases of CONSUMPTION, BRONCHITIS, ASTHMA, COUGHS, RHEUMATISM, GOUT, GENERAL DEBILITY, DISEASES OF THE SKIN, RICKETS, INFANTILE WASTING, AND ALL SCROFULOUS AFFECTIONS.

Extensive experience, and the recorded testimony of numberless eminent medical practitioners prove that a half-pint of DR DE JONGH'S Oil is equal in remedial effects to a quart of any other kind. Hence as it is incomparably the best, so it is likewise far the cheapest.

Palatableness, speedy efficacy, safety, and economy unitedly recommend this unrivalled preparation to invalids.

Opinion of A. B. GRANVILLE, Esq., M.D., L.R.C.P., F.R.S., Author of "The Spas of Germany," "On Sudden Death," &c.

"Dr Granville has found that DR DE JONGH'S Cod Liver Oil produces the desired effect in a shorter time than others, and that it does not cause the nausea and indigestion too often consequent on the administration of the Pale Newfoundland Oils. The Oil being, moreover, much more palatable, Dr Granville's patients have themselves expressed a preference for Dr De Jongh's Light Brown Cod Liver Oil."

Sold ONLY in IMPERIAL Half-pints, 2s 6d; Pints, 4s 9d; Quarts, 9s, capsuled, and labelled with DR DE JONGH'S stamp and signature, WITHOUT WHICH NONE CAN POSSIBLY BE GENUINE, by respectable chemists.

SOLE CONSIGNEES, ANSAR, HARFORD, and CO. 77 STRAND, LONDON, W.C

PROSPECTUS OF THE IMPERIAL

THESSALIAN MINING COMPANY, LIMITED.

Capital £100,000, in 50,000 Shares of £2 each.
10s per Share payable on application and 10s on allotment.

SOLICITORS.
Messrs Hughes, Kearsey, Masterman, and Hughes.
BANKERS—Messrs Smith, Payne, and Smiths.
BROKERS—Messrs Field, Son, and Wood.
SECRETARY (pro tem)—Mr A. C. Prince.
OFFICES—85 Gresham house, Old Broad street.

The Mining property which it is the object of the present Company to acquire and work, is situated in the Provinces of Thessaly and Epirus, and a portion of it in Macedonia, known in the country as the Sanjak of Janina, Trikala, and Volos; it embraces a superficial area of great extent, and many ranges of mountains rich in mineral deposits. Amongst those ranges are comprised Mount Pindus, Mount Othris, Mount Pelion, Mount Ossa, and Mount Olympus, which are elongations of the well-known metalliferous chain of mountains passing through Illyria and Carniola, in Austria.

H. I. M. the Sultan of Turkey, in the year 1856, granted a concession for mining on the above property during a period of thirty-one years from that date, subject to an annual rent of 70,000 piastres (about £650 sterling), in lieu of all royalties, payable on the 1st day of January in each year. The concession comprises the exclusive right of mining in the above districts, and an exemption from the payment of custom duties on all minerals produced from the mines.

The district possesses unusual advantages for the export of minerals, having a great extent of seaboard both in the Adriatic Sea and in the Grecian Archipelago. The boundary in the Adriatic Sea comprises a length of two hundred miles of the sea-coast from the Gulf of Arta, northwards, passing opposite to Corfu, and on towards the harbour of Duratzo in Albania, north of Avlona. The boundary in the Grecian Archipelago embraces about one hundred miles of sea-coast from the Gulf of Volo to Katherina, in the Gulf of Salonica.

The concession was originally granted to Ized Pacha, and has finally become the property of Mr George Zarifi, of the well-known Constantinople house. This gentleman has continued the operations commenced by Ized Pacha and his former associates in one portion of the property, viz.:—at the foot of and on the eastern slopes of Mount Pelion, in which numerous veins of argentiferous and auriferous lead have been laid open. Large works for smelting the ores from these veins have been erected there, about three-quarters of a mile from the sea-coast. They are described by Mr William B. Bray, C.E., in his able report, copies of which may be be obtained at the Company's offices and of the Brokers, as very extensive in character, substantial in construction, and capable of treating a large quantity of ore.

The smelting establishment consists of 14 furnaces, of different sorts, besides a complete set of desilverising pans, according to Pattinson's process. There are six ore and slag hearths, three roasting furnaces, two cupelling furnaces, and a reducing furnace. There is a water-wheel of 40 horse power, but this power can be more than quadrupled. There are sets of stampers for crushing ores, as well as extensive apparatus for washing and dressing them.

There are workshops, smitheries, saw mills, &c., &c., and extensive magazines for charcoal. Wood can be delivered at the works from the adjacent extensive forests at a low cost, and may be had in unlimited quantities.

The establishment at "Pelion Works" is capable of smelting from nine to ten tons of mixed metal daily, and of separating the silver and gold from lead. There are generally from sixty to eighty, and sometimes as much as one hundred and fifty ounces of silver, and from six to eight dwts of gold, in a ton of metal, and its average worth for gold, silver, and lead, is from £28 to £30 per ton.

The ores of Galena yielded by the mines are very rich, some of them give as much as eighty-two per cent. of metal, and the average is from thirty to forty per cent. The mineral veins vary in breadth from two to ten feet, and yield on an average about thirty-five per cent. of mixed metal, consisting of lead, silver and gold. The gold and silver are refined at the works, and the lead is of the softest and best quality.

The Directors have entered into a provisional arrangement for the purchase from Mr Zarifi of the above-mentioned concession, together with the smelting works, furnaces, plant, machinery, minerals, and other property belonging to the mines. Mr Zarifi, wishing to retain a large interest in the undertaking, has agreed to accept payment for the property as follows, viz.: £30,000 in fully paid-up shares at par, and £20,000 in cash.

According to the report of Mr Bray, already alluded to, confirmed by Captain Hoskins, the Pelion mines are now working at a profit, and only require the judicious application of additional capital to render them highly remunerative.

Labour can be obtained in the neighbourhood of the mines upon economical terms, and a ready market is found in Turkey for all lead raised from the property, the price at Constantinople being higher than in London.

Applications for shares may be made in the subjoined form to the Directors, at the Offices of the Company, No. 85 Gresham house, Old Broad street, or to Messrs Field, Son, and Wood, 9 Warnford court, Throgmorton street, London.

Each application for shares must be accompanied by a payment to the Bankers of the Company of 10s per Share on the number of shares applied for. If no allotment be made, the deposit will be returned in full.

FORM OF APPLICATION FOR SHARES.

To the Directors of The Imperial Thessalian Mining Company, Limited.

Gentlemen,—Having paid to your Bankers, Messrs Smith, Payne, and Smiths, the sum of £ , I hereby request that you will allot to me shares of £2 each in the above Company, upon the terms of the prospectus; and I hereby undertake to accept the said shares, or any smaller number that may be allotted to me, and to pay the further sum of 10s per share upon the shares allotted to me, when required so to do.—I am, Gentlemen, yours obediently,

Name in full.....

PROSPECTUS.

This Company has been formed under the Joint Stock Companies Act, with limited liability, for the establishment in the metropolis of lines of pneumatic tube, for the more speedy and convenient circulation of despatches and parcels, and an Act of Parliament was obtained in the last Session empowering the Company to open the streets, and lay down tubes for the purpose, within the limits of the "Metropolis Local Management Act, 1855."

The principle of the Pneumatic Tube, as a means of intercommunication, has already been put into practical operation upon a small scale in London; the Electric and International Telegraph Company having for several years availed themselves of its advantages, by connecting in this way two of their subsidiary stations in the City with their central station there. Thus, to avoid the inconvenience of repeating each message, the written papers received in that Company's stations in Cornhill and in the Stock Exchange have, for the period mentioned, been regularly forwarded through pneumatic tubes to the central station in Lothbury, for their contents to be thence telegraphed; and, so easy and rapid is the process, that the time occupied in each despatch is, in the former case, about 30 seconds, and the latter about 10 seconds only. Indeed, that Company are so highly satisfied with the working of these lines, and find so much convenience from their use, that they are now laying others to more distant stations.

The practical means and appliances for the working of larger tubes having been devised, the plans were submitted to, and approved of by, the late Mr Robert Stephenson. The Pneumatic Despatch Company was then formed, Mr Stephenson becoming one of the original promoters, and equitable arrangements were entered into with the patentees. The Company now being in possession of the necessary powers propose to commence operations forthwith, and their views comprise the laying down of a complete and extended system of public lines in London, for the cheap and rapid transmission of despatches and parcels.

The Company's system will be upon a scale which will enable them not only to transmit papers and packets, but to deal as well with parcels of considerable bulk, and they will be prepared to undertake:—1. The transmission of the mail-bags of the Post Office between the chief office and the railways, and between the several district offices. 2. The conveyance and delivery of the small parcels of the railways (under arrangements with the several companies); and 3. The conveyance and delivery of ordinary parcels, professional, commercial, and official papers, documents, private despatches, newspapers, and printed matter, including periodicals and books.

The promoters have brought the details of their proposed scheme under the notice of the Post Office, and have been furnished with the fullest information as to the working of the present mail service, and the general requirements of the office as respects transmission. Besides the great advantage of increased speed in the conveyance of the mails (30 miles an hour as against the contract rate of 8 miles), the new system offers important facilities for the performance of the postal service. When fully developed it will practically bring the ten district offices of London under one roof; will afford the means for a continuous transmission and interchange of the bags; and consequently allow the offices in outlying and suburban districts to be kept open for receipt of country letters to a much later hour than at present. Further, it will obviate the serious delays now not unfrequently experienced in the conveyance of the mails, from the overcrowded state of the metropolitan thoroughfares. The Company propose to lay their first line from St Martin's-le-Grand to one of the principal district post offices, in a manner specially adapted to the requirements of the service, at the same time opening stations upon the line for general service. The success of this work once practically demonstrated, the Company propose to proceed gradually with additional lines to the other district and principal post offices, the several railway termini, and other convenient stations to be established in the chief business and residential quarters of London, on such a plan that ultimately every important point of communication may be embraced in a complete system through which a rapid and continuous circulation will be maintained.

Not only is the principle of pneumatic transmission applicable to public, but it is equally useful for private purposes; and the promoters have submitted to the Lords Commissioners of Her Majesty's Treasury a proposition to connect together the several departments in the neighbourhood of Whitehall, the Houses of Parliament, &c., by a separate system of small lines, through which sealed despatches and papers may be instantaneously exchanged.

It is estimated that the outlay upon the first line will be well covered with the sum of £14,000, being little more than one-half the amount of the proposed first issue of shares. Of course the working of this single section can scarcely be expected to yield commercial results so favourable as the more extended system will give; but it may be mentioned that the present cost of the postal service between the chief office and the district office selected is not less than £800 per annum. The Directors will not proceed with any extensions until the success of this line shall have been completely and satisfactorily established.

As regards the further and larger operations of the Company, plans have been prepared for an extended system of lines, embracing the General Post Office, the ten district and the principal sub-district post offices, the termini of all the railways, and many stations at central and convenient points in the City and at the West-end; and the cost of these larger works, including the outlay upon tubes, stations, and pumping and other machinery, is estimated at £230,000.

As respects income, it is difficult, in a matter so new to draw up any definite statement, but the undermentioned three sources, the first two of which admit of accurate measurement, and are year by year increasing, will be more or less available:—

	£
1. The Post Office Service, including the transmission, within the limits described, both of the London district post and country mail bags.—Annual cost of present cart and van service, not less than	11,000
2. The Railway Small Parcels Service.—Annual cost of present conveyance and delivery service, according to a reliable estimate.....	38,000
3. The General or Public Service, including receipts for ordinary parcels; professional, commercial, and official papers; private despatches, newspapers, and other printed matter.—Wide difference of opinion may be entertained as to the receipts to be expected from this service, but it is submitted that an average of £3 per diem at each of 25 public stations cannot be considered an excessive estimate	23,000
	72,000

On the subject of working expenses, it may be said that there is nothing to lead to the belief that they will be unusually heavy, and it is calculated that, with a fair share of business, they cannot exceed the proportion of from 40 to 50 per cent. upon the gross receipts. The undertaking, therefore, gives promise of being a very profitable investment.

The Directors have determined that the amount of the first issue of shares shall be limited to £25,000. The holders of these original shares will be entitled to a preference in the subscriptions to subsequent issues.

Applications for shares (on the form annexed to the prospectus) to be sent to the Company's brokers, or to the Secretary, from whom, as well as from the brokers, copies of the prospectus and form of application may be obtained.

All applications must be accompanied with the banker's receipt for £1 per share, as part payment of the full deposit of £2 10s per share. Should the amount so paid exceed the amount of the deposit on any less number of shares allotted, the surplus will be returned; but if it falls short of this amount the balance must be immediately paid, or the allotment will be cancelled. If no allotment be made, the deposit will be returned without deduction.

GREAT NORTH ATLANTIC TELEGRAPH COMPANY (Limited).

—This Company is now in course of formation, having for its object the laying down of a line of submarine telegraphic communication between England and America, via the Faroe Islands, Iceland, and Greenland, for which purpose the necessary concession has been obtained from the Government of Denmark. Prospectuses are now in preparation, and will shortly be issued to the public. In the meantime any information on the subject may be obtained of Mr Wm. Bevan, solicitor, 6 Old Jewry.

MIDLAND RAILWAY COMPANY.

—The Directors are prepared to receive applications for the Company's Perpetual Four per Cent. Mortgage Preference Shares of £100 each, which will be inscribed in the books of the Company, in the names of applicants, without payment of stamp duty or other expense.

These shares will be issued under the authority of the Midland Railway Act, 1853, and of a resolution of a Special General Meeting of the Company, held in conformity therewith, on the 18th of February, 1858.

The shares thus raised will be exclusively applied in substitution of the debenture or mortgage debt of the Company, and they will be entitled to the same priority against the property and income of the Company as the debenture or mortgage debt, ranking before the Company's stock and share capital, and will be the first charge on a net income amounting, last year, to about £1,000,000 after payment of working expenses and rents of all kinds.

The interest will commence from the date when the money is placed in the Company's credit, and will be paid half-yearly, on the 1st of January and 1st of July.

Forms of application may be obtained by letter addressed to me. G. N. BROWNE, Secretary.

Derby, 31st May, 1860.

FLORAL HALL, COVENT GARDEN.

—EXHIBITION of FLOWERS.—On Wednesday, June 13, and Thursday, June, 14, a Grand Exhibition of Flowers will take place in the New Floral Hall, Covent garden, to be held as an Inaugural Exhibition previously to the opening of the building as a market for the sale of plants and flowers.

The Exhibition will be arranged and the Floral Hall illuminated on the Evening previous to the Flower Show, viz., on Tuesday Evening, June 12, and on this occasion the Subscribers to the Opera as well as the Visitors to the Boxes, Pit Stalls, or Pit, will be presented with a card of entrée.

Persons wishing to exhibit will have as much space allotted to them as the applications will allow: they will please to apply with as little delay as possible, personally, or by letter stating the kind of plants they would wish to exhibit, the quantity, &c., addressed to Mr Stevens, Floral Hall, Covent garden, W.C., London.

THE SUEZ MARITIME CANAL COMPANY.

At the First General Meeting of the Shareholders, on the 15th of May, 1860, M. Ferdinand de Lesseps read the following Report in the name of the Council of Administration :—

Gentlemen—Before entering into the details which it is our duty to furnish you, permit us to express our sentiments of personal gratitude for the confidence which you have never ceased to manifest towards us. We have desired this first meeting for a long while, and it is unnecessary for us to recapitulate the circumstances which have retarded it until to-day.

Devoted to a work which promises legitimate profit you are, nevertheless, actuated by a loftier feeling. You appreciate the immense advantages which the approximation of the West to the East should render to civilisation and the development of general wealth.

The world expects from you an important step towards general progress, and you will reply to the expectations of the world. This sentiment, which predominates among you, and which we have gathered from all your communications, has been, and will remain, the honour of our company.

The report which we have the honour to submit, will explain the origin and the constitution of our society, as also the negotiations which have preceded and followed the progress and actual state of the works; and, lastly, our financial situation, naturally indicating the ways and methods prepared for the pursuit of our operations.

1.—Of the Origin and Constitution of the Society—Negotiations.

The first decree delivered by H. H. Mohammed Said, Viceroy of Egypt, for the concession of the maritime canal of Suez, is dated from Cairo, 30th November, 1854.

The Viceroy himself announced, at an official audience given to the diplomatic agents and consuls accredited to him, the decision to which he had arrived for uniting the two seas by a maritime canal, and confiding to us the organisation as well as the conduct of the enterprise, whose principle was universality, without exclusive privilege for any nation whatever.

We were thereupon charged to address a circular to the representatives of all the foreign Powers in Egypt, from Cairo, the 3rd of December, 1854, and which terminated in these words :—

"The Viceroy, whose good understanding with the Porte you are aware of, has no doubt as to the acquiescence of the Sultan, with whom he will put himself into direct communication."

The Viceroy, at the same time, himself wrote to the Grand Vizier at Constantinople, desiring him to inform the Divan of his resolution as to the canalisation of the Isthmus of Suez.

He also stated his intention of executing the railway from Cairo to Suez, an enterprise whose execution had long been demanded by England; he added that he had no doubt as to the consent of the Sultan to both these projects.

This act of respectful deference was then justly appreciated at Constantinople, where it never occurred to any of the members of the Divan (at that time left to their own impressions) to make the smallest remark. It will be necessary here to make some observations on the faculty which the Viceroys of Egypt have always held for the spontaneous execution or concession of great works of public utility. We will, in the first place, go back to the origin and the construction of the exceptional and hereditary power founded by Mahomet Ali, recognised by the hatti-scherif of 1841, and guaranteed by the Great Powers.

What was the situation of the Sultan sixty years ago as regards Egypt? All the valley of the Nile, from the first cataract to the Mediterranean, was possessed and governed by twenty-four Mameluke Beys, who for a lengthened period had thrown off all allegiance to Constantinople. A Turkish Pasha, guarded in the citadel of Cairo, without authority or financial resource, was the sole remaining proof of the power retained by the Sublime Porte over the conquests of the Sultan Selim.

The Mameluke Beys thought to brave the power of France with impunity, while insulting and outraging our countrymen travelling or established in Egypt. The Porte having proved incapable of satisfying our just complaints against them, General Bonaparte undertook to chastise them, and his efforts went far to facilitate the task assigned later to Mahomet Ali by Providence, namely, the deliverance of Egypt from anarchy and confusion, and the fructification of the germs of civilisation which the Pharoahs had left upon that ancient land—an expedition as glorious from its scientific results as from the brilliancy of its victories.

France resolved to favour the mission of Mahomet Ali, and to strengthen it, by reuniting it at the same time to the Ottoman Porte by the ties of vassalage, which would assist to maintain an edifice necessary to the equilibrium of Europe.

Events having taken place with which we need not here occupy ourselves, the connection between the Porte and Egypt was arranged by the intervention and under the guarantee of the Five Great Powers.

The hatti-scherif of 1841 wisely acted as a settlement of the conventions thus adopted, and placed Egypt legally in the exceptional conditions which had previously tended to her prosperity. We are brought by these facts to recognise that Egypt is not a Pashalic, like those of Smyrna, Aleppo, Damascus, or Bagdad; and that the Viceroy of Egypt is not a simple functionary of the Porte, as is at present believed, or feigned to be believed, by certain personages in the West and East.

The Viceroy of Egypt has rights, then, peculiar to himself. Amid these rights has he the faculty of ameliorating, *motu proprio*, by important works of public utility, the land of which the hereditary rule has been conceded to him, on the sole condition of paying a settled annual tribute, and under certain reservations, minutely expressed in the special act known as the hatti-scherif? None of these exceptions being applicable to public works, and numerous instances, especially those of the grand canal from Alexandria to the Nile, and the railway from Cairo to Suez, having constituted the initiative faculty of the Viceroy, the concession of the Suez Canal is, according to the rights of international conventions, perfectly regular and unimpeachable. As regards the principle, no one would think of contesting it, and the Cabinet of England less than any other, since it maintained diplomatically at Constantinople, at the period of the discussions relative to the railroad from Alexandria to Cairo—awarded at the formal demand of the British agent in Egypt by the Viceroy, Abbas Pasha—that the initiative of this Prince should be respected by the Porte, and that there were no grounds for opposing the execution of his enterprise.

Nevertheless, the Viceroy would not dispense with coming to an understanding with his Suzerain on such an occasion as the late war in the East, when he employed all his forces and resources to assist in the defence of the empire. He himself accredited us at Constantinople to explain the question to the Sultan and his ministers.

The concession of the Suez Canal had been explicitly and implicitly approved of by all the Continental Governments to whom the project had been submitted. We believe that the incorporation in this report of the opinion expressed on the subject by the illustrious Prince Metternich will not be without interest. The *doyen* of diplomatists will certainly not be suspected of partiality towards Egypt to the detriment of the authority of the rights of the Sultan.

The Prince de Metternich, in establishing a wise distinction between the interior question of execution and the exterior question of neutrality, very judiciously attributed to the Viceroy the power of awarding, *motu proprio*, the concession of the canal; and to the Sultan the exclusive power of giving the enterprise a political authorisation in what would concern the questions of international right, which would arise in consequence of the execution of the canal.

In effect, if the vassal Prince of Egypt possesses the faculty of governing that country upon the terms of independence determined by the hatti-scherif, the Suzerain power has retained the diplomatic right which renders it fit to direct and regulate, in connection with foreign nations, the negotiations and international conventions induced by the interests of all portions of the empire.

Upon this principle the Viceroy of Egypt—to whom agents are, however, accredited bearing a diplomatic character, namely, those of France and England, by reason of the exceptionally independent character of his interior government—does not himself employ a diplomatic corps at the Courts of foreign Sovereigns.

Our negotiations commenced at Constantinople in the month of February, 1855.

A reply favourable to the Viceroy was immediately promised us. It is difficult to persuade oneself that there was never any question of a firman of the Sultan's concession. The concession was regularly and legally granted by Mohammed Said, who had pledged himself to *come to an understanding directly with the Sultan*, to obtain, according to usage, a simple authorisation, the form of which was as yet undetermined, or a declaration of non-opposition.

Then began to appear the first symptoms of political opposition from England. We had occasion to verify, in a despatch of the 1st of March, 1855, to the Austrian Internuncio at Constantinople, that we should not meet with any further difficulty. The Ambassador of England had particularly interfered with the Grand Vizier to obtain a negative reply from the Council to the letter of the Viceroy. This attempt not having succeeded, he proposed to leave the question of authorisation provisionally on one side, and to name a commission to discuss the articles of the concession in detail. Now the act of concession, dictated by the Viceroy himself, communicated to all the Cabinets of Europe, already recognised in conformity to the laws and usages of the country by the Grand Council at Cairo, was not under discussion. We could not pursue our adversary upon ground of this nature, which we were specially recommended, moreover, not to approach. The Viceroy was right in not allowing to be established, in conjunction with a legal act of his interior administration, a precedent which might at a later period seriously embarrass the regular and liberal progress of his Government.

We announced that we were about to return to Egypt, where the Viceroy awaited us, to prepare the organisation of his project. The Grand Vizier, Redschid Pasha, remitted us a letter of acquiescence, according to his promise, for the Viceroy, which has been printed in the first volume of our official publications.

Certain, henceforth, that in that which concerned the interests of the empire the veto of the Suzerain was not to be feared—the Suzerain himself having considered the canal of Suez as a most useful and interesting project—the Viceroy immediately occupied himself, conjointly with ourselves, in carrying out his glorious enterprise. He said to us :—"If you encounter difficulties in the financial organisation of the company, know that I am resolved to accomplish my work with my personal resource, and that of my country, added to those of whatever individual may respond to your appeal." These noble words deserve to be retained in your memory, as in the archives of our society.

The princely founder gave us further special instructions on the 30th of April, 1855, at Marea (Mariout), on that same encampment of the desert which had six months previously been the witness of our first studies towards organisation. These instructions form a striking proof of the interest taken by the Viceroy in the conduct of his project, and of the care which we took to inform him continually upon every circumstance relative to the honourable duty he had confided to us. His approbation, dated the 19th of May, 1855, is expressed in the following terms :—"I have received your report addressed to me on the 13th of April. I approve of the document, which should serve you in the light of instructions. I appreciate the zeal you have manifested in this affair, the friendly zeal which you have displayed, and it has given me genuine satisfaction."

At the same time that the Prince transmitted this official document to us, secured with his own seal, an authentic duplicate of his firman of concession—which we had not previously claimed, but which would become necessary on our departure for Europe—was also put into our hands.

Notwithstanding the opposition of English diplomacy, the favourable disposition of his Highness and the Divan personally was well understood. It was evident that the only danger to be anticipated for the Viceroy in the pursuit of his enterprise was a foreign opposition, which might seek to misrepresent his intentions and cause serious difficulties to arise, by making him appear as though acting antagonistically to the authority of the Sultan, for the maintenance of whose power the Western nations had just made such important sacrifices. We had been for so long a time too devoted to the Viceroy, too desirous not to cause any embarrassment to his Government or his political relations, not to explain to him the gravity of the situation.

We informed him that while accepting his powers, we did not intend to make use of them without the consent of the Sublime Porte, or without having previously removed the difficulties that might present themselves.

The English Cabinet, naturally well informed of the favourable disposition of the Sublime Porte, and convinced that an understanding upon this subject was being arrived at between the Porte and the Viceroy, made an attempt to press the French Government to prevent that understanding taking place.

A despatch addressed by Lord Clarendon to Lord Cowley, June, 1855, states that :—"The Government of Her Britannic Majesty will perceive difficulties in the way of leaving the question of the canal through the Isthmus of Suez to be decided between the Sultan and the Viceroy of Egypt, because then, the agents and partisans of the two allied countries, using their influence at Constantinople and Alexandria, might renew, by their intrigues, an antagonistic struggle of national rivalry which has fortunately disappeared, from the policy of the two Governments." The question then, being in the course of examination, Lord Clarendon presented the following objections :—

"1. The canal was a physical impossibility, and, even if it could be executed, it would be at such an enormous expense that no profit could result as a commercial speculation, which proved that the enterprise could only be attempted for political purposes.

"2. The canal project, which, under all circumstances, would require a very lengthened period for its completion, would considerably retard, even if it did not altogether prevent, the execution of the one already established between Alexandria and Cairo. It would also be seriously injurious to the interests of England, in connection with India. All that the British Government had to look for in Egypt was an easy and short road to India for travellers, light merchandise, and despatches. It sought neither political ascendency nor territorial domination. It required only a free and unopposed transit. The prolongation of the railway would give the British Government this rapid transit, and the actual Government of Egypt, as a dependency of the Turkish Empire, would guarantee it freely and surely."

The French Minister of Foreign Affairs replied :—

"1. If the Suez Canal is physically impossible, those who fear to see their interests affected by its completion have no motive for alarm. If it was not possible but by means of expenditure not in proportion to the accruing profits, it would be equally impossible, as the Viceroy of Egypt abandons the charge of its construction to the association of private capitals of all nations, without exclusion and without particular advantage for any country, and without the intervention or help of foreign Governments. Under these conditions, it is evident that individuals to whom it cannot be proved that benefit will be derived from bringing their money into the enterprise will not do so.

"2. The two Governments of France and England have not to occupy themselves with the scientific or physical questions of the means of execution. The project of the canal, such as it is, has been conceived and produced spontaneously by the Pasha of Egypt, all idea of politics excluded, whether on his part or that of any European Government.

"The perforation of the Isthmus of Suez has always passed for being advantageous to the commercial and maritime interests of all nations, and of Great Britain in particular. It has lately obtained the approbation of the Emperor's Government, who are favourable to all enterprises tending to augment the well-being of mankind, and to benefit international communication. It is upon this principle that the French agent at Alexandria has recently encouraged and protected the project of the railway from the Mediterranean to the Red Sea across Egypt, formerly exclusively desired, it may be said, by English policy, and which was formerly regarded—no doubt wrongfully—as likely to tend exclusively to British interests.

"The old policy of political antagonism and national jealousy has been loyally avoided by the Government of the Emperor and his agents, who, faithful to their instructions, have nowhere practised the system of intrigue and secrecy which appears to alarm and to

occasion the despatch of Lord Clarendon to Lord Cowley; that which has just taken place in the case of the railway from Cairo to Suez is a proof."

2. The Government of Her Britannic Majesty, which appears only to attach importance to the transit of passengers, light merchandise, and despatches, considers that the railway will suffice for all these requirements, and it fears that the resources absorbed by the canal will retard indefinitely the completion of the railway. If the two enterprises were handed over at the same time to private industry, it might, in fact, be feared that the canal, by which the navigation of the entire world would pass, might be preferred to the railway, whose profits would be more doubtful; but happily, the Pasha of Egypt has decided to continue the railway from Cairo to Suez at his own expense. He has already ordered the rails from an English house, the plans are finished, and the works are actually commenced. This result has been received with *empressement* by the British agent in Egypt. The French agent has, on his part, congratulated the Viceroy; and up to this moment it has not occurred to any one that it has not been considered necessary to demand from the Porte the authorisation solicited, on the contrary, for the project of the canal.

Consequently, the fear of seeing the completion of the railway delayed by the execution of the canal is without any foundation.

At the end of this exchange of "observations," which indicated the tendency of the two Governments, it was verbally arranged that France and England would not take into consideration the decisions of Turkey or Egypt, and that they would leave the Suez affair freely to its own industrial and commercial course.

The favourable conclusions to which the International Commission had arrived soon gave a new impulse to the enterprise, and completed the satisfaction of the Viceroy, who beheld the judgment of science give the final stamp to the enterprise to which he attached all the interest of his reign and of his own honour. Mohammed Said had been barely two years in power. All the Sovereigns of Europe sent him the Grand Crosses of their several Orders; he had the satisfaction of finding that civilised Europe applauded his efforts to ameliorate the condition of his people.

The British Cabinet, which had failed in the attempt to prevent, by a mutual movement with France, the Porte from arriving at an understanding directly with the Viceroy, showed itself uneasy at the impetus given to the enterprise by the judgment of the first engineers of Europe; and it found itself driven, by every possible means, to gain the desired result, individually, which it now despaired of obtaining with the assistance of the French Cabinet. Although its opposition was neither official nor avowed, it was not the less active; neither was this opposition counteracted, the French Government not choosing, and with reason, by direct interference, to give a political feature to an operation exclusively private and commercial, and which was not yet in a position to require protection. Moreover, the loyal system of our diplomacy did not allow our agents to follow a path contrary to the promise of neutrality and the official abstention to which they had been enjoined.

On our return to Europe we hastened to publish in France and England a volume containing, among other official documents, the definitive firman of concession, the *cahier* of charges, and the minutes of the sittings in Egypt of the delegates of the International Scientific Commission.

The members of that commission met in Paris in the month of June, and drew up definitively the bases of their general report, which was to precede and serve as a guide to the financial arrangements.

After having attended the sittings of the commission, we proceeded to render an account of its deliberations to the Viceroy.

At the Court of Egypt we found the Grand Vizier, Redschid Pasha, who had quitted Constantinople to visit the Viceroy; and an envoy from the Sultan, Medjid Pasha, who was the bearer to Mohammed Said of high marks of consideration from his Highness.

At this time the celebrated hatti-humayoun, or Imperial decree, was promulgated in Egypt. It recommended all the governors and vassals of the Empire "to occupy themselves with the construction of roads and canals, to facilitate communication, to augment the sources of national wealth, and attract European capital."

It was under these circumstances that the Viceroy adopted a regular budget of expenses for the execution of the preparatory works indicated by the International Commission—works of which he himself undertakes the responsibility, while awaiting the formation of the company.

Moreover, he considered the time opportune to give a course to his decree upon the organisation, the treatment, and pay of Egyptian workmen employed by the company. This decree, bearing the date of the 20th of July, 1856—a legal copy of which was transmitted to us to form a portion of the constitutive acts of our society—announced publicly that his Highness "would assure the execution of the Suez Canal works."

We were recalled to Paris for the purpose of publishing and distributing the report of the International Commission. This report, which is a veritable monument of the modern science of engineering, was translated into all languages, and many millions of copies were sold.

The scientific bodies of the whole of Europe gave their adhesion, and the Imperial Academy of Sciences in Paris declared, on the 2d of March, 1857, by the organ of their honourable reporter, the Baron Charles Dupin, that the conception and plans of the Suez Canal were the worthy fruit of an enterprise which would be useful to the human race.

The public press could not fail us in an undertaking which embraced the highest questions of civilisation, and which of itself, considered in a point of view exclusively economical, merits full attention on the part of the journalist. Sympathy and encouragement were lavished on us by organs representing the entire world of opinion. Since that time they have not left a hostile or erroneous allegation unrefuted, nor a single interest of ours without defence. Resting upon truth, we have had, besides, the aid of eloquence. We ought to express here the gratitude with which this powerful co-operation has inspired us, in adding that in this crusade with all nations in the cause of right, France has distinguished herself, as ever, by the unshaken firmness of her integrity and generosity.

Our correspondents from Constantinople agreed in representing the Grand Vizier and his colleagues as always favourable to the canal; but they apprised us of the persistence in opposition of the English Ambassador, who, not limiting himself to suspending the official expression of the ratification of the Porte, sought to obtain a hostile declaration. We were advised that a counterpoise was necessary to this opposition, or otherwise the canal would be endangered. This counterpoise should have been the intervention of the French Government, or the exercise of an influence on public opinion in England. The first means appeared to us premature; the second we did not hesitate to adopt.

The meetings, which were held in April, May, and June, 1857, in the principal maritime and commercial centres of England, Scotland and Ireland, gave us complete satisfaction. The shorthand reports of these meetings formed an interesting inquiry, in which the subject was discussed and studied in its commercial, industrial, and maritime aspects. The opinion of the Chambers of Commerce and of shareholders in Great Britain was unanimous in approval of the tariff of ten francs per ton fixed for the right of passage by the canal.

Such explicit manifestations in favour of the canal disturbed the English Cabinet, which sought to oppose a pretended political interest to the commercial interest of the country; as if, in our day, the policy of States could have any other aim than that which is indicated by public opinion and the necessity of augmenting the welfare and prosperity of the population. The Prime Minister avowed to Parliament that "the Government of Her Britannic Majesty had used, up to that moment, all its influence at Constantinople and Alexandria to prevent the project of the canal from being put into execution."

There was but one voice in England and on the Continent in censure of the language, which had soon to be modified.

Mr Gladstone subsequently placed before the House of Commons the true principles which ought to guide Her Majesty's Government in the question of the Suez Canal. The majority of the English Press lent us their aid in the contest, which may be called a personal one, that we had to sustain.

The resolutions adopted by the Councils-General and Chambers of Commerce of France completed the first rout of our adversaries.

Convinced thenceforth that they could not count on the support of public opinion in their own country, they will employ afresh all their efforts to bear upon the Porte.

A sojourn of six months at Constantinople permitted us not only to re-establish the situation as we had previously left it, but also to obtain a written declaration, verifying that the members of the Imperial Divan "were still favourably disposed to the Canal, and desirous of publicly establishing the fact that the Porte opposed no obstacle to the realisation of the grand enterprise of the Viceroy of Egypt."

From another quarter the following motion was presented in the British House of Commons in June, 1858:—

"According to the opinion of the House, the power and influence of England ought not to be employed to oblige the Sultan to refuse his consent to the project of a canal across the Isthmus of Suez."

The motion was warmly supported by several honourable members of the actual Cabinet of London, among whom we congratulate ourselves upon being able to mention the Minister for Foreign Affairs, Lord John Russell, and the Chancellor of the Exchequer, Mr Gladstone. To obtain from the House of Commons a vote, not hostile to the spirit of the motion, but merely a neutral one, the orator of the Government, Mr Disraeli was obliged to deny, and consequently to disavow, all the former proceedings of British diplomacy, whether at Cairo or at the Divan. "They had not the right to suppose," he said, "that the influence and power of England had been employed to force the Porte to oppose the Suez Canal project."

These debates exercised a favourable influence on the Sultan's Ministers.

After another trip to Europe, with the object of ascertaining if the time was opportune for the formation of the financial society, we returned to Egypt. We agreed with the Viceroy on the propriety of amalgamating the capitals, and constituting the company, and we arranged to let him know the result of our commission before the end of the year. We then returned to Constantinople, where we informed the Grand Vizier of our project.

The call for capital could no longer be delayed; we were armed with the commission and the concession of the Viceroy, we had the consent of the Porte on those points in which it was personally concerned. The Cabinet of England, isolated in Europe and in its own country, was to us in the question but a foreign and impotent voice. The enterprise had arrived at its point of maturity, and it was generally understood that honour as well as profit was to be derived from an association with it.

The matter in hand was the expenditure of 200 millions of francs at the maximum, and a revenue of 40 millions at the minimum. The precise calculations of the International commission guaranteed that the estimate would not be exceeded.

The subscription previously announced in the journals was publicly opened at Paris on the 5th of November, 1858, at the same time as at Alexandria, Constantinople, and all the principal cities of Europe. It was closed on the 30th of the same month. The 200 millions intended to form the capital of the association was entirely subscribed with the assistance of the Viceroy of Egypt, who placed his name at the head of the shareholders in his work—our hopes were realised.

France had the honour of herself finding more than one-half of the fund, which comprised 21,229 subscribers, on an average representing 10 shares each.

On the 15th of December, 1858, we were authorised to declare, in an act received by M. Mocquard, notary, that according to the terms of Article 4 of the Statutes the Universal Company of the Maritime Canal of Suez was constituted.

And to execute Article 77 of the Statutes, it was set forth in the same act that the council of administration, named for the entire duration of the works, and pending the five first years to follow the opening of the canal to general navigation, should be composed of members designed by the said act.

On the 5th of January, 1859, we rendered an account to His Highness, through the agency of a detailed report, of the entire operations of the council.

As soon as the Viceroy had replied to this communication by a despatch, the council of administration nominated a commission, chosen to accompany us to Egypt, and to take possession on the spot of the ground conceded to us.

On their arrival in Egypt, the members of the commission delegated by the council acquainted the Viceroy, by an official message bearing date the 9th of March, with the object of their mission.

Every facility was accorded them for the exploration of the Isthmus, in company with Mougel Bey, director-general, and M. Harden, entrepreneur-general of the works.

On the 15th April, we each of us struck the first blow with the pick to break the ground at a spot on a melancholy desert coast, which has already become a considerable establishment, and assisted to disembark the first materials necessary to commence that double mole, which represents the two arms of Africa and Asia open to Europe and America.

The first stroke of the pick, modest as it was, made, as we foresaw, a considerable noise.

Our adversaries began to feel that our enterprise was not a chimera; they then raised up difficulties which you know, but in the midst of which your administrative council has pursued, with wise and firm resolution, the course which was dictated alike by the defence of your interests, and by their confidence in the success of a work which we have commenced together, and which we will never abandon.

After vainly endeavouring to intimidate the Viceroy, whom they wished to push directly against his own work, they profited by a moment when France was engaged in the war in Italy to make an intended visit of the Sultan to Egypt coincide with the arrival of an English squadron in the Alexandrian waters. But the peace of Villafranca having frustrated the plans which had been conceived, British diplomacy renewed its attempts at Constantinople, and finished by obtaining the mission to Alexandria of a member of the Divan, bearer of a letter from the Vizier, which communicated to the Viceroy the order to suspend the works undertaken by the company. The French interests engaged in the enterprise were seriously menaced. Your council presented itself to the Emperor Napoleon, and claimed the high and all-powerful protection of His Majesty. Our operations in the Isthmus were continued.

At the same time, the Ambassador of France at Constantinople received orders to open the negotiations which, notwithstanding the wily intervention of the British Ambassador, fortunately terminated by the formal recognition of the principle of adherence by the Porte to the enterprise of the Viceroy of Egypt, and by the official proposition of a recourse to the great Maritime Powers to examine and decide the political and international questions concerning the completion of the canal.

We hastened to present ourselves in Egypt to inform the Viceroy of what had taken place at Constantinople. His Highness profited by our presence to express his approbation of the account current of the company with the Egyptian Government. Amidst the recommendations suggested to us by Prince Mohammed Said, before the formation of the company, that which he above all enjoined, was that the general subscription should not be exclusively filled up by a little group of countries; and by the diversity of nationalities called in to participate, it would preserve its principle of universality. France, Spain, Belgium, Holland, Switzerland, Italy, Tunis, were the only countries which by their habits or their dispositions appeared to us likely to afford us direct shareholders. In order that we might conform ourselves to our commission, we should have accepted on the part of certain States the subscriptions of some bankers who engaged themselves to be the intermediaries between the public of these countries and the company. We were desirous for a realisation of the subscriptions, knowing that, the term of the company expiring, the King would become the lessee. The events which occurred from the first days of 1859, and the war which followed, became circumstances of the first importance, which interrupted the regular course of affairs with many of the banker subscribers, and made them suspend their payments. We arranged with the Viceroy that he should take upon himself definitively the shares reserved for the foreign bankers prevented by circumstances from fulfilling their engagements.

The Viceroy, on his side, wishing to retain for the enterprise its universal character, and perceiving that we had faithfully carried out his views, restricted himself to distributing, if he thought it necessary, the subscriptions in question amongst the different maritime countries which had previously obtained, and which might be desirous at a future period of participating in the advantages of the enterprise.

In consequence of a regular mutation, the first list of subscriptions has not experienced any depression, and the amount of shares in reserve has been inscribed on the books of the company to the account of the Viceroy, who, before any shareholder had disbursed any payment whatever, had, during the last four years, made advances amounting to several millions, to be attributed to the payments of his personal subscriptions. Nevertheless, gentlemen, as a company such as ours ought to be established on the firmest basis, we have considered that we should submit the examination of our constitution, together with the questions which appertain thereto, to the experience of the most eminent and competent jurisconsults in these matters.

In consequence, we have united your Judicial Council, and have placed those questions before them:—

1. Has the society been regularly and solidly constituted from its beginning?

2. Has the condition of the subscription been fulfilled?

3. Is the society in fact, as in right, irrevocably constituted, as much as regards His Highness the Viceroy as in the case of each of the shareholders?

The minute inquiry which we have engaged the Judicial Council to enter upon, and the examination of all the documents to which they required access, terminated by the following *resume*:—

We are unanimously of opinion that the three questions proposed to us ought to be resolved in the affirmative; that, as a consequence of this triple solution, it is at present beyond all contradiction that the Universal Society of the Maritime Canal at Suez is regularly constituted; and that, by the effect of the commission

given to M. Lesseps, and which he loyally executed. His Highness the Viceroy and the shareholders of the Universal Company are definitively and irrevocably bound by the terms of the decree of the 30th of November, 1854, and the 5th of January, 1856, and by the social pact; and that, in fine, nothing can prevent the said society from carrying out all the functions according to the terms of the Act of Sucession and the conditions of the Statutes.

The unanimous declaration of the members of the Judicial Council, supported by the communication of all the documents which had induced it, received at once the adherence of MM. Ploequo, *batonier* of the Imperial Court of Paris, of Vatimesnil, Marie, and Crémieux.

By the sequence of facts which have been unfolded to you, you have had the opportunity, gentlemen, of convincing yourselves that we are in the right, and continuing the progressive and conciliatory policy which up to the present moment has proved so successful.

If it is sought to attack these rights afresh, the experiences of the past guarantee us the efficacious protection of two great powers—that of public opinion, and that of the august Sovereign who has acquired so many titles to our gratitude.

Let us continue, then, with all confidence, our commercial and industrial enterprise, and let us leave exclusively to diplomacy the care of treating, in a fitting time, the political questions which it has been called on to settle at the demand of the Ottoman Ports.

We will now pass to a description of the progress and actual state of the works.

2.—Progress and Present State of the Works.

The surveys and works, of which we have to give you an account, divide themselves into periods. The first comprises four years; it begins in 1854, at the date of the deed of concession; and it terminates at the end of 1858, the epoch at which the company, definitively constituted, took the place of the Viceroy and his mandatary.

The second period begins on the 1st January, 1859, with the legal existence of the company; it includes all the operations executed by the company itself up to this day.

On granting the concession of the enterprise to a universal company, the Viceroy placed at the disposal of the president-founder the resources and material means necessary for beginning and actively going on with the surveys for the preliminary plans, and for making on the spot the scientific exploration and all the preparatory operations.

The Viceroy's engineers were charged with the earliest works. The arsenals of Cairo and Alexandria were opened to us; escorts and means of transport by land and water were generously furnished; an important material was ordered in the Viceroy's name, and paid for by him; so that before the existence of our company considerable works were executed for its benefit.

A definitive levelling confirms the equality of the level of the two seas, which had been already recognised and published by M. Talabot, according to the operations of M. Bourdaloue.

The line of the canal was marked out, the sections were approximately determined, both lengthwise and crosswise; borings were taken along the whole line to ascertain the subsoil; a survey of all the irrigable lands belonging to the concession was undertaken; several brigades of engineers were permanently established on the Isthmus; the number of men employed often rose as high as 2,000.

Whilst these necessary preparations were going forward in Egypt, a commission chosen, as we said before, from amongst the most celebrated engineers of Europe, delegated a sub-commission to repair to the spot, to make known its opinion on the draught-plan of the Viceroy's engineers, and to get together the elements of a definitive plan.

The members of the sub-commission were magnificently received by the Viceroy. They themselves placed in the Viceroy's hands, on the 2nd of January, 1856, a remarkable report, the publication of which produced a great effect.

The hydrography of the Gulf of Pelusium was executed by M. Laposnas, under the direction of MM. Lieussou and De Negrilli, both afterwards removed by a premature death from an undertaking the bases of which they had assisted in laying down, and to which they were willing to devote their illustrious career.

The calculations of that young and eminent French engineer, M. Lieussou, determined the point where the canal should debouch into the Mediterranean, and acquainted us with the régime of the waters on the Maritime Canal. They established the inutility of sluices, and decided for their suppression. It was at M. Lieussou's demand, also, that a stationary vessel was confided to an experienced and zealous seaman, Captain Philigret.

The capital holding of the anchorage in the Bay of Dibeh, and the excellent quality of the bottom, were thenceforward facts settled by decisive experience.

As soon as the company was constituted, the principal members of the international commission were called on to form a superior council of works, which established itself *en permanence* by side of your council of administration, and resumed the examination, according to the latest data and surveys, of every question of execution, on the proposition of our able engineer-in-chief, Mougel Bey. This council decided on important reductions or modifications. A definitive programme was settled and published.

It was shown by positive figures that the maritime canal fit for the navigation of large vessels, with its gates, the junction canal to the Nile, and the lateral rivulets of irrigation, might be executed in five years at a maximum cost of 130,000,000f.

In this sum a large margin is left for the unforeseen.

The competency of the engineers who adopted those figures as the definitive base of their revised plans, gives us the firm confidence that they will not be exceeded. In this regard we have, besides, another guarantee. We have appealed to the interest and experience of the undertakers of public works, and have asked for contracts within the limits of our plans, following the sub-details settled by our engineers.

Numerous tenders were addressed to us from France and from abroad. Almost all demanded a bonus on the cost of the base of the plans. That of M. Hardon, which we have accepted, presented incontestable advantages, which evidently owed their origin to the conditions of our contract and to the experience of more than a year.

Our works have been prosecuted without interruption from that day, and have just received a fresh impulse from the arrival of the first *dragues*.

Four-and-twenty of these machines have been ordered in France and Belgium. Each of them is furnished with an accessory apparatus invented by our engineer-in-chief, Mougel Bey. This apparatus itself transports to the desired distance, without hand labour and without transhipment, the deposit proceeding from the excavations. You will easily comprehend, gentlemen the immense advantages and economy of labour resulting from this ingenious arrangement. In inventing this apparatus, M. Mougel has rendered a real service to the company.

In our original plans, the average cost of the cubic *metre* of stuff to be removed, dry and under water, was calculated at 83 centimes. The first experiments we have made with our *dragues* proves that this cost may be materially reduced. Six *dragues* have already arrived at our yards at Port Said; two of them have begun to work, and yield satisfactory results. They are fitted up to do a job of 1,000 cubic metres in a ten hour's day.

The fitting up of the other *dragues* will be actively pushed forward. Twenty will be at work during the course of the summer. The employment of this one implement in clearing away the 12,800,000 mètres that constitute the earthwork to be done for digging a canal for ships, and for petty communication, ensures the execution within the period of the eighteen months fixed by the plans.

The Jason, which was lost in the Straits of Bonifacio, had on board a brigade of workmen despatched from Lyons by the contractor for the *dragues*, whose agreement obliged him to deliver the machines at Port Said fitted for work. Four of the machines were also on board that vessel, with various other articles destined for our yards. The machines were insured, and active measures were immediately taken to replace them. There will be no loss to the company. The damage irreparable is the death of nineteen of those courageous workmen, true soldiers of labour, whom we see daily giving to our undertaking admirable proofs of constancy, devotedness, and intelligence.

Your council, painfully affected, has given orders to have rendered to them a statement of the position of the families of these victims. Obedient to a feeling in which you will be partakers, they intend to see to what degree and by what means it may be just that the company should intervene in the relief of such mishaps, although completely unconnected with them.

The posts and yards successively established in the course of the last year on the line of the Maritime Canal are six in number. In fact, your yards occupy the whole line of the Maritime Canal, and are prepared for the advantageous employment of the machines. Nothing, therefore, has been neglected to ensure the carrying out of the programme that we have adopted as the most proper for expediting the execution of the enterprise. We can state with confidence that not a day has been lost.

We have neglected no precaution for keeping up the good condition and health of our workmen. We can now affirm that the climate of the Isthmus is perfectly salubrious. Our European workmen have dwelt there permanently for a year; consequently, they have been at work in all seasons, and there are less sick among them than there would have been in any other country.

We shall conclude this chapter by placing before you an estimate of the probable results of the working of the enterprise,

The gross results, it appears to us, cannot be less than 40,000,000f.

By the terms of its deed of concession, the company has the right of levying on vessels a toll of 10f per ton of burden for passing into the Maritime Canal. We have taken as a basis for the levying of this tariff an average movement of three million tons. Such a movement was the basis of our first valuations. It is below the interchange now actually effected between the countries beyond the Cape and the States of Europe.

The produce of the irrigable lands, and the other beneficial interests the company will enjoy along its canals, were valued, according to the calculations of the first plan, at a minimum of six millions.

As regards the lands situated around our establishments, if we look at the results obtained in our similar situations, we shall find under that head likewise certain elements of revenue.

Experience has shown that centres of transit and depot create, wherever they exist, great commercial currents. Port Said and Timsah will, by the opening of the canal, become considerable depots. The ground around them cannot fail, therefore, speedily to acquire great value.

We forbear, because difficult to put into figures, to refer to the development of the coasting trade between the Mediterranean, the Red Sea, and the eastern coast of Africa, under the influence of a route that opens new markets for the products of three continents.

An amount of four millions of tons would be the lowest, if compared with the present maritime movement at Constantinople, the situation of which, at the confluence of two seas, is analogous to that of the Suez Canal.

By an estimate, certainly below the reality, you will arrive at a gross result of 40,000,000f, which would give to the capital expended a probable net revenue of from 15 to 20 per cent.

We shall now, gentlemen, lay before you our financial position.

3.—Financial Position.

The balance of the papers, of which we are going to give you an analysis, is the *résumé* of the accounts that establish your financial situation.

We have made a point of presenting you with your position at the closest possible date to the time of your meeting. It includes the accounts of the expense and the situation of the Superior Agency in Egypt up to the 30th of April last.

The balance of the books to the 30th of April, 1860, presents, as the first article on the credit side, the realisation of the company's funds, which are fixed by the statutes at an amount of 200,000,000f.

The two first tenths of this capital—that is, 100f per share—are all that have been called for; but the option of paying in anticipation up to the third or fourth tenth was left to all the shareholders. You will see by the figures under the head of that article with what eagerness that option was embraced. It is an unchallengeable testimony to the confidence and favour bestowed on our enterprise.

This anticipation of payments, provided for by our statutes, has given to those among you who have used it a means of obtaining shares endorsed to bearer.

You have seen, gentlemen, by the details of the preceding chapter, that the plans of the original scheme, as revised by the Superior Council of Works, have left room for considerable reductions on the first estimates of the expenses of construction. The definitive plans establish that the expenditure will probably not exceed the sum of 130,000,000f. Without jumping too eagerly to a result so satisfactory, we yet cannot refrain from now calling your attention to it, as permitting the hope that we may not have to employ the total of the company's capital, and of our being able one day to propose to you definitively to hand over the shares without requiring the entire payment of their amount.

The second article on the credit side comprehends a sum of 896,221f. 57c., of which 889,716f 69c represent the produce of temporary investments of our disposable funds.

Bringing the most scrupulous prudence to the administration of the current funds of the company, your Council applied themselves, as you see, not to leave them unproductive. They have thus been able to augment your resources by an important sum, which is specially devoted to meet the interest on the shares.

The third article is composed of different credits amounting to a sum of 5,614,951f. 38c. The first and most important of these credits represents the anticipatory payments on the shares, which are subdivided in the following manner—

	f
For the 3rd tenth.....	3,138,300
For the 4th	1,777,250
Total.....	4,915,550

The united credit accounts form a total of 206,511,320f 58c.

The debtor account, which is its counterpart, represents the expenditure already effected, and the sums or values in the hands of the company.

At the head of this account figures the amount of the eight tenths remaining to be called up on the 400,000 shares—that is, 400f per share, or 160,000,000f.

The second article of the debit account results from the settlement effected by the Council in execution of Art. 5 of the Statutes, and represents the expenditure incurred anterior to the constitution of the company, and with a view to that constitution by means of advances made either by His Highness the Viceroy of Egypt, or by the founding members. This article applies to the first period of surveys and works, comprising the years 1854-5, 6, 7, and 8, the importance and the results of which we have made you acquainted with.

The Council have admitted under this head the settlement of vouched-for expenses to a total sum of 2,852,142f 60c. Of that sum, 1,594,897f 54c has been paid for advances and disbursements made by the Egyptian Government on behalf of the company; the total of which amounted to 2,394,914f 52c, including the material and works executed, which the Viceroy was kind enough to hand over to the company on definitively approving its constitution.

Though advances of that importance already sufficiently evince the generous intentions of His Highness in favour of our enterprise, the Viceroy has deigned to give a fresh proof of it by taking to his own charge the expenses relative to the reception and stay in Egypt of the International Commission, and to various surveys, amounting to a sum of 270,000f.

By the terms of Art. 5 of our Statutes, the costs anterior to our constitution form a charge on the company, but if you consider that these costs apply to surveys and operations that embrace a period of five years during which they necessitated researches, journeys, publications, personal and administrative expenses, you will be of opinion, with your Council of Administration, that their amount is relatively very moderate.

The reimbursement of the greater part of these expenses was, moreover, not effected by a movement of moneys withdrawn from cash-box. The Viceroy admitted it in diminution of the debit of an account-current opened to him by the company, of which we will presently let you know the situation.

To the expenses anterior to the constitution of the company, amounting to	f c 2,852,142 60
Must be added the amount of the debit accounts opened after the formation of the company:—	
1. Property at the company's head-quarters at Alexandria, and at the administrative domicile at Paris.....	85,830 70
2. Interest paid to the shareholders for 1859	1,391,003 6
3. General cost of administration for 1859 and 1860	1,043,890 20
4. Insertions, advertisements, publications	143,040 63
5. Journeys, missions, dismissals.....	57,027 10
6. General expenses of the works, purchase of matériel in 1859 and 1860 ..	3,627,078 31
7. Lastly, the cash in hand, amounting to a total of	37,810,707 98

This last item comprehends the current account of the Viceroy, the present debit of which amounts to a sum of 15,218,042f 68c.

We have explained the nature and origin of this account, gentlemen, in speaking of the constitution of the company. We have thought it our duty to open it with the Viceroy for the successive realisation, at the convenience of the company, of the payments attached to the shares of which His Highness reserved the subscription, which remain in stock until he takes them up.

This account has already been credited with the sum of 2,394,914f 52c, of which the company was a debtor to the Egyptian Government, by the terms of Art. 5 of the Statutes.

The payment to His Highness's debit, though large, is sufficiently justified, as is the particular nature of the account itself, by the importance of the relations that exist between the Viceroy and your company, by the assistance he has not ceased to give to the undertaking, and by the peculiar guarantees offered by the position and character of the Prince to whom you owe your concessions. On the other hand, the form adopted presents the evident advantage of exonerating the company from the payment of interest on a capital for which it has no immediate employment.

The Political Economist.

THE MONEY MARKET AND THE PRESENT INFLUENCES UPON IT.

The changes in the value of money during the present year have been somewhat remarkable. On the 1st of January, the Bank rate of discount was 2½ per cent. On the 19th of that month, it advanced to 3; on the 2nd February to 4; on the 29th March to 4½; on the 12th April to 5 per cent. At this rate it continued till the 10th of May, on which day it was reduced to 4½, and on the 24th ult. to 4 per cent. The rate in Lombard street is rather below than above the Bank rate, and, therefore, it is certain that the value of money, which had doubled during the earlier part of the year, has since declined seriously.

The unfortunate dispute between the bill brokers of Lombard street and the Bank was the cause of a small—but only of a small—part of these fluctuations. It is certain that the alteration from 4½ to 5 per cent. which was made on the 12th of April, was determined upon partly, if not wholly, in consequence of the withdrawal of a very large sum in Bank notes under circumstances that are now well known; and as the value of money soon afterwards began to decrease, it is at least doubtful whether the rate of discount would ever have risen to 5 per cent. if the bill-brokers and the Bank of England had been upon more friendly terms. Probably it would not have done so. But there is no reason to think that any other part of the fluctuations in the value of money have been perceptibly affected by a circumstance so merely local. They have been caused, not by the altercations of Lombard street, but by the variations in the natural value of capital in England and throughout the world.

In the early part of this year our trade increased, perhaps, more rapidly than most people were aware of. The attention of men of business is very commonly directed rather to our export trade than to our import trade. It is somewhat more interesting to watch the progress of *our own* industry, than to watch the results of the industry of others. The best *data*, too, respecting our import trade are not given to the world so early as those relating to our exports. The real value of our imports is computed in the tables published by the Board of Trade, and the computation necessarily occupies some time; while the value of our exports, given by the same authority, is only the value *declared* by the exporters, and can, therefore, be given without delay. From these causes our export trade is apt to engross a somewhat undue share of our attention. But, when we are tracing the influences which act upon the money market of Lombard street, our imports are as important as our exports. Speaking generally, England pays cash for all her imports. The amount of capital which is embarked in them at any particular time is, therefore, a most important item in determining what the value of money will be at that time. We have now the official tables, giving the real value of our imports for the first three months of this year, and they give us some explanation of the tendency in money to rise at that time. We find that the

		£
Total real value of enumerated articles during the three months ending 31st March ..... was in	1858	18,124,410
— — — —	1859	23,208,064
— — — —	1860	28,731,063

showing an augmentation of five millions and a half as compared with the corresponding period of last year, and ten millions as compared with the corresponding quarter of 1858.

The most important item in this augmentation is the great increase in the import of cotton:—

		£
The real value of cotton imported during first three months of	1858 was	4,263,025
— — — —	1859 —	6,770,503
— — — —	1860 —	10,725,274

and this increase, though more rapid during the last three months than before, is not confined to them. The imports of cotton into England from all countries were—

	lbs.
In 1857	969,318,896
1858	1,034,342,176
1859	1,225,989,072

In consequence of this large import the supply of cotton in Liverpool is now considerable.

	Bales.
The computed stock was on 31st May, 1859	566,230
— — — 31st May, 1860	1,295,170

There is no reason to think this amount excessive, but in comparison with last year it is large.

The augmentation in our imports, though more remarkable in cotton than other articles, is not confined to it. During the three months of the respective years the following quantities of various articles have been imported:—

	1858.	1859.	1860.
	£	£	£
Tea	945,000	1,110,000	2,001,036
Wool	694,168	978,992	1,336,111
Wine	374,266	389,767	788,606

And though there has been a considerable diminution in the present year in the importation of silk as compared with 1859, and of wheat as compared with 1859 and 1860, and there have been minor fluctuations in other articles, yet the general result is that our import trade was nearly twenty-five per cent. greater in the first quarter of this year than in the first quarter of last year, and fifty per cent. greater than it was two years ago.

We think this great increase explains the rise in the value of money early in the present year. The variation in our export trade was indeed but trifling:—

	£
Exports of all articles during the first three months of 1859 were	30,520,794
— — — — 1860 —	30,481,907

But, whichever side of the national account we take, whether we increase our imports or our exports, the effect on our money market is to a very considerable extent the same. A great part of our import trade is carried on with our own capital. The importing merchant may not pay cash; he

may be, and he generally is, drawn upon at dates more or less distant, but his bill is discounted in Lombard street, and the goods imported are, therefore, as much purchased with English capital as if he had paid cash for them himself. We do not doubt that this augmentation of our trade was the principal cause of the increased value of money in the early part of the year.

The causes of the last change in the money market, and those which seem likely to affect its future prospects, are both less tangible and less pleasing. It is certain that the market has to some extent been affected by political disquietude—to what extent it is very difficult to say. It is in the nature of anxiety and apprehension to be rather vague, both in their extent and their operation. The place in which we should naturally expect to find most trace of such feelings is our export trade. We should have expected that foreign nations who were uneasy as to the future prospects of the country, as Germany for example, would buy less of us than formerly. We should expect they would be as economical as possible and that economy would be unfavourable to our trades. As yet, however, this cause can only have prevented the natural increase of our export trade. It has not diminished it, though it may, and we think has, tended to prevent its increase. The official figures prove this:—

	£
Our exports for the four months ending 31st May, 1859, were	41,851,524
— — — — 1860, —	41,834,347

On the whole, therefore, foreign nations continue as yet to buy of us as well as they ever did. But we must bear in mind two considerations. First, that it is a long time before a feeling of distrust will show its consequences in these figures. Men of business must look forward; if they do not anticipate a large demand, they do and must reduce their operations. This reduction will tell on the amount of capital they employ, will restrict the amount of bills they discount, and will diminish the value of money. Although, therefore, our actual exports are not diminished, yet there is no doubt that our trade is slacker than it was—is much slacker than it was expected to be. Secondly, we must reflect that it is a long time before political distrust affects the ordinary transactions of life. People read the newspapers and express their apprehensions; but they do not act differently for a long time. They talk, and *say* they are afraid, but they buy and sell as they used to do. Although, therefore, diffused political apprehension is a material cause of a retarded trade, it is one which operates but slowly. The ordinary consumer is not affected by it. If, as from the diminished value of money appears to be the case, we are now cramped by political considerations, we must expect to continue to be cramped, supposing the grounds upon which those considerations rest to continue. We fear that, to a certain extent, the attitude of France, which is the main source of political disquietude, will continue; and we are in consequence apprehensive that the effect of political circumstances will become more unfavourable as time goes on.

At this moment the French Emperor has produced several very unfavourable effects on the trade of Europe. First, his restless spirit has produced the disquietude we have just spoken of, and of which the effects may we fear augment; next, he has hampered French industry by saying that protection shall last till certain fixed times, at which times the parties interested fear it will cease. In consequence the trade of France is under sentence of alteration, and is, of necessity, impeded and hampered. Thirdly, the treaty which the Emperor has made with us is a nullity as far as our manufactures are concerned, until the degree of protection the French are to enjoy and the nature of it are settled by the Commission now sitting. Our manufacturers are, therefore, in an unpleasant state of suspense. They may have a demand, and they may not. What has occurred may lead to business and may not,—and the result is irritating and depressing. These, however, are transitory matters; but we fear that the general disquietude which the policy of the Emperor produces on the Continent will diminish our trade for a long period. Its effects will be counteracted in part by the effects of the treaty, but not wholly or completely.

Another political circumstance will contribute its effect. The trade with China is rapidly increasing. We showed last week that the value of exports of some of the principal articles of trade with that country had been in the first four months of

	£
1858	741,228
1859	1,031,655
1860	1,768,798

And the increase in the quantity of tea imported, of which almost the whole came from China, was:—

	lbs
1858	21,813,916
1859	23,674,582
1860	39,942,504

But it is certain that we cannot expect this increase to continue. The war with China must interfere with it more or less. We fear it must interfere with it greatly.

Nor, if we turn to portions of the world unaffected by political considerations, is the result very cheerful. We naturally look for the extension of our trade to countries governed and colonised by the English race. Experience proves that they are our best customers. But, at present, India indicates that we must be cautious in what we do with her, and Australia shows that we must be very cautious. With the United States, indeed, we may hope for a rapidly increasing trade; but with the other two countries in which the Anglo-Saxon race is predominant, we must not look for it. There are few reasons, therefore, for predicting an increase of our export trade at present. And without an increase in it, our import trade cannot long continue to increase. Imports and exports must be equivalent, and one cannot augment without the other. We must anticipate that the increase of our imports on which we have remarked, and to which we have ascribed the rise in the value of money, will not be maintained, unless a material stimulus should be given to our export trade. This stimulus we own we scarcely expect—at least, we cannot be sanguine about it.

The effect of these mercantile causes on the rate of interest is very simple. The cardinal principle of our subject is, that an *increasing trade is necessary to a steady money market.* Our annual savings accumulate year by year, and they must be employed in some way;—until they are employed, they press upon the market and reduce the rate of interest. We must augment the channels of employment as well as the money requiring employment, if we wish for an unaltered value of money. Unless, therefore, we see good reason for anticipating a considerable and rapid augmentation in our commerce, we must not expect to see a considerable and rapid rise in the value of money. We may hope for such an ordinary and usual extension of trade as will keep the value of money from falling further, but we should be content with that. To the best of our present judgment, we should not venture to anticipate a result more favourable.

FRANCE AND ENGLAND; AND THE ITALIAN QUESTION.

In spite of the disclaimers of the *Moniteur*, the vague anxiety which has for some time prevailed as to the aggressive designs of Louis Napoleon is getting gradually more serious and assuming a more definite shape. It is idle to ignore this, and it may be well quietly to consider the bearing of these designs,—supposing them, as we do, to exist,—upon the position of this country: and the course best calculated, as far as England is concerned, to baffle them.

From the date of his elevation to supreme power in France, there could be no doubt that in Louis Napoleon we must have a scheming and not over-scrupulous neighbour; but for some time there was reason to hope that he saw his interest in, and was prepared to base his power upon, the development of the great material resources of France at home, and the peaceful advancement of French objects and legitimate influence abroad, in tolerably faithful alliance with this country. How this hope,—if but half entertained, yet hitherto most honestly acted upon by us,—has been gradually extinguished, it matters not here to examine. Suffice it that it is now clear that while no doubt bent upon cultivating the internal prosperity of France, the Emperor is likewise determined to carry out, and if need be fight for, certain other aggressive ideas of French policy; and that these are, broadly, extension of the boundaries of France,—subordination of the Spanish and Italian Peninsulas to French influence and dictation,—conversion of the Mediteranean into a French sea, and,—with these to aid,—curtailment of the power and influence of this country. Nor are these "ideas"

merely his own:—they have been, are, and will long continue to be, under any form of Government, essentially French. They are ingrained in the passions, the prejudices, and the imagination of the French nation. Hence their danger to Europe and to us. For, although there are undoubtedly in the character and conduct of Louis Napoleon elements of weakness which may be slowly but surely sapping the foundation of the structure he has so strangely and, to a certain extent, so skilfully raised, he undoubtedly derives an indefinite increase of power from the fact that the policy he has now unmasked embodies the wishes of the very great majority of the French nation. However hateful his Government may be to the higher-minded and more intelligent minority in France, one has but to study the *Debats* and the *Deux Mondes* to perceive that, as far as these objects are concerned, all serious internal opposition is for the time in abeyance. French parties—or rather partisans—seem waiting to see whether his dexterous paw can snatch these chestnuts from the bars. Successful or unsuccessful, later, if they get the chance, they may bell the cat. Meanwhile they are watching, and, in spite of them, evidently inwardly applauding the play.

Another source of immediate strength he has in the unavoidable disunion of the other four Great Powers,—a disunion arising from an incompatibility of principle of action rather than of interests. The treaties of 1815 were based on the fears and jealousies of the Governments, not on the real interests of the governed; and though they served for a time to hold Europe together, as soon as a real strain came they naturally gave way. From the date of their signature, although we have often been drawn, to a certain extent, into community of action with them all in turn, we have never had with any of them any reliable community of feeling or view. More than once we have contrived to stem their folly and to baffle their egotism, but, as a rule, our better judgment and better purpose have been almost necessarily subordinate throughout. The treaties of 1815 were not a web of our weaving, and we may perhaps be thankful that they are fairly rent asunder. The sooner that we realise the fact that, as a weapon, they are to us perfectly useless,—that we must form our judgment of the interests of Europe, and among these of our own, unfettered by their stipulations,—the sooner shall we come to a conclusion as to the only principle of policy which we can safely lay down or possibly *act* upon. There is no need to blink it:—from one cause or another we stand to a certain extent isolated in Europe,—isolated at least from its Governments. Russia is unwilling, Austria unable, and Prussia scarcely ready to back us in any overt or combined resistance to Louis Napoleon, should he attempt to carry further at once the policy of aggrandisement on which he has evidently entered. The position is one, no doubt, of great difficulty—perhaps of no small peril; but one possessing, notwithstanding, some great advantages; one, indeed, requiring caution, but probably best made good by boldness.

If we had but a little of the sense of our real power so evidently entertained by Louis Napoleon, there would be less cause for misgiving. If we will but observe how careful he is to keep us occupied at all points; how anxious to entangle us in a joint action of which we are to reap the principal share of the knocks, he of the profit or glory; how necessary he finds it to conceal and deny his designs until they assume the form of accomplished fact; how careful, indeed, to avoid absolutely to provoke our timely resistance,—we may gather the assurance that that resistance is not so indifferent to him; and that, whatever may be his ulterior intentions, or, indeed, his ability later to avoid it, he is not at present prepared to run the risk of absolute collision with us.

In fact, however much it may suit his game to exhibit us to France and to Europe,—a game into which we have been all too inclined hitherto to play,—as apparently powerless to hinder him; yet no one better than he knows the real strength of this country, or less desires to see it put forth. His object is clearly rather to make point after point in such a manner as not to give us any opportunity of real resistance. No one we are convinced knows better than he, whatever might be the result to France, how ruinous would be the death-struggle to him:—how many defeats any Government here would rise from with increased support,—how few would ensure his own downfall.

Now, with regard to the "idea" of extension of frontier, the points of Savoy and Nice have been made. That of the Rhine remains to make. Savoy and Nice having, to outward seeming at least, been not unwillingly bartered away by Piedmont, it was neither possible nor desirable for this country to make any serious opposition:—it is very questionable whether it was either dignified or politic to go the length it did in offering objection to that barter. If Germany should in like manner be cajoled into ceding the Rhenish Provinces, it will be equally difficult for this country to interfere. But there is some reason to believe that neither Prussia nor Belgium are prepared to acquiesce in the extension of France to its "natural frontier" in this direction; and, if the "idea" should in this case assume the form of invasion, it will be for us to make up our minds at once what it is then our duty to do. There must be no conferencing, no protesting:—entire abstinence from such useless proceeding at least; or,—the most rapid action. Antwerp and Cherbourg are, after all, no further from the Nore and Portsmouth than these are from them. Sooner than we think, even this contingency may arise, and it will be as well earnestly to contemplate idea No. 1.

But in the present course of events in Italy, the other three "ideas" are immediately and actually involved; and in the carrying out of *these*, the points are far from being all made; and the time for a decided course of action on the part of this country is already come.

If Italy is not for some time to come to be practically promoted to the rank of a French department, the Mediterranean to that of a French lake, now is the time to take up our ground and keep it. Let the Governments of Europe be quietly informed that, in presence of the events which are occurring, and likely to occur, in Italy, we think it well to declare at once that, while reserving to ourselves all freedom of action as to collisions between State and State, as between the Governments of the various States of Italy and their subjects, we shall not only abstain from all interference ourselves, but be prepared to resent it in others. It is said in quarters where there are good means of knowing, that a detachment of Austrian troops will immediately be sent to Naples, unless either England or France put an immediate and firm veto on the proceeding. Now England has certainly the means of preventing this. What may be the case in a few years, if a Murat shall reign at Naples, and possibly Sardinia and Sicily be part of a cordon of French stations, and a Russian fleet cruising in the Adriatic, it may be difficult to predict; but, as yet, with or without Armstrong or Whitworth guns, our fleet commands the Mediterranean. A few frigates and gunboats at Corfu, and the fleet quietly collected at Malta, would paralyse even the joint action of France and Austria,—a contingency far from impossible. No doubt there would, in such a course, still be plenty of room for the active intrigues of both these Governments; but behind such a declaration of principle and such a demonstration on our part, the Italians might be pretty safely left to deal with such intrigues, or even menaces. Naples, whether annexed to Piedmont or constitutionally separate, must virtually secure Italian independence, and in independent Italy we should have an ally as interested as ourselves in the Mediterranean remaining, as we have hitherto kept it, an open sea. Spain has already had a taste in Morocco of the advantage to be derived to it by making itself subordinate to French designs. Germany would be stimulated to show a determined and united front to aggression on the Rhine. The French nation would see that, while anxious, indeed willing, as we have shown ourselves, to make great sacrifices to remain in strict alliance with them as a nation, we are determined to uphold the principle which can alone preserve the real balance of power in Europe and our own legitimate influence. Even Louis Napoleon may learn that, after all, the best interest of himself and his dynasty does lie in peace.

No doubt such a course requires grave consideration. The Government must be sure of its resources abroad and of opinion at home. But if it will but be explicit and bold, of neither can there be any doubt. Of one thing we may rest assured,—the longer we hesitate to decide upon a definite

course of action in these questions, the more difficult will that course become. The country is already exasperated at the indefinite prospect of a war expenditure during a time of so-called peace; and if the Government can come down to the House of Commons and show that, while not going to enter upon any Quixotic interference in the internal affairs of Italy, it is prepared to take a course that will at once best secure free action to a movement which has the hearty sympathies of the whole nation, and be that best calculated to maintain the real balance of power in Europe, and to promote the interests of this country, we have the intimate conviction that it will meet with universal support. It is at least high time for the Government and the country to come to a decision and to announce it.

WHAT IS STILL PRACTICABLE FOR CONSTITUTIONAL REFORMERS.

The practical condition of the Reform Question is much changed by the debate of this week. The end which all sincere constitutional Reformers wish to attain is no longer attainable for this session. Something may yet be done; but the limits within which success is practicable are very narrow. The debate and division of Thursday night, on Sir James Fergusson's motion for indefinite adjournment, defended as it was only on the flimsy plea that the Irish and Scotch Reform Bills ought to proceed *pari passu* with the English Bill, sufficiently prove that the Tory party have made up their minds to admit no compromise; and that they have the *power* to defeat the Bill by delay, no one doubts. Mr Disraeli's reply to Lord Palmerston's able speech indicated this clearly enough; it was quite obvious that he felt, though he could not admit, that Sir Hugh Cairns' objections had been adequately disposed of; and his own objections were based on the general ground that the Bill was one which the Conservative party was determined to resist.

We have now, then, to consider what is still practicable to constitutional Reformers. Immediate legislation is out of the question. A good measure can neither be carried for its own sake; nor can an indifferent compromise be carried for the sake of shelving the question and relieving the country of a wearisome discussion. We are heartily glad that the Tories have rendered the latter alternative impossible. It was a dangerous temptation to weak and timid minds, and would have been not only a discredit to the English constitution, but a certain failure as regards its aim. Justice alone can stop agitation. While a shadow of injustice is willingly and openly admitted for the sake of quiet,—disquiet and discontent can be the only result. Thus far, at all events, we go with Mr Bright, that a surer means of exciting popular anger, and *just* popular anger, cannot be devised, than to admit the equity of a claim which we shrink from conceding. A sham Reform resulting from hasty compromise would have answered the purpose of the Chartists, and no other purpose at all.

It is, however, still possible for the House of Commons, in the debates which still remain, to influence materially the plan of any future Bill, though nothing can be done now. If only the constitutional party would unite to lay down the true principle of Reform, and could show sufficient numbers in its support to satisfy the Liberal leaders that in any measure which is to carry the assent of the House, it must be embodied,—a great step would be gained. All we anticipate, all we hope for Reform during this Session is, that the Constitutionalists may unite in strength to indicate some one guarantee against the encroachments of the democratic principle, which they would be prepared to demand as the condition of extending the suffrage to the most numerous class in the country. Unfortunately for the Conservatives, Mr Disraeli has committed himself in his criticisms on Lord John Russell's measure to the absurd doctrine that though it is perfectly constitutional to exclude large masses of men well qualified to vote from the franchise altogether, it is in the highest degree unconstitutional to admit them except to an equal individual (and, therefore, far more than equal *collective*) power with the present electors. In the blindness of his attachment to the letter of our present electoral law, he has entirely failed to catch its spirit, and has done all that in him lay to show that the alternative lies between barring out the working class as a class *altogether* from the privilege of electing representatives, and admitting them in such numbers as to swamp every other class. His own measure of last year attempted to meet the difficulty by admitting a certain *infusion* of working class voters into all the constituencies,—without admitting enough in any to ensure them one real spokesman in the House of Commons. And when he is told that such a measure will not satisfy the working classes, he asserts that there is no middle course between that method and complete democracy;—simply because he has chosen to patronise the stupid prejudice,—for it is nothing better,—in favour of always deciding by absolute majorities. But though Mr Disraeli has in this respect seriously misled the liberal Conservatives,—the constitutional Liberals have been for some time steadily approaching the conviction that any true Reform must deny at once this illusory necessity of giving either everything or nothing. Mr Black, Mr Massey, Mr Horsman, Sir John Ramsden, Mr Marsh, Mr Warner, and many other Liberal members, have expressed unmistakeably their conviction that a permanent and solid measure of reform is possible, which should not only give the working classes a substantial influence in all borough elections and the absolute command of many constituencies in this country, but secure the adequate representation of the educated and less numerous classes against the overwhelming influence of numbers. This can only be done, however, by boldly denying the absolute right of numbers, and insisting that a Reform Bill which first opens the gates to a new and enormous class, shall modify the electoral law so as to diminish the individual power given in some definite proportion to the numbers by which it is to be multiplied. Here, and here alone, can we find any security against the downward path of democratic innovation; and, if some such provision is not solemnly sanctioned in our next Reform Bill, we may be pretty sure it will be hopeless to struggle for it in the next but one.

Now, our only hope from the remaining Reform discussion of this Session is, that the Constitutionalists will combine strongly to indicate to the Government where this year's measure must be supplemented before they can hope to command a majority in the House. This it is still possible to do; and if the many different amendments really intended to compass this end could be exchanged for some one resolution on which all would combine, the whole course of the Reform question might be determined for the future. For it is quite obvious that Mr Disraeli's paradoxical and untenable position is not adopted by the clearest sighted and most liberal men of his party. If once it became evident that the constitutionalist Liberals were strong enough to influence the Government measure, a very large portion of the moderate Conservatives would unite with them, and enable them easily to defeat the high Tories in combination with the Ultra-Radicals under Mr Bright. Sir E. B. Lytton expressed only the other day his willingness to support any comprehensive measure for including the working classes in the electoral body, if it were balanced by such guarantees as this journal has contended for,—and what Sir E. B. Lytton would do, many other of the more liberal Conservatives have indicated distinctly enough that they would do also. We do not doubt, therefore, the feasibility of carrying such a measure, if once Lord John Russell can be extricated by his own party from that disposition to temporise with democracy which the present Bill unfortunately indicates. All that is wanted is some significant indication that the confidence of the Liberal party at large cannot be gained for any Reform Bill which does not provide for the direct and permanent representation of the educated classes when the floodgates which still shut out the working classes are thrown open. Almost any resolution, well supported in Committee, which raised and answered this question distinctly would be sufficient,—were it only a resolution in favour of allowing every elector in future either to accumulate his votes on one candidate, or to divide them as he thought best. Such a resolution alone, if strongly supported both by arguments and votes, would indicate clearly enough to the Government what kind of guarantee is held essential to a measure admitting a large and homogeneous class to the representation. There is yet time for such a step as this; and we earnestly entreat those members of the House of Commons,—either Liberal or Conservative, but especially the former,—who sincerely wish for Reform, and for a Reform that shall be liberal in the best sense, be-

cause including one class without practically excluding another, to unite on some amendment in Committee which may serve as a sign-post for all future legislation on this subject which no Government can venture to disregard. The time of the House will not have been wasted, if the net result of all these tedious discussions be to establish clearly that a great principle has been ignored by Lord John Russell's Reform Bill which must never be ignored again by any statesman who wishes to bring his proposition to a successful issue.

WHY IS NO ENGLISH CONSUL SENT TO MOZAMBIQUE?

THE SLAVE TRADE IN EASTERN AFRICA.

A motion of some importance will be made by Lord Stratheden, on Thursday, the 14th, in the House of Lords, and shortly repeated, if needful, in the House of Commons, to which we are anxious to invite public attention. The affair of the *Charles et Georges*, and the activity of the slave trade at Mozambique, and, indeed, all along the East Coast of Africa which it revealed, must still be fresh in our readers' mind. On the 18th May, 1858, about six months after the seizure of the *Charles et Georges*, Mr MacLeod, our Consul at Mozambique, after enduring a six months' course of outrages from the slave-owners and slave-traders of that colony,—from which the Governor of the colony, Colonel Almeida, found himself powerless to protect him,—came, in conjunction with the Governor-General of Mozambique, to the conclusion, that "his best course was to retire to Mauri-"tius, or even to England, until such time as arrangements "were made between England and Portugal for the reception "of a British Consul in honour and safety at Mozambique." Since Mr MacLeod's departure in May, 1858, no English Consul has been sent in his place to Mozambique; and it is the object of Lord Stratheden's motion to elicit from the Government their reasons for this long suspension of our official relations with that coast. Mr MacLeod's position, without an English ship-of-war permanently stationed there to protect him, had become simply intolerable; but, in intimating his departure from Mozambique, he requested telegraphic instructions as to whether Lord Malmesbury wished him to return to his post,—addressed either to the Mauritius or Alexandria,—and in that case, of course, adequate protection to render his position endurable. No despatch was sent to direct his return to Mozambique, and he reached home at the crisis of the *Charles et Georges* dispute in October, 1858. We fear that the fact that this important station has been left now for more than two years without any English Consul, is not likely to redound to the credit of the English Government. We will briefly show why it is most important that England should be adequately represented along that coast, and how the gradual withdrawal of our agents there is likely to be interpreted by France, Portugal, and Europe in general.

Those who have read Mr MacLeod's book on Eastern Africa, know that slavery is nowhere more frightfully cruel, that the slave trade was nowhere more actively carried on than in the colony of Mozambique. The Governor-General of Mozambique has no efficient force at his disposal. When, in compliance with the instructions of the Portuguese Government, he rigorously discourages and punishes the slave-traders, his guards are stoned, he is subjected to all sorts of annoyances, his informers are persecuted,—the "apprentices," or slaves of the colony, are treated with more horrible cruelty than ever,—and, in short, every evil of slavery and the slave trade is aggravated instead of ameliorated. The *only* remedy for this, in case the Portuguese Government is too weak to establish its own authority firmly in so distant a colony, is that the Governor-General should be supported firmly by a strong foreign Power really averse to slavery. It was on the support given by H.M.'s Consul at Mozambique that the Governor-General relied when he condemned the *Charles et Georges* for slave-trading; and, if we are to believe Consul MacLeod's account, it was in consequence of some intimation, express or implied, from the commander of an English ship-of-war (Captain Lyster of H.M. ship Castor), to the effect that no support could be given to Portugal by England in any dispute in which the suppression of this trade might involve her, that the tide turned so immediately and so strongly against him. Be this as it may, it is certain that a Governor of Mozambique so honest as Colonel Almeida, if supported by an English Consul as sturdy as Consul MacLeod, and an English ship-of-war constantly on the station, would have the power to put down, in great measure at least, the slave trade on those coasts. A very efficient beginning was made in 1857,—but the English Consul was not supported by the English Government, and the countenance then given by France to the slave trade turned the scales effectually against us.

The Emperor of the French has explicity committed himself, by the letter of the 3rd of October, 1858, to his "dear "cousin," to a repression of the slave trade on that coast, and a prohibition of that system of "hiring" labour in Africa for French colonies under the name of which the slave trade has flourished anew. From that engagement it is impossible for him to draw back. And even if it were an honourable reason to give for no longer sending out Consuls to the scene of this traffic, that their reports might involve us in misunderstandings with France and that it is better to shut our eyes to what we do not wish to see,—even if such a reason were admissible for a moment by English statesmen,—we cannot well suppose that the pledge of the Emperor's letter can be evaded, and this dishonourable traffic still sustained. Anything, therefore, that England can do to to reveal the true state of the case to the Portuguese and French Governments, and to co-operate with them for its suppression, she is under the deepest obligation to do.

Now, what result may have been produced by the commission with which the Emperor intrusted his cousin at the end of 1858, in the way of diminishing or annihilating the French slave trade on the East Coast of Africa, we do not yet know, The reports of Her Majesty's consuls and diplomatic agents for the year 1859-60 are not yet published; and, of course, there could not have been any initiation of an improved system before the summer of 1859. But we do know enough to render it extremely important that active English agents should be appointed wherever possible on that line of coast. We have reports from Zanzibar as late as the autumn of 1858, proving that the French slave trade had never been more active than it was at that time. Captain Rigby, the agent of the East India Company at Zanzibar, reported to the Government of Bombay as late as September, 1858 (nearly a year after the capture of the *Charles et Georges*), the undisguised slave trade which the French merchants of Réunion were carrying on with the East Coast of Africa. Several cargoes of slaves are specified, and on the 21st September, 1858, Captain Rigby encloses a copy of a letter received by the young Sultan of Zanzibar from a merchant in Réunion, of which the following are extracts:—

To His Highness Said Majid, Sultan of Zanzibar.
After compliments.

I was much grieved to hear of the death of your Highness' father, the Imam of Muscat, which took place on the passage from Muscat to Zanzibar, after having arranged the affairs of Muscat and its neighbourhood, and giving tranquillity to those countries. I was anxiously awaiting his arrival in Zanzibar, for I was desirous of writing to him on various subjects. I wished to advise him to be supreme in his own territories, and give permission for the shipment of slaves, so that they might labour for wages in any country, and *that if the English Consul should oppose this, his Highness should insist.* And after the death of his Highness I was unable to write this; and now if I were certain that permission is granted, I should wish that you would send me some slaves, young and strong, to labour in our colonies; and if this can be arranged, send the answer in the ship which conveys this letter to you, viz., the ship named * , and inform me whether I shall send my ship to your country to convey slaves or not.....

And do not pay attention to the words of the English Consul in all what he says to you; do all that you see is good for your country and condition; for the English Consul is dwelling in your country solely for his own affairs; he has by no means anything to do with your affairs; for the English would wish to manufacture sugar in their colonies, in Europe and in India, and sell it to foreign countries, and would desire that other countries should not manufacture any sugar. And the French Government has given permission to all the Governors of their colonies to purchase slaves and to set them free; for the Government of France desires the happiness of all mankind, so that people should convey slaves to Bourbon to be taught labour, in order that they may become wise and clever.

This letter sufficiently proves both how active is the demand for slaves in the French colony of Réunion, and how

* Illegible in the Arabic letter.

much the influence of the English Consuls in preventiog this traffic is felt and feared. We will hope that the Government may be able to assign some adequate reason for the long delay in sending out a new Consul to Mozambique,—and either to hasten arrangements with the Portuguese Government for the adequate protection of our Consul in the faithful discharge of his duty there,—or to make those arrangements on its own account, by the permanent allotment of an English ship-of-war to the Mozambique station.

INDIAN FINANCE.

[Continued from the letter of April 23rd printed in our last number.]

TO THE EDITOR OF THE ECONOMIST.

Calcutta, May 3, 1860.

Sir,—In my last letter the general state of public opinion in this country regarding Mr Wilson's financial measures was described, and special reference was made to the protest which had emanated from the Government of Madras, and some of its main arguments were answered. Indeed, the Madras Government protest forms an episode in the great drama, of which the curtain rose on the 18th of February (when Mr Wilson made his financial statement), and of which the first act will have been played when the Bills now before the Legislative Council shall have passed into law. The opinion of the public regarding the protest has stood at the same point during the last fortnight as before. It has found some support and sympathy from the Press, both at Madras and Bombay. But it is condemned by a part of the Press at both these Presidencies; by almost all the Calcutta Press; and also by the up-country Press—that is, the newspapers in North-West India. The North-West newspapers represent chiefly the opinion of the "services,"—that is, the servants of the State of all classes. The sentiments contained in the protest are not concurred in. And its publication is altogether objected to, as quite unconstitutional, as calculated to injure the prestige of Government, and to excite discontent among the natives against the new measures. The native Press has begun to teem with translations of and comments on the minute of the Madras Governor. And it is evident that though, on the one hand, the natives are much impressed with an idea of the invincible resolution of Government to carry out its declared plans; yet many of them catch at the hope that this unexpected opposition, from so high a quarter as the Madras Government, may cause the evil day of the imposition of new taxes to be postponed. At first every one of them was disposed to accept the measures as a decree of fate, and to submit with stoical apathy. Now they may fancy that a loophole of escape is discernible; and a sort of excitement may begin to ferment in their minds. It is not to be supposed that Mr Wilson is unaware of the several little straws which show in which way the wind of native sentiment is blowing. There was a slight *émeute* at Peshawur, though it turned out to be more ludicrous than serious, and to have arisen from absurd misrepresentations of the intentions of Government. There have been some mysterious pitchers circulated in Jhansee, though it appears that they have reference to an expected epidemic. There have been rumours in the Calcutta Bazaar about a disturbance at Delhi, although such rumours are utterly baseless. There has been much discussion in the North-West cities about the taxes, though it related rather to the Madras protest than to the merits of the measures themselves. The native Press in Bengal do certainly write against the new taxes; though they say nothing seditious, and do not breathe a single doubt of the certainty of the measures being introduced. All these things are taken note of. The knowledge of these things, however, should not shake the determination of Government, but only increase its precautionary vigilance. Even in England riots have been known to occur on the imposition of new taxes. If some passing storm of discontent should arise, the Government must face it. Better were it to brave this than to permit the foundation of the Empire to be sapped by an increasing deficit. But, supposing that trouble should break out here and there,—what then? Would it not be instantly put down? There is a good European force well distributed all over the country. The mass of the native army and of the agricultural population are not affected by the new measures. The independent native Princes are not affected either; and their aid might be counted on. European public opinion is still almost unanimous in favour of Government. The conduct of the European mercantile community continues to be patriotic and disinterested. The civil officers of Government appear to have no doubt of the feasibility of the measures. When will so fair an opportunity again present itself of introducing new taxes? Then, if the principle of the taxes be just: if they affect alike all classes, whether official or non-official, all races, whether European or native: if the taxes be assessed in a judicious and considerate manner, without making any offensive inquisition; without offending any social or religious prejudice; without introducing any oppressive process;—may we not hope that the natives will refrain from serious opposition? With them it is, indeed, *omne ignotum pro mirifico;* at first they shrink from taxes they know not of. But if the new taxes be well managed, then there is a good hope that the natives will see them in their true light, divested of all imaginary terrors.

Therefore it is to be hoped that Mr Wilson will unhesitatingly persevere with the new taxes, to the successful carrying out of which the credit of the Indian Government has been in a manner pledged, and to abandon which would be most prejudicial to the prestige of British authority. But it will doubtless be in your recollection that the new taxes only form a portion of a comprehensive policy, relating to finance, to commerce, to currency, to material progress, to political security. All these objects are more or less connected together, and form the links of a great chain. In the present letter it will be desirable to sketch the several specific measures designed to accomplish these objects; preserving the order in which it seems probable that they will be carried into execution. In subsequent letters the description of each measure can be expanded into detail, according as the course of events brings it into sharp relief, and as the policy of the Government in respect to it shall be developed.

In this policy, then, the five main points appear to be as follows:—1st. New taxes. 2nd. The establishment of a financial system. 3rd. The introduction of a paper currency. 4th. The formation of an organised police. 5th. The augmentation of productive power by means of British capital. To these there might perhaps be added a sixth, namely, the providing of an agency whereby the people may find a safe and acceptable investment of their savings.

Now, as regards the new taxes, it becomes more and more evident that, although the Government have succeeded in making great reductions of military expenditure; and will shortly bring down the cost of the army to a sum not much exceeding the cost of the old army, notwithstanding that the new army will be chiefly European, while the old army was chiefly native; and although the Government abstain from spending any considerable sum in improvements, material or moral,—still there will for some years be a heavy deficit. There was indeed no deficit in 1857, that is, just before the mutinies; but it is now quite clear that we never can return to the status of 1857. No doubt the revenues have proved more elastic and buoyant than was generally anticipated. But still our expenses have more than proportionately increased. Irrespectively of the increase of military expenditure, the civil charges have a tendency to increase as fast as our institutions are developed, and as improvements expand. And then there is the permanent incubus of increased interest on debt, which alone is an item of two millions yearly. Even if perfect peace continued, our income would, without some new taxes, be barely equal to our expenditure, and would allow no margin for improvement. But not only is the continuance of peace the most uncertain thing imaginable, but also, if an average of chances were struck upon cycles of years, all Indian experience shows that we are certain to have wars of some kind. Unless, therefore, we can restore our finances to a sound state during peace, what chance is there of the Government being able to meet war or other trouble with vigour, or dignity, or even safety? The absolute and inevitable necessity of imposing new taxes being clear, there remains the question as to the best mode of imposing them. This point can be dealt with in detail in a subsequent letter. It must suffice here to state in recapitulation that the new imposts are,—1st, a tax on incomes of all kinds; 2nd, a system of licences for arts, trades, and professions; 3rd, a tobacco tax. I shall endeavour to show hereafter that these are, all circumstances considered, less objectionable than any other taxes that could be thought of. When im-

posed, they will probably prove effectual for the object in view, and will yield, perhaps, several millions annually. It is but reasonable to suppose that this much of assistance might be expected from an immense population like that of India, which, if all its circumstances be considered, is really not overtaxed; and has, without doubt, been increasing vastly in numbers and prosperity. The horrors of the two years of rebellion will give an idea of the state to which India would instantly relapse if British rule were weakened or withdrawn. Is the sum of some few millions sterling, to be paid annually for a few years, too great a price for such an immense population to pay for the restoration of such inestimable blessings as peace and protection? With such additional aid, the Government will be able to reduce other imposts which may press unduly upon trade or industry, and to prosecute improvement, both moral and material, during peace; and, in the event of war, it may be able to resist foes from within and from without, avoiding those expedients which embarrass the State and trench upon future resources. Thus, a foundation will be laid not only for political security, but also for material prosperity. The Income Tax Bill has been read twice in the Legislative Council, and has been considered in detail by a select committee. Every effort has been made to render the machinery of assessment such as may work smoothly, and to prevent the possibility of the process being inquisitorial. It has been promised that the Bill shall shortly be presented to the Council for the third reading. In the next letter I may have the means of showing how all the safeguards existing in England have been introduced, and several additional precautions taken. The Licence Bill is of a simpler kind. It has been read twice. The Tobacco Tax Bill has not yet been introduced.

But while it has been determined to add to the resources of the State, further precautions have been taken to ensure that these resources shall be expended with the utmost economy. Heretofore there has existed nothing in India to be compared to the Budget and audit as they now exist in England. There is in future to be a Budget for the Empire, declaring what the expenditure is to be, and appropriating specific sums for each branch of service. Then there is to be an Imperial Audit Department, to see that all the accounts of all departments are duly examined and passed, and to try judicially at the end of the year whether the limits of the appropriations fixed in the Budget have been strictly observed. The examination of accounts will be concurrent, so that it can be known month by month how much of the appropriation for each service has been expended. Thus, financial considerations will become really potent elements in the policy of the State. Already rough estimates have been called for from every Local Government and Province in the Empire, so that in the course of June next the Supreme Government may determine its Budget for the official year commencing with May of the present year. By the same time the Audit Department will be brought into play in order to *enforce* the observance of the Budget. Already the Military Finance Commission, sitting at Calcutta, have been of infinite service, by causing a variety of war charges to be done away with, and by scrutinising every Administrative Department of the Army. Such departments always needs scrutiny after the termination of a war like that lately waged in India. It is probable that this Commission will be invested with various powers for the control of current expenditure. A Central Revenue Board is also to be organised immediately, to introduce uniformity into all fiscal arrangements, and to bring all the scattered information on so important a subject as the State Revenue into one focus.

The Bill for the new paper currency has been read the first time in the Legislative Council. Its second reading is immediately expected. While the income of Government is to be increased on the one hand, and the expenditure to be economised on the other; all commercial operations throughout the country are to be facilitated, the public convenience consulted, and a further addition made to the resources of the State by means of a paper currency. Some slight opposition to the measure has been made by those who advocate the intrusting of the paper issue to a Presidency Bank. But the measure is generally well received by the public.

A Bill is expected to be introduced shortly for establishing an organised police, which shall do a large share of the duty heretofore taken by the native army, and shall really be the right arm of the Civil Power. Such a police will be free from the disadvantages of a native army, and will not be so dangerous to the State. And its formation will justify the extensive reduction of the native army, and diminish the necessity of employing so large an European force at present.

The last object, namely, the application of British capital to improving the productive powers of India, is a subject worthy of Mr Wilson's powers. It is to be hoped that he will avail himself of the earliest opportunity of visiting the cotton districts. Such a visit would be productive of schemes that will mutually benefit both England and India.—I am, yours truly, R. T.

Agriculture.

SOCIAL AND COMMERCIAL STATUS OF FARMERS.

AGRICULTURAL SOCIETIES AND DIPLOMAS.

The position, social and commercial, of tenant-farmers in England is more unsatisfactory and ill-defined than that of any other class. They are bepraised and petted, flouted and suspected by turns. They are denounced as narrow-minded and non-enterprising, and are restrained and regulated in all that concerns the management of their business lest they should ignorantly or wickedly injure their landlords' land; or they are urged to expend their capital and their energies in the improvement of the farms they hold on the most precarious tenures and under the most onerous conditions. In short, all kinds of plans are adopted or suggested for their advancement, save the simple one of letting their farms to them on fair bargains and leaving them alone. Amongst the numerous abortive schemes for inducing agricultural improvement has been one for granting agricultural diplomas. A graduate or doctor in husbandry must sound ludicrous enough to any one who really knows what husbandry is, and who is not misled by fanciful analogies. A degree in classics, mathematics, or any of the various branches of physical science,—a diploma or certificate of proficiency in medicine, surgery, or law, may operate at once as a stimulus to youth and a test of efficiency in manhood. But farming is essentially a trade, a commercial undertaking, wherein the command of capital, with full liberty to use it advantageously, activity, energy, and the habit of order, with attention to details, are of far more importance than the highest scientific attainments, albeit such scientific knowledge may be more or less applicable to agriculture.

Now, let it not be imagined that we in any way undervalue science applicable or applied to husbandry, or that we would dissuade farmers from considering and adopting all or any improvements science may suggest. But we know that, as a rule, the practical farmer, who means to make his living by his business, cannot become a highly scientific man, and would wholly misapply his time and attention in attempting it. A good general education must always prove useful to the farmer as to other traders, but a diploma of proficiency would be as useless to the farmer as it would to the manufacturer, the merchant, or the tradesman.

Some remarks we lately made on agricultural diplomas having been reprinted in the *North British Agriculturist*, a correspondent of that journal, who signs himself "A Practical Farmer," has penned some rather irate comments thereupon. He assumes we "announce" "that every incentive to a deeper, fuller, and keener study of the laws of nature, of more correct habits of observation, of all attempts to keep pace with the advance of knowledge which other professions are making, and of even an acquaintance with the very nomenclature, which chemistry, as applied to agriculture, has been urgently demanding him to make, is utterly and entirely useless to the farmers, and that the rising generation must content themselves with the wisdom of their fathers," and much more to the like effect. That the "Practical Farmer" is not in the habit of reading our comments on rural affairs is obvious enough, so we treat the imputation of counselling the farmer to stick to the ways of his forefathers very lightly. But it is clear that, in noticing the utter inapplicability of diplomas and the like to the business of practical husbandry, we have run against some pet project or other. And on going through the "Practical Farmer's" letter we think we discern a clue to that project. He says:—"Is there not in the three kingdoms a vast number of land stewards, factors, and estate agents, to whom the possession of a certificate saying that these men have been examined in certain branches of knowledge, and found to be possessed of the specified attainments, will be found valuable? Is it not as a nursery for land stewards and other employés of the landowners that agricultural examinations and diplomas are supposed to be useful? A subsequent fling at "a mercantile landowner who accepts the highest rent that can be offered for his land," seems to betray the prejudices of a landowner under the guise of "A Practical Farmer." What we have persistently advocated as most for the interest of the owners and occupiers of land is, such a system of management as will afford to the tenant, the most complete command over his land during a term of years and entire security for the capital he invests, and to the landlord, the best rent

the land is capable of producing with security for its regular payment. This will raise the status of the farmer in a social and commercial sense, and will do far more to bring educated and improving men into the business of husbandry than any fanciful scheme of examinations and diplomas. One of the great obstacles to the advancement of agriculture in England is that, as a rule, men of education and independent minds will not submit to the semi-feudal position in which the English farmer is too generally placed.

That the best classes of our farmers are growing somewhat impatient under their existing trammels and the manner in which they are overborne by landlords is notorious. Something of this feeling found expression at the half-yearly meeting of the Royal Agricultural Society, on the 22nd of May last, when, amongst other business, the election of 25 members of the Council had to be made. The election is effected by means of voting papers, which, by a by-law—made by the Council—the voting member is to deliver in person to the President. This of course confines the votes to the persons present at the meeting. But it is said by many of the members that, in order to render the Council fairly representative of the whole body of members, scattered as they are throughout this country, members ought to be allowed to sign and transmit their voting papers by the day of election. Under the present rule, the members of the Council are elected by the members of the Society who attend the general meetings, and the result has been that the landowning element in the Council has come to preponderate so largely, that the practical farmers complain, and advert to the original constitution of the Council, which was as nearly as possible divided equally into landowning and farming members. But even the general meeting is scarcely allowed fair play in respect of the election of councillors; for the Council, instead of permitting individual names for filling the vacancies occasioned by periodical or absolute retirement to be proposed one by one, arranges a house list which the meeting must vote on in a lump. Consequently, there is no opportunity of selection, and the filling up of all vacancies has virtually fallen into the hands of the Council itself. It has become, in fact, a self-elected body. We need scarcely say this creates much and just dissatisfaction. Under such circumstances, the acts of the Council, rightly or wrongly, are regarded with little confidence; and an increasing number of the Society's members feel that some decided change has become necessary if the Society is to be supported by the practical agriculturists of England.

At the late meeting, Mr S. Sidney expressed the views of the farmers, and, in so doing, said:—"There were only thirteen persons on the Council who could be described as practical farmers or engaged in the cultivation of the soil for profit.....whenever a practical farmer had been removed from the Council, his place had been filled up, not by a man of his own class, but by some nobleman, or son or son-in-law of a nobleman, or a country squire, whose interest in the soil was no more than that of an amateur at the best, while men of the most glaring inefficiency with aristocratic connections were elected year after year. He did not deny—no one would deny—that the landed gentry of the country ought to be fully represented on the Council; but if they meant the Society to be efficient for good, there could be no doubt that they ought also to have a considerable infusion of thoroughly practical men." It had been said practical farmers would never attend the Council meetings. "But at the Council meeting at which the house list had been settled, three distinguished farmers, who were regular attendants at the Farmers' Club meetings, had been rejected in favour of two peers and a squire whose agricultural reputation was as yet unmade." These farmers were Mr Owen Wallis, of Northamptonshire, Mr Pawlett, of Bedfordshire, and Mr Rigden, of Sussex. The recent selections of Secretary to the Society and Editor of the "Journal" had created very general discontent. This was expressed by Mr Sidney when he said:—"With regard to the Secretaryship, there were candidates for that office who had distinguished themselves by their acquaintance with and application to agricultural pursuits, and were well known to and enjoyed the confidence of every intelligent farmer in the kingdom. What was the course which had been taken by the Council? Why, acting upon the exclusive system to which they had become so unfortunately wedded, they had selected a gentleman, the son of an ex-county M.P., highly respectable no doubt, but entirely unacquainted with agriculture; about which probably he had never thought until he was put in nomination for the office of Secretary." This contrasted unfavourably with the course pursued by the late Board of Agriculture, who had appointed Arthur Young, the first agricultural writer of the day, to be Secretary to the Board. Then, in reference to the appointment of the Editor of the "Journal," Mr Sidney admitted the gentleman appointed was "a highly-educated man; but, considering that there were amongst the other candidates several men who had devoted themselves for years to agriculture and agricultural information, who had learned by experience both how to write and how to edit on agriculture..... and who had in fact the confidence of the agricultural community, it was with surprise that people saw the Council electing a gentleman totally unknown to the agricultural world—a gentleman of middle age, without literary experience—although doubtless connected with influential families—who commenced his apprenticeship for the first time when he entered upon his duties as Editor of the 'Journal.'"

To this indictment little defence was offered on behalf of the Council, while many speakers to a certain extent endorsed the accusation. Thus, Colonel Higgins said: "It would be as well that the great body of practical agriculturists should be more fully represented.....He wished the mode of election of the Council was somewhat different, and on a future occasion he should certainly move an alteration in that respect." Mr Barrow, M.P., one of the Council, confessed that he had no practical connection with agriculture, but, "when he joined the Council, it was as the representative of a particular class of farmers whose interests he was anxious to protect." What that class is he did not say, and we cannot guess. He was of opinion that "the great value and importance of that Society arose from there being a mixture of landlords and farmers, and he was quite satisfied that it was not the interest of farmers that it should become a farmers' club or a debating society." Nobody denies the benefit of mixing the two classes in the Council; the complaint is that there is too much of the landlord element in the mixture. The reference to a "debating society" points to what is, no doubt, one source of apprehension to the landowners on the Council, that agricultural questions which may bear uncomfortably on the relation of landlord and tenant might be discussed if the farmer element formed anything like an equal and active portion of the Council. Again, Mr Dent, M.P., said "there certainly was a feeling that the proceedings connected with the selection [of Editor of the 'Journal'] was carried on in a very close manner, and the fact that Mr Frere was not known to the agricultural world tended to increase the general disatisfaction on the subject.....As regarded the election of the Council itself, he thought it would be far better if the candidates were all proposed and seconded in the usual manner." Mr Torr, a farmer and member of the Council, remarked that "with regard to the selection of the Secretary and of the Editor of the 'Journal,' he would not say one word against either of those gentlemen; but he certainly thought that one election ought to have been conducted on more popular principles.....As regarded the manner in which the elections took place at the annual meeting, there was in his opinion room for improvement, and if no one else did so, he should himself bring forward a motion on the subject." The queerest defence of the Council was that put forward by Lord Faversham. He did not suppose it was contended "that those only were practical farmers who were tenant-farmers. He apprehended that an owner of the soil was a practical farmer who, residing for some months in the year in the country, had during that period a tract of land under his daily superintendence, rode frequently over the fields, observed the different kinds of culture which were being carried on, remarked upon any defects, and made inquiries as to the mode of cultivation, the kind and quantity of seed sown, and the causes of any deficiency which attracted his attention." Such a man, according to his Lordship's notions, "came under the definition of a practical farmer." We have no doubt Lord Faversham was really serious. But it would be difficult to make a more clear and precise definition of a person taking much interest in agriculture who is *not a practical farmer*. Such a man may fairly be deemed qualified for the Council of the Society as a landowner, but certainly not as a practical farmer. Mr Girdwood said "there was an immense deal of dissatisfaction expressed throughout the whole country at the present management of the Society," and referred to Mr J. C. Morton, whom the almost unanimous voice of the practical agriculturists would have named for the Editorship of the "Journal." In the result no counter movement was made on this occasion, but it is quite obvious the real agriculturists—the men who live by farming and, usually, are tenants—of England will not much longer submit to be represented by landowners. They are now fully sensible of the truth of Mr Cobden's observation, made during an anti-corn-law debate, "that a landowner is no more an agriculturist than a shipowner is a sailor."

Literature.

Fleets and Navies. By Capt. Charles Hamley, R.M. Originally published in "Blackwood's Magazine." W. Blackwood and Sons. 1860.

Of the many *brochures* of every size and degree which have during the last twelve months been written on the subject of our Naval Defences—or defencelessness—we should rank highest, for clearness, moderation, and practical good sense, this little volume by Captain Hamley. It is distinguished by a precision of statement and coherency of argument which are too generally wanting in its compeers; it puts clearly and forcibly the main features of the subject, the chief objects to be sought and the chief obstacles to their attainment, without the encumbrance of a cloud of details. And, while the author most distinctly states his opinion that our Navy, at the highest point of efficiency and numbers to which it has been proposed to raise it, would be utterly inadequate to its actual duties and possible dangers, he is not in the true sense of the word an alarmist. He is rather inclined to disregard than to overrate the power of the new engines of warfare which are supposed by some to have materially altered our condition for the worse; and still believes most devoutly in the ability of England

to maintain, if she will, her ancient supremacy at sea. His book is short, because he disregards not only all unimportant matters, but also all those on which his professional knowledge does not especially qualify him to speak. He discusses neither the politics of Europe, which make a navy and a naval superiority necessary to England, nor the folly and weakness of ministers, nor the recklessness of unscrupulous demagogues, which have so deeply imperilled her safety at home. He takes for granted, as all men entitled to public attention do or pretend to do, that England is not safe from attack unless she possesses the sovereignty of the seas; and he proceeds to show what force she must maintain for that purpose. He cannot refrain from an occasional sneer at the politicians whose indifference to honour moves the contempt, and whose blindness and recklessness on the score of national safety excites the indignation, of their sober and thinking countrymen; but he feels that on this point the nation is with him, and he is content to indicate in a few words the method in which the nation may be assured that the Admiralty is doing its duty by the country. His practical suggestions are few, sound, and thoughtful; and, on the whole, his book appears to us to render a national service of considerable moment, and to add greatly to the public knowledge of a most important topic, by stating its leading points in a style and with a brevity suitable to non-professional readers.

He begins by combating the idea that steam navigation will be found to have neutralised, in future wars, the superior seamanship of British sailors; to which he justly ascribes the past naval victories of their country. No mechanical inventions, he affirms, can destroy or render valueless inherent superiority in the men who have to work them. This may be true enough, as a rule; it is true that superior bravery, and sense, and physical vigour will give an advantage, *ceteris paribus*, under almost any conditions of conflict. But it is not quite so clear that the advantage formerly given by skill of a particular kind will equally exist under changed conditions. Now, as formerly, the efficiency of a ship in action depends chiefly on two things; the skill with which she is handled by her crew, and the rapidity and exactness with which her guns are served. In both points British crews were, in former wars, greatly superior to their antagonists. In the latter, the French crews are said, whether truly or not, to have attained by long practice at least equality with our own. In the former, a great change has taken place; the engine and screw have superseded sails and wind as motive power and agent. Now, therefore, the handling of a vessel *in action* will depend upon her engineers, not on her sailors; and seamanship, as such, can hardly be as valuable now as when the ship's position in action, and her rapidity of movement, depended on the manner in which her sails were handled. Much must still depend on the skill of the commander, much on the quality of the engineers, much on the valour, activity, and gunnery of the crew; but certainly little, or much less than formerly, on their seamanship properly so called.

On another and less important point—the quality of the vessel herself—our rivals were formerly superior. Our best vessels were those captured from the French. We are glad to be assured by Captain Hamley that this advantage now rests with the British navy.

Captain Hamley next sets forth the condition and power of the French navy as compared with our own. In number of vessels the latter is decidedly superior. Of gunboats, corvettes, and so forth, France has few or none. The strength of her navy is adapted rather for great battles, securing a mastery of the home seas, than for cruises off an enemy's coast, or the minor operations for which these small vessels are required. She has built, of late years, only a formidable force of screw ships of the line, nearly equal in number to that possessed by Great Britain; and a force of heavy frigates actually superior to our own. Of her *frégates blindées* the author does not think highly. They will, he says, be too slow and unwieldly to be able to choose their own distance and position, and, except at long ranges, their armour will fail to render them invulnerable. Of the steam-ram which our own Admiralty are building his opinion is almost equally low. She will be faster, and much more effective as a battery; but *as a ram* she will be so much less mobile than the vessels she is to assail that, unless they were first disabled, she would be liable to have her vulnerable stem and stern knocked to pieces before she could reach them. And when an enemy's ship is disabled, to run her down is sheer waste of life and material. Besides, from certain peculiarities of construction, he inclines to think that the ram will be perilously top-heavy. Putting these new-fangled contrivances out of the question, France has a force of line-of-battle ships and frigates almost equal to our own; while she owes to the *Inscription Maritime* the invaluable advantage that *she can man her ships, and we cannot.*

This being the case, one thing at least is so clear that Captain Hamley does not think it worth formal statement; that the Ministry which should consent, we do not say to diminish our naval preparations, but to relax the rate of their increase, would be guilty of nothing less than a deliberate sacrifice of the national safety.

Our author will not believe that, owing to Armstrong and Whitworth guns, *frégates blindées*, and the rest of the new engines of destruction, naval battles will henceforth be fought at respectful distances; and, with a preference for defective analogies which vitiates more than one of his conclusions in the volume, he cites the *land battles* of the late war in proof of his opinion:—

> As long as pluck and daring are elements of human nature, men will never submit to be mowed down or sunk at an interval of miles without attempting to close if they have the power. It was said that rifles and rifled cannon would decide military operations at long ranges; and that a close encounter, a hand-to-hand fight, or a bayonet thrust, would be a thing unknown in modern combat; and yet in these late battles the bayonet has done more deadly work than ever, and positions have been carried by the rush of men. Unless therefore the armour-ships have some marvellous speed which enables them to keep their foes at their own distance, there will be closing too in naval actions; and then, in spite of plates and coating, size and broadsides will tell; the traditions too of boarding still remain, and the iron sides would be little proof against seamen swarming over the nettings, or dropping from the fore yardarm, cutlass in hand, as in the time of old.

We once heard an anecdote—apocryphal, perhaps, as it was attributed to the French Emperor himself—illustrative of the difficulties of closing at Magenta and Solferino. On the latter field, it was said, a battalion had set forth to storm an Austrian battery, planted on a hill, which sorely annoyed them. Half-way up the slope there remained but a hundred and fifty men on their feet: *five* only were bayonetted at the guns. The difficulty of closing at sea is even greater than it would be on land if grape and chain shot could be thrown as far as round shot. For, if it be found that the new artillery can be worked with precision on shipboard, and if it be possible, by concentrating a broadside, to make a hole in the enemy's ship that will sink her at half a mile's distance, closing and boarding will be almost out of the question. On land it is not possible for a battery to destroy a regiment half a mile off even by many volleys; at sea, one crashing broadside of something more than half a ton of metal may be driven through a ship's side at that distance so as to destroy eight hundred men at one blow.

Comparing our available force at sea with that of France, Captain Hamley refers to two occasions on which, as ought to be better known, the weakness to which we had been reduced was exposed in a manner which might easily have cost us a foreign invasion. In 1841 our Government had quarrelled with Louis Philippe about Syria. The French collected 20 sail of the line at Toulon. Their Egyptian allies had 25 in the Levant. We had 16 ships in the Mediterranean, and could man none in the Channel. Attacked by the combined fleets in the Mediterranean, or by that of France on our own shores, we should have been helpless. From that disgraceful dilemma we escaped by the pacific policy of the French Sovereign. In 1850 Lord Palmerston quarrelled with France and Russia about Greece. At that time "by no efforts could five sail of the line have been collected in the Channel," while the enemy could have mustered ten times that number. And Great Britain only avoided ruin by accepting humiliation.

At present, owing to the change from sails to steam, we are greatly in need of ships, as well as of men. Captain Hamley considers that we ought to have 100 screw line-of-battle ships afloat; a force sufficient to meet any probable combination against us, without leaving either the Channel or our colonies defenceless. England ought at least to be able, without dangerously weakening her forces in distant quarters, to meet at home the combined fleets of France and Russia. While she has not ships enough to do this, we ought not to be satisfied; for ships enough can be built for money, and money for such a purpose will not be refused by Parliament.

But there is another question, not less momentous, but much less easily answered. Given the ships, how are they to be manned? It is useless to build ships to lie empty on the water; and till we know where men are to be found to fill them, it would seem bad economy to incur the immense outlay necessary to build them in the requisite numbers. Here is the real difficulty of the national defence; not the want of ships or material—for all these things the wealth of England, once honestly applied, can create in abundance—but the *want of men*, aggravated by that very wealth, creating as it does a demand for labour in every department of industry. To solve the problem thus presented, Captain Hamley devotes the latter half of his book.

The difficulty arises from two sources. First, men are in demand everywhere, and seamen in especial demand. Second, seamen generally prefer the merchant service to the Queen's

The first of these obstacles to the manning of the navy is one which does not depend upon the Admiralty. Seamen are an article of which the supply is limited, and for which the demand is continual. The merchant service has the preference in the market; the Royal service cannot draw more than a certain very insufficient yearly supply from the regular seafaring population. Captain Hamley's remedy for this evil has the merit of being practicable, and in accordance with the tendency of all the evidence on this subject that is yet before the public: its expense would be the chief objection. Every year 2,000 boys enter the navy—of whom 500 pass through the Government training ships. These 500, as a rule "eventually constitute, from their superior education and training, the most valuable part of the crews of Her Majesty's ships." Those who have entered the service as boys, are far less likely to leave it for the higher wages and looser discipline of the mercantile marine than those who, before they entered, had acquired the tone of that marine, or the habits of

civilians on shore. Captain Hamley suggests that all boys entering the navy should pass through the training-schools, and that the total number recruited should be increased to six or eight thousand, in order to maintain an adequate supply for the large force which he considers necessary. In other words, he proposes that Government should buy the raw material where and when it can be had in abundance and at a reasonable price, and manufacture the complete man-of-war's man in its own training ships. Every man so trained would be an effective—which is not the case with all those entered at a later age. And, as this process would be a slow one, the author proposes an increase *pro tempore* in the proportionate number of the marine force; for though marines are admittedly of less value than seamen, they can be had in sufficient numbers, and seamen cannot.

To improve the character and increase the popularity of the Royal Navy, Captain Hamley offers several sensible suggestions. On those of detail we shall not enter. The important proposals on which the whole of his plan is based are two—the maintenance of a standing reserve of 10,000 men on shore, and the assimilation of the Navy to the Army, as a permanent service. Every man entered would belong under his system to some special port; would be placed on board a ship having so to speak its depôt in that port; and when returning from a voyage would find his place in a barrack, or his home and family, at the same port, in which only the ship would be paid off. Instead of dismissing a crew after a certain period of service afloat, they would be passed to take their turn in the reserve, from which another crew would be drawn to fill their place; and thus every man would have his regular period of active service afloat and his turn of duty with the reserve ashore. We think that both these proposals, as well as the minor improvements suggested in the discipline and organisation of the Navy, deserve careful attention.

Netley Hall; or, The Wife's Sister.

Steyne's Grief; or, Losing, Seeking, and Finding. William Tweedie, 337 Strand.

The Weaver's Family. Judd and Glass, New Bridge street.

"For Heaven's sake, cried the great man," in Goldsmith's "Citizen of the World," "washing his brush in water," as Lieu-Chi-Attangi proposed to relate to him a tale whose moral should "compensate for its stupidity, let us have no morality at present; if we must have a story, let it be without any moral." After reading several tales like those enumerated above, every candid reader will, we think, cordially echo this sentiment of the dilettante Prince, unless perchance he should be especially interested in any of the wrongs therein dilated upon, or have a benevolent eye for the edification of his neighbour (no one dreams of applying such things to himself) by the morals they severally enforce. We do not mean to say that the merit of a story must be in inverse proportion to its morality; on the contrary, in the highest order of novels, such, for instance, as Scott's, the moral constitution of the universe is taught in the most effective, because most unstrained and least didactic manner; but a set moral purpose is a bore in a work of fiction. If the tale be a good one, it will almost certainly be found to have dropped out of the main story, and only to appear at set places *prô formâ*; if only tolerable, it acts as a dead weight, threatening it continually with death by dulness; if bad, it makes it worse.

The latter is pretty much the case with the first tale on our list. Some pretty descriptions of the country round Malvern, and one or two fairly drawn characters, can do nothing against the weight of the moral, or we should perhaps rather say the argument of this book. This turns upon the hardship and injustice of the law which forbids marriage with a deceased wife's sister, illustrated in an exemplary family circle. Of course the writer, like a preacher in his pulpit, has it all his own way; but, as Swedenborg at church heard the angels within him drowning the voice of the clergyman with contrary assertions, so the spirit of the reader has its own word to say; and, whatever his own views or no views upon the question in hand may be, it throws discredit upon the arguments brought up by interested parties in behalf of a marriage which he sees to have been determined upon from the beginning. Reasons which, in another form, might have considerable weight, lose their force with their impartiality, and a story dull at best becomes positively disagreeable. The love-making that is carried on over a sister's grave is not in itself attractive, nor is it at all improved by the fact, that that sister was to be killed off in the midst of youth, health, and her husband's love by an especial accident, in order that her younger sister may have her turn.

"Steyne's Grief" is much superior both as a tale and in the ability of the writing. As a somewhat melodramatic tale it is not amiss. The earlier part among the village gossips of pretty little Stillhaven, and in the orderly peaceful home of the hero's childhood before it was wrecked by the growing love of drinking in his father, is natural and pleasant. The interest becomes afterwards more exciting and painful, and runs at length beyond the bounds of probability. An author writing with a purpose is somewhat like a lady putting on rouge; little by little, imperceptibly to herself, she acquires the look of a painted doll more than of a human being. So, in this tale before us, a first part of considerable power and truth to nature is followed by a second whose startling scenes could only be fitly illustrated in the prints of some of the cheaper serials. After all, one real case of destitution and misery brought on by drunkenness, such as falls under every man's notice at one time or other in his life, is more impressive in its warning than all the griefs it is possible to heap upon the head of an imaginary Steyne.

"The Weaver's Family" is not so much a story with a purpose, as a purpose dressed up in the disguise of a story. Those who have met with "Dives and Lazarus," or other of the writer's works, will know that that purpose is to draw attention to the wants and sufferings of the poor in crowded cities, and to suggest some means for their alleviation. The one reform he has particularly at heart is a redistribution of the parish districts, so that the burden of supporting the masses of town poor may fall with greater fairness among the richer and poorer classes. He draws a terrible picture of the state of those parishes where the ratepayers are themselves only one degree removed above the pauperism they relieve, and where the hard-working man or woman who is distrained upon for rates to-day, is added to the parish burdens, a pauper, to-morrow. We are only sorry that the writer should have chosen to clothe his actual experiences in the form of a tale, because, while facts as facts assert their rights to be heard however painful, the mind of the reader, unwilling to be unnecessarily harrowed, takes refuge in the thought that "it is only a fiction" from the too intrusive conviction that such cases are in reality far from rare. In this story, as in "Dives and Lazarus," the darkness of the picture is lightened by the mutual kindness and helpfulness shown by the very poorest towards each other,—the genuine charity that out of its want gives all that it has,—and by some characters (not unnaturally perfect) which shine out with more clearness from the dark background of ignorance and sin. In this too, as in former works, willing testimony is borne to the general kindness and justice of the dispensers of the poor-law relief. Guardians and parish doctors seldom get a hard word from this writer. It is against legislative defects alone that his reforming energies are directed.

The Manse Garden. By Nathaniel Paterson, D.D. London: James Blackwood, Paternoster row.

The Garden that Paid the Rent. London: Chapman and Hall, Piccadilly. 1860.

Of these two little works on gardening, we prefer the former, as being more simple and practical, and we should say a safer guide to the amateur gardener. The book, independently of its technical interest, is very pleasant reading; it is evidently written by one who takes a strong interest in the subject he writes on, and who understands that subject. As the title intimates, it is written for the North country, and contains of course some precautions, and enjoins some necessary operations, which are not required in our more genial climate, but these are not numerous, and, on the whole, we have never come across a more agreeable and useful manual of gardening. There are some amusing directions worthy attention at the end of the book on the management of that impracticable appendage to a garden—a boy.

"The Garden that Paid the Rent" is, as the name indicates, a much more ambitious book, and is not likely to prove of such general use as the former. We cannot but think that, to produce the requisite amount of forced fruit and vegetables, with even the assistance of a boy, the owner of the garden must devote his whole time to this object—he must, in fact, become a market gardener. This, though a sufficiently agreeable occupation, is not one that is quite compatible with other professions. The directions and information about managing vines and forcing fruit are, no doubt, very good and correct. We only think that they would be found difficult to carry out except under the personal superintendence of the author of this book—we mean, of course, with such appliances as Mr Atkin's establishment could boast of. Under these circumstances, we fear the productive gardens would turn out to be appendages of certain celebrated *chateaux en Espagne*. Still there is some truth in the general principle of the book,—that, by careful management and superintendence, well-ordered and productive gardens might be enjoyed without the almost ruinous expense that is now generally supposed to attend them.

Handbook of the Mechanical Arts concerned in the Construction and Arrangement of Dwelling Houses and other Buildings. Second Edition. By R. S. Burn. Blackwood and Sons.

The first edition of this work was chiefly intended for emigrants. It has now been enlarged so as also to be of great assistance to persons engaged, either professionally or as amateurs, in constructing small houses and farm buildings. It contains also a great deal o information most useful to farmers and country gentlemen on well sinking, draining, road and fence-making, &c.

It is one of the best books which an emigrant can obtain to take to the colonies; it will instruct him how to build his cabin, whether he prefers a log hut, shanty, or frame house, and gives elaborate information about cements, roofing, and all kinds of joinery and carpentry work.

MACMILLAN'S MAGAZINE. No. 8. June.

THE June number of this magazine is superior to the last; yet, with the exception of three chapters of "Tom Brown at Oxford," as racy and vigorous as any of their predecessors, there is little of strong interest, or of more than fair ability. Quite the best among the literary articles is a spirit-stirring account of the "Rescue" of nineteen lives from a wreck on the Margate Sands by the crew of the "Ramsgate Life-boat." It is impossible to read without admiration and pride of such deeds as are here recorded,—recorded not as an uncommon occurrence, or as the work of a picked crew, but as that of men taken at random from numbers emulous of filling the same post of duty and peril. "Shelley in Pall Mall" relates the connection of Shelley with one Stockdale, a publisher in Pall Mall. It is curious, as containing some unpublished letters relating to Shelley's first attempts in literature, and to his quarrel with his father, in which Stockdale appears to have meddled to the equal disgust of all the parties concerned. Two political articles call for brief mention. "The Suffrage considered in Reference to the Working Class and to the Professional Class" is a thoughtful exposition of the duty incumbent upon all men, but more particularly upon the educated and professional man, of not only avoiding apathy in the exercise of his own political rights, but of impressing on the minds of less-educated men, by his pen and by his example, "that there are other advantages of being a living and governing part of a nation than the outward good things which it procures." The very moderate measure of popularity enjoyed by Mr Bright among them proves that selfish interests are not the sole things to which the working classes look in a reform of the representation. Mr Maurice, whose opinion is entitled to much weight, avers that it is far from being so at present; and that it rests with those who have now the legislative and intellectual leading of the nation to open the way to a fair representation of the working classes, secured against the peril of a "self-seeking" in them, not greater than it is in other classes, becoming dangerous by the main force of numbers. "Sir Charles Trevelyan and Mr Wilson" is an attempt to defend the dangerous and impolitic step which occasioned the recall of the Governor of Madras. The defence is inadequate,—for, even supposing that the facts alleged are true, that taxes suitable to the North are not so to the South, that "Calcutta centralisation" is a "monstrous folly," that "what India wants is, not *four* independent Governments indeed, but twenty or thirty,"—all this does not lessen the "indiscretion," to use the reviewer's own term, that at such a time as the present could appeal from the Government to the people, could weaken authority by revealing disunion in its councils, and "save a country" by sowing wide the seeds of suspicion, discontent, and revolutionary hopes.

THE CORNHILL MAGAZINE. No. 6. June. Smith, Elder, and Co.

THE tales of "Framley Parsonage" and "Lovel the Widower" continue to form the chief attractions of this magazine. The latter, however, comes to an end in this number. It winds up with great spirit, and reminds us, in its broad colouring and plentiful use of back-stairs intrigue, of nothing so much as the genteel comedy of some fifty years ago. The comic concluding scene between Lovel and his "three mothers" would have a great success upon the stage. The story is slight and extravagant; the people for the most part either foolish or disagreeable; yet the skill of the narrator carries us along protesting, but amused. The essays on "William Hogarth" are interesting and painstaking researches into the life of the painter, and the manners of the times he painted. They would be improved by greater clearness and less affectation in their style, which is neither pleasing nor good. The present number opens with a plan for the fortification of London by means of forts, half-a-dozen in number, at regular intervals round it, with earthworks between the whole, to be under the charge of the Volunteer corps, with the assistance of a few regular troops; and concludes with a partly serious, partly jesting, flourish of trumpets over the success of the first volume of the "Cornhill Magazine."

Foreign Correspondence

(FROM OUR CORRESPONDENTS.)

PARIS, Thursday.

I have had the opportunity of looking over the report of another sitting of the Superior Council of Commerce and Manufactures, charged to fix the specific duties on English productions imported under the treaty. This sitting was again devoted to the iron question; and the report seems to me to prove most strongly that the clamour which the French ironmasters are raising for the largest protection possible is perfectly unjustifiable even on their own showing. Thus, a M. Corneau, of the Ardennes, admitted that "for some time past French cast iron has been so good that the use of English cast iron might be dispensed with in France," and that it is about 26f a ton cheaper; and yet he stands out for exorbitant protection. M. E. Martin, formerly at the head of one of the most important works in France,—that of Fourchambault,—proclaimed that the superior qualities of cast iron made in France are infinitely superior to those made in England, and that if the French would turn their attention more seriously than they have done to the production thereof by means of charcoal, and to the improvement of their processes, they would be able to obtain an extensive market even in England. M. Gouin, a great engine-builder, said that the French can now manufacture locomotives and certain other descriptions of machines as well and about as cheap as the English, though they cannot yet rival them in the making of textile machines. The latter and other witnesses also admitted that of late years French workmen have wonderfully improved,—75 per cent. said one of them. Evidently such admissions as these cut away the ground for protection as regards both cast iron and machinery. It is worthy of note that, though the great majority, in fact all the persons examined, insist on the necessity of protection, they differ greatly as to the amount at which it should be fixed on different objects. It is also worthy of remark that two members of the Council, the Minister of Commerce and M. Michel Chevalier, contrive, by apt questions appropriately put, to show the unreasonableness of most of the pretensions of this iron fraternity. The most recent sittings of the Council have been occupied in inquiries respecting the cutlery, nail, needle, watch-spring, steel pen, and other trades. Some of the persons examined have been English.

Some Chambers of Commerce are petitioning the Government to cause the treaty of commerce to be brought into force at once, instead of waiting for the delays fixed for certain articles. The Chambers of Lyons and Marseilles are amongst those that have done so. On the other hand, a number of ironmasters, who some time ago petitioned that the treaty should come into operation forthwith, now say that they were mistaken, and that they wish the periods named in the treaty to be strictly maintained,—if possible, prolonged.

The French Government, as is known, encourages the cod fishery in the neighbourhood of Newfoundland by very liberal premiums. A bill has just been presented to the Legislative Body for continuing this encouragement to the 1st July, 1871. This bill has one good point; it proposes to abolish the duty of 7f the 100 kilogs (nearly 3l per ton) on cod fished by foreigners imported into French colonies.

The Government has presented to the Legislative Body a bill for the purchase by the State "for public utility" of eight canals:—those from Arles to Boue, from Orleans to Loing, of the Somme, &c. Many persons applaud this measure, and doubtless reasons not without weight may be urged in favour of it. But it is a step, and a not unimportant one, towards the assumption by the State of commercial enterprises which had better far be left to private hands; and on that account it is liable to serious objections. Having bought up canals, the Government will hardly be able to oppose the arguments of those who think that it ought to be the sole possessor of railways; if it takes railways, it cannot evidently object to buy up all the fire and life insurance offices, as many persons are recommending it to do; and so it will go on from one thing to another, until at last it will possess everything, do everything, and be everything,—the citizens sinking into mere automatons. Already the Government does a great deal more than it ought to do; it breeds race-horses, keeps farms, educates fiddlers, ballet girls, and play actors, supports theatres, &c., in addition to its ordinary legitimate functions; and it would be wise on its part to reduce, instead of extending, its multifarious operations.

The Legislature, at the bidding of the Government, has just adopted a bill of considerable importance, namely, authorising the

Government to concede to a Company the construction and working of three lines of railway in Algeria,—1, from the sea to Constantia; 2, from Algiers to Blidah; and 3, from St Denis du Sig to Oran,—subject to the condition of receiving a subvention of 6,000,000f, a guarantee of interest of 5 per cent. on a capital not exceeding 55,000,000f for 75 years, and the privilege of introducing, free of duty, the waggons, locomotives, and other materials necessary for the construction of the railways. The objection was made that the Government proposed to accord to the Company far more than was just or necessary, but it was of no avail.

M. J. E. Horn's *Annuaire International du Credit Public pour* 1860, which has long been expected, has at last appeared *chez* Guillaumin and Co. This work contains an account of the debts, budgets, banks, and other establishments of credit, railways, great companies, commerce, &c., &c., of all European and some other nations. This information is drawn from official documents, is ably condensed, and is set forth with great clearness. The book has been prepared with extraordinary care; so that it is perfectly trustworthy,—an all-important matter in publications of the kind. Its utility to mercantile men, to all who are engaged in financial operations on the Continent, and to economists, must be very great. The wonder is, that in a commercial country like England no work of the kind exists. Among the many chapters it comprises is one on the fluctuations of discount in the principal markets of Europe in the course of last year. From this it appears that in the following places discount

	At the beginning of the war rose		And with the re-establishment of peace fell	
Frankfort	from 3½ to 4½	per cent.	from 4½ to 3	per cent.
Paris	— 3 — 4	—	— 4 — 3½	—
Bremen	— 3 — 6	—	— 6 — 3	—
Amsterdam	— 3 — 3	—	— 3 — 3	—
London	— 2½ — 4½	—	— 4½ — 2½	—
Hamburg	— 2 — 5	—	— 5 — 1½	—

It further appears that the following were the average annual rates of discount during the last six years:—

	1854.	1855.	1856.	1857.	1858.	1859.
Frankfort	3½	3½	4½	4½	3½	3½
Amsterdam	3	3½	4½	5⅛	3	3
Paris	4½	4⅝	5½	6½	3⅛	3½
Bremen	4	4½	5½	6½	3½	4
London	5½	4½	5½	6⅝	3½	2½
Hamburg	2½	3½	6½	6½	2⅜	2½

One of the Havre journals suggests that the Government would do well to profit by the increased demand for the sugar, coffee, cocoa, dyewoods, and other things, which the recent modifications in the tariffs cannot fail to occasion in Brazil, Havana, and Central America, to press on the Governments of those countries to reduce the import duties on French productions, or, at all events, to abolish the *export* duties which certain of them maintain on some of their articles. The suggestion of your contemporary is certainly a good one. Perhaps, if the English Government would join that of France in pressing the South American countries to make tariff reforms, much might be hoped for.

The Company des Services Maritimes des Messageries Impériales has just held its annual meeting, and a dividend of 60f per share was declared for 1859. Of this sum 20f have already been paid, and the rest is now payable. A balance of 241,804f is, besides, carried over to this year. This Company will on the 25th of this month commence a regular service between Bordeaux and Brazil.

The quotations of the Bourse, this week, have presented some little fluctuations, caused partly by speculative operations, partly by the political situation; and the result of this will be seen below. It is to be remarked that the quotations of the 3 per Cent. *rente* represents a deduction of 1f 50c for the *coupon* detached this day. It may also be noticed that the Caisse des Depots et Consignations has ceased it purchases.

The usual quarterly return of railways has been published this day, and is as follows. It shows, compared with the corresponding quarter of last year, an increase in the gross receipts, which, from the perturbation and depression that prevailed in commerce could hardly have been calculated on; but it will be observed that the length of railway worked was greater by upwards of 200 miles.

* The kilometre is ⅝ths of a mile. 25f = 1l.

The following is an account of the markets:—

Flour, at *Paris*, presents a marked advance on last week's quotations. Yesterday, the price was 61f to 66f the sack of 159 kilogs, according to quality. Four marks were for the current month at 64f 50c; July, 65f 25c to 65f 75c; July and August, 66f; August, 66f 50c.

Wheat.—At *Paris*, yesterday, business was active at 36f 50c to 38f 50c and 39f the sack of 120 kilogs,—a rise on last week's quotations. Of the provincial markets, not fewer than 124 present a rise of from 8c to 2f 10c the hectolitre, whilst only 9 have fallen from 7c to 1f 15c. In five markets there has been no change.

Cotton.—The sales at *Havre*, in the week ending Friday, were only 5,528 bales, and the arrivals were 7,278. The closing quotations were 2f for the "very low," and 1f for the "low" of all sorts, below those of the preceding week; other qualities remaining unchanged. Low New Orleans was consequently 87f the 50 kilogrammes, but very ordinary ditto remained at 85f. The stock on the 1st was 260,530 bales, which was much larger than that at the corresponding date of preceding years. This week business has not been very active; low New Orleans was last quoted at 87f.

Coffee.—At *Havre*, last week, business was active, especially in India: 1,100 sacks Hayti disposable went at 82f 50c to 83f the 50 kilogs in bond for Port-au-Prince and Jacmel, 84f to 84f 50c for Cape, 84f to 84f 50c Gonaives, 86f St Marc; 3,500 sacks for delivery, Port-au-Prince and Jeremie, 82f to 82f 50c; 100 sacks Santos, 79f; 235 sacks Java, 114f 50c to 115f duty paid; 1,600 sacks Malabar triage for delivery, 110f 45c (new duties); 1,000 ditto ditto, 111f; 2,400 sacks Ceylon triage disposable, 107f 50c to 110f; 1,530 sacks ditto for delivery, 107f 20c to 110f; 900 sacks ordinary Ceylon, 105f 50c to 106f; 74 sacks "pea-berry" ditto, 117f; and various large lots of Ceylon plantation at prices not stated. In addition there were some sales of damaged of different sorts. The arrivals were unimportant. The stock on the 1st was upwards of 75,000 sacks of different sorts. This week, sales have been inconsiderable: Hayti Jacmel, 82f; Gonaives, 85f. At *Nantes*, 1,156 sacks Ceylon native went at 111f (it is said); 60 bales

Reunion "pointue," 138f; 400 sacks Port-au-Prince, 82f 50c and 83f. This week, some rather large sales of damaged have been made; a lot of Reunion has also been disposed of at prices kept secret. At *Bordeaux*, last week, 1,600 sacks Guayra went at 92f to 101f; and various lots of French West India, Singapore, St Domingo, and Malabar, at prices not stated. This week, some Guayra have been sold at 95f to 102f; some French West India at prices kept secret. At *Marseilles*, last week, 4,400 sacks Rio went at 72f to 76f in bond; 300 sacks Porto Rico, in bond, 95f.

Sugar.—The sales at *Havre*, in the week ending Friday, consisted of 1,354 hogsheads of French West India, at 47f 50c to 49f the 50 kilogs duty paid; 365 "usine" ditto, 50f; 1,928 bales Reunion "gros grain," 55f. The arrivals were nearly 3,000 hogsheads. The stock of French West India on the 1st was 9,870 hogsheads. This week, there have been no sales. At *Bordeaux*, last week, some lots of French West India went at 46f to 47f; some at prices kept secret; some Guadeloupe "usine," 65f; 2,200 bales Reunion, 50f; 853 bales Reunion "gros grain," 56f; some small sales of Mauritius and Havana were also effected. This week, a small lot of Havana damaged has been sold; and there have been some large sales of refined. At *Nantes*, last week, only 100 hogsheads of Guadeloupe "usine" were sold at, it is said, 60f. This week, a lot of Reunion has been sold at 57f; ditto, "gros grain," 60f.

Indigo.—The sales at *Havre*, in the week ending Friday, were 130 cases Bengal at 25c to 75c above the estimates. The stock on the 1st was upwards of 1,800 cases. This week, 17 cases Bengal have been sold at prices kept secret. At *Bordeaux*, last week, 175 cases Bengal and Caracca were sold. The quotation of Bengal was, without duty, 8f to 12f 75c the ½-kilog; Java, ordinary, 8f 50c to 12f 50c; Kurpah, 5f 50c to 10f 50c; Madras, 4f to 6f 80c; Caracca, 5f to 9f 25c. This week, sales have been rather numerous, but prices are not given.

Hides.—At *Havre*, in the week ending Friday, 2,300 salted La Plata went at 80f to 85f the 50 kilogs duty paid; 800 Lima drysalted, 85f; 900 horse salted La Plata, part at 1f 5c the kilog, part at 14f each There was a sale by auction in the course of the week of some damaged lots, but only a portion of the quantity offered was taken. The stock on the 1st, including horse's, was 190,000 hides. This week, a small lot of Monte Video salted has been sold at 85f.

Wool.—The sales at *Havre*, in the week ending Friday, were 184 bales La Plata unwashed at 1f 92½c to 2f 80c the kilog; 17 bales ditto washed, 2f 50c to 4f 5c; 104 bales sheepskin, La Plata unwashed, 65c to 1f 12½c. The arrivals were nearly 1,500 bales. The stock on the 1st was about 5,000 bales. This week, Buenos Ayres unwashed has been at 1f 85c; ditto sheepskins, 91½c to 1f 25c.

Tallow.—At *Havre*, last week, 100 pipes Buenos Ayres went at 65f the 50 kilogs duty paid, and a lot of Russian to be delivered in the autumn at prices not stated. The stock on the 1st was insignificant. There have been no sales this week. At *Paris*, yesterday, the 100 kilogs were 130f 75c. At *Marseilles*, last week, business was not active: Roman was 130f the 100 kilogs; Italian and Russian, 128f to 130f; Malta and Naples, 127f to 128f; Algeria, 132f to 133f.

Spirits.—At *Paris*, yesterday, 3-6 of 90 degrees was 107f to 108f the hectolitre; Montpellier of 86 degrees, 140f. At *Bordeaux*, the day before yesterday, 3-6 Languedoc was 135f; beetroot, first quality, 110f.

Brussels, June 6.

Sometime back I mentioned that a project was set on foot for establishing direct commercial relations between this country and the Southern States of the American Union. This project has received the unanimous support of Belgian merchants and American planters; and a Company for carrying it out is to be formed with a large capital. The belief is that by means of this Company large exports of Belgian manufactures can be made to the States, and that, in return, larger imports from the States can be effected in Belgium.

Vienna, May 31.

The report of the Austrian Railway Company has just been published. It states that the net revenue of 1859 was 2,000,000 florins, which was sufficient to allow a dividend of 5 florins, or 10f French money, per share to be distributed. This, added to the interest already paid, makes the total revenue 35f per share. The revenue would have been nearly 50f if the florin had been at par.

St. Petersburg, May 26.

Despotic though the Government of Russia be, it does not throw the slightest obstacle in the way of the teaching of political economy, which is a science liberal *par excellence*. Several journals and periodicals discuss economic questions with the greatest freedom, and one of the periodicals exclusively devoted thereto possesses between 6,000 and 7,000 subscribers. The higher classes take the greatest interest in discussions of this kind, and quite recently an eminent French economist, M. de Molinari, delivered at Moscow, to crowded audiences, lectures explaining the principles of the science.

COMMERCIAL AND MISCELLANEOUS NEWS.

The latest advices from Buenos Ayres report that the state of the markets continued satisfactory. Money was easy, and the bank rate for currency was reduced. Sales of salted ox and cow hides were 67,000, of which 5,000 were at 65½ reals, to be delivered in June, and for the rest 63 reals was the price, at which rate the market closed. Dry ox and cow hides had declined 1½ real to 2 reals; 20,000 had been taken up for Germany, at from 72 reals to 70 reals, at which rate there were still buyers. For the States prices opened at 62, and declined to 60½. Salted horse hides sold at 20 reals, heavy weights, and 17 reals, light weights. Prices of salted matadero hides ranged from 58 to 55. Tallow fetched from 19 reals to 20 reals, last price. Of wool, 55,000 arrobas had come to hand during the month, chiefly medium qualities, the bulk of which was taken up by speculators. Rio advices are to the 9th of May. Owing to the extremely limited supplies of coffee during the month, which hardly reached an average of 2,000 bags per diem, the market had continued to be firmly supported. From the 9th to the 30th of April 58,000 bags changed hands, at the rates quoted by last mail, assortments for the United States having then ruled at 6,350 reis to 6,600 reis per arroba.

The following is a statement of the operations of the United States Branch Mint at New Orleans, for the month of April, 1860:—

		dols	c
Gold Deposits.			
California gold		3,742	27
Gold from other sources		3,368	7
Total gold deposited		7,110	34
Silver Deposits.

Silver Coinage.			
Half dollars	pcs 280,000	140,000	0
Quarter dollars	80,000	20,000	0
Total coinage		200,000	0

A report from Albany dated the 23rd ult. says:—Lumber continues to come forward slowly both from the North and the West, the shipments from Oswego being light on account of the recent advance on freights of 1 dol per M. The supply from the Chemung district has been fair, and there is a good assortment of Chemung pine now in market. Pine tally board and one-and-a-quarter inch pine are the only kinds that are now difficult to be obtained, all other descriptions of lumber being in fair supply. Hard woods and white wood have been received from Buffalo, and the stock and assortments now here of these are good. The demand for lumber has been fair, and the market has ruled very firm.

Messrs Moran and Co., of Calcutta, writing on the 3rd ult., observe:—Our indigo market is closed, there being no demand whatever for such low descriptions as compose the remaining stock. In Dacca, Furreedpore, and Mymensingh, the plant has of late been greatly refreshed by showers, which, though generally light, have been rather frequent, and manufacturing in one concern commenced about the 20th ultimo, and other factories are now beginning. Appearances in these districts are reported to be very favourable. In Kishnaghur and Jessore there have also been some good showers, and, but for the difficulty with the ryots, the sowings would have been considerably more forward. So far as the weather is concerned there has not been much to complain of. In Malda, Beauleah, Puhna, and Rajshye, rain would be very acceptable, but there are as yet few complaints. Purneah has suffered severely for want of rain, and the prospects of the district are considered certainly unfavourable. Tirhoot and Chaprah have a fine crop of plant, which requires rain to strengthen and bring it on, and to disperse caterpillars which have here and there made their appearance. Rain is also much wanted in the Benares districts, to refresh the Khoontias after such an unusually protracted drought. The objection on the part of the ryots to sow indigo still continues in Kishnaghur and in some of the Jessore factories bordering upon it. Exports of indigo from the 1st November, 1859, to the evening of the 2nd current, 1860:—To Great Britain, *18,769 chests; Havre and Bordeaux, 4,929; foreign, Europe, 64; America, 1,340; Gulf, 1,731; sundry ports, 11—total, *26,844.

The following return shows the state of the note circulation in the United Kingdom during the four weeks ending May 5, 1860, compared with the previous month:—

	April 7, 1860.	May 5, 1860.	Increase.	Decrease.
	£	£	£	£
Bank of England	20918679	22286561	1367891	...
Private Banks	3457647	3566864	109217	...
Joint Stock Banks	3067840	3120771	52931	...
Total to England	27444157	28973196	1529039	...
Scotland	3882392	4001322	118930	...
Ireland	7095408	7013067	...	82341
United Kingdom	38421957	39987585	1565628	...

And, as compared with the month ending the 7th of May, 1859, the above return shows an increase of 268,099*l* in the circulation of notes in England, and an increase of 248,400*l* in the circulation of the United Kingdom. On comparing the above with the fixed issues of the several banks, the following is the state of the circulation:—The English private banks are below their fixed issue 839,071*l*, the English joint stock banks are below their fixed issue 181,586*l*,—total below fixed issue in England 1,020,657*l*; the Scotch banks are above their fixed issue 1,252,051*l*, the Irish banks are above their fixed issue 658,573*l*. The average stock of bullion held by the Bank of England in both departments during the month ending the 2nd of May was 14,708,055*l*, being an decrease of 499,883*l* as compared with the previous month, and a decrease of 3,165,378*l* when compared with the same period last year. The following are the amounts of specie held by the Scotch and Irish banks during the month ending the 5th of May:—Gold and silver held by the Scotch banks, 2,500,114*l*; gold and silver held by the Irish banks, 2,506,814*l*; total, 5,096,928*l*; being a decrease of 105,476*l* as compared with the previous return, and an increase of 255,923*l* when compared with the corresponding period last year.

* 889 chests have been relanded from the Red Gauntlet and deducted from the exports.

The Bankers' Gazette.

BANK RETURNS AND MONEY MARKET.

BANK OF ENGLAND.

(From the GAZETTE.)

AN ACCOUNT, pursuant to the Act 7th and 8th Victoria, cap. 32, for the week ending on Wednesday, the 6th day of June, 1860.

ISSUE DEPARTMENT.

	£		£
Notes issued	29,655,635	Government Debt	11,015 100
		Other Securities	3 459,900
		Gold Coin and Bullion	15,180,635
		Silver Bullion	...
	29,655,635		29,655,635

BANKING DEPARTMENT.

	£		£
Proprietors' Capital	14,553,000	Government Securities (Including Dead Weight Annuity)	9,759,603
Rest	3,226,268	Other Securities	19,463,341
Public Deposits (including Exchequer, Savings Banks Commissioners of National Debt, and Dividend Accounts	7 752,799	Notes	8,388,005
		Gold and Silver Coin	782,467
Other Deposits	12,180,599		
Seven Day and other Bills	680,150		
	38,392,816		38,392,816

Dated the 7th June, 1860. M. MARSHALL, Chief Cashier.

THE OLD FORM.

The above Bank accounts would, if made out in the old form, present the following result:—

Liabilities.	£	Assets.	£
Circulation (including Bank post bills)	21,948,780	Securities	29,144,844
Public Deposits	7,752,799	Coin and Bullion	15,963,102
Private Deposits	12,180,599		
	41,882,178		45,107,446

The balance of Assets above Liabilities being 3,226,268*l*, as stated in the above account under the head REST.

FRIDAY NIGHT.

The preceding accounts, compared with those of last week, exhibit—

A DECREASE of Circulation of	£168,321
An INCREASE of Public Deposits of	86,266
A DECREASE of Other Deposits of	370,648
An INCREASE of Government Securities of	30,060
A DECREASE of Other Securities of	370,090
An INCREASE of Bullion of	70,990
An INCREASE of Rest of	7,420
An INCREASE of Reserve of	250,855

The effect of the decrease in the "other" securities is counterbalanced by the decrease in the "other" deposits. The reserve of notes presents a moderate increase.

Subjoined is our usual weekly table, affording a comparative view of the Bank returns, the Bank rate of discount, the price of Consols, the price of wheat, and the leading exchanges, during a period of four years, corresponding with the present date, as well as ten years back, viz., in 1850:—

At corresponding dates with the present week	1850.	1857.	1858.	1859.	1860.
Circulation, including bank post bills	£ 20,354,851	£ 19,450 447	£ 20,586,373	£ 21,882,859	£ 21,948,780
Public deposits	8,034,220	7,036,869	5,648,550	7,210,397	7,752,799
Other deposits	9,450,246	9 796,386	13,754,354	15,942,762	12,180,599
Government securities	14,316,185	10,326 131	10,578,644	11,281,376	9,759,003
Other securities	10,267 023	19,066,740	14,626,191	19,049,912	19,463,341
Reserve of notes & coin	11,701,010	5,979,669	12,765,329	11,298,442	9,170,472
Coin and bullion	16,865,705	10 290,649	18,020,044	17,957.887	15,963,102
Bank rate of discount	2½ p. c.	6½ p. c.	3 p. c.	3 p. c.	4 p. c.
Price of Consols	96 xd	93⅛	96	94	95⅛
Average price of wheat	39s 8d	58s 9d	44s 9d	53s 5d	53s 4d
Exchange on Paris (shrt)	25 55 60	25 25 32½	25 2½ 7½	25 5 10	25 12½ 17½
— Amsterdam ditto	12 2	11 17 18	11 15 15½	11 13 13½	11 14½ 15
— Hamburg (3months)	13 12½	13 8	13 7	13 4	13 5½ 5½

At the corresponding period of the year 1850, it had been announced that the difference between England and France had been settled, and that M. Drouyn de Lhuys would return to his post in London within a few days.

In 1857, notwithstanding enormous shipments of silver to the East, gold was flowing into the Bank, and a reduction in the minimum from 6½ to 6 per cent. was coming into prospect. An official statement just made described the position of the Treasury as unexpectedly favourable, enabling Government to pay the sum stipulated for the redemption of the Sound dues without having recourse to any extraordinary financial measures.

In 1858, the rate of discount of the Bank of France was upon the point of being lowered from 4 to 3½ per cent., the bullion having increased two millions and three quarters sterling within a month.

In 1859, the Bank of England had just reduced their rate of discount from 3½ to 3 per cent. The French and Sardinian armies in Italy fully maintained their advantage over the Austrians. The disruption of the Derby Administration was considered imminent, and the general political atmosphere was disturbed.

The amount of the "other" deposits, as compared with the "other" securities, showed, in 1850, a deficiency of 816,777*l*; in 1857, a deficiency of 9,270,354*l*; in 1858, a deficiency of 871,837*l*; and in 1859, a deficiency of 3,107,150*l*. In 1860, the deficiency is 7,282,742*l*.

There has been no alteration of importance in the money market during the week under notice. It has been easy to get the best bills discounted at a fraction below the Bank of England minimum; but the rate is not below 3⅞ per cent., and some of the largest establishments have asked 4. The supply of money in the open market is still fully equal to all requirements, but its tendency, as usual at this period of the quarter, is rather to diminish than to increase.

To-day, the demand was more active than upon any previous day of the week, and the business at the Bank, which latterly had been languid, became brisk.

With the exception of a decline in the rates for bills on Austria, in answer to the movement at Vienna, there is no variation of importance this week in the Continental exchanges.

The Magdalena is expected to take to-morrow nearly 100,000*l*, principally gold, for Brazil.

The movements in bullion and in the Indian Government paper are thus noticed by Messrs Pixley, Abell, and Langley:—

Gold.—The gold per City of Manchester, mentioned in our last circular, has been taken for exportation, and we have now to report the following additional arrivals:—The Illinois, from New York, with 23,000*l*; the Asia, from New York, with 24,000*l*., and about 60,000*l* in Russian gold coin; these amounts have also been purchased, and will be sent away. The demand for gold for export is not, however, brisk, the Bank having had about 30,000*l* sent in during the past week. The Shannon takes 18,540*l* to the West Indies. The following ships are now on the way from Australia:—The Omar Pasha, out 95 days, with 61,000*l*; the Southampton, out 89 days, with 77,000*l*; the Dream, out 86 days, with 26,500*l*. The Fulton, has brought about 340,000 dollars from New York, but the specie will not reach London until the 8th instant.

Silver.—The market for silver is a little more active, and inquiries have been made for bars for the outgoing Bombay steamer; we quote the price as 61⅝d to 61¾d per oz standard, but do not think that any large amount will be sent to the East by the next mail.

The Sultan has brought 4,002*l* from the Peninsula, and several small sums have been imported from the Continent.

Mexican Dollars.—Some considerable amounts have been sold at 62⅜d per oz, but the market is now rather quiet. We do not, however, look for a further decline in price, as some orders are expected to be executed for the next China mail.

Exchange on India remains unchanged at 2s to 2s 0¼d for 60 days' sight Bank bills on Bombay and Calcutta. Madras, 1s 11⅞d to 2s. Bills with documents, 1s 11⅛d.

India Government Loan Notes continue unchanged at late quotations, viz., 102½ to 103 for 5½ per Cents., 97½ to 98 for 5 per Cents. Transactions in these securities are very limited, but Fives at 98 seem to be preferred.

Quotations for Bullion.—Gold—Bar gold, 77s 9d per oz std; bar gold, fine, 77s 9d per oz std; bar gold, refinable, 78s per oz std; Spanish doubloons, 76s 6d per oz, last price; South American doubloons, 74s per oz, last price; United States gold coin, 76s 3½d per oz, last price. Silver—Bar silver, 5s 1⅝d to 5s 1¾d per oz std; bar silver, containing 5 grs of gold, 5s 1⅝d per oz std; fine cake silver, 5s 6¼d per oz; Mexican dollars, 5s 2⅛d per oz; Spanish dollars (Carolus), 6s 2d per oz, last price; five-franc pieces, 4s 11⅝d per oz, last price.

The stoppage of Messrs E. Bernoulli, Levant merchants and exchange dealers, is announced. The amount of the liabilities has not transpired.

The affairs of the Union Bank of London have again attracted a large share of public attention this week. On Wednesday the Committee of the Stock Exchange published their report upon Pullinger's transactions in that establishment. It is as follows:—

TO THE MEMBERS OF THE STOCK EXCHANGE.

Gentlemen—The Committee for General Purposes have already made known to you their several awards of punishment against Mr R. Johnston, Mr S. Sheldon, Mr T. Uzielli, Mr W. A. Bradock, and Messrs R. S., J. S., and C. J. Scrimgeour, for having carried on speculative transactions for W. G. Pullinger, when chief cashier to the Union Bank of London, without communicating with his employers; and having also recorded their severe censure of the conduct of Messrs Bell and Ball, their duties, under ordinary circumstances, might have been considered at an end. They think, however, that it should be publicly known that the offence for which the members suspended have been so severely dealt with was a disregard of the warning contained in a rule (No. 58) passed by the committee for the special protection of banking and other interests, and they deem it an act of justice to yourselves to give publicity to the result of a long and careful investigation, which enables them to state, that neither from any data furnished

by the Union Bank, nor by evidence otherwise obtained, have they any knowledge or suspicion that other members of the Stock Exchange are implicated in these unjustifiable transactions. The committee wish to make these facts known as speedily as possible, as they conceive that the Stock Exchange, a body numbering more than 1,000 members, and largely representing the commercial and financial interests of this country, has been suffering too long from a general reproach which, in reality, should only attach to five of its present firms—one of the offending parties, the firm of Messrs Bell and Ball, who carried on by far the largest operations for W. G. Pullinger, being, in consequence of default, in and since April, 1859, beyond the control of the committee.

Your committee also consider that some notice should be taken of the circular issued in April last to the shareholders of the Union Bank of London, in which the directors, from the confessions of Pullinger, most hastily adopted by themselves, lead the public to infer that the enormous amount of 263,000*l*, embezzled by the delinquent clerk, had been lost by him in speculations on the Stock Exchange.

Your committee refrain from commenting on the evident laxity of that system of check which has proved itself not only insufficient to prevent the commission of a gigantic fraud, but has allowed it to remain undetected from year to year.

Your committee wish distinctly to state, that the only documents possessed by the directors of the Union Bank, upon which they adopted the assertions of Pullinger, were certain brokers' notes and accounts, generally without heading or signature, and representing a trifling loss of about 1,290*l*. Upon this point there can be no doubt, as the committee have seen and examined the whole of these papers; and the directors of the Union Bank admit that they neither had when they issued their circular, nor have since found, any other documents than those referred to.

By an account of Bank notes passed and credits given, the Union Bank of London have furnished to your committee sufficient evidence to enable them to carry through a general and searching inquiry, including a *viva voce* examination of the brokers accused of having undertaken speculative business for Pullinger; but in order to obtain a full knowledge of the facts, a sub-committee was specially appointed to analyse and report upon each separate account; and, from their investigation, it results that the balance of monies actually paid by W. G. Pullinger, on account of speculative transactions, carried on through members of the Stock Exchange (including Messrs Bell and Ball), from January, 1855, when the defalcations first commenced, up to April of the present year, amounted to a total of 53,285*l*. It is but reasonable to suppose that this amount would not have been so large had not Pullinger's operations been greatly facilitated by the extraordinary power which he appears to have possessed in passing entries to the accounts, and in the pass books of those brokers who kept accounts at the Union Bank. Through what channels the immense balance of above 200,000*l* has passed it is scarcely a question for this committee to decide. But it appears, in an account furnished by the Union Bank, that the delinquent Pullinger had passed credits amounting to 57,000*l* to an individual named Nathan, who is reported to have died lately at Paris, possessed of considerable wealth, and who had, at the time these entries were made, an account with the Union Bank; but as Nathan never was a member of the Stock Exchange, the committee have no knowledge of his transactions. There is also very sufficient evidence that Pullinger was largely interested in the results of horse-racing.

To co-operate with the directors of the Union Bank, and to render them every assistance, has been the constant wish of the committee, and they have much pleasure in knowing that, from information forwarded through them, and by individual members of the Stock Exchange, the directors have been enabled to realise valuable assets, placed by Pullinger in the names of other persons. On the other hand, the directors of the Union Bank not only furnished information leading to the suspension of Messrs Bradock, Johnston, Sheldon, and Uzielli, but, in answer to the earnest requests of your committee, promised to forward to them, as soon as obtained, every intelligence as to the participation of other members of the Stock Exchange in speculative transactions for Pullinger. The following facts will enable you to decide whether the promises made by the directors of the Union Bank have been fulfilled. Immediately after the discovery of the enormous loss sustained by the Union Bank, Messrs Scrimgeour communicated to the bank, through the manager, Mr W. W. Scrimgeour, that they, the brokers to the Company, had carried on a speculative account for W. G. Pullinger; but the committee regret to say that no communication was made to them on this subject by either manager or directors, and the knowledge of the offence committed was obtained by your committee through an entirely different channel, and at an interval of more than a month after the first communication of Messrs. Scrimgeour to the manager of the Union Bank. Determined as your committee have been to administer strict and impartial justice to all, and believing that the feelings of the directors of the Union Bank of London were entirely in unison with their own, the discovery of this important suppression has caused them considerable pain and surprise.

In conclusion, your committee cannot but express regret that even six firms of the Stock Exchange should have carried on speculations on account of a clerk in a banking establishment; but they trust they have shown that they are determined to enforce obedience to a law passed specially to protect the interests of the public; and they feel confident they represent the feeling of the entire body of the Stock Exchange in saying that they deeply deplore the acts of those who, by their misconduct, have compromised the character of the Stock Exchange.—By order of the committee, GEORGE LOVELESS, Secretary.

Stock Exchange, June 5, 1860.

Most of the facts here referred to had transpired previously, but the fact mentioned at the end of the last paragraph but one has provoked great animadversion.

The following further communication from the Directors of the Union Bank was forwarded to the journals this evening:—

TO THE SHAREHOLDERS OF THE UNION BANK OF LONDON.

The directors feel called upon to advert to a portion of the report recently issued by the committee of the Stock Exchange with reference to the frauds committed by W. G. Pullinger on this bank.

The statement of the committee that the directors have been enabled to realise valuable assets from information obtained through them must have been made under some misapprehension, as the directors have not received any information of which they were not previously in possession from the committee which has led to that result; and the directors have reason to conclude that the information which was furnished by one member of the Stock Exchange was given before the committee commenced their investigation.

The directors have already recovered upwards of 10,000*l*, and are engaged in inquiries which they trust may result in recovering a further portion of the funds of the bank.

The directors are able to assure the proprietors that, after the strictest investigation, their first statement, announcing the total amount of loss which has been sustained, has been found correct within 54*l*, and that no other deficiency exists in any department.

They have been engaged in a close examination of the system of checks existing in the bank, and have in some departments introduced others which they trust will prove effectual safeguards against any repetition of fraud.

The proprietors will also learn with satisfaction that the loss which has been suffered has not affected the general business of the bank, while the number of proprietors has increased from 1,052 to 1,151 since the 19th April, being an addition of 99 partners.

The directors consider that the general meeting will afford the most suitable opportunity for noticing some other statements in the report of the Stock Exchange Committee, in the accuracy of which they cannot acquiesce. The directors will then be prepared to give such full information on these and on other points, as they have reason to anticipate will prove satisfactory to the proprietors.—By order of the Court of Directors,

HENRY NEWMARCH, Secretary.

2, Princes street, Mansion House, 8th June, 1860.

Until the meeting referred to the public will do well to suspend their judgment. The particular points in controversy between the Directors of the Union Bank and the Committee of the Stock Exchange are of very trifling importance. But the credit of the Joint Stock Banks of London is a matter of national concern, and it will be gratifying to the public to learn that the "checks" now introduced into the system of the Union Bank of London are likely to be effectual. That some were wanted the frauds of Pullinger proves conclusively.

The resolution passed by the Committee of the Stock Exchange, suspending Messrs Scrimgeour until March next, was posted up in the house on Tuesday morning, and is as follows:—

Messrs R. S., J. S., and C. J. Scrimgeour, having disregarded the caution contained in Rule 58 by transacting speculative business with William George Pullinger when cashier to the Union Bank of London, without communicating with his employers, resolved—That they be suspended until the 25th of March, 1861; their re-admission, after that date, to be decided upon by the committee for the time being.

The transfer books for India Stock were shut for the dividends on Thursday; and those for Consols, New 3½ per Cents., New 2½ per Cents., New 5 per Cents., Annuities (January, 1880), and Indian 5 per Cent. Stock, to-day (Friday).

The prospectus of the "Dock Warrants Advance and Discount Company (Limited)" is issued. This company proposes to open an advance and discount account with parties properly introduced, upon the deposit, as collateral security, of dock and wharf warrants, and other convertible securities, representing any and all kinds of merchandise, charging interest at the current discount rates upon the amount advanced, with a small commission for the trouble

attending the sampling and inspection of the goods; at the same time affording the owners every facility to sample and effect sales, whereby they may be enabled to redeem any portion, or the whole, at any moment. It is proposed to receive deposits at call, bearing interest. The company's capital is fixed at 200,000*l*.

At the meeting of the Peninsular and Oriental Steam Navigation Company on Tuesday, the Directors' report, recommending the usual dividend of 3½ per cent. for the half-year, was adopted.

At the meeting of proprietors of the Bank of British North America, held on Tuesday, the Directors' report, notifying the declaration of a half-yearly dividend at the rate of 6 per cent. per annum, free of income tax, payable on the 5th July, was adopted.

The annual meeting of the African Steam-ship Company also took place on Tuesday; the Directors' report, recommending a half-yearly dividend at the rate of 7 per cent. per annum, was agreed to.

We have to announce that a fusion has taken place between the banking firms of Messrs Robarts and Co. and Sir John Lubbock and Co. Mr Weguelin is about to retire from the former establishment; but both Sir John Lubbock and his son will be partners in the new bank.

Mr Pollard, of the London Joint Stock Bank, after a service of 24 years, has resigned his position; but he will be recommended to join the Board of Directors, in which a vacancy has been caused by the decease of Mr Ormsby Gore.

A general meeting of the Commercial Dock Company was held to-day; the dividend agreed to was 2½ per cent. for the half-year.

The quotations for shares in new projects this afternoon were as follow:—Ocean Marine Insurance, 1⅞ to 2⅛ prem.; Universal Marine Insurance, ⅛ to ⅜ prem.; London and Provincial Marine Insurance, ¼ to ½ dis.; Thames and Mersey Marine Insurance, 1¼ to 1½ prem.; and London and South African Bank, ½ to ¼ dis.

The shares of the Thessalian Mining Company were quoted to-day ⅜ to ⅝ prem.

The allotment of the shares of the Thames and Mersey Marine Insurance Company has taken place this week.

At Paris, to-day, the 3 per Cent. Rentes closed at 68.20 ex div. both for money and the account. After allowing for the deduction of the dividend, this quotation is about ⅛ per cent. above that current on last Friday.

The English funds this week have been very inactive, and rather dull in character, but prices are fairly supported. The closing quotations of Consols this afternoon were 94⅞ to 95 for money, and 95¼ to ⅜ (or equal to 93¾ to ⅞ ex div.) for the 10th of July. The settlement just completed showed a considerable supply of floating stock. Subjoined is our usual list of the highest and lowest prices of Consols every day; and the closing prices of the principal English and foreign stocks last Friday and this day:—

CONSOLS

COMPARATIVE EXCHANGES.

The quotation of gold at Paris is about at par, and the short exchange on London is 25.12½ per 1*l* sterling. On comparing these rates with the English Mint price of 3*l* 17s 10½d per ounce for standard gold, it appears that gold is about 2-10ths per cent. dearer in Paris than in London.

By advices from Hamburg the price of gold is 422½ per mark, and the short exchange on London is 13.3½ per 1*l* sterling. Standard gold at the English Mint price is, therefore, about 1-10th per cent. dearer in Hamburg than in London.

The course of exchange at New York on London for bills at 60 days' sight is about 109¾ per cent., which, when compared with the Mint par between the two countries, shows that the exchange is slightly in favour of England; and, after making allowance for charges of transport and difference of interest, the present rate leaves a trifling profit on the importation of gold from the United States.

The Commercial Times.

MAILS TO BE DESPATCHED

This evening, to America (New York line) and Bahamas, by British packet.
On Monday evening, to India (Calcutta line), China, &c., via Marseilles.
On Tuesday morning, to India (Bombay line), via Southampton.
On Wednesday morning, to America (New York), by United States packet.
On Wednesday evening, to Canada and United States, by Canadian packet, via Londonderry.
On Thursday evening, to Constantinople, by French packet.
On Friday evening, to Constantinople, by French packet.
On Saturday evening next, to America (Boston line), Newfoundland, and Bermuda, by British packet, via Cork.

COMMERCIAL EPITOME.

FRIDAY NIGHT.

A very limited supply of home-grown wheat was on offer at Mark lane to-day, and the whole found buyers, at full quotations. Rather a large business was doing in foreign wheat, at a further improvement in value of from 1s to 2s per quarter. Spring corn moved off freely, at extreme rates, and country flour was held for 1s to 2s per 280 lbs more money. The imports from abroad amount to 10,570 quarters of wheat; 2,180 barley; 26,230 oats; 3,080 sacks and 760 barrels of flour.

At Liverpool, this morning, produce, generally, moved off freely, and prices had an upward tendency. About 500 vessels laden with grain are now on passage from the Mediterranean and Black Seas; but a less proportion than usual of these have cargoes of wheat. At New York, on the 26th ult., large supplies of wheat and flour were on offer, and the demand ruled steady, at previous rates. Advices from Alexandria to the 26th ult. forwarded by Messrs Briggs and Co., state that wheat was selling at from 35s to 37s 6d; beans, 27s to 28s; and barley, 20s 2d to 20s 8d per quarter.

The demand in the Liverpool cotton market during the week has been rather limited, the total sales amounting to 48,000 bales, and include 39,000 bales to spinners, 1,000 bales on speculation, and 8,000 bales for export. Quotations are without change since Friday last. To-day the market closes dull; sales 7,000 bales. The tone of the market throughout the week has been very quiet, and, although quotations are not reduced, still lower rates have been accepted to close sales. The stock has now reached its largest proportion, and shows the large figure of 1,358,000 bales, which makes buyers very shy, and sellers glad to realise.

The latest prices paid for cotton at Alexandria are 5½d to 8.77d per lb. The New York cotton market, on the 26th instant, was firm, at full quotations.

The public sales of tea have gone off without much spirit, at about previous rates. Privately, the demand is by no means active, yet prices are supported.

IMPORT of TEA in London, from Jan. 1 to June 1, 1860, and the STOCK on hand on June 1, 1860, compared with the corresponding date in 1859.

The following report, in reference to the tea and silk markets, is dated Hong Kong, April 25:—

Tea—Settlements have been very trifling, and confined to gunpowder and scented kinds. No transactions have taken place in congou, the stock of which is five chops. The new Tayshan teas have not yet come to market, the dispute about the inland duties being still unsettled. Sales during the fortnight are—Scented orange pekoe, 2,000 boxes, at 18 to 24 taels for low to medium mixed leaf; scented caper, 1,500 boxes, at 14 to 16 taels, low mixed leaf; gunpowder 2,000 boxes, at 11 to 13 taels, mixed spurious leaf. Amoy advices are to the 21st inst. Little doing in imports. In tea, some contracts have been made for new teas, and the season is expected to be a good one both in quantity and quality. Foo-chow advices are to the 18th. Tea—Transactions have been very insignificant, amounting to only 1,050 chests congou, at 9 taels for low dust to 18 taels for "but middling." Stock is reduced to 3,200 chests, chiefly "very low" to "fair common" kinds. Prices remain unaltered. No departures have taken place, and no vessel on the berth. Shanghai advices are to the 17th inst. Silk—Transactions during the fortnight have been small, amounting to only 500 bales at a reduction of 15 to 20 taels for Taatlees, and 10 taels for Taysaams. Quotations were:—Nos. 1-2 Taatlee, none; Nos. 1-2 Taysaams, none; No. 3 Taatlee, 390-95 taels; No. 3 Taysaams, 330 taels; No. 4 Taatlee, 370-75 taels; No. 4 Taysaams, 315 taels; inferior Taatlee, 340 360 taels; inferior Taysaams 300 310. The total export of silk from China to Europe is 61,079 bales, against 70,330 bales, or a decrease for this season of 9,251 bales. Tea—During the past fortnight only a very small business has been done, at former prices. Settlements for the fortnight are:—Congou, Ningchow, 1,000 chests common to fair, at 26 to 29 taels; congou, Shanghai packed, 600 chests, at 15 to 17 taels; pekoe, finest, 260 chests, at 40 to 58 taels; green teas, 6,000 half-chests (including 2,000 of Japan). Stock—Black, 5,600 chests; green, 6,000 half-chests. Three vessels, the Constantia, Benvoirlich, and Sir George Pollock, had left for London, the latter with Japan cargo. The Invincible was loading at 2*l*. Total export of tea from China to Great Britain is 75,043,200 lbs, against the same time last year 53,800,900 lbs, or an increase of 21,242,300 lbs for this season. To the United States the export is 30,087,000 lbs, against 27,491,300 lbs last year, or an increase for 1859-60 of 2,595,700 lbs.

In the early part of the week, all raw sugars changed hands somewhat heavily, at 6d per cwt less money. Since then, however, the demand has improved, and the quotations have shown a hardening tendency. The refined market has been somewhat steady.

COMPARATIVE STATEMENT of the SHIPMENT of SUGAR from the Mauritius, from the beginning of each Crop to the 1st May of each Year.

The state of the coffee trade at Colombo to the 11th ult., is thus reported by Messrs A. W. Heale and Co.:—

The South-west Monsoon not having yet commenced, exporters have been enabled to make considerable progress in shipments of coffee, which now stand as follows:—

PLANTATION COFFEE.

To Great Britain	cwts 280,837	against last year,	cwts	246,629
Foreign Ports	30,391	—	—	31,820
Australia and India	6,499	—	—	4,823
	317,727			283,272

NATIVE COFFEE.

To Great Britain	cwts 66,603	against last year,	cwts	46,898
Foreign Ports	67,056	—	—	109,578
Australia and India	2,035	—	—	4,508
	135,694			160,984

The crop of native coffee from the Kandian country being exhausted, we can do little more than report an almost total cessation of business in the article. For such small parcels of Ouvah crop as have found their way to market, extreme prices have been paid. We hear of but one transaction in plantation coffee, of which there remains a good deal for shipment on owners' accounts, but very little for sale on the spot. Plantation coffee, low, 11s 3d per bhl; do. mountain, 11s 6d to 11s 9d per bhl. Native coffee, unpicked, 42s per cwt; do. picked and dried, 45s per cwt.

Cocoa has moved off heavily at further reduced rates; but there has been an improved inquiry for most descriptions of rice at extreme currencies. The saltpetre market has been devoid of animation, and the transactions in wool have been very limited. Messrs Hazard and Co. report the result of the last colonial wool sales as under:—

Port Philip fleece about ½d to 1d lower; scoured the same as in March. Wools in the grease from this quarter realised high rates. Sydney of all descriptions brought fully last sale's prices. Adelaide, as usual, mostly in the grease, was in some instances a trifle easier as to clothing sorts only; combing qualities sold fully up to March quotations. Van Dieman's Land, chiefly in first-rate condition, was eagerly competed for, and realised very satisfactory prices. New Zealand, of which description only a very small quantity was offered, sold well at March rates. Swan River was much inquired for, and the small quantity to hand sold at extreme rates. Cape of Good Hope was scarce, and the finer sorts, which were much wanted both for home and foreign consumption, sold at last sale's prices: In middling and inferior descriptions we notice a decline of ½d to 1d per lb. The great feature of the sales has no doubt been the large quantity taken for export, which is estimated at between 25 and 30,000 bales, consisting of the finest descriptions of all classes of wools. The next series of London colonial sales will take place in July, for which the following quantity has already arrived:—Sydney, 9,192; Port Philip, 13,179; Van Dieman's Land, 7,660; Adelaide, 3,611; New Zealand, 6,472; Swan River, 1,010; Cape of Good Hope, 4,946; total, 46,070 bales.

Owing to the approaching quarterly sales, indigo has moved off slowly, but without leading to any change in value.

We have no improvement to notice in the demand for hemp, and, in some instances, Manilla qualities have ruled lower. Flax has commanded very little attention.

COMPARATIVE STATEMENT of HEMP and FLAX remaining on hand in the London Warehouses, the Dealers' Stocks included, on the 1st of June, 1859 and 1860.

Messrs Powell and Co.'s circular shows only a moderate business doing in the leather market.

Although a Government contract for 100,000 gallons will be tendered for on the 21st inst., rum has moved off slowly, and a few parcels of proof Leewards have changed hands at 1s 7d per gallon.

Scotch pig iron has shown rather more firmness, and spelter has sold at full prices. Other metals have ruled about stationary.

The following is the monthly report of Banca tin in Holland:—

	1860.		1859.		1858.
	slabs		slabs		slabs

We have very little change to report in the value of oils; but the demand generally is steady. Tallow still maintains its value. To-day, P.Y.C., on the spot, has sold at 52s to 52s 3d, and for delivery during the last three months, 51s 9d to 52s per cwt.

"The demand for dry goods," observes the New York *Shipping List* of the 23rd ult., "continues light for most goods of domestic manufacture, and the market remains without noticeable change. Transactions have been full as heavy as usual at this advanced season of the year, however, and prices are for the most part supported. Stocks continue fair, and manufacturers are mainly employed on contracts running into the fall months. Extraordinary efforts are being put forth to procure a greater diversity of styles than usual, and many of the patterns now being constructed are entirely new, and represented to be unusually attractive. Foreign goods are in fair request for desirable styles, at steady rates. Undesirable goods are selling slowly at about previous prices."

The cotton market has continued greatly depressed during the week. The operations of the trade have not been equal to their consumption, but a fair business continues to be done for export. The supply offering is still excessive, and holders meet the buyer very freely. Prices have been exceedingly irregular. Our quotations are again reduced ⅛d to ¼d per lb in most current grades of American. Egyptian are nominally without change, but difficult to move. Brazil are languid and depressed. East India slightly lower. The sales to-day are estimated at 7,000 bales. The market remains dull. The reported export amounts to 8,280 bales, consisting of 4,560 American, 220 Brazil, and 3,500 East India.

MARKETS IN THE MANUFACTURING DISTRICTS.

Although there has been rather an improved feeling in the demand for goods in most of the manufacturing markets, when compared with last week, export buyers, almost generally, have operated with extreme caution, and no advance has taken place in the quotations. In some instances, stocks have somewhat accumulated; but, for the time of year, they are still very moderate. The home trade may be represented as in a most healthy state. There has been rather more business doing in the iron districts. Coals, however, have ruled dull, at further depressed rates.

MANCHESTER, June 7.—Business has scarcely resumed its accustomed course since the Whitsuntide holidays, and quotations have been still rather on the decline. Besides, many of the home trade warehouses have been occupied in taking stock. In yarns for export there have been a few trifling orders placed for Germany, and even for Italy. In qualities for India, low offers have been current, in 40's mule for example, of about 1d per lb below the recent highest prices. In shirtings for the same market similar offers have been numerous, but in neither case have sellers generally made up their minds to accept them. The India letters, though discouraging in tone, appear to have brought orders which seem likely to be filled up at present limits, so that to some extent a resumption of purchases is considered not far off.

HUDDERSFIELD.—Several buyers from country houses have been in attendance; although their purchases have been for the most part limited, and little impression has been made upon manufacturers' stocks. The demand for low goods and unions by the shipping trade has fallen away somewhat of late, although orders for some descriptions have been freely given.——LEEDS.—Now that the price of wool is to some extent fixed by the late sales in London, there is more confidence shown in our cloth halls. The transactions in the warehouses show more confidence, and a fair average amount has been done since this day week.——HALIFAX.—Light goods are the most saleable, but fabrics suitable for autumn are inquired for, and some of the manufacturers are well engaged on orders for the latter. The woollen trade continues active, and, indeed, the same may be said as to the worsted and carpet trades; but though manufacturers are mostly well employed, there is some slackness in the demand, and stocks are slightly increasing on their hands. Wools, notwithstanding this want of briskness in the demand for yarns and fabrics,

command high prices, and are stiffly held at the topmost of late quotations.——ROCHDALE.—Wool—In some cases moderate quantities have been sold at 5s, and in other cases at 10s, in advance of the prices current last week. The stocks of English wool are not large. Flannel—The demand is still firm. There is a brisker trade in saxonies and unions. The Yorkshire trade continues good.——LEICESTER.—Manufacturers are keeping down stock as much as possible, and are making principally to order. In the country districts trade is quiet. Yarns are 1d per pound dearer, the continued high price of wools having necessitated spinners to make the advance.——BRADFORD.—The assortment of wools offering is by no means good, and prices continue firm. Noils and brokes are firm. Yarns—There is a disposition on the part of shippers to increase the amount of business, but this is checked by the high prices. Pieces—Where goods are really wanted, manufacturers are getting an advance in price; but this feature is very circumscribed. Merchants who have stocks on hand will not give the advance sought for. Manufacturers are already acting on the defensive, and stopping their looms.——WOLVERHAMPTON.—There has been more business doing in native pig iron, the stocks of manufacturers having been reduced considerably during the past five weeks. The reports from North Staffordshire, the Middlesborough district, Derbyshire, and Lancashire, are all favourable. More orders have likewise been received in the North for pigs, and the trade on the whole must be reported brisker than it was a week since. The demand for railway bars, however, is still languid, and several of the works on the "hills" are turning their attention to other kinds of iron. The passing of Mr Morrill's bill through the House of Representatives at Washington, increasing the duties on iron, though the measure is not expected to pass the Upper House, has given rise to much uneasiness here.——GLASGOW.—The shipments of iron last month were in excess of those of May, 1859, by 4,016 tons, which fully confirms the opinions we expressed in our previous reports; and should the price of iron remain at, or under its present value, our home shipments will, for a time, continue as large, if not larger, than those of last year. Shipments in May, 1860:—Foreign, 20,362; coastwise, 45,305; 65,667 tons. In May, 1859:—Foreign, 24,224; coastwise, 37,427; 61,651 tons.

CORN.

AMERICAN GRAIN AND FLOUR MARKETS.

NEW YORK, May 23.—FLOUR AND MEAL.—The market for State and Western flour has been heavy for the most part, and prices tended in favour of the purchaser. The sales have been to a fair extent, however, both for consumption and shipment, though comparatively little has been exported since our last issue. Transactions for the three days comprise 40,000 bbls, including 11,400 bbls yesterday, closing heavily at a decline of 5 cents per bbl on the poorer grades, to which we conform our quotations. Canada flour is in limited request, and prices are somewhat lower. The sales are 1,550 bbls, including 550 bbls yesterday. Southern flour has been dull and heavy, and prices have declined somewhat, with still a downward tendency at the close. The sales aggregate 3,800 bbls, including 1,400 bbls yesterday, at 6.75 dols for Brandywine, 6.70 dols to 7.65 dols for Richmond city, 5.85 dols to 7 dols for Baltimore. Other kinds are quiet and unchanged. Export of wheat flour from 1st to 22nd May, 65,702 bbls, against 44,003 in 1859.

LONDON MARKETS.

STATE OF THE CORN TRADE FOR THE WEEK.

MARK LANE, FRIDAY EVENING.

The arrivals of English wheat up to our market, this week, have been on a very moderate scale, but, on the whole, in fair saleable condition. Both red and white qualities have changed hands somewhat freely, at an improvement in value of from 1s to 2s per quarter. There has been an improved inquiry for foreign wheat, at 2s advance; but the transactions have not been to say extensive, owing to the high pretensions of importers. Most descriptions of barley have commanded fully previous rates, and there has been rather more doing in malt, especially fine parcels. The imports of foreign oats, though tolerably extensive, have gone off freely, at previous currencies. Beans have risen 1s per quarter; but no advance has taken place in the value of peas. The flour trade has been somewhat firm, and the quotations have advanced 1s per 280 lbs.

Advices from most parts of the country are decidedly unfavourable as regards the general appearance of the wheat crop. In several districts it has assumed a yellow tinge, and not a few of the growers apprehend a decided falling off in this year's yield. It is, of course, too early to form a conclusive opinion on so important a matter; but, unquestionably, present appearances do not favour a large return. As regards barley, oats, beans, and peas, however, the accounts are, on the whole, satisfactory.

The leading country markets have continued to be scantily supplied with wheat, and the trade has been somewhat firm at 1s to 2s per qr more money. This advance, however, has not been generally paid. In the value of spring corn no change of importance has taken place, but the value of flour has somewhat improved.

In some parts of Scotland, wheat has sold at slightly enhanced rates; but the demand has been by no means active. Other produce has commanded very full prices. The shipments to the South have fallen off to some extent.

The Irish markets have been somewhat firm. Fine wheat, oats, and flour have realised prices against buyers; but the business done has not been to any extensive.

Only a limited supply of English wheat was on sale to-day, and it was mostly cleared off at Monday's currency. Foreign wheat moved off briskly, at 1s to 2s per quarter more money. There was a steady sale for all spring corn, at extreme rates. Country flour was held at 2s more money.

Mr Ed. Rainford states that 47 vessels laden with grain have arrived off coast since the 31st ult., and that there has been an active demand for floating cargoes, at very full prices.

The London averages announced this day were:—

	qrs	s	d
Wheat	3802 at	53	10
Barley	15	30	0
Oats	10	27	0

COLONIAL AND FOREIGN PRODUCE MARKETS.

TRANSACTIONS OF THE WEEK.

FOR REPORT OF THIS DAY'S MARKETS, SEE "POSTSCRIPT."

MINCING LANE, FRIDAY MORNING.

SUGAR.—The public sales have gone off without animation, fine qualities barely supporting their former value, while low to middling occasionally sold at from 6d to 1s under last week's rates, and the general tone of the market remains without improvement. Floating cargoes have found buyers on easier terms. Crystallised Mauritius has been taken freely by the grocers. 529 casks Barbadoes were about half disposed of at 38s to 43s for low to very good yellow, and 35s 6d to 37s 6d for brown; also some Jamaica at 37s to 40s per cwt for brown and grey. Nearly 10,000 tons were landed last week, and, notwithstanding the large delivery, the stock showed a further increase, and now amounts to 65,000 tons, against 50,000 tons in 1859. The stock in Great Britain is about 110,000 tons.

Mauritius.—Of 16,603 bags, a large proportion found buyers: grey and yellow, 37s 6d to 40s 6d; grainy, 39s to 45s 6d; crystallised, 41s 6d to 46s 6d; brown, 31s to 37s per cwt for very low dark to good.

Bengal.—2,300 bags about half sold: good to fine Baliy, 44s 6d to 45s 6d; syrups, 40s 6d per cwt.

Penang.—623 bags found buyers as follows: brown, 34s 6d to 36s 6d; grey and soft yellow, 37s 6d to 41s per cwt.

Madras.—3,534 bags partly sold at 31s 6d to 36s per cwt for native brown and yellow.

Foreign.—5,295 bags China, by auction, were about half disposed of: soft white, 44s to 44s 6d; low brown, 30s 6d to 31s; soft greyish yellow bought in at 36s 6d to 38s. 10,961 bags Manilla were withdrawn, but since chiefly sold at 36s to 36s 6d for clayed. 320 casks 150 barrels Porto Rico sold at 38s to 44s 6d. 1,299 boxes Havana were taken in at high prices. Two floating cargoes of Havana, Nos. 11 to 12, have sold at 26s 9d for export; and one, No. 11½, at 27s 3d for the United Kingdom; also a landed cargo, Nos. 10½ to 11, at 40s 6d per cwt duty paid.

Refined.—The market is quiet, but sales are only occasionally made at lower prices. Crushed keeps in steady demand. Common dry goods quoted 51s 6d to 52s per cwt.

MOLASSES.—60 puns West India have sold at 16s 6d for Dominica and St Vincent's. 138 casks Cuba offered by auction, afterwards sold at 17s 6d per cwt for muscovado kind.

RUM.—Further business has been done in Mauritius at 1s 6½d per proof gallon. Some few parcels of Demerara have sold at previous rates. The appearance of the Government contract for 100,000 gallons has not improved the demand. Yesterday, 200 puns Leewards sold at 1s 7d per proof gallon.

COCOA.—The market is liberally supplied, and prices of Trinidad have declined about 2s; but 1,335 bags by auction only partly sold: grey to superior red, 70s to 86s; a few lots very fine, 95s to 97s 6d. 725 bags Grenada found buyers on easier terms: grey and red, 60s to 66s; bright red, 68s to 71s. 202 bags Guayaquil were withdrawn at 72s 6d per cwt.

TEA.—Although the market continues firm, it has not been at all active since the close of last week. General quotations have, however, been maintained. Several public sales will be held to-day. The stock in London is 60,000,000 lbs, against 62,500,000 lbs last year.

COFFEE.—The improved feeling which characterised the market last week has continued, and prices of plantation coffee generally are rather higher, especially for colony kinds. 774 casks 192 barrels 310 bags, by auction, went off with spirit, the range of quotations being chiefly from 66s to 74s 6d for fine fine ordinary small berry to good middling, with a small portion of superior quality at 78s 6d to 79s. 93 casks 1,466 barrels and bags native realised 60s to 62s for good ordinary to good bold picked. 40 half-bales Mocha, good garbled short berry, 115s. 100 bags pale and dull Costa Rica, 63s to 63s 6d per cwt.

RICE.—A large business has been done, and, in some instances, at rather higher prices, transactions including white Bengal at 9s 10½d to 10s 6d for the lower kinds, and 11s to 14s 6d for low middling to fine white; low to good Rangoon, 8s 4½d to 9s 6d; Necrancie Arracan, 9s to 9s 9d; low Moulmein, 8s 9d. By auction, 688 bags Bengal realised 11s to 11s 6d per cwt for low middling to middling white.

IMPORTS and DELIVERIES of RICE to June 2, with STOCK on hand.

Stock	4250	2800	4860	3960

Deliveries last week 150 tons.

METALS.—The market still presents a quiet appearance, but within the past few days there has been rather more business done in some kinds. Scotch pig iron, after receding to 49s 6d, closes at 50s 6d per ton. Foreign tin is inactive: Banca, 136s to 137s; Straits, 129s to 130s. The former has sold to arrive at equal to 136s per cwt laid down here. English copper now meets with more inquiry. Several contracts have been made in spelter at 20*l* 2s 6d to 20*l* 7s 6d on the spot and to arrive.

HEMP.—625 bales Manilla, by auction, partly sold at 21*l* 10s for common quality, but there are not further sellers at that reduction. The jute sales held on Wednesday went off well, and 6,600 bales mostly sold at very full prices, low to fine quality ranging from 14*l* 5s to 21*l* 5s per ton. Privately, a considerable inquiry prevails. The stock on the 1st instant had increased to 13,500 tons, but the quantity afloat is much smaller than last year.

OILS.—Olive has been almost neglected. 100 tuns colonial sperm have changed hands at the recent decline, viz., at 92*l* per tun. Cocoa-nut is rather dearer: Cochin, 45s 6d; Ceylon, 43s to 44s; to arrive, at the latter price. Palm remains firm at 45s, with buyers. The linseed market has been very steady at 28s on the spot; 28s 3d is now demanded, and 29s 6d for delivery in the last four months of the year. The unfavourable weather for the continental rapeseed crops has continued. Foreign refined is quoted 42s 6d to 43s; 45s 6d to 46s for delivery in the last four months; brown, 40s 6d and 43s per cwt respectively.

TALLOW.—The market has again become quiet, and prices slightly favour the buyers: St Petersburg sort Y. C. on the spot, 52s to 52s 3d; for forward deliveries, 51s 9d per cwt. The clearances last week showed a material increase.

PARTICULARS OF TALLOW.—Monday, June 4.

POSTSCRIPT. FRIDAY EVENING.

SUGAR.—The market was rather firmer to-day. 980 casks West India found buyers, making the week's business 3,119 casks. 2,613 bags Mauritius by auction realised the previous value. 1,197 bags native Madras were chiefly bought in. 227 casks 58 barrels Cuba sold at 36s to 40s 6d. 637 boxes Havana, 40s to 47s for yellow and fiorettes.

COFFEE.—390 casks 124 barrels and bags plantation sold steadily at 67s to 76s. 30 casks 390 bags native, 60s to 61s. 120 packages East India, 62s 6d to 64s 6d per cwt.

TEA.—The sales commenced to-day, and went off flatly. 8,500 packages passed, and 5,460 packages sold. Congous barely maintained their previous value.

COCHINEAL.—148 bags chiefly sold at previous quotations for Honduras. Mexican silver, 3s to 3s 3d; black, 3s 6d to 4s 3d per lb.

SPICES.—133 cases nutmegs sold at 1s 3d to 3s 9d for low to very good brown. 20 cases mace, 1s to 1s 8d per lb. 201 barrels Jamaica ginger, 85s to 126s per cwt.

COCOA.—58 bags Guayaquil sold at 66s 6d to 69s.

RICE.—30,000 bags sold on the spot, mostly soft grain descriptions. A floating cargo of Arracan at 10s 9d, and one of Rangoon at 11s per cwt open charter.

SALTPETRE.—1,235 bags Bengal, refraction 13 to 7½, were bought in at 41s to 44s; and 296 bags Bombay, refraction 49½ to 43, realised 35s to 35s 6d per cwt.

OILS.—By auction, Ceylon brought 43s to 44s; Cochin, 45s to 46s; Sydney, 37s to 43s 9d per cwt, being dearer.

TALLOW.—Foreign unaltered. 208 pipes South American, by auction, part sold at 52s 6d to 52s 9d. 107 casks Australian, 48s 3d to 52s 6d. Town, 53s 6d per cwt.

ADDITIONAL NOTICES.

REFINED SUGAR.—The home market for refined sugar has been very quiet this week, without any material alteration in prices. Nothing doing for export. Some few sales have been made in Dutch crushed, f.o.b. in Holland, viz., 50 tons of V. O. in tierces, at 31s; and 50 tons of W. & Z., at 30s 3d hogsheads. Some few other parcels, not worth quoting.

GREEN FRUIT.—A good demand for all kinds. Oranges have improved in price; some parcels of Lisbon, sold by Keeling and Hunt at public sale, went at an advance of 3s to 5s. per package. Lemons of good quality in request. Shipments from Palermo have ceased, owing to the political state of affairs. Nuts have a moderate sale.

DRY FRUIT.—Five public sales took place on the 6th instant. Of about 500 tons currants offered, only the damaged portion were sold at a decline of 2s; but sound fruit remains unaltered in quotations, but market depressed. Valentia raisins are selling for export at 22s; good Cheames in boxes done at 26s to 27s. Clearances of fruit are barely equal to those of last year at this period.

ENGLISH WOOL.—Market quiet; prices firm.

COLONIAL WOOL.—The market remains firm.

FLAX unaltered.

HEMP quiet, and very few transactions have taken place this week.

COTTON.—Sales of cotton wool from Friday, 1st June, to Thursday, 7th, inclusive:—700 bales Surat at 3d to 4⅛d for ordinary to fully fair, and 4⅜d to 4¼d for fair to good fair sawginned; 700 bales Madras, 4¼d to 5¼d for middling fair to good fair Tinnevelly, and 3¼d for fair Western. The market has been dull and prices irregular, although a fair amount of business has been transacted. The lower qualities of Surat have declined fully ⅛d per lb, whilst the better sorts are unchanged. Sawginned is heavy of sale, and may be quoted ⅛d per lb lower during the fortnight. Madras has realised previous rates.

SILK.—Market continues active; prices firm.

LEATHER AND HIDES.—At Leadenhall this week, the supplies were small, and a very limited amount of business was done without alteration of prices. In South American hides also a very small amount of business has been transacted. The arrival of the Brazil mail shows that a considerable number of hides from the River Plate are preparing for shipment, as well as about 130,000 now afloat, so that the stock may shortly be considerably increased. There has been no public sale of hides this week.

METALS.—There is little to remark upon metals, the market continuing inanimate. Copper has been sold largely under the market quotations of English, but in foreign little has been done, as holders are unwilling to yield to buyers' ideas of price. Iron is uniformly fist in demand. Tin keeps steady for all descriptions. Spelter has rallied a little, and is in demand at the improved rates. Lead is a trifle easier to buy. Tin plates are without change.

TALLOW.—Official market letter issued this evening:—Town tallow, 53s 6d; fat by do., 2s 9½d; Yellow Russian, 53s 6d; melted stuff, 38s 6d; rough do., 22s 6d; greaves, 16s; good dregs, 7s. Imports this week 3,202 casks.

PROVISIONS.

Bacon market, though steady, shows some signs of improvement: good shipments 71s f.o.b. Higher prices are looked for. Grass Friesland 100s, quality good. Very little doing in hams, owing, no doubt, to the lateness of the season.

METROPOLITAN CATTLE MARKET.

THURSDAY, June 7.—A very limited supply of beasts, chiefly in middling condition, was on sale in to-day's market. All breeds moved off readily, at fully Monday's quotations, and the primest Scots would have realised 5s 8d per 8 lbs. Although the show of sheep was by no means extensive, the mutton trade was heavy, at 2d per 8 lbs less money. We have to report a dull sale for lambs, at a fall in value from 2d to 4d per 8 lbs. The veal trade was very inactive, and prices gave way 2d per 8 lbs. There was very little business doing either in pigs or milch cows, and quotations were barely supported.

Per 8 lbs to sink the offal.

	s	d	s	d		s	d	s	d
Coarse and inferior beasts	4	0	4	2	Prime Southdown sheep	5	8	5	10
Second quality ditto.....	4	6	4	10	Large coarse calves ...	4	6	5	0
Prime large oxen	5	0	5	4	Prime small ditto	5	2	5	8

Prime coarse-woolled do..	5	4	5	6	Quarter old store pigs...	23	0	30	0

Lambs, 6s 0d to 7s 6d.

Total supply—Beasts, 752; sheep and lambs, 8,332; calves, 264; pigs, 200.
Foreign supply—Beasts, 200; sheep, 1,850 calves, 180.

HOP MARKET.

FRIDAY, June 8.—The trade is steady, at late prices. Nothing doing on the duty.

COAL MARKET.

FRIDAY, June 8.—Small supplies have caused a further rise; best Wall's-end, 18s 3d down to 16s per ton; Hartley's, 15s 6d to 16s 6d; Manufacturers, 13s 3d to 15s 6d. Ships at market, 20, all sold; at sea, 115.

LIVERPOOL MARKETS.

WOOL.

(FROM OUR OWN CORRESPONDENT.)

FRIDAY, June 8.—There has been rather more inquiry this week than for some time past, and the transactions are to a moderate extent at very steady prices, with very light stocks of all useful kinds now on hand.

CORN.

(FROM OUR OWN CORRESPONDENT.)

FRIDAY, June 8.—A good consumptive demand for wheat at rather better prices than were obtainable on Tuesday. Flour in fair request, at a slight advance. All other articles remain quiet.

METALS.

(FROM OUR OWN CORRESPONDENT.)

FRIDAY, June 8.—There is little change to report in the market for manufactured iron, and the prices of the better descriptions have been pretty well supported during the past week. In Scotch pig iron there has been more steadiness in price during the week, with a fair business doing. The demand for copper at present quotations has been almost entirely confined to consumptive requirements. Lead continues dull. Most other metals are without alteration.

The Gazette.

TUESDAY, June 5.

BANKRUPTS.

T. Toynbee, Southwick street, Hyde park, hotelkeeper.
J. G. Sheppard, Towcester Northamptonshire, brewer.
C. L. Klog, Ryde, Isle of Wight, tailor.

EPITOME OF RAILWAY NEWS.

TRAFFIC RETURNS.—The traffic returns of railways in the United Kingdom for the week ending May 26 amounted to 547,120*l*, and for the corresponding week of last year to 473,600*l*, showing an increase of 73,520*l*. The gross receipts on the eight railways having their termini in the metropolis amounted to 245,208*l*, and for the corresponding week of 1859 to 202,160*l*, showing an increase of 43,048*l*.

RAILWAY AND MINING SHARE MARKET. LONDON.

MONDAY, June 4.—The principal movement in the railway market to-day was a rise of nearly 1 per cent. in South-Eastern. Other stocks were also firm, and closed at a nearly general advance of ⅛ to ¾ per cent. Foreign descriptions, particularly French, were generally in better demand. After regular hours South Austrian and Lombardo-Venetian improved to par to ¼ premium; and Pernambuco to 1¾ to 1½ dis. In American railway securities the bonds of the Michigan Central were firmer. New Brunswick debentures left off ¼ per cent. higher. The New Victoria bonds advanced to 107. There were no changes of importance in mines. In joint stock banks, Bank of London were quoted better. In miscellaneous descriptions a decline occurred in Mediterranean Extension Telegraph. Great Ship shares were likewise flat at 11s to 11s 6d, while Red Sea Telegraph recovered to ⅛ to ¼ dis. The Canadian loan left off 101⅛ to 102⅛ bonds, and 2½ to ¾ pm. scrip; London and Provincial, ⅜ to ½ dis.; the new Thames and Mersey, 1¾ to ¼ pm.; London and South African Bank, ¼ to ½ dis.; Bank of Turkey, 1½ to 1¼ dis., and Thessalian Mining Company shares, ⅛ to ¼ pm.

TUESDAY, June 5.—The railway market was fairly supported, and closed with steadiness, although the final quotations were not equal to one period of the day. Most of the leading stocks, however, left off a fraction better than yesterday, except South-Eastern, which declined nearly a half per cent. Business was limited. In the colonial market, there were some inquiries for Indian guaranteed, and occasionally an advance took place. Atlantic and St Lawrence and Great Western of Canada shares also improved, while Grand Trunk stock left off without change at 32 to ½. Foreign descriptions were dull, South Austrian and Lombardo-Venetian, after being quoted the greater part of the day par to ¼ pm., receded after regular hours to par. Brazilian shares were flatter, Pernambuco closing at 1¾ to 1½ dis., and Bahia ⅝ to ¾ dis. In American railway securities, the bonds of the Pennsylvania Central advanced. New South Wales debentures were also a half per cent. higher. There was no general change in mines; East Basset shares, however, were more offered.

WEDNESDAY, June 6.—The railway market to-day was dull, and occasionally flat. No reduction, however, of more than ¼ per cent. occurred, except in Great Northern stock, which left off ½ lower. The market was steadier at the close than at one period of the day. Colonial stocks experienced no material change; Grand Trunk of Canada was last quoted 32 to ½. The foreign market again showed heaviness, especially as regards Paris and Lyons and South Austrian and Lombardo-Venetian shares; the latter left off ¼ dis. to par, and Pernambuco, 1¾ to 1½ dis. No alteration occurred in American railway securities. In mining shares one or two dividend mines were higher; other descriptions were dull. In the miscellaneous market, Mediterranean Extension Telegraph and National Discount improved. Victoria debentures, new, left off at 107; the Canadian loan, 102 to ¼ bonds and 2¾ pm. scrip; Ocean Marine Insurance, 2 to ¼ pm.; Universal, ⅛ to ¼ pm.; London and Provincial, ¼ dis. to par; Bank of Turkey, 1½ to 1¼ dis.; London and South African Bank, ¼ to ½ dis.; and the new Pneumatic Despatch Company, ½ to 1 pm.

THURSDAY, June 7.—The principal feature in the railway market was a decline in South-Eastern, on the passing of the bill of the London, Chatham, and Dover through the House of Commons. The final price was 84⅞ to 85½, showing a reduction of ⅞ per cent. In the colonial market, a fall occurred in Grand Trunk stock and Great Western of Canada shares, the latter closing at 12½ to ½. Foreign descriptions were dull. South Austrian and Lombardo-Venetian were again rather flat, the final quotation being ⅛ dis. Pernambuco left off at 1¾ to 1½ dis.; Bahia, ⅝ to ¾ dis.; and San Paulo, ⅜ to ½ dis. In American railway securities the shares of the Illinois Central improved. Mines were inactive, but in several cases exhibited an advance, particularly St John del Rey. Union Bank of London shares showed increased heaviness. In miscellaneous descriptions there was another rise in Royal Mail Steam. Victoria debentures, new, were last quoted at 106⅞ to 107½; the Canadian loan, 102 to ¼ bonds, and 2⅝ to ½ pm. scrip.

FRIDAY, June 8.—The railway share market to day was inactive, and with the exception of a decline of ¼ per cent. in Great Northern stock, prices were quoted almost the same as yesterday afternoon. London and North-Western stock was quoted 101½ to 102; Great Western, 69 to ½; Midland, 116¾ to 117¼; Lancashire and Yorkshire, 104¾ to 105¼; Great Northern, 115 to 116. The Indian lines were in fair demand.

37 BEDFORD SQUARE, London.

Dr La'Mert has just published, price Sixpence, with numerous Engravings and Cases, a New Edition of his Work, entitled,

SELF-PRESERVATION

which will be sent free in a sealed envelope, Mann, 39 Cornhill, London, or by the Author to any address, for eight stamps.

CONTENTS

SECTION I.—The Physiology of the enerative Organs.
SECTION II.—Puberty—Manhood—The Morale
Generative Physiology—True and False Morality.
SECTION III.—Marriage in its Moral, Social, and Physical Relations—Its Expectancies and Disappointments—Advantages of Physical contrasts in securing Healthy offspring.
SECTION IV.—Spermatorrhœa and Impotence—The Causes of Sterility in both sexes—Self-inflicted miseries.
SECTION V.—The Vices of Schools—Effects of certain pernicious habits on the mental and generative faculties—Importance of Moral Discipline.
SECTION VI.—Treatment of nervous and generative debility—Impotence and sterility—Dangerous results of various hazardous specifics—The Author's principles of treatment; medical, dietetic, and general, derived from twenty years' successful practice

TO THE NERVOUS AND DEBILITATED.

Just published, the 125th thousand, with numerous plates, in a sealed envelope, price 1s, sold by all booksellers, or post paid, by the Author, for 12 stamps,

MANHOOD: THE CAUSE AND CURE of PREMATURE DECLINE, with Plain Directions for Perfect Restoration to Health and Vigour. By J. L. CURTIS, 15 Albemarle street, Piccadilly, London.

CONTENTS.

INTRODUCTORY CHAPTER on the Physiological Structure and Functions of the Reproductive Organs.
CHAPTER II.—Causes of Spermatorrhœa and Impotence; Early Vicious Indulgences; Dangers of Neglect.
CHAPTER III.—A Review of the Disqualifications of Marriage; whether resulting from the Youthful Abuse, the Follies of Maturity, the Effects of Climate, or Infection.
CHAPTER IV.—Plan of Treatment, Medical and Moral, with observations on a new and successful mode of detecting Spermatorrhœa and other Urethral discharges by microscopic examination.
CHAPTER V. and VI. on the modern Treatment of Gonorrhœa and Syphilis.

The Book concludes with numerous interesting cases, to which is added the Author's receipt of a preventive Lotion.

MR CURTIS, author of the above Medical Treatise, may be consulted as usual. The efficacy and harmless nature of the remedies employed by MR CURTIS having been demonstrated by a successful practice extending over a period of 20 years nervous sufferers have a perfect guarantee that the utmost skill and experience will be made available in the treatment of their cases

Consultations from 10 till 12 and 3 till 8, and 6 till 8. Sundays from 10 till 1.

AT HAMBLY HOUSE ACADEMY Streatham Common, Surrey, Young Gentlemen are carefully Educated for the Public Schools, Military Colleges, Professions, or Commerce, by Mr R. S. TROUSDALE, L.C.P., aided by highly qualified assistant masters.

The domestic arrangements are on the most liberal scale; and the house is very delightfully situated. The terms for pupils under ten years of age, 30 guineas per annum; ten and under fourteen, 35 guineas per annum; fourteen, 40 guineas per annum. The above amount includes board and instruction in the Latin, Greek, French, and English Languages, Writing, Arithmetic, Merchants' Accounts, History, Geography, the Use of the Globes, Astronomy, Geometry, Algebra, and the other branches of the Mathematics. A library is devoted to the instruction and amusement of the pupils during their leisure hours. Religious works are provided for Sunday perusal; and lectures on various popular subjects are occasionally delivered. German Drawing, Dancing, and Music, on the usual terms. Washing, half-a-guinea per quarter. Drilling during the summer months, at a trifling charge; and board during a vacation, four guineas. All accounts are expected to be settled quarterly. Excellent accommodation for foreigners or gentlemen of neglected education. A quarter's notice of removal is required.

ON SPINAL AND OTHER DEFORMITIES.

PRACTICAL OBSERVATIONS on the CAUSES and TREATMENT of CURVATURES of the SPINE. Third edition, price 6s.

AND

Just published, second edition, price 1s 6d,

CASES and OBSERVATIONS illustrative of the beneficial results which may be obtained by close attention and perseverance, in some of the most unpromising instances of Spinal Deformity; with numerous Engravings. By SAMUEL HARE, F.R.C.S., &c.

"Mr Hare may take credit to himself for having effected much good in the treatment of the cases described."—BRITISH MEDICAL JOURNAL.

"Mr Hare is, we think, a sound and successful practitioner."—MEDICAL CIRCULAR.

"We unhesitatingly commend this work as a truthful and trustworthy statement of the power of scientific surgery and medicine over some of the most grievous hindrances to human activity and industry."—MEDICAL GAZETTE.

"The author has had much success in his plan of treatment, and we are of opinion that the principles on which he acts, in the treatment of these affections, are correct."—LANCET.

London: JohnChurchill; and may be had of al booksellers.

DR ROBERT ROWE ON INDIGESTION.

This day is published, price 2s 6d, the fifteenth edition,

NERVOUS DISEASES, Liver and Stomach Complaints, Low Spirits, General Debility, and Diseases of Warm Climates; the Result of Thirty Years' Practice.

By O. ROBERT ROWE, M.D.

"Dr Rowe claims with justice a priority of authorship, while he yields to none in his treatment. The value of this work is enhanced by its practical nature."—LANCET.

"We have no hesitation in placing this work among the first ranks. We entertain a high opinion of its value."—MEDICAL TIMES.

"This is a clever and useful work; contains much that is worthy of attention, and should be read by all martyrs to indigestion and other ills."—TIMES.

Also, by the same Author, 2nd edition, price 4s 6d, On some of the Important Diseases of Females and Children.

London: J. Churchill, and to be had of all booksellers.

THE BEST REMEDY FOR INDIGESTION.

NORTON'S CAMOMILE PILLS are confidently recommended as a simple but certain remedy for Indigestion, which is the cause of nearly all the diseases to which we are subject, being a medicine so uniformly grateful and beneficial, that it is with justice called the "Natural Strengthener of the Human Stomach." NORTON'S PILLS act as a powerful tonic and general aperient; are mild in their operation; safe under any circumstances; and thousands of persons can now bear testimony to the benefits to be derived from their use.—Sold in Bottles at 1s 1½d, 2s 9d, and 11s each, in every town in the kingdom.

CAUTION!—Be sure to ask for "NORTON'S PILLS," and do not be persuaded to purchase the various imitations.

KEATING'S COUGH LOZENGES —Statistics show that 50,000 persons annually fal victims to Pulmonary Disorders, including Consumption, Diseases of the Chest, and the Respiratory Organs. Prevention is at all times better than cure; be, therefore, prepared during the wet and wintry season with a supply of Keating's Cough Lozenges, which possess the virtue of averting, as well as of curing a cough or cold; they are good alike for the young or for the aged—they soothe bronchial irritation, and for improving the voice, the Preacher, Statesman, Singer, and Actor, have long patronised them.

IMPORTANT TESTIMONIAL.

Cure of Asthma of several years' standing.—"Calnecross, near Stroud, Gloucestershire.—Sir,—Having been troubled with Asthma for several years, I could find no relief from any medicine whatever, until I was induced about 2 years ago to try a box of your valuable lozenges, and found such relief from them, that I am determined for the future never to be without a box of them in the house, and will do all in my power to recommend them to my friends. If you consider the above testimonial of any advantage, you are quite at liberty to make what use of it you please.—I am, sir, your most obliged servant, W. J. TAGG."—Thomas Keating, Esq.

Prepared and sold in boxes, 1s 1½d, and tins, 2s 9d, 4s 6d, and 10s 6d each, by Thomas Keating, Chemist, &c., 79 St Paul's churchyard, London. Retail by all Druggists and Patent Medicine Vendors in the world

N.B.—To prevent spurious imitations, please to observe that the words "KEATING'S COUGH LOZENGES" are engraven on the Government Stamp of each Box, without which none are genuine.

MR LEWIS AND SON, 113 Strand.—The Royal Lewisian Systems of Writing, Arithmetic, Bookkeeping, and Shorthand, as taught for upwards of fifty years by Mr Lewis, the real inventor and first teacher of these world-renowned and only infallible systems, insures perfection in any of the above branches after a few easy and interesting lessons Persons unable to take the lessons may obtain the inventor's works for self-instruction at his only institution, 113 Strand

IMPORTANT NOTICE.

GLENFIELD PATENT STARCH is the only STARCH used in HER MAJESTY'S LAUNDRY.

And as some unprincipal Parties are now making and offering for Sale an Imitation of the

GLENFIELD STARCH,

we hereby caution all our Customers to be careful, when purchasing, to see that the word GLENFIELD is on each Packet, to copy which is Felony.

WOTHERSPOON and CO., Glasgow and London.

DEANE'S TWO-HOLE BLACK PENS which are unequalled for their durability and easy action, are adopted by the gentlemen of the Stock Exchange, and the principal bankers, merchants, and public companies of the city of London, besides several of Her Majesty's judges, the most eminent counsel, and the reverend the clergy. Their cheapness and popularity ha induced many unprincipled people to put forth imitations of the genuine articles, which are equally useless to the purchaser, and disgraceful to the vender. The public are therefore cautioned, and respectfully requested not to purchase any as DEANE'S GENUINE TWO-HOLE BLACK PENS, unless each pen is stamped

"G. and J. Deane, London Bridge,"

and the box, which contains exactly twelve dozen, has thereon a variously coloured label, inscribed

"G. and J. DEANE's Two-Hole Black Pens, 46 King William street, London bridge."

HANDSOME BRASS AND IRON BEDSTEADS.—HEAL and SON'S Show Rooms contain a large assortment of Brass Bedsteads, suitable both for Home use and for Tropical Climates; handsome Iron Bedsteads with Brass Mountings and elegantly Japanned; Plain Iron Bedsteads for Servants; every description of Wood Bedstead that is manufactured, in Mahogany, Birch, Walnut-tree Woods, Polished Deal and Japanned, all fitted with Bedding and Furniture complete, as well as every description of Bedroom Furniture.

HEAL AND SON'S ILLUSTRATED CATALOGUE, containing Designs and Prices of 100 Bedsteads, as well as of 150 different articles of Bedroom Furniture, sent free by post.—HEAL and SON, Bedstead, Bedding, and Bedroom Furniture facturers 196 Tottenham court road W.

DINNEFORD'S

PURE FLUID MAGNESIA has been for many years sanctioned by the most eminent of the Medical Profession, as an excellent remedy for acidities, heartburn, headache, gout, and indigestion. As a mild aperient it is admirably adapted for delicate females, particularly during pregnancy; and it prevents the food of infants from turning sour during digestion. Combined with the Acidulated Lemon Syrup, it forms an effervescing aperient draught which is highly agreeable and efficacious.

Prepare by DINNEFORD and CO., Dispensing Chemists (and General Agents for the Improved Horse Hair Gloves and Belts), 172 New Bond street, London, and sold by all respectable Chemists throughout the empire.

NO MORE MEDICINE.—For Habitual Constipation, Indigestion (Dyspepsia), Diarrhœa, Nervous, Bilious, and Liver Complaints.

DU BARRY'S delicious Health-restoring REVALENTA ARABICA FOOD —Certificate No. 36,418. In our practice we have been enabled to appreciate the virtues of Du Barry's Food. In its effect on chronic Dyspepsia (Indigestion), Nervousness, Constipation, Diarrhœa, Bilious and Liver Complaints, Cough, Asthma, Debility and incipient Consumption, we find it the safest remedy. Dr Ure, M.D., F.R.S.; Dr Harvey; Dr Bright, Dr Shorland; Dr Campbell.

At a cost of about a penny per meal, it speedily cures constipation, dyspepsia (indigestion), nervousness, flatulency, distension, phlegm, biliousness, liver complaints, hysteria, neuralgia, sleeplessness, acidity, congestion, blood to the head, headaches, loss of memory, indecision, nervous fancies, palpitation, heartburn, eruptions, impurities, fever, irritability, low spirits, diarrhœa, dysentery, noises in the head and ears, debility, diabetes, pains between the shoulders, cramps, spasms, nausea and sickness, sinking, fits, colds, catarrhs, cough, asthma, bronchitis, consumption, debility, gout, rheumatism, hæmorrhoids, also children's complaints, and saves fifty times its cost in medicine. It does not interfere with a liberal diet, but imparts a healthy relish for lunch and dinner, and restores the faculty of digestion and nervous and muscular energy to the most enfeebled. We extract a few of many thousand cures:

Cure No. 1,771.—Lord Stuart de Decies of many year's dyspepsia.——Cure No. 49,832.—"Fifty year's indescribable agony from dyspepsia, nervousness, asthma, cough, constipation, flatulency, spasms, sickness and vomiting, have been removed by Du Barry's excellent food."—Maria Joly, of Lynn, Norfolk.——Cure No 53,816.—Field Marshal the Duke of Pinskow, of dyspepsia, constipation, nervousness, and liver complaints, which had resisted all baths and medical treatment.——Cure No. 47,121.—Miss Elizabeth Jacobs, of extreme nervousness, indigestion, gatherings, low spirits, and nervous fancies.——Cure No. 54,816.—From the Rev. James T. Campbell, Syderstone Rectory, near Fakenham, Norfolk: "In all cases of indigestion, and particularly when the liver is affected, I consider Du Barry's Revalenta Arabica food the best of all remedies."—James T. Campbell.

Sold in canisters, 1 lb, 2s 9d; 2 lbs, 4s 6d; 12 lbs, 22s; 24 lbs, 40s. Super-refined quality, 5 lbs 22s; 10 lbs, 33s. The 10 lb, 12 lb, and 24 lb canisters carriage free, on receipt of post-office order by Barry Du Barry and Co., 77 Regent street, London; Fortnum, Mason and Co. Piccadilly, London; Abbis, 60 Gracechurch street and all grocers and chemists.

THE FORTY-SEVEN SHILLING SUITS ARE MADE TO ORDER FROM Scotch Cheviot Tweeds, and Angolas, all wool, and thoroughly shrunk, by B. BENJAMIN, Merchant and Family Tailor, 74 Regent street, W. The Two Guinea Dress and Frock Coats, the Guinea Dress Trousers, and the Half-Guinea Waistcoats. N.B.—A Perfect Fit guaranteed.

LAWRENCE HYAM announces that his New Stock of Clothing for the Season of 1860, consisting of the largest and choicest variety of Spring and Summer attire ever designed, is now ready for inspection, and to which he solicits public attention and patronage. The greatest confidence may be placed in the durability and style of all garments, combined with the utmost economy in price.

LAWRENCE HYAM invites attention to his Surtout and Dress Coats, varying from 25s to 50s. The Material, Style, Fit, and make are perfect, and cannot fail to give general satisfaction.

LAWRENCE HYAM'S Spring and Summer Overcoat and Undress Jackets are first in fashion, serviceable in wear, and beautiful in design. Price, 16s, 21s, 30s, 42s, and 50s.

LAWRENCE HYAM'S Guinea Coats, 38s Suits, 15s and 17s Trousers, and 6s Vests, are "Household Words" in every family. An immense variety of the newest patterns to select from, specially made for the Spring and Summer Season of 1860.

LAWRENCE HYAM'S Ordered Department is complete in all its arrangements. The most talented cutters and best workmen only are employed, whereby perfection in Fit, Elegance, and Style, are always secured at moderate prices.

Observe—The only Establishments of Lawrence Hyam are:—City, 36 Gracechurch street; West-end, 189 and 190 Tottenham court road.

SUMMER ATTIRE.—E. MOSES and SON beg to state, that their preparations for Spring and Summer exceed any of their former efforts as well in extent as in variety. They have visited the principal markets both at Home and Abroad for the best and newest manufactures, and have succeeded in collecting such an assortment of goods as has never before been exhibited under one roof in this or any other country.

Their Bespoke Tailoring Departments have been supplied with an endless variety of the choicest and most popular fabrics

Their Ready Made Clothing Stock is complete in every respect, and they venture to say that for Elegance of Style, Durability of Material and Workmanship, Tastefulness of Finish and Cheapness, it is quite unequalled, even in the Metropolis of England.

No less care has been bestowed on the Hosiery, Hat and Cap, and Boot and Shoe Departments, which have been furnished with an entirely new stock of fashionable and seasonable goods at such prices as enable the proprietors to offer their patrons very great advantages.

N.B.—E. MOSES and SON take this opportunity of announcing, that they intend giving their customers the full benefit of the abolition of the duty on silks, gloves, &c.

E. MOSES and SON, Corner of MINORIES and ALDGATE, and Corner of NEW OXFORD STREET and HART STREET.

COUNTRY BRANCHES—Bradford & Sheffield, Yorkshire.

E. MOSES and SON wish it to be particularly observed that if any article be not approved of it will be exchanged, or the money returned without hesitation.

Their Book for Spring and Summer, containing "The Growth of an Important Branch of British Industry," with rules for self-measurement, and list of prices, may be had gratis on application, or post free.

THE "INDISPENSABLE" SUIT, made in various colours and patterns, and particularly adapted for walking, riding, travelling, and business. This is universally acknowledged to be the most comfortable and serviceable suit ever introduced. Price from 35s.—To be obtained of E. MOSES and SON, Corner of MINORIES and ALDGATE, and Corner of NEW OXFORD STREET and HART STREET.

TOURISTS AND EXCURSIONISTS are specially provided for at E. MOSES and SON'S, MERCHANT TAILORS, HATTERS, HOSIERS, BOOTMAKERS, &c., Corner of MINORIES and ALDGATE, Corner of NEW OXFORD STREET and HART STREET, BRADFORD and SHEFFIELD, YORKSHIRE.

CONSUMPTION AND ASTHMA CURED.—Dr H. JAMES discovered, while in the East Indies, a Certain Cure for Consumption, Asthma, Bronchitis, Coughs, Colds, and General Debility. The remedy was discovered by him when his only child, a daughter, was given up to die. His child was cured and is now alive and well. Desirous of benefiting his fellow-creatures, he will send, post free, to those who wish it, the recipe, containing full directions for making and successfully using this remedy, on receipt of their names, with stamped envelope for return postage.—Address to O. P. Brown, 14 Cecil street, Strand.

SEQUELIN'S OIL.—This vegetable preparation is most successful as an instantaneous restorative, strengthening weak hair, opening pores of the skin, most effectual in the growth of hair and eyebrows, preventing its falling off, curing the scurvy, giving also brightness, softness, and keeping its natural colour, and checking the most obstinate baldness in two months. One bottle is sufficient. Price one guinea. Address to 40 Wharton street, Lloyd square, W.C. Chief depot, G. Jozeau, 48 Haymarket. The most satisfactory testimonials shown upon application.

RIMMEL'S TOILET VINEGAR, by its cooling properties and delightful aroma, renders the daily bath or ablutions doubly pleasant and salubrious. Price 1s and 2s 6d. Sold by all perfumers and chemists. Made only by E. Rimmel, Perfumer, 96 Strand, and 24 Cornhill, London, and 17 Boulevard des Italiens, Paris.

HOLLOWAY'S OINTMENT AND PILLS.—Changes of season are always trying to mankind, from the variability of temperature now increasing, then depressing, the circulation. Hence the prevalence of throat affections, chest complaints, and disordered digestion at this season. For all this catalogue of ailments Holloway's Ointment rubbed thoroughly twice a day over the parts affected will be found universally serviceable in preventing, checking, or curing each and all, however severe the attack. It is remarkably curative in cases of relaxed, inflamed, or ulcerated throat; while for glandular enlargements it is a specific. In coughs, colds, asthma, and bronchitis, Holloway's Pills should be taken simultaneously with the friction of the Ointment over the chest. Ease will soon follow this treatment, and health will return.

VALUABLE INFORMATION.—GRATUITOUS EDITIONS of the following LECTURES, delivered at the Royal Institute of Anatomy, Science, and Medicine, 369 Oxford street, London, by W. B. MARSTON, the Principal, are being issued, with plain directions for SELF-TREATMENT and CURE in each of them.

THE PHILOSOPHY OF MARRIAGE. By JOSEPH KAHN, Graduate in Medicine, Surgery, and Midwifery in the Royal and Imperial University of Vienna, Erlangen, &c., &c.

This popular work (which has been translated into four different languages) has now gone through forty-one editions of 10,000 each, and is designed to impart accurate knowledge on subjects which involve, the means of securing moral and physical happiness.

Price One Shilling, or, post free, for Twelve Stamps, direct from the Author, 17 Hanley street, Cavendish square, London, W.

A Boon to Nervous Sufferers.

GIVEN AWAY.—26,000 COPIES of a Medical Book, for the benefit of Nervous Sufferers, sent, post free, by the author, secure from observation, on receipt of a directed envelope, enclosing two stamps, the Private Medical Friend, a new work on the Self-cure of Nervous Debility, Loss of Memory, Dimness of Sight, Lassitude, Indigestion, Dislike to Society, &c., which, if neglected, result in consumption, insanity, and premature death, with plain directions for perfect restoration to health and vigour. The true guide to those who desire a speedy and private cure.—By HENRY SMITH, Esq., 8 Burton crescent, Tavistock square, London, W.C.

HUBBUCK'S PATENT WHITE ZINC PAINT.

By their process, which is patented, Pure White Zinc Paint is cheaper than White Lead. It is the most durable and beautiful paint known, and does not stain or discolour with the London atmosphere.

CHEAPNESS.—Two hundred-weight of this Paint, with six gallons of Oil, covers as much surface as three hundred-weight of White Lead and twelve gallons of Oil. It is cheaper in the first instance, as well as desirable on every consideration.

ADULTERATIONS.—Prejudice is caused by some Paint Grinders selling Zinc Paint adulterated with Sulphate of Barytes, some even to the extent of thirty per cent. Whether this is sold under the name of "Improved Zinc Paint," or is candidly sold as Number Two or Three qualities, no Painter can produce good work with it. He naturally condemns Zinc Paint altogether.

That Painters have never seen the best Zinc Paint is evident, or they would not use any other paint for their best work. To prevent the prejudice which the inferior article must produce, each Cask of Pure White Zinc is stamped

"HUBBUCK, LONDON, PATENT."

THOMAS HUBBUCK and SON, WHITE LEAD, OIL, PAINT and VARNISH WORKS, 24 LIME STREET.

Messrs ALLSOPP and SONS take the opportunity of announcing to private families that their Ales, so strongly recommended by the medical profession, may be procured in Bottles and Casks, and on Draught, from all the most respectable wine and beer merchants and licensed victuallers, on "ALLSOPP'S PALE ALE" being especially asked for.

When in bottle, the genuineness of the lable can be ascertained by its having "ALLSOPP and SONS" written across it upon red and white ground striped.

The Brewery, Burton-on-Trent, April 30, 1860.

TEETH.—MR ESKELL, Surgeon Dentist, 314 Regent street (facing the Polytechnic), supplies his PATENTED INCORRODIBLE TEETH, which can be matched so closely in shape and colour to those left in the mouth, and are formed so exactly to nature, that the closest observer cannot detect the difference, and in all cases they restore perfect articulation and mastication. These teeth are fixed from one to a complete set upon Mr Eskell's never-failing and painless principle of SELF-ADHESION, without extracting any teeth or stumps, or giving any pain whatever; and being incorrodible, they possess the superior advantage of never changing colour nor decaying. Mr Eskell's celebrated OSTEOPLASTIC ENAMEL for stopping Decayed Teeth is a preparation which never changes colour nor affects the colour of the tooth, and is free from any injurious properties either as regards the teeth or general health. Its application is easily performed, and without giving the slightest pain. Deficiencies of palate effectually remedied. Loose teeth fastened. Teeth regulated. Discoloured teeth restored, &c. Hours, Ten to Six. Consultation free. Charges strictly moderate.—314 Regent street, London (opposite the Polytechnic). Established 1347.

PIANOFORTES. CRAMER, BEALE, and CO. NEW MODEL OBLIQUE GRAND PIANO, and every description, warranted. Lists of Prices and Terms for Hire, post free. 201 Regent street.

HARMONIUMS. CRAMER, BEALE, and CO. Description and List of Prices, post free. Also, SECOND-HAND HARMONIUMS in great variety. 201 Regent street,

Samples, testimonials, and full instructions, on application to CROGGON and CO, 2 Dowgate hill, London and at 2 Goree Piazzas, Liverpool.

RUPTURES.—BY ROYAL LETTERS PATENT

WHITE'S MOC-MAIN LEVER TRUSS is allowed by upwards of 200 Medical Gentlemen to be the most effective invention in the curative treatment of HERNIA. The use of the steel spring, so often hurtful in its effects, is here avoided, a soft bandage being worn round the body while the requisite resisting power is supplied by the MOC-MAIN PAD and PATENT LEVER, fitting with so much ease and closeness that it cannot be detected, and may be worn during sleep. A descriptive circular may be had, and the Truss (which cannot fail to fit) forwarded by post, on the circumference of the body two inches below the hips being sent to the Manufacturer,

Mr WHITE, 228 Piccadilly London.

Price of a single Truss, 16s, 21s, 26s 6d and 31s 6d; Postage, 1s. Double ditto, 31s 6d, 42s, and 52s 6d; postage, 1s 8d. Post-office orders to be made payable to John White, Post-office, Piccadilly.

ELASTIC STOCKINGS KNEE CAPS, &c., for VARICOSE VEINS, and all cases of WEAKNESS and SWELLING of the LEGS, SPRAINS, &c. They are porous, light of texture, and inexpensive, and are drawn on like an ordinary stocking. Price from 7s 6d to 16s each; postage, 6d.

WHITE, MANUFACTURER, 228 Piccadilly, London

A TOILETTE REQUISITE FOR THE SPRING.—Among the many luxuries of the present age, none can be obtained possessing the manifold virtues of OLDRIDGE'S BALM of COLUMBIA. If applied to the roots and body of the hair, it imparts the most delightful coolness, with an agreeable fragrance of perfume. It also at this period of the season prevents the hair from falling off, or if already too thin or turning grey, will prevent its further progress, and soon restore it again. Those who really desire to have beautiful hair, either with wave or curl, should use it daily. It is also celebrated for strengthening the hair, freeing it from scurf, and producing new hair, whiskers, and moustache. Established upwards of thirty years. No imitative wash can equal it. Price 3s 6d, 6s, and 11s only.—C. and A. Oldridge, 22 Wellington street, trand, W.C.

NEW THEATRE ROYAL ADELPHI. Sole Proprietor and Manager, Mr B. Webster.

Seventh week of the Popular American Actress, Miss Julia Daly. Last Six nights of Mr and Mrs A. Wigan.

On Monday and during the week, IT'S AN ILL WIND THAT BLOWS NOBODY GOOD. Messrs A. Wigan, J. L. Toole, Billington, Stuart, C. J. Smith, Ward; Mrs A. Wigan, Miss H. Simms. After which A MODEL OF A WIFE. Messrs A. Wigan, J. L. Toole; Mrs Billington. To conclude with OUR FEMALE AMERICAN COUSIN. Messrs Stuart, Billington, C. Selby, Ebnrne; Miss Julia Daly, K. Kelly, Mrs Chatterley. Commence at 7.

ASTLEY'S ROYAL AMPHITHEATRE.

Proprietor and Manager, Mr Wm. Batty.

Entire Change! Production of a Grand Historical Hippo-Drama on a scale of Great Magnificence! Varied Novelties in the Scenes of the Arena. On Monday, June 11, 1860, and during the week, the Entertainments will commence with a deeply interesting and splendid spectacle in three acts, entitled FAIR ROSAMOND, or the AMAZON CRUSADERS. Produced with Entirely New and Magnificent Scenery, Costly Costumes and Appointments. To be succeeded by Scenes of the Cirque, supported by the most talented British and Continental Artistes in the World! Concluding with a Laughable Farce. The Magnificent Chandeliers manufactured by Messrs Defries and Sons, of Houndsditch.

Doors open at ½-past 6, commence at 7. Box-office open daily from 11 till 4. Stage Manager, Mr W. West. Director of the Arena, M. Felix Revolti.

NEW FLORAL HALL, COVENT GARDEN, EXHIBITION of FLOWERS.

On Wednesday and Thursday next, June 13 and 14, a Grand Exhibition of Flowers will take place in the New Floral Hall, Covent Garden.

Admission, 2s 6d. Open from 10 in the morning until 7 in the evening.

PRIVATE VIEW.

The Exhibition will be arranged and the Floral Hall illuminated on the Evening previously to the two public days above announced, viz., on Tuesday Evening next, June 12. That evening will be set apart for the exclusive admission to the Flower Show of the Subscribers to the Opera present, as well as to the Visitors to the Boxes, Pit Stalls, or Pit, all of whom will be presented with a card of entrée.

ST JAMES'S HALL, PICCADILLY.—Now open, daily, at 3 and 8 o'clock, WASHINGTON FRIEND'S GRAND MUSICAL and PICTORIAL ENTERTAINMENT, entitled "Two Hours in America," beautifully illustrated by his large and magnificent moving Panorama, faithfully delineating 3,000 miles of the most interesting natural scenery in Canada and the United States; comprising the Falls of Niagara and the river St Lawrence, including a magnificent representation of the Great Victoria Tubular Bridge at Montreal, presenting Canada in spring, summer, autumn, and winter, illustrating American, Indian, Emigrant, and Negro Life, showing the very places where thousands now reside who formerly lived in this country, accurately depicting the river, lake, forest, and prairie scenery of the Far West. While the panorama is passing, Mr Friend, the artist and proprietor, will relate his own adventures, and sing a choice selection of the original songs and melodies of the country, accompanying himself upon seven instruments. Admission—stalls (numbered), 3s; area, 2s; gallery, 1s.

SOYER'S SULTANA SAUCE Relish, Succulante, Aromatic Mustard, &c.—These excellent preparations, of which the LANCET, in its sanitary analysation of Articles of Food, reported so favourably of their purity and wholesomeness, are to be obtained of all grocers and Italian warehousemen in the United Kingdom. They are indispensable with Fish, Meat, Game, Poultry, Hashes, Stews, and all made dishes, impart also to Chops, Steaks, and Cutlets a most delicious flavour. Wholesale, CROSSE and BLACKWELL, Purveyors to the Queen, 21 Soho square, London.

HARVEY'S FISH SAUCE.—Notice of Injunction.—The admirers of this celebrated Fish Sauce are particularly requested to observe that none is genuine but that which bears the back label with the name of WILLIAM LAZENBY, as well as the front label signed "Elizabeth Lazenby," and that for futher security, on the neck of every bottle of the Genuine Sauce will henceforward appear an additional label, printed in green and red, as follows:—"This notice will be affixed to Lazenby's Harvey's Sauce, prepared at the original warehouse, in addition to the well-known labels, which are protected against imitation by a perpetual injunction in Chancery of 9th July, 1858." 6 Edwards street, Portman square, London.

TRADE MARK.

BROWN AND POLSON'S

PATENT CORN FLOUR.—The LANCET states, "This is superior to anything of the kind known."—The most wholesome part of the best Indian corn, prepared by a process patented for the Three Kingdoms and France, and wherever it becomes known obtains great favour for Puddings, Custards, Blancmange; all the uses of the finest arrow root, and especially suited to the delicacy of Children and Invalids.—BROWN and POLSON, Manufacturers to Her Majesty the Queen, Paisley, Manchester, Dublin, and London.

VOLUNTEER PIPE.—RIFLE BORE.—The most delightful, economical, and permanent medium for the enjoyment of tobacco ever invented. This new pipe only to be had of the patentee. Sample pipe in case sent post free for 23 stamps.—EDWARD PELLINET, 53 Great Queen street, London, W.C.

MERSEY DOCK ESTATE.—LOANS OF MONEY.

The Mersey Docks and Harbour Board hereby give notice, that they are willing to receive LOANS of money, on security of their bonds, at the rate of £4 5s per centum per annum interest, for terms of three, five, or seven years, at the option of the lenders. The Board will accept loans for a longer period than seven years, on such terms as may be agreed upon.

Interest warrants for the whole term, payable half-yearly at the bankers' of the Board in Liverpool, or their correspondents in London, are issued with each bond.

All offers to be addressed to George J. Jefferson, Esq., Treasurer, Dock office, Liverpool.—By order of the Board, DANIEL MASON, Secretary.

Dock office, Liverpool, May 10, 1860.

MATANZAS AND SABANILLA RAILROAD 7 PER CENT. BONDS.

The Half-yearly Interest on the above Bonds, due on the 15th inst., will be paid at the counting house of Messrs J. Henry Schröder and Co., No. 145 Leadenhall street, on that and every succeeding day, between the hours of Eleven and Two o'clock, on presentation of the Coupons, which must be left for examination two clear days previous to applying for paymeot.

J. H. SCHRODER and CO.

London, June 5, 1860.

MATANZAS AND SABANILLA RAILROAD 7 PER CENT. BONDS.

Notice is hereby given, that the following 140 Bonds, of £100 each, having been drawn by lot for the Annual Redemption, the holders of them are requested to present the same for payment at the counting house of Messrs J. Henry Schröder and Co., No. 145 Leadenhall street, on and after the 15th June instant, after which day all interest on them will cease and determine. The Bonds must be left two clear days for examination.

J. HENRY SCHRODER and CO.

London, 5th June, 1860

THE SCINDE RAILWAY COMPANY.

CHAIRMAN.

W. P. Andrew, Esq., 26 Montague square.

GOVERNMENT DIRECTOR.

Sir James C. Melvill, K.C.B.

Sir Herbert Maddock (late Deputy-Governor Bengal).
J. Edmund Anderdon, Esq. (Director of the Bank of London).
Major J. A. Moore, F.R.S. (Director of the National Provincial Bank of England).
Harry Borradaile, Esq. (late Bombay Civil Service).
Thomas Williams, Esq., Grove End road, Regent's Park.
Sir Frederick Arthur, Bart. (Gloucester square, Hyde Park).

AUDITORS.

Philip Anstruther, Esq. (Deputy-Chairman of the Bank of Egypt).
George Gordon Macpherson, Esq. (Director Agra Bank).

The Directors are prepared to receive tenders of sums of not less than £100 of the unappropriated portion of the £250,000 Debentures, payable in five years, about to be issued under the guarantee of the Secretary of State for India in Council, bearing 5 per cent. interest, and convertible into Stock at par, at the option of the holder.—By order of the Board,

THOS. BURNELL, Secretary.

Gresham House, Old Broad street, April 10, 1860.

CALEDONIAN RAILWAY.—CONTRACTS for STORES for the Year ending 30th June, 1861.

The Directors are prepared to receive TENDERS for the SUPPLY of the undermentioned stores, &c.:—

No. of Contract.	No. of Contract.
1. Bags, baskets, ropes, canvas, &c.	25. Lamps and lamp furnishing
3. Brooms, birch and heath	26. Leather
4. Brushes	27. Locks
8. Carriage furnishings	28. Nails, &c.
10. Coach trimmings	31. Screws
12. Colours, &c.	32. Spelter, tin, and lead
13. Copper brads, rivets, &c.	33. Sponges
15. Crucibles	34. Pressure gauges and spring balances
16. Drysalteries	37. Hammer shafts
19. Plate glass	38. Tin work
20. Glass, various	40 Varnishes
21. Hardware	41. India-rubber, rings, belting, and hose pipe
24. Lamp wicks	51. Signal wire

Specifications and forms of tender for each contract are printed separately, and may be had on and after the 5th June, on application (in writing) to Mr W. Lester, Caledonian Railway, St Rollox, Glasgow.

Parties applying should state the particular contract or contracts for which they propose to tender.

Patterns may be inspected on and after 5th day of June, from 10 to 4 o'clock, at the Company's Stores, St Rollox, Glasgow; and further information may be had on application to Mr Lester.

Tenders, endorsed "Tender for Stores," to be lodged with the Secretary, Caledonian Railway offices, Glasgow, on or before 21st June, 1860.

The Directors do not bind themselves to accept the lowest or any tender.—By order,

C. JOHNSTONE, General Manager.

Caledonian Railway Company's offices,
Glasgow, May 29, 1860.

MADRAS RAILWAY COMPANY

—Notice is hereby given, that the Transfer Books of the Company will be closed from the 19th inst. to the 11th day of July next, both days inclusive, for the purpose of making up the Interest Accounts to the 30th inst.

The Interest Warrants will be forwarded to the Proprietors whose names are registered on the 19th inst. in the books of the Company.

Deeds of Transfer are not received at the offices of the Company while the books are closed.—By Order of the Board, JAMES WALKER, Managing Director.

No. 33 New Broad street, E. C., 9th June, 1860.

EAST INDIAN RAILWAY COMPANY.

Notice is hereby given, that the Transfer Books of this Company will be closed from Monday, the 18th day of June, 1860, to Thursday, the 12th day of July, 1860, both days inclusive, for the purpose of making up the Interest Account to the 30th day of June, 1860. The interest warrants will be forwarded on the 12th July to the proprietors who are registered in the Company's books on the 16th day of June instant.—By order of the Board, D. I. NOAD, Secretary.

East Indian Railway House, Alderman's walk,
New Broad street, London, June 5, 1860.

N.B.—Transfers will not be received at the office while the books remain closed.

INVERNESS AND ABERDEEN JUNCTION RAILWAY.

ISSUE OF NEW SHARES.

The Inverness and Aberdeen Junction Railway Company having, under the powers of "The Inverness and Aberdeen Junction Railway Act, 1860," resolved upon issuing further Capital to the extent of £100,000, in shares of £10 each, bearing a Preference Dividend, payable Half-yearly, at the rate of 4½ per cent. per annum, the Directors are now prepared to receive applications from the public for portions of the same.

These shares represent the only stock in the Company having any preference, and the dividend on them will be paid before any dividend is paid upon the existing or ordinary shares of the Company, the whole being amply secured by a surplus income.

Applications may be made for one or more shares to the Secretary, at Inverness, or through a Broker or Agent.—By order of the Board,

AND. DOUGALL, Secretary.

Company's office, Inverness, 30th April, 1860.

MIDLAND RAILWAY COMPANY.

—The Directors are prepared to receive applications for the Company's Perpetual Four per Cent. Mortgage Preference Shares of £100 each, which will be inscribed in the books of the Company, in the names of applicants, without payment of stamp duty or other expense.

These shares will be issued under the authority of the Midland Railway Act, 1853, and of a resolution of a Special General Meeting of the Company, held in conformity therewith, on the 18th of February, 1858.

The shares thus raised will be exclusively applied in substitution of the debentnre or mortgage debt of the Company, and they will be entitled to the same priority against the property and income of the Company as the debenture or mortgage debt, ranking before the Company's stock and share capital, and will be the first charge on a net income amounting, last year, to about £1,000,000 after payment of working expenses and rents of all kinds.

The interest will commence from the date when the money is placed in the Company's credit, and will be paid half-yearly, on the 1st of January and 1st of July.

Forms of application may be obtained by letter addressed to me. G. N. BROWNE, Secretary.

Derby, 31st May, 1860.

OVERLAND ROUTE.—COMMUNICATION by STEAM to INDIA, AUSTRALIA, &c., via Egypt.—The PENINSULAR and ORIENTAL STEAM NAVIGATION COMPANY BOOK PASSENGERS and receive Cargo and Parcels for Gibraltar, Malta, Corfu, Egypt, Aden, Ceylon, Madras, Calcutta, the Straits, and China, by their steamers leaving Southampton on the 4th and 20th of every month; for Gibraltar, Malta, Egypt, Aden, and Bombay, by those of the 12th and 27th of each month; and for Mauritius, Reunion, King George's Sound, and Melbourne, by the steamers leaving Southampton on the 20th of every month.—For further particulars apply at the Company's offices, 122 Leadenhall street, London, E. C., or Oriental place, Southampton.

NOTICE.—The Steamers call at Cork Harbour, on both outward and homeward passages, to land and receive Mails.

BRITISH AND NORTH AMERICAN ROYAL MAIL STEAM SHIPS, appointed by the Admiralty to sail between LIVERPOOL and NEW YORK direct, and between LIVERPOOL and BOSTON, the Boston ships only calling at HALIFAX to land and receive passengers and her Majesty's mails. The following, or other vessels are appointed to sail from Liverpool:—

EUROPA, for BOSTON, Saturday, June 16.
PERSIA, for NEW YORK direct, Saturday, June 23.
ARABIA, for BOSTON, Saturday, June 30.

Passage money, including steward's fee and provisions, but without wines or liquors, which can be obtained on board:—To Halifax and Boston, chief cabin, Twenty two Pounds; second cabin, Sixteen Pounds. To New York, chief cabin, Twenty-six Pounds; second cabin, Eighteen Pounds. Freight to Halifax, Boston, and New York, £3 per ton and 5 per cent. primage. Small parcels, 5s each and upwards. These steam ships have accommodation for a limited number of second cabin passengers.

For passage or other information, apply to J. B. Foord, 52 Old Broad street, London; D. Currie, Havre, and 12 Place de la Bourse, Paris; G. and J. Burns, Buchanan street, Glasgow; D. and C. M'Iver, Queenstown; or D. and C. M'Iver, Water street, Liverpool.

IMPERIAL AND ROYAL DANUBE STEAM NAVIGATION COMPANY.

The Steamers of this Company have recommenced running for the season—

From VIENNA to PESTH, every day, 6.30 a.m.
From VIENNA to SEMLIN, Sunday, Tuesday, Friday, 6.30 a.m.
From VIENNA to ORSOVA, GIURGEVO, GALATZ, CONSTANTINOPLE, every Tuesday, 6.30 a.m.
From PESTH to VIENNA, every day, 6 p.m.
From SEMLIN to PESTH and VIENNA, Sunday, Tuesday, Thursday, 5 a.m.
From ORSOVA to SEMLIN, PESTH, VIENNA, Saturday, 6 a.m.
From GALATZ to GIURGEVO, ORSOVA, SEMLIN, PESTH and VIENNA, Saturday morning.

EXPRESS BOAT LINE from PESTH to GALATZ, in direct communication with ODESSA and CONSTANTINOPLE. The vessels leave Pesth every MONDAY, at 8 a.m., touch at MOHAIS, SEMLIN, BASIASCH, ORSOVA, and the principal stations of the Lower Danube, and arrive at Galatz on the following Saturday. Departure from GALATZ to PESTH and VIENNA, Saturday, 4 a.m.

ON THE SAVE.

From SEMLIN to SISSEK, Thursday morning.
From SISSEK to SEMLIN, Monday morning.

For further information apply to
Messrs PIETRONI and DRAPER,
81 London Wall, E. C.

STEAM SHIPS.—The General Steam Navigation Company's powerful and first-class STEAM SHIPS leave from St Katharine's Wharf for—

HAMBURG—Every Wednesday and Saturday morning. Chief cabin, 2l; fore, 11s.

HARBURG—Every Sunday.

ROTTERDAM—Every Tuesday, Thursday, and Saturday, at 11 morning. Chief cabin, 1l 10s; fore, 17s 6d. Cologne, 34s 6d or 19s 9d.

ANTWERP, BRUSSELS, and the RHINE—The Rhine and Dolphin every Tuesday and Thursday, at 12 noon. Chief cabin, 1l 7s; fore, 20s. Brussels, 22s 3d. Cologne, 35s 6d. Leaving Antwerp for London every Sunday and Friday at noon.

OSTEND, BRUSSELS, and the RHINE—Every Wednesday and Saturday morning. June 13 at 8; 16 at 11. Leaving Ostend for London every Tuesday and Friday night. Chief cabin, 18s; fore, 14s. Brussels, 20s 3d. Cologne, 34s.

HAVRE—From St Katharine's Wharf, every Thursday. June 14 at 6; 21 at 12 noon. Chief cabin, 14s; fore, 10s. London to Paris, 1l.

PARIS, via CALAIS, direct—From London Bridge Wharf, every Wednesday and Saturday morning. June 13 at 8; 16 at 11. Chief cabin, 14s; fore, 10s. London to Paris, 17s 3d.

BOULOGNE—From London Bridge Wharf, every Tuesday, Thursday, Friday, and Sunday morning. June 10 at 6; 12 at 7; 14 at 9; 15 at 10. Chief cabin, 14s; fore, 10s. London to Paris, 16s.

EDINBURGH—From St Katharine's Wharf adjoining the Tower, every Wednesday and Saturday; at 10 morning. Fares: chief cabin, 25s; return, 37s 6d; fore, 15s; return, 22s 6d; deck, 10s; which fares include all pier dues at London and Granton.

HULL—From London Bridge Wharf, every Wednesday and Saturday, at Eight morning Chief cabin, 6s 6d; return, 10s; fore cabin, 4s; return, 6s

NEWCASTLE—From Newcastle Steam Wharf, 272 Wapping, every Wednesday and Sunday, at 10 morning Chief cabin, 8s; return ticket, 12s: fore, 5s; return, 7s 6d

YARMOUTH—From London Bridge Wharf, every Wednesday; and Saturday, at Four afternoon. Saloon, 8s; return, 12s: fore cabin, 5s; return, 7s 6d.

MARGATE and RAMSGATE—From London Bridge Wharf, daily, at 10 morning, Sunday's excepted; calling at Blackwall and Tilbury piers.

MARGATE and BACK every Sunday at 9 morning, returning at ½-past 3 afternoon (one fare).

HERNE BAY—Every Wednesday and Saturday, at 10 morning.

Offices 71 Lombard street, 37 Regent circus, and 35 Leadenhall street; and St Katharine Wharf.

JULLIEN FUND.

Committee Room—50 New Bond street.

The Committee of the Jullien Fund, fearing that the subscriptions have been materially checked by the unfortunate death of Mons. Jullien, desire to explain that a widow and others, members of his family, can be protected from want only by the kind aid of those who appreciate the great services rendered by the late lamented maestro to the cause of the musical education of the English people.

The Committee confidently appeal to that benevolence for which their countrymen are so distinguished, for such prompt and liberal additions to the subscription list as shall enable them to do some justice to the memory of M. Jullien, and at the same time afford adequate relief to his bereaved family.

COMMITTEE for the DISTRIBUTION of the JULLIEN FUND.

Mr John Mitchel	Mr W. Duncan Davison
Mr W. R. Sams	Mr Jules Benedict
Mr Thomas Chappell	Mr A. Blumenthal

HONORARY TREASURERS.

Mr John Mitchell, 33 Old Bond street
Mr T. Chappell, 50 New Bond street
Mr W. R. Sams, 1 St James's street

BANKERS.

Messrs Coutts and Co., Strand
Heywood, Kennards, and Co., Lombard street
London and County Bank, Hanover square

Who, as well as the honorary treasurers, have kindly consented to receive subscriptions.

April, 25th, 1860.

METHODS OF BORROWING.

It has now become certain that there must be a Supply Budget. The Chinese war and the national defences are both contingencies which were not provided for by the first. It is also certain that the Supply Budget will contain a loan of some amount in some form or other; and it is, therefore, a proper time to consider what are the times and circumstances suited to particular methods of borrowing and what are not. No one ever thinks of such subjects, except when money is to be raised by way of loan.

Under ordinary circumstances we should be justified, we believe, in throwing a share of the cost of the present outlay on the national defences upon posterity. They are in the nature of a permanent improvement. Other generations as well as ours will enjoy the benefit of them. If we are, as we believe, conferring a great benefit upon posterity, we may throw, as a general principle, some of the burden upon posterity likewise. There is, however, one great objection to our doing so. The National Debt has increased very materially during the last ten years. We borrowed for the purposes of the Russian war :—we borrowed in

	£
1855	14,520,327
1856	13,152,489

And the sinking fund of 1,500,000*l*, which was to have been applied annually out of the surplus revenue to the liquidation of this debt, has been abolished. The requisite surplus expenditure has not been maintained, or has been diverted to other purposes. Now, whatever may be the merits or demerits of the Russian war, which we need not discuss now, it certainly is not a war so exceptional in its nature as to justify our charging posterity for ever with its cost. Every generation has its own little wars; it is obliged to engage in contests which do not menace its existence, which may not confer anything more than a temporary benefit, which are essentially "evils of a day." Recent events prove how exactly the Russian war was of this kind. How much Turkey is strengthened by what was then done,—how much now remains of the effect of the achievements before Sebastopol, are at the best doubtful questions. At the best we cannot believe that the result of our exertions will last many years longer. As we are throwing on posterity this charge of more than twenty-seven millions sterling, which we are not justified in throwing, we think we should be cautious of burdening them with the cost of the improvements of the national defences, however much, under other circumstances, we might have been justified in so doing. As to the cost of the present China war, this is evidently a war of the moment, from which it would be absurd to expect consequences that a distant posterity will feel, and of which, therefore, we who are alive should bear the burden.

We are, therefore, obliged to ask what are the best means of borrowing money which we really mean to pay. There are three modes of effecting this object, all of which have been tried within the last few years,—Exchequer Bonds, a Sinking Fund payable out of a real surplus, and Terminable Annuities. It is certain that the most economical course for the country is to borrow in Consols, and apply a surplus revenue annually to the purchase of Government securities, in the same manner in which any casual surplus that may occur within the year is already applied. This is the mode in which the loan is obtained on the best terms. It suits the dealers better.

The great bulk of our National Debt consists of Consols and other 3 per cent. stocks, and of these the dealer keeps a constant supply. He is always ready to sell them at a price, and always ready to buy them at a price. But if he were to attempt to keep a supply of miscellaneous Government securities,—of Terminable Annuities, some having ten years to run, some twenty, some thirty—or of Bonds, some falling due next year, some the year after, some the year after that,—the capital which his business would require would be very great, much larger than it now is, and his profits would be the same. Every trader knows that it requires a much larger capital to deal in nine articles than to deal in one: to be always able to satisfy his customers with *each*, he must hold a surplus stock in *all*. Particular circumstances in the stock market make this stronger. All the great dealers there like to be able at any time to supply a purchaser with the Government securities in which they deal. In Consols this is easily effected. If a dealer contracts to sell more than he has of his own, the supply in the general market is so large, that he can easily obtain what he requires at a reasonable rate. In securities of which the quantity created is small, there is no such facility. If a dealer contract to supply more of these than he himself has, he will have a difficulty in finding the few holders of the small supply which exists,—and those few holders, becoming aware of the contract he has made, may ask very high prices. On these accounts the dealers of the Stock Exchange at present discourage all loans except in three per cent. stocks; and, as long as circumstances are unchanged, they are likely to continue to do so.

We cannot in England borrow except through contractors. Middlemen are essential in an advanced state of commerce. There are not here any hoarded sums to be drawn forth, as in France, from secret holes and corners. We are dependent on the dealers, and it is certain, therefore, that borrowing in any other form than Consols is an expensive mode.

The difficulty of this plan is the difficulty of securing the repayment. The creditors of the country cannot require payment, and the country is not anxious to pay. We may not discuss now who is to blame, whether it be the Cabinet, the Parliament, or the nation, but we all know the circumstances. It is a very difficult task in this country to maintain a surplus revenue for the purpose of repaying debt. The

public do not distinctly feel the obligation of it; our administrations, as a rule, are weak; they covet the popularity which may be obtained by a reduction of taxation. We cannot say that this difficulty becomes less. Of late years, on the contrary, there have been two increasing tendencies. On the one hand, the House of Commons and the nation press on the Executive Government an increase of expenditure. On the other hand, they loudly object to taxation,—some to direct and some to indirect taxation, but almost all to taxation of some sort. Between these two tendencies, the attempt to "muddle away our resources" in paying our debts is not likely to be successful. We own that we should like to see the true plan of a *real* sinking fund again tried. We never like to give up right principle. Still, the prospect, the calculation of the relative probability of success and of failure, is not favourable.

If we are compelled to fall back on the two other species of temporary loans, we have conclusive proofs that Terminable Annuities are preferable in this country to Exchequer Bonds. We can ascertain the worst of Terminable Annuities. We raise them at such terms as we may; and pay them off by a process that is gradual—that is comparatively imperceptible. When they cease it is a great relief. But of Exchequer Bonds it is impossible to know the worst. They may fall due at the most inconvenient of all times, exactly when it is impossible to repay them and scarcely possible to renew them. The market for both species of security is limited, and no large amounts of either could easily be "placed." It is some time before a new creation, even of Consols, the most favourite security which we have, sinks down to the ordinary consumer. The daily tendency of Terminable Annuities to depreciation is a great objection to them. The holder has to make a continual reserve to counterbalance that depreciation, and this is a process and a difficulty. But, on the other hand, Terminable Annuities are very suitable to a considerable class of regular investors—viz., insurance offices, who require a certain sum of money periodically for the purposes of their business, and *prefer*, therefore, that a certain per centage of their loans should be repaid them year by year. If they can obtain at the same time a little higher interest, so much the better. Terminable Annuities offer both these advantages, and will, therefore, be sure of a steady, though moderate, sale among such purchasers.

If, therefore, it is really hopeless to maintain a surplus revenue, and to apply it with consistent regularity to the purchase of Consols, we must relinquish all idea of an efficient sinking fund, and sell as many Terminable Annuities as the market will bear from time to time;—not as the best expedient imaginable, but as the least costly method that is practicable. It will be singular if there is a new creation of Terminable Annuities in 1860, but, if needful, so it must be.

NO MEDIATION FOR NAPLES.

Lord Palmerston's firm and admirable language in the House of Commons on Tuesday night, with respect to the Neapolitan overtures, will give cordial satisfaction to this country, confidence to the Sicilians, and hope to the still oppressed people of Naples. There is but one great peril still ahead for the people of the Two Sicilies,—but one probable contingency which may rob the marvellous achievements of the noblest and most brilliant military leader of our day of their natural crown in the attainment of the great end for which he fights. That contingency is the mediation for which the King of Naples asks, and to which Lord Palmerston expressed himself as so justly hostile; and the only real danger of mediation comes from France. Austria, as we hear from Lord Palmerston, has given a peremptory refusal to the application of Francis II., and we can well believe that she is not anxious to hasten any struggle likely to take place in Venetia by committing herself prematurely to the unpopular side. But even if Austria were inclined to intervene, she could not venture unless it were certain that by doing so she should not provoke the opposition either of France or of England; and hence the real power, not only to intervene, but to permit or prohibit intervention, lies with the statesmen of France and England. What the decision of English statesmen is we know; at least so far as the moral influence of England is concerned. We shall stand strictly neutral, and shall use all the influence we may have with France to prevent intervention. What the decision of France is we do not yet know. We know, indeed, that at present she seems disposed to maintain her neutrality, but that she has not committed herself to this policy with anything like the same decision as England, or even Austria. "Austria," says Lord Palmerston, "has peremptorily and positively "refused to interfere in the affairs of Naples. *We have* "*every reason to believe* that the determination of the Govern- "ment of France is similar to that of Austria." This, as our sole evidence for the intended neutrality of France, is by no means a perfectly satisfactory form of language. The English Ministry have, unfortunately, more than once had "every reason to believe" that France was not intending to do what she did do. For a long time they had every reason to believe that she did not intend to go to war with Austria at all. For a still longer period they had every reason to believe that the liberation of Italy from Austrian rule was the sole end of the Italian war, and that no reward would be taken by France at all. More recently they had every reason to believe that after the prohibition against the export of rags from France had been removed, a very inconsiderable duty, not likely to prevent the exportation, would be substituted. In all these cases they had every reason to believe that which turned out to be false. And now we can rely but little on reasons probably of the same kind, stated to our Ministers probably for the same purpose,—in order to allay our anxieties and keep open the whole matter until the policy of France can be matured.

In fact, no Englishman will feel convinced that France has finally decided to stand altogether aloof from the Sicilian and Neapolitan revolution until he sees that the opportunity for interference is really passed. The opportunity is great, and the temptation must be great. One of the most prominent of the Napoleonic ideas has always been to secure the predominance of French influence in Italy. Francis II. places himself, it is said,—assuredly may be made to place himself—entirely at the disposal of France. All will be lost to him if she does not interfere; a mere remnant of formal power would not be too small a charity to accept at her hands,—and might be improved after the fashion of the Bourbons into something much more than a remnant of formal power as time and Garibaldi pass away. Thus France undoubtedly might have the opportunity of making a bargain for the Sicilians and Neapolitans which would *sound* liberal enough, which would have the appearance of disinterestedness, and might yet secure to France the constant power of meddling in Italian affairs. This is what she wanted to do in Tuscany: will she be able to refrain, now that an opportunity with far more promise opens before her in the South of the Peninsula?

The answer must depend mainly on the attitude taken by our own Government, and we hope that that attitude may be as resolute and straightforward as Lord Palmerston's words on Tuesday night indicated. As we pointed out last week, the desire to keep on good terms with England has far more real influence with the Emperor of the French than is commonly supposed. He saw that we could do nothing in the case of Savoy. Our army is inconsiderable, and well occupied at home. Our fleet could offer no protection to the mountaineers of the Alps. But in the case of Sicily and Naples, our fleet could do good service, were it necessary, in preventing foreign intervention. Let it once be indicated, without any appearance of threatening, that England is determined in this case to make a stand for non-intervention, and the Emperor would not be very likely to risk a collision with England in a cause which could not be popular.

And let us remember that the decision of the question whether France could or could not get a popular pretext for mediation must depend on the line taken by England. The Sicilians and Neapolitans would certainly never invite it, unless they were assured that it was inevitable,—that it would be better to meet it half-way than to provoke the anger of France by opposition. If, then, they had a definite certainty that England would side with them, there can be no doubt that they would not facilitate the intervention of French diplomacy, but would take care to retain the determination of their own political destiny in their own hands. And France, for her part, if she interfered at all, would be obliged to appear on behalf of the King of Naples, instead of appearing as an impartial arbiter

between the contending parties. Thus much, at least, the declared purpose of England to resist intervention would effect. It would leave the Sicilian army at liberty to ignore all foreign influence,—until France should force her counsel upon the Sicilians,—and it would oblige France in so doing not only to run the risk of collision with England, but to identify herself with the wrong side. And it might well be that the "Liberator of Italy" would yield to the temptation of fastening his influence on Southern Italy, in case he could manage to do so under the cover of an invitation from the chiefs of the Revolution, when he would by no means be inclined to appear in the cause of Francis II. England, therefore, besides the influence of her fleet, which is not inconsiderable, will have a very great advantage of moral position. She can oblige France,—if she wishes to intervene at all,—to unmask her real motives,—and to intervene definitely on behalf of the Throne, instead of at the invitation of the Sicilians.

We trust, then, that there will be no hesitation on the part of England,—that if there is any proposal for either separate or "joint intervention," she will not only steadily oppose, but intimate clearly that such an intervention shall not be. We believe that this policy would not only be bold but effectual in preventing any compromise between the Bourbons and the followers of Garibaldi,—a compromise which could not but end in the speedy renewal of oppression, treachery, torture, and European intervention. "It is the fault," said Lord Palmerston in words which deserve to be remembered, "and fortune of Governments like "those of Rome and Naples, when, by the cruelties and "atrocities committed under their authority, their subjects "have been driven to desperation and have revolted, that "they appeal to all friendly Powers for assistance to remove "the men who are the authors and instigators of the revolu-"tion. These Governments forget that they themselves are "the real authors and instigators of the revolutionary "movements, and if their prayer were granted, and steps "taken to accomplish the object they desired, unless, which "is very unlikely, they were prepared to alter their own "courses, the first most effectual and only necessary step "would be their own removal." Let us take care that France does not by any manœuvres or pretences of mediation defeat an end which our English Premier can state so broadly and so well.

THE WITHDRAWAL OF THE REFORM BILL.

With the exception of the introduction of a Bill proposing an extensive organic change in our constitution, there is no more serious event in politics than the withdrawal of such a Bill. It is serious that a Government should say to a large class of her Majesty's subjects: 'You are entitled to have a 'greater share of political power than you now have: you 'ought to have votes, and you have none: you ought to 'have representatives, and you have none.' It is especially serious when the class so addressed is a low one in the social scale—when it is presumably an excitable one. But grave as is the evident nature of language such as this, the relinquishment of the measure so proposed is even graver. The abandonment of a Bill for extending the suffrage defeats the hopes created by its introduction, allows those to rule whom it was said ought not to rule, permits those to be still without power who were informed that they were at once entitled to such power, acquiesces in the continuance of political contrivances which have been authoritatively stigmatised as inexpedient and unjust.

Some persons are of opinion that the question of Reform can be easily laid to rest. They regard it as the artificial produce of political circumstances; they believe it may die away if those circumstances should change. We do not think it will be found to be so. Whatever may be the latent origin of the present Reform movement, its obvious history is clear. We have told the most numerous class in the country that they ought to have some power: will they be content with none? Statesmen have vied with one another in their zeal for the rights of the "working man." Is the working man, after all, to have nothing? The artisan classes may or may not have definite political opinions; they may or may not have formed a characteristic political creed; but they have (as the phenomena of trades' unions and of strikes show) strong class feelings, strong class prejudices, strong class hopes: considering their education, the facility of organisation proves that they have an inherent political aptitude. Is it safe, is is wise, is it right, is it decent, year after year, to assure men such as these that they are entitled to a place in the constitution, and yet, when the occasion comes, to give them no such place?

The present generation have on this subject a great political duty. Our fathers lived in a comparatively easy age. For many years the principal political topics in this country have been the repeal of certain laws—of the Protective laws, of the Anti-Catholic laws, of the laws infringing Protestant freedom. Even when thirty years ago our fathers had to deal with the question of Reform, they had to deal with it in a shape comparatively simple. They had to destroy the rotten boroughs, and they thought of little else. They did not minutely examine the exact results of the franchise they adopted. But the duty which they did not perform we must. We have practically engaged to give the working classes of this country some power in the State:—we must take care not to give them all the power. We have acknowledged that the views and the feelings—if you like the errors and the prejudices of the working classes should be heard in Parliament:—we must take care that they are not exclusively heard there; that they do not drown all other voices. We admit the difficulty of this task. *All* political construction is difficult, and this instance has difficulties which are peculiar to it. But we must not abandon a duty because it is difficult. We must do what we can; if we do not, we may find that democracy has come upon us before we knew or thought of it.

We have in the last two years had two measures of Reform, a Tory Bill and a Whig Bill. The Bill of Lord Derby's Government was a carefully considered measure, and it had several merits of detail. But it did not attempt to solve the problem. If it had become a law, it would have been ineffectual. There would, in all likelihood, have been no members for the working classes in Parliament afterwards, just as there are none now. It did not reduce the property qualification in any borough; and no evidence has ever been adduced to show that the "fancy franchises" would give the working classes the command of even a single borough. They would give many respectable working men votes, but they would be scattered through many constituencies, they would not return a member in any one. The Bill of Lord Derby was inherently defective, for it showed no apprehension of the problem to be solved.

The Bill of the present Government had, as we have recently shown, grave defects. On the whole, perhaps, its defects were as grave as any measure on the subject could possibly have been. It lowered the franchise in all the constituencies indiscriminately, and it introduced no counterbalancing elements. It strengthened poverty without strengthening property; it strengthened numbers without strengthening intelligence. It opened a door to democracy: it gave us no means of closing it. The particular consequences of the measure itself need not be discussed. Its immediate effects may be disputable, but the precedent which it established was evident and pernicious.

The failure of this last attempt to solve the question is very instructive. The Government introduced not a measure, but the schedule of a measure. They said to the House: 'There is the outline of a Bill; go into a Committee, modify 'it as you please.' The event has proved that on a difficult and generally interesting subject it is not beneficial, it is not even possible, for a Cabinet to abandon its constitutional duty of construction. The House of Commons cannot *make* a Bill in Committee. They may alter details, suggest specific amendments, interpolate coherent or incoherent additions. But they have no large creative power. They can invent very little in the present case. They could not suggest the needful checks upon democracy; they could not provide for the representation of property and intelligence; they could not devise a delicate machinery. They can test the solutions of a problem: they cannot solve it for themselves. The number of persons who were anxious to perform the task, was rather a hindrance than a help. If the Reform Bill had gone into Committee, it would have been buried under the multitude of inconsistent amendments. An "invitation to thinkers" was given at the outset of the French Revolution; and the

medley of suggestions which were received was so confusing, that all of them were useless. So it might have been in this instance. Even, moreover, if a private member should have suggested—not a very likely event—some perfect scheme, he could not have carried it. The influence and authority of a Government would be hardly tasked in the midst of such various opinions, by the inevitable difficulties of so complicated a subject. No individual could hope for success.

The failure of the late experiment gives us hope that it will not be tried again. We hope,—we are even sanguine that we shall not again see "a simple measure." We are anxious to think that nothing will be proposed in the hope that it will be modified either in Committee or "elsewhere." We believe that every future Bill will at least attempt to satisfy the evident conditions of the real problem; we hope that it will give the working men some members of their own; that it will not give them the whole Parliament; that it will not give them a precedent for claiming it.

MINES REGULATIONS AND INSPECTION BILL.

The Bill which the House of Commons were engaged in discussing on Wednesday afternoon for limiting the labour of children in mines and collieries, was one of those measures of a liberal and far-sighted economy which justify themselves in a very short time even to their strongest and bitterest opponents. We have a very profound conviction that legislative restrictions on the terms of any legitimate contract is an unmixed evil,—that it is usually far wiser to let adult labourers suffer for an indefinite time from the errors of their own class than to adopt the paternal theory of government. Now and then, indeed, there may be advantages universally demanded by the whole class of labourers of which a very small minority of dissentients would have the power to rob them,—as, for example, the abstinence from all productive labour on the Sunday. Here the State must interfere to give effect to the will of a people, or a trifling minority might be able to defeat it. But the duty of insisting on the education of the children of the labouring classes rests on still higher grounds. It is not because the parents are taking a false step in precluding their children's education, for which they are, sooner or later, sure themselves to suffer,—but because they are transgressing their rights and violating their duties as parents when they turn their children into the mines without even the rudiments of an education,—that the State is bound to interfere so far as it can do so effectually.

No doubt what the State can do is very ineffectual when compared with what the labourers, as a class, might effect for their own children, had they learned to estimate their duties aright. But this is just what they have not done,—what no generation of labouring parents can be expected to do, unless their own childhood has been preserved from the degrading influences of oppressive and stupifying toil. When the danger of interfering with the responsibilities of parents is pleaded, it is forgotten that you must first obtain a race of parents roused to a general sense of those responsibilities, and that unless you begin at once with the children, or, better still, so far as is possible, both with parents and children, such a race is never likely to grow up. No one doubts for a moment that if the working miners were themselves intelligent and unselfish enough to appreciate universally the importance of their children's education, they have in their own hands the means of securing it in what would be a much more efficient form than the House are now providing. As a class, they are in receipt of very high wages,—in some places so high that they can afford to decline working more than six hours a day; and no one ventures to foretell, as a consequence, that "migration of capital," which is held *in terrorem* over other workmen, from the great mining districts of the North of England. In fact, the miners would have the game pretty much in their own hands if they had a sufficiently deep interest in it at all. If they were all frugal, industrious, and resolute, they could make their own terms for their children's work, and without difficulty secure, if not the half-time system of the Factory Act, at least an eight-hour system for children throughout the mining districts. But though the miners are thus, as a class, blind to their own real duties and the rights of their children in their short-sighted eagerness to increase the weekly gains of their family, the owners of mines and collieries ought not to be found equally short-sighted and eager to increase their own supply of labour at the expense of the children who are to be their future workmen. If one thing more than another ought to be clear to them, it is that the increase in the general intelligence, carefulness, economy, and trustworthiness of their labourers is their own greatest gain; that these qualities cannot increase in the new generation without some more considerate tending in early youth. Even on the physical side of the question, the testimony of the factory inspectors to the improvement produced by the Factory Act is extremely striking. Mr Baker, one of the inspectors, and himself a medical man, reports last October that the Factory Acts "have put an end to the premature decrepitude of the former long-hour workers."

There were in 1833 at least 200,000 females employed within the factories of the United Kingdom. "They were," says Mr Smith, the eminent surgeon of Leeds, writing on this subject in August last, "a poor, emaciated and down-hearted looking race, with angular shoulders and stooping heads, and altogether destitute of the rounded form of healthy women." There are now 400,000, and they are "fair and florid, stout and muscular, cheerful and happy, and all the outlines are admirable." Such is the concurrent testimony of nine of the certifying surgeons who certify for mills which employ 70,000 persons in the various branches of textile labour, of whom 40,000 are women and children.

But this is not the least part of the gain either to masters or workmen. The general elevation in the elasticity and mind of labourers, caused by educational influences in their childhood and the lightening of toil during the years of childhood, is so real and great a gain to the master, that Mr Leonard Horner can give the following strong testimony as to the change of feeling which has taken place in the factory districts since the Factory Act was passed:—

The experience of nearly twenty-six years, extending throughout the whole time that the existing law has been in operation, convinces me that the legislative interference for the regulation of the labour of children, young persons, and women in factories is now viewed by a great majority of the occupiers of those works as having done, and as continuing to do, a great amount of good, without any injurious interference with the prosperity of their trade; and I firmly believe, that if it were proposed to repeal the law, there would be a very stout resistance on the part of masters; independently of all consideration of the opposition that would be made by the operatives, and of their own appreciation of the moral and social improvements which the law has effected and sustains.

All this, however, refers only to the factory districts, and that there are some important practical distinctions between mine and factory labour, which render the provisions of the Factory Bill less applicable to mines and collieries, cannot honestly be denied. The *relay system*, which has rendered half-time labour for children so common in the factory districts, appears to be little applicable, or less applicable, to the mines,—if we may trust the reports of the mine inspectors. The chief difficulty consists in the time that is taken in the ascent and descent of the mine, and the greater embarrassment caused by any break during the hours of work. Mr Baker, the factory inspector, who has also lived among colliers for 20 years, and who is a warm advocate for the half-time principle of the Factory Act, states this difficulty thus:—

Still, whilst I have no doubt that the half-time labour and half-day education of the factory system might be carried into effect in all congregated labour, I question very much whether just at present it could in *diffused labour, i.e., in agrarian labour, and in mines*. In the former, the hours of work are dependent upon such a variety of contingencies, many of which have reference to life, that it could scarcely be sufficiently controlled. In the latter, the "hurrier" works so thoroughly with his "getter," that unless two sets of children could be obtained, the removal of the one would necessitate the stoppage of the other. Neither does the hurrier ever work very long hours. Having lived among colliers for twenty years of my life, and being familiar with their habits, having had professional charge of two of the largest pits in the North of England for some time, and finding them in colonies, the whole of which are absorbed by the labour therein, I do not see the possibility of every colliery owner obtaining double sets of children.

It appears, then, from the best evidence, that the half-time system for children would not be applicable to mines and collieries. On the other hand, a half-time system is the less necessary, as the hours of labour in many of the most profitable mines are very short, and in few so long as they used to be in factories. There are pits in which the men even now will work only from 6 to 8 hours a-day;—and to divide that

period into half-time would clearly not be desirable. There are also many pits, especially in Scotland, no doubt, where the hours greatly exceed this, and range from 10 to 14 hours.

For the reasons just mentioned, the Government has thought it better to limit the labour of children in pits and mines by prohibiting it under the age of 12 altogether,—unless some evidence of an acquired knowledge of writing and reading on the part of the child can be proved,—than to limit it to a certain number of hours per day. Mr Kinnaird's amendment, limiting the labour of children in mines to eight hours per day, would, it seems, practically limit the labour of adults to the same period;—and Mr Paget's ably-supported amendment, extending the period of exclusion of ignorant children to 13 years of age, was resisted on the same ground, as causing too great a change at one time. How far the Government have or have not erred on the side of caution, we cannot undertake to determine; but of this we are sure, that the tendency of the Bill is excellent, and will not be found injurious to that spirit of honourable and substantial trade which can only rest upon the prosperity of all the classes concerned in conducting it. The workmen, whenever they are wise and noble enough, will find it easy to secure better guarantees for their children's education than this tentative Bill gives; and we are not sorry that it should be so. Once let them see and feel the blessing which is involved to their children in deferring the day of absorbing toil till some love of knowledge has been infused, and they will be eager enough to take the next step themselves. In the meantime, let us be assured that nothing is more chimerical than to apprehend any permanent injury to the productiveness of mines arising from such causes;—causes, namely, which, if they temporarily somewhat diminish the supply of labour, do so in order to economise it, through the increased intelligence of the labouring class, for ever after.

LORD OVERSTONE ON THE RESULTS OF INVASION.

The following extract from the replies of Lord Overstone to queries put to him by the Commissioners of National Defences, will have much interest for our readers:—

2. Question 2 asks my opinion of the probable effects of the *occupation of London* by an invading army; books, security, and public property having been previously removed, and private property being respected by the invader.

I cannot contemplate or trace to its consequences such a supposition. My only answer is,—it must never be. In proportion as a country has advanced in civilisation, and in commercial and manufacturing property, the metropolis of that country becomes more and more intimately connected with all the operations and interests of the whole community; it becomes the centre, the heart of the entire social and industrial system. The movements of the central city become connected by an indefinite number of the most delicate links with the daily transactions of every town in the empire. *Ruere illa non possunt, et non hæc eodem labefactata motu concidant.*

An invading army occupying London will be in possession of the centre of our governmental system, the centre of internal communication, the centre in which a large proportion of the transactions of the whole country are daily adjusted, the centre of our financial system; and as Woolwich must of course be included in the fate of London, the enemy will hold the great depôt of our military resources. Can any doubt exist as to the effects of this?

But the enemy will respect private property, and will endeavour to allay alarm, to restore confidence, to obviate confusion, and to give to his presence the character of a purely military occupation. What, it is asked in Question 5, will be the results of this?

I believe that in the case supposed there would exist a prevalent feeling that the fatal blow had been struck; that the deep humiliation had been sustained; that the means of satisfying his exactions are under the command of the enemy; that the means of further and effectual resistance are doubtful, whilst the calamities attending it are certain and overwhelming. Under these circumstances, many, no doubt with a noble spirit, would counsel determined and persevering resistance at all hazards and under any sacrifice; but many would deem such courage to be recklessness, and would think the time come for bending under the blow, and that no rational alternative remains but that of purchasing the withdrawal of the enemy upon the the best terms that could be obtained. Which of these conflicting views would prevail I cannot undertake to determine.

The efforts, however, of a country thus humiliated, paralysed, dispirited, and divided in opinion, would not, I fear, lead to any satisfactory result.

The safety of the country, as much as its honour, require that the integrity of the empire be defended on the sea principally, and in the first instance; and in case of any serious mishap there, we must be prepared to fight the battle upon the first inch of ground upon which a foreign foe sets his hostile foot. Our riches, the complicated nature of our social and monetary system, the limited extent of our country, the necessity of internal order and confidence for the maintenance of our manufacturing population, would, I fear, be found to render a prolonged conflict upon our own soil perhaps impracticable, at all events fatal to all that constitutes the power, the well-being, and the happiness of the country.

3. A serious apprehension of invasion, still more the actual landing of an invading army in force, would, I apprehend, necessitate the immediate suspension of specie payments by the Bank of England; this would be followed by the prevalence of monetary alarm, partaking more or less, according to circumstances, of the character of panic. Money would be withdrawn from savings banks, from country banks, from all parties holding money at call. To meet these demands Government securities must be brought to market in unusual quantities, at a time when the credit of the Government would be shaken, and the disposition to invest in Government securities would from the same cause be seriously checked. The consequence is obvious; a heavy fall in the price of public securities, a prostration of public credit, and grievous inconvenience, amounting not improbably to the absolute suspension of the usual course of monetary operations.

In this country the use of money is economised by various complicated expedients to an extent infinitely greater than in any other country. The efficiency of these expedients depends upon the undisturbed state of social order and public confidence; they would be at once paralysed by any serious invasion of the country. More money would be required for the purposes of circulation when more money could not be had; and the existing amount of money would be rapidly secreted for safety. Money, and the substitute for money, credit, would disappear simultaneously. To what extent would this go? No man can say beforehand. But these results would be more disastrous in England than in any other country, on account of the complicated character of our monetary arrangements, which renders the whole system peculiarly sensitive to any movement tending to produce disorder or discredit.

4. The fourth question directs attention to the effect which an invasion of England may be expected to produce upon the prosperity of other countries, and the strong reaction which it is supposed this might cause against the author of the aggression.

I cannot doubt that the consequences of any blow inflicted upon the prosperity of England would be felt, and seriously felt, through every quarter of the globe to which trade and commerce have penetrated. A large portion of the productive energies of the world are sustained by British capital and British credit. Look at our annual exports, amounting to about one hundred millions of sterling value. This indicates the extent to which other countries derive the supply of their necessaries or their luxuries from British industry. Look, again, at our our annual imports, swelling to the same amount, and thus showing the extent to which other countries find a market for their products in British prosperity. The country from which these gigantic transactions emanate cannot be seriously injured without disastrous consequences to every country which directly or indirectly has held intercourse with her. Such is the beneficent law of international commercial intercourse; all trading countries have a common interest in the progressive prosperity of their neighbours, and no doubt can be entertained that the effects of a blow which an invasion of England would inflict upon our commercial prosperity must vibrate through the whole trading world. But these effects will be very slightly estimated by anticipation; it is only after the fatal occurrence other nations will fully recognise the extent to which their interests are involved in the well-being of this country. Our safety must in no degree be left dependent upon the precarious and tardy sympathy of other countries. The aid to be derived from this source will arise after the evil has been consummated. With ourselves alone must rest the defence of our country.

We have every inducement to make our system of national defence complete and effectual, because the calamities and misery which a successful invasion of England must produce would be far more serious than any of which the world has yet had experience.

THE TWO REFORMS.

TO THE EDITOR OF THE ECONOMIST.

Sir,—Allow me to say a few words of farewell, for the present, to the question of Reform. The country, the House of Commons, and the majority of the Ministers, are rejoicing over the departure of the Bill of 1860. They have much cause for joy; but your powerful remarks of last Saturday have faithfully shown how great will be the public misfortune if the alarm of the nation, and the thought and discussion to which it has given rise, shall pass away without fruit for the future.

There are many who have been so disgusted and frightened as to wish not to hear again of Reform for the remainder of

their lives. The feeling is natural; but such wishes will not avert the danger they dread. If the motives which prompt the demand for Reform are just and permanent, the only safe way of dealing with them is to grant them reasonable satisfaction.

The reproduction of a Bill similar to that which has recently departed would be a national calamity and a most culpable act. But a Bill which should give effect to desires that do honour to those who feel them, and prove their attachment to the institutions of their country by their wish to participate in them, would strengthen the constitution and promote the welfare and safety of all.

Men are led away by words, which often represent very different things under the same sound. There are two most distinct substances expressed by the term Reform.

In 1832 Reform denoted a transfer of power from one class of persons to another, discontent with the spirit and character of the then existing legislation, a sense that an unjust predominance of political influence, and consequent illegitimate advantages were enjoyed by men who had no lawful title to them,—a feeling that their interests, their opinions, and their prejudices had an undue weight in the State, and obstructed the passing of measures demanded by the expanding wants and intelligence of the nation. Reform was a revolution against the unjust preponderance of lords, landowners, and protected interests, in the control of public affairs. The desire for it was provoked by sinecures and pluralists of every kind, and by the most startling abuses in the State, the Church, and the Corporations. It was eminently popular, and deserved to be so. Men had come to perceive the evils from which they suffered, and the hopelessness of redress from the then House of Commons. That House had ceased to be in harmony with the state of society and the progressive development of the country. Government and society were at discord; and nothing but a very deep change could enable them to work together.

This is not the Reform which is asked for or needed in 1860. The House of Commons is not accused by the people at large of being inattentive to their wants or unsympathetic with their feelings. There is not a single measure which can be fairly shown to be required for the improvement of the happiness of any class, which the House of Commons is not only willing but even eager to pass. Differences of opinion there are, as there must be under every form of human association; but no disposition to confer privileges, or to resist any enactments called for by public opinion, is charged upon the House of Commons. Reform is not wanted as revolution; and it is because it has come upon the country in the form of revolution that its defeat has been so overwhelming.

Yet there is a Reform which our age greatly needs, which is righteously asked for and can be safely granted, which would give a broader basis to the State and increased security to its institutions. It is a real misfortune that it has no special name to designate it. It suffers grievously from being confounded with such Reform as that of 1832, from which it entirely differs in nature and objects. It is the admission to a just share of political influence of men who have earned a right to it by their intelligence, their industry, and their loyalty. In free States there is no political desire so legitimate, so deserving of respect, so honourable to a man, as the desire of self-government. It is a shame and a danger to tell men who love their country, who value its institutions, and on that very account wish to take a part in them, that they must remain excluded because there is not statesmanship and energy enough in Parliament to incorporate them into the political machine.

It may do some service towards the understanding and advancement of a question of such vital importance to remind the public that it is just and expedient, that it aims at no change of policy, that it is completely capable of a safe solution. It cannot be got rid of: it is highly dangerous to let it stand over for the day of physical suffering and disaffection: and, on the other hand, it needs only an accurate comprehension of its character and conditions to bring it to a satisfactory settlement. It is entirely a problem of political securities and guarantees, as I have already shown. Several solutions have been proposed, and I have stated that, in my opinion, plurality of votes, guaranteed according to property, is the most direct and the most efficient. It would be a happy termination of much agitation, if the alarmed discussion on the conditions of a safe Reform Bill excited by the late measure, resulted in the enfranchisement of the many sons of England whose honourable self-respect has given them the desire, and their moral worth the title, to be received within her constitution.—I remain your obedient servant,

BONAMY PRICE.

Agriculture.

LANDLORD AND TENANT.

FROM A LAND AGENT'S POINT OF VIEW.

WE lately referred to some passages from a lecture delivered to the members of the Faringdon (Berks) Agricultural Book Club, by Mr John Beasley, of Chapel Brampton, which we met with in the columns of a contemporary, and which did not seem to be in accordance with any very sound view of the relation of landlord and tenant. We have since received a copy of the lecture, and it forms a remarkable illustration of the transition state in which husbandry as a business, and tenant-farmers as traders, exist in England.

From a request made by the Club for the publication of the lecture, it is evident that it found much acceptance with the farmers who heard it, and it is quite evident that Mr Beasley is a thoroughly practical man, and is well acquainted with most of the conditions essential to good husbandry. As a land agent and a farmer of many years' experience, Mr Beasley tells the farmers of the Faringdon Club what he conceives "to be the duties and the responsibilities of the several parties who form the links of the agricultural chain," *i.e.*, the landlord, the tenant, the land agent, and the labourer. "The landlord is in the possession of the raw material,—the land is in his hands, and there is nothing to prevent his disposing of it as he will and upon what terms he will." Granted; but, unless the landlord means to retain the land in his own occupation, he must consider how he can best obtain, what after all he most wants from it, a permanent income regularly paid. "His privileges are great," says Mr Beasley, "and so are his responsibilities... .....I will not pretend to say that all farmers cultivate their land as they ought to do when they have confidence in their landlord, but I do say that where this confidence is wanting, the land is never farmed well. Confidence is the lever of elevation." Now, with all deference to Mr Beasley's experience, this is sheer nonsense. What has confidence in the landlord to do with the tenant-farmer, who has made such a bargain as will secure to him the uninterrupted possession of his farm for such a period as will enable him to cultivate it with advantage? If he means to say that the tenant is to farm as an yearly tenant, and farm well because he believes his landlord will not take any advantage of him, then he simply asks the farmers to trust to the frailest of all frail reeds. And we say so upon his own showing. Let us trace his description of the landlords, and the requirements of the agriculture of England. He thinks "that the one great defect in the character of English landlords is, *their want of knowledge upon those subjects in which their interests are most deeply concerned.*" And he afterwards adds:—"It will be to his own comfort and interest, to the comfort and interest of all over whom he is placed, that he should possess a good and intelligent knowledge of all that belongs to the management of landed property. I am persuaded that for the want of this knowledge, many right-intentioned landlords fall into grievous mistakes." A man of education "cannot live much in the country without acquiring some knowledge of agriculture and some notions of business; but it is not *a little knowledge* I want to see in the landlords of England; there is nothing in which it is more true that a little knowledge is a dangerous thing than in agriculture and all its belongings. would rather have to deal with perfect and acknowledged ignorance than with a little knowledge." And he recommends that heirs to large landed properties "should devote at least some measure of their early days in preparation for their after position, in the same way as their younger brothers prepare themselves for the army, the navy, the law, or the church.....I have known few instances of men attaining to anything like a useful knowledge of agriculture who did not give attention to it in early life." Nothing can be more sensible and true than these remarks. But then, we may ask, what possible ground is there for farmers "confiding" in such owners of land? Indeed, there are no persons so difficult to deal with in business transactions as those who are ignorant of their own interests in regard to the matter in hand, or who, still worse, have only the "little knowledge" which in relation to agriculture Mr Beasley so justly deprecates. How many landlords are there in England who "know their own business"? Yet Mr Beasley well says that this "is the first duty a landlord owes to himself and to all those over whom he is placed." The extreme distrust and suspicion with which so many landowners regard the occupiers of their farms are direct consequences of their own "want of knowledge upon those subjects in which their interests are most deeply concerned."

Then Mr Beasley told his audience "there is nothing more, perhaps nothing so important, as fixedness of tenure; and I believe

it is the duty and the interest of every landlord to secure this to his tenants in one shape or another.....I do not give any decided opinion as to whether this security should be ensured by leases, or by other means.....But unless a tenant feels that he is secure of holding his farm so long as he farms it well and maintains a respectable character, he is not placed in a position to do justice to his landlord, himself, or the labourers of his parish." And then Mr Beasley proceeded to argue against leases, because "in a district where leases are the exception and not the rule, there is some difficulty in jumping out of one system into another." How "fixedness of tenure" is to be secured without leases the Faringdon farmers were not told. The truth is, Mr Beasley is convinced, as every intelligent land agent must be, that to secure "good tenants with ample capital" for farms, leases must be granted; while he is aware that many of the tenants, who under the actual system occupy farms, are not able to occupy them with advantage either with or without leases; but in deference to the prejudices of his employers against granting leases, he sounds these doubtful notes on the subject. He says, at all events, "short leases are a mistake. A lease of seven years is not worth having, a lease of fourteen years is not long enough, and a lease of twenty-one years should not be allowed to nearly expire before it is renewed, but the custom should be at the expiration of the first fourteen years to add seven years to the lease, and to continue renewing the lease at the expiration of every seven years, until either the landlord or tenant had good reason to run it out. Not necessarily at the same rent, which could be, at each renewal, a matter of arrangement." These are the suggestions of a thoroughly practical farmer, and deserve the attention of every landlord who takes a rational view of his own interests. Again he says:—"Stipulations in most leases and agreements for a year are antiquated.....Stringent clauses, confining tenants to one routine of cropping, are not desirable, neither is it a test of good farming; good crops and perfectly clean ones are the best evidence of a farm being in good condition, and when I have this evidence I require no other." Yet with such sensible views Mr Beasley can prattle about "estates where the same family have been occupiers under the same [family of the] landlord for generations," as if such estates were not, as they commonly are, the least improved and such farmers the least enterprising of the day.

On other points Mr Beasley's evidence is important. He says there is a great want of dwellings for agricultural labourers, and "an increase of houses has not kept pace with the increase of population in the rural districts.....What has become of the surplus labourers of England now?.... ....The willing labour of this country has found a ready market and is all absorbed; but if we are to retain for agricultural purposes our fair and necessary share, we must make due provision for their health, their comfort, and their prosperity." In a pecuniary point of view, a proper supply of cottages will pay the landlord well.

There are at present signs of a "more rapid increase," of general prosperity in this country, "than has hitherto been witnessed. If this be so, the value of landed property, in a good state, compared with that which has been neglected, will be increased in like proportion. It is not too much to say that the value of a landed property may be diminished or increased, during the lifetime of one owner, fifteen per cent., making a difference to his successor of thirty per cent." This is by no means exaggerated. It is remarkable that the lecturer did not say a word about game, a subject which is answerable for much of the evil which afflicts English farmers.

To farmers, Mr Beasley recommended an early and complete training in their own business, even to the performance of the various kinds of manual labour required on the farm. They must pay "attention to details." They must not take too much land. He said:—"I would recommend that in engaging a farm, you should take care that you are fully up to its management in capital and in every other requirement. A man who takes a farm of five hundred acres, whose capital in money, energy, and skill are more fitted for a farm of three hundred acres, makes a great mistake. Upon the lesser quantity he might have been a prosperous man, while upon the greater, he is all his life labouring under difficulties and disadvantages, and the ultimate result is unsatisfactory." This is advice we have often offered to our agricultural readers. A farmer can make no greater mistake than to take more land than his command of capital will enable him to cultivate thoroughly. There are other shrewd and business-like suggestions in this lecture, which are curiously mixed up with remarks implying that the position of a farmer towards his landlord is one of almost servile dependence, rather than that of a capitalist who has made an equal commercial bargain. It tries to combine the feudal with the commercial principle, and illustrates aptly enough the sort of struggle which is going on in reference to agricultural land and its management in this country.

AGRICULTURAL SOCIETIES.

Two meetings in connection with agricultural societies were held last week,—the one the annual meeting of the Bath and West of England Society held at Dorchester, the other a special general meeting of the Smithfield Club; and at each some points worthy of note occurred.

At the Dorchester meeting the show of stock was pretty good, though, from the unfavourable state of the weather and the showground, the exhibition seems to have lost much of the interest which is usually taken by the locality. The ground itself seems to have been ill-chosen for the season, being "a low-lying, undrained marsh, which two or three hours' rain had reduced to a swamp." Great efforts had, however, been made by the directors to render the ground passable by means of planks and hurdles. The Shorthorn classes were not numerously filled, and, as is commonly the case in the West of England, the great majority of the prizes were carried off by Mr Richard Stratton. The Herefords and Devons were both in more strength, and formed a good show. In sheep, the Cotswolds were very good, and Mr Turner, of Barton, who seems to have had all the prizes, produced some excellent Leicesters. The South Down and Hampshire and Shropshire Down sheep attracted much attention; and, of course, there were Somerset and Dorset horned sheep, as well as Dartmoors classed as mountain sheep. Lord Rivers, the chairman, at the Council dinner, after descanting on the progress agriculture had made in recent times, said: "And though last not least, as he said it without the least wish of provoking any political or party feeling, or causing any discord or difference, it (the Society) had lived to see the prosperity of agriculture riding triumphantly over the desponding views which were at one time entertained." Such an expression was probably thought useful, for opinions in favour of protection, like belief in witchcraft, may yet linger in the West.

The Society, it appears, has abolished prizes for implements, at the instance of the implement-makers. Lord Rivers, however, "thought it was a mistake on the part of the Society.....The public had a right, or if that was too strong a term, they ought to receive from that Society the best proof that could be given that the implement was really a good one. Persons came to the yard and could judge for themselves as to the best cow, sheep, or pig; but they had not the same means as the Society possessed of deciding upon the merit of implements." On the other hand, the majority of the Council had declared against a prize list for implements, though the farmers generally desired, and naturally desired, to see the various implements tested by competitive trials. Lord Portman "thought the science of agricultural machinery and implements was so far advanced, and the task of deciding which exhibitor had the highest claim was so difficult, that it was not desirable for the Society to give prizes for agricultural machinery, and thus give its authoritative opinion, but rather to leave it open to anybody to test the merits of the implements exhibited." So Mr Acland was of opinion "that the Society, by offering premiums, would incur too great a responsibility, and that it would be better to leave everybody to choose for himself, without being biassed by the Society's judgment." May it not be said that this is rather shirking a responsibility which the Society, from the position it assumes, ought not to evade. That the agricultural implement-makers as a body have greatly benefited by the attention excited by competition for prizes is undoubted, but their jealousy of each other now induces them to put an end to prizes. Probably public trials, of so brief a character as alone can take place at an agricultural meeting, afford a very imperfect test of the comparative merits of different instruments when they come to be used on the farm, but where the implements are new, such trials do afford the farmers some idea of the work they are fitted to perform. Even if no very strict test of merit is obtained, the ordinary class of farmers expect, when they go to a grand agricultural meeting, to see something more than mere sheds full of implements and machinery. It seems, however, that the ploughs and other machines were set to work, leaving the spectators to form their own opinions of the work executed. This may be the best plan. In moving the appointment of the President for the ensuing year, Mr G. S. Poole objected to the practice which had hitherto prevailed, of selecting as President a gentleman from the county in which the next annual meeting was to be held, and gave notice that he intended to move, on a future occasion, that it should be a rule of the Society "that the President be elected from among the members not resident in the county in which the next annual meeting is appointed to be held." His object was "that there was nothing the Society should more carefully avoid than mixing itself up with local interests, local divisions, and local difficulties."

There is much sound sense in that view. This is one of the reasons why local agricultural societies seldom succeed. The area of such a society's operations cannot well be too wide, and local prejudices should be carefully avoided.

At the special meeting of the Smithfield Club, the purpose was to consider the report of a Committee appointed to make arrangements for removing the Society's Christmas exhibition to Islington. Contrasting favourably with the Royal Agricultural Society, a reporter was admitted, and it was arranged that a circular should be sent to every member to invite his approval or disapproval of the Committee's plan. The plan is to form a Company to build an exhibition hall at Islington, the Club undertaking to lease their exhibition to the Company for twenty-one years, receiving a yearly rent of 1,000*l* a year.

We must confess to some regret that the Christmas fat cattle show should be banished to so remote a site as Islington. The Duke of Richmond, the President of the Club, Mr C. Barnett, the

chairman of the special meeting, and Mr Gibbs, the Hon. Secretary, severally declined to sign on behalf of the Club the agreement with the Company.

Literature.

History of England, from the Fall of Wolsey to the Death of Elizabeth. By James Anthony Froude, M.A., Late Fellow of Exeter College, Oxford. Volumes V. and VI. John W. Parker and Son.

Mr Froude has at least the incontrovertible merit of *getting on* with his History. The scale on which his first volumes were composed inspired a not unnatural doubt in many minds whether he would do more than add another to the melancholy list of unfinished fragments of history, full of a promise which renders more keen the ultimate disappointment to the public. But six volumes have now already appeared, and the reigns of Henry VIII.,—at least that portion of it to which our historian professed to confine himself,—of Edward VI., and Mary are now completed. We spoke on former occasions of the peculiar merits and defects of Mr Froude as an historian of the Tudor Princes, so that we have little left to say on that score, except by way of reference to any change in his mode of treatment or modification of his peculiar views. We have, we think, to return a negative answer on both these points. Mr Froude is in these volumes very much what he was in the preceding—the graceful and truly English writer, the laborious and thoughtful student, the independent and original thinker, the skilful reasoner, the practised advocate, and, we must add, the *not* impartial judge. As in the former volumes, so in this, few passages can be read without a keen perception in the reader of the thorough mastery of language and the easy and felicitous use of illustrative imagery by which they are marked. The taste of the writer seems also to be more continuously good in this than in the former part of his work. We are not troubled and provoked by the little passages of somewhat maudlin sentimentality which every now and then marred the general effect. These blue and red lights of the theatre are happily extinguished, and we have an agreeable natural colouring thrown over nearly the whole of the historical *tableau*.

Mr Froude is not fond of parading ostentatiously a long list of authorities at the bottom of his page, but the select list which he gives affords ample testimony that he has not spared his labour to gather from fresh original sources the actual motives of men and the prevalent contemporary estimate of current events. If the addition thus made to our stock of facts is not large, we have some assurance that the positive amount of new matter to be obtained from our present sources of knowledge is in fault, rather than the diligence of the historian.

It is not easy, at first, when these manifest merits of the writer are conceded, to understand why Mr Froude's History is not more interesting, and in the wide sense of the term more popular, than it actually is. With all its beauties of style and its freshness of treatment, we cannot help feeling throughout that it is more a book for the historical student and the finished scholar than for the reading public at large. In the mind of the former it will recommend itself above the work of Lord Macaulay in many points. With severer judges of historical study it may be more controverted in its conclusions, but it will probably be more respected in its arguments. The reason of the difference in the public estimate of the two writers perhaps is, that in Mr Froude the story is subordinated throughout to the criticism—the tale is told as an advocate would tell it—bringing out into relief only those portions which told on his argument, and sinking those non-essential details which might give richness and more brilliant colouring to the eye, but rather distracted the attention from the syllogistic sequences of the selected facts. Macaulay, on the contrary, is more pictorial than logical, and seeks to excite our sympathies by carrying us along with his heroes into the midst of their glorious toils and triumphs, and with his villains into the actual arena of their deeds of darkness, rather than to convince our reason by an astute and forcible array of summarised facts and balanced motives. Not that Mr Froude cannot describe scenes well and vividly, but he seldom gives the play of personal passion; and our knowledge of and interest in the individual is too subordinate in his pages to our judgment on the *conduct* and *policy* of the action. This mode of drawing personal character can never be popular, and is to some extent defective, irrespectively of any popular taste. It is difficult to realise thoroughly, so as to picture to ourselves as a living man, one of whom our knowledge resolves itself pretty much into a succession of judgments on particular historical events in which he was engaged. We gather more idea of Charles V. from one day's chronicle of him in the petty details of his convent life, than from all the systematised treatises on his political philosophy and his successful imperial career. Lord Macaulay has given us something of this chronicler's gossip. Mr Froude seldom condescends to avail himself of it, and how much his History loses by this we see at once by observing the superior interest and life-like character attaching to those passages of his present volumes in which he has departed from his general rule. At the same time we have no intention of recommending the fashion pursued by memoir-mongers of the present day, of hanging up on a peg a suit of antique clothing, and collecting around it a museum of miscellaneous anecdotes of the most various origin. If Mr Froude is defective as an historical portrait painter, it is because he leaves us too much in a Platonic world of prototypes, and satisfies himself with a few master outline touches.

The second of the present volumes appears to us to be much the better of the two in this as well as in other points. The reign of Edward VI. is too much a sequence of the argument by which to our mind the account of the reign of Henry was unfavourably affected. The Protector Somerset and his successor Dudley, Duke of Northumberland, are here little else than foils to the superior policy of the deceased Tudor King. The freedom which the author gains in one direction by ceasing to be the constant apologist and eulogist, he loses by the sort of necessity which his theory imposes upon him of finding fault in most things to render more emphatic the essentially Henrician excellencies of the previous administration. Take Scotland for instance:—how differently is the comparatively mild warfare of Somerset treated to that which Henry shadowed forth in his savage instructions to his generals. Take again the condition of the poorer classes and the insurrections which took place in various parts of the kingdom:—in the reign of Henry, they are dwelt upon as excuses for the severe measures of the Government; in that of Edward, they are pointed out as indications of its feebleness and inefficiency. Somerset may have been in some respects a weak man, but he strikes us as in the main an honest man; and although the stern dignity of the Crown may have been more firmly upheld in the person of Henry, we recognise more of the virtue of princely care for the people committed to his rule in the gentler spirit of the Protector. The love of the common people which Somerset excited was of a deeper and more touching character than the loyal enthusiasm which the gallant carriage of the Tudor King extorted through all his crimes and cruelties; and the errors of his head are more easily forgiven, when we recollect that half his difficulties were created by the goodness of his heart. Dudley is painted by Mr Froude in much darker colours: he is the villain of the volume, but the difficulty at starting of transforming a chosen instrument of Henry into such an evil-disposed personage, without derogating from the sagacity or justice of the dead King, is never quite overcome, and a certain indistinctness in consequence hangs over the portrait. Edward himself is hinted at rather than sketched, though perhaps little but hints are now to be attained to respecting his real character. Cranmer is eulogised—we think with too undiscriminating a hand. The creature of King Henry is treated with a lenity to which even his ultimate noble bearing seems to us to give him no claim. Gardiner is drawn with a more even and judicious hand. Pole, again, is a caricature, nearly as exaggerated as the portrait of Henry in the Cardinal's own publications.

In his character of Mary, however, we think our author has been eminently successful and very impartially just. He has drawn us the picture of a true religious bigot, in its weakness and strength, and the sympathy and repulsion we feel flow so naturally and directly from our impressions of the working of such a temperament, that we are never sensible of any want of harmony in our conception of it as a whole. Did our limits allow, we should be disposed to break a lance with Mr Froude as to the assumption which runs through all his volumes that consistent principle is essentially unpractical, and that the exclusive bigotry of a middle-system, based on compromise and expediency, and enforced by penal laws, is any better or more justifiable and desirable than the excess of zeal which springs from a faithful carrying out of honest convictions. We are quite prepared to admit that the Reformation under Edward outstripped in some respects the reforming impulses of the majority of the nation; we can fully estimate the evils of the reactionary frenzy under Mary; but we think that some account ought also to be taken of that balancing system under Henry which made sincere convictions in either direction a penal offence, and made utter indifference to principle, and the power of easy self-adaptation to the changing religious phases of the Royal mind, the essential and primary conditions of political success. The great nobles whose ambition the historian bewails in his history of Edward's reign were the true disciples of Henry's school of expediency; and the fanaticism of the extreme parties in the Protestant and Catholic movements was recommended and strengthened by its contrast with the unprincipled selfishness of a Court Religion.

The Rights of Nations; or, the New Law of European States, applied to the Affairs of Italy. By Count Mamiani, Minister of Public Instruction in the Kingdom of Sardinia. Translated from the Italian, and Edited, with the Author's Additions and Corrections, by Roger Acton. London and Brighton: W. Jeffs. 1860.

[First notice.]

To say of any person that he is an eminent foreign statesman, is to predicate of him a career and character very different, in most cases, from those of statesmen in England. The vicissitudes of political life in this country seldom include severer disasters than fall from office, deposition from party leadership, and decline of reputation. He, however, who takes a prominent part in public affairs in almost any other European nation must be prepared for graver reverses. Proscription and imprisonment, flight

and exile, have, at one time or another, been the fate of a great majority of considerable continental politicians. Foreign statesmen, moreover, unlike those of England, are generally men of letters as well as of affairs, of thought as well as of action. Count Mamiani, at present the Sardinian Minister of Public Instruction, forms no exception to either of these rules. A Roman subject and a liberal politician, he took part in the insurrection of the Legations in 1831, and, as Mr Acton informs us, in his instructive and interesting preface, "was the only member of the Provisional Government who refused to sign the capitulation of Ancona." Nine months' captivity in Venice was the natural reward of his patriotism. Fifteen years later, "when Pius XI. proclaimed an amnesty, Mamiani was invited to return to the Roman States, but he would not do so until that clause, which prescribed to every political exile, on returning, a formal recantation of previous offences, had been modified for his unconditional resumption of the Roman citizenship." As Prime Minister of that weak Pontiff, in the days of his reforming zeal or pretences, Count Mamiani earned by his wise moderation the hatred of the fanatics both of the ultra-democratic and the ultra-reactionary parties. Though he opposed the establishment of the Roman Republic on the ruins of the Romish Papacy, he yet left Rome, when, in 1849, French bayonets restored the most hypocritical, and, with one exception, the most abominable of Italian despotisms, and transferred his allegiance and his political service to Piedmont.

But Mamiani is a man of letters as well as a statesman. During the tranquil intervals of a disturbed life, he has found leisure for the cultivation of speculative philosophy, and has done much to revive the study of it in Italy. He is the author of several elaborate treatises, of which the reader, who may be curious in such matters, may find an account in M. Débrit's recent "Histoire des Doctrines Philosophiques dans l'Italie Contemporaine." From the qualities displayed in the "Nuovo Diritto Europeo," which Mr Acton has justly deemed worthy of translation, and has skilfully translated into English, we should infer that they are of high value. However this may be, the double discipline of abstract thought and of the practical handling of affairs is just that which is required for the successful treatment of questions of international law. They are involved in intricate details which only the *homme d'affaires* can properly understand; and yet, as Sir James Mackintosh has remarked, "there is close connection between the most abstract and elementary maxims of moral philosophy and the most complicated controversies of.....public law"; or, as Mamiani himself expresses it, "The law of nations requires not unfrequently the discussion of abstract truths. For it is independent of the authority of.....statutes and superior to them; it has an immediate connection with the law of nature, which is wholly rational and speculative; it must often be traced back to the very foundation of human society, and often to solve the doubts and settle the differences which arise between one people and another, no better way can be found than to cite the great maxims of equitable reason deduced and explained by science."

The general notion of international law is that it is a dull and dry science, full of thorny technicalities, interesting only to the professional diplomatist; and that its professors are formal pedants, in whose hands the most attractive theme would become repellent. Voltaire has helped to give currency to this notion. "*Rien*" (he observes in one of the articles of his "Dictionnaire Philosophique") "*rien ne contribuera peut-être plus à rendre un esprit faux, obscur, confus, incertain, que la lecture de Grotius et de Puffendorf, et de presque tous les commentaires sur le droit publique.*" That a treatise on public law need not have these faults,—that it may be, at once, profoundly instructive and of almost popular interest,—that it may be marked by exact logic, moral depth, and discrimination, and by the attractiveness of a clear and graceful style,—Count Mamiani has given convincing proof in the work before us.

In the method which he has adopted, Count Mamiani is a disciple of Puffendorf rather than of Grotius. He proceeds downwards from acknowledged moral principles to the interpretation and judgment of facts; and does not entangle himself in the details of particular cases, without having explicitly recognised and stated the standard by which he pronounces on them. His method is rational rather than empirical. He himself will best explain it. After admitting that there are certain points connected with his subject, on which controversy seems likely to perpetuate itself in academies and professorial chairs, he thus proceeds:—

> But happily it comes to pass that educated and well-informed men, in every civilised country, are wont to gather from the theories of philosophical jurists those portions only which are evidently and strikingly reasonable, and which are in exact conformity with the conclusions and suggestions of an universal intuition in regard to morality and justice. From these sources a kind of popular science is, drop by drop, as it were, distilled, which is slowly but surely augmented, until our observation and judgment of all the concerns of social life are gradually refined by it, and it may be fitly referred to, as consisting of common sense, clarified and applied. Its application, however, is, as yet, inadequate and disconnected. It is contained in a multitude of aphorisms, rather than in any well-arranged system of ideas and doctrine, or any strict and coherent series of antecedent and consequent propositions. To construct such a work of reflection and reasoning is a task that obviously demands the labour and care of a learned and speculative mind.

This task is, however, one which, according to our author, must be "modestly discharged," and of which the "results should be perpetually collated with the maxims of that which we have called the popular science of evidently reasonable rules";—its function being not to supersede, but to supply the deficiencies of, that "fine discernment of enlightened men," which "picks out from scientific doctrine its sure and solid portion, but creates and methodises none."

Again:—

> The fabric of law is ever one of a mingled texture, made up of thought and action, and as produced by facts it comes out in an involved, confused, and contradictory shape. By the ideal contemplation of law this fabric is developed, cleared up, and made to harmonise with itself. Speculation and History, therefore, are the twin eyes of juridical philosophy. .....The mind may either descend from a distinct and orderly conception of the idea to its illustration by the facts; or else it may, on the other hand, discern from the essential nature of the facts the ideal principles latent and implied therein. We shall adopt the first of these two methods.

The neglect of this science in England,—the indifference to it, and the dense ignorance about it which prevail among persons not uneducated, and which are painfully apparent in our confused and fluctuating judgments on foreign affairs,—are partially owing to the absence from our literature of any standard work on the subject. Such a work Sir James Mackintosh might have written, if he had devoted his fine powers to so doing. The natural bent of his mind, his fondness for and knowledge of ethical science, and his practical acquaintance with politics, admirably fitted him for the composition of a treatise on International Rights and Duties. His lecture on the "Law of Nature and of Nations" does indeed sketch out the ground plan of such a work, but it does no more. Further, the fact that international law had scarcely any recognised existence among the Greeks and Romans, and that therefore their literature, which forms so large an element of modern culture in England, has no work touching thereon, has contributed to the same unfortunate result. The truth is, that in regard to ourselves,—*penitus divisos orbe Britannos*,—the "unsocial ocean," in relieving us from some of the complications of what the Germans call the "European States-system," has made us too indifferent to the problems involved in the relations of nations. And as to Greece and Rome, the explanation is not less evident. International law implies a community of civilised peoples. This community, however, did not exist in the ancient world. Except those two nations, all were barbarians; and, therefore, public law had no scope or field of application. For the same reason, in quite modern times, the Ottoman Porte has held itself out of, and been regarded as without the pale of European law; and we ourselves do not feel bound by its principles in dealing with the Asiatic races. For its obligations are reciprocal, and must be acknowledged on both sides, in order to be acknowledged by either State. These considerations may, to some extent, explain why it is that the three States of the ancient and modern world, which have contributed more than all others together to ethical and political science and its exemplification, should have left one great department of it so slightly cultivated. As respects ourselves, we can only hope that the reproach may soon be done away with. In the meantime, we must be dependent on the foreigner. Count Mamiani's work, indeed, deserves to take by adoption, a permanent place in our political literature. So high is our opinion of its value, not only in itself, but in the application of its doctrines to the present state of European affairs, that we shall not hesitate to ask the reader's attention to an account of some portions of it in a second notice.

THE IRISH CONVICT SYSTEM, MORE ESPECIALLY INTERMEDIATE PRISONS. By BARON FRANZ VON HOLTZENDORFF, Doctor of Laws, and Professor in the University of Berlin. Translated from the German. Simpkin, Marshall, and Co.

It is as an expression of the opinions formed by an able and thoughtful foreign critic concerning the Irish system of prison discipline that this work has been considered worthy of translation. English readers have the opportunity of studying the subject at greater length, and more satisfactorily, in the reports of the directors by whom that system is managed, and in the writings of the eminent and valuable public servant who has been its chief creator. M. von Holtzendorff's work is written distinctly for the German public; and for that section of the German world which is interested in the questions upon which it bears. In a word, it was intended simply as a fragmentary contribution to German knowledge and experience on the topics of repression and reformation. Our readers, therefore, must not expect to find in its brief account a full history of a system which has been often discussed, but which is still too little known to be adequately explained within the compass of ten or twelve well-printed sheets. Writing with such an object, too, the author is sparing of comment, and more anxious to elucidate than to criticise. Nevertheless, even for English readers, this little work will have interest and value. And it is certainly gratifying to those who, like ourselves, feel that Captain Crofton has accomplished the greatest improvement yet made in our penal system—has made the most decided step yet taken towards some better and more rational method of secondary punishment—to find his views so generally adopted, and his practice so cordially approved by a foreigner of high authority, on

the very points on which most cavil and objection have been raised by unfriendly observers at home.

M. von Holtzendorff clearly does not belong to the severer school, represented in England by such writers as Mr Adderley, who still feel confidence in the deterrent power of punishment, and deprecate the over-clemency which they charge upon the advocates of reformation. If he err, it is assuredly in the direction in which, as we think, our writers and legislators have often erred of late,—forgetting the crime through their interest in the criminal; allowing the innocent to be in danger from criminal violence, rather than deal severely with those who merit severity. He appears to think the English system of punishment too severe, and to be by no means favourably disposed to long sentences of penal servitude. But on this head his opinions are not given with great decision or clearness. In our belief, the error of our recent past, and the danger of at least our immediate future, lies in the maudlin sentimentality of weak-headed philanthropists, and the one-sidedness of clear-headed students. There is, in the first place, a tendency in the present generation of Englishmen to shrink from the infliction of suffering, especially when the sight of that suffering is not, as under the system of transportation, removed to a distance from the public eye. It has been said, and we fear with truth, that it would be impossible now to inflict on the worst felons the most appropriate and deterrent of all punishments—that of labour in irons on public works—because "the public feeling" would not endure it; though that feeling sanctioned the practice when carried on in a colony at the antipodes. Yet the few hardened criminals for whom this punishment should and would be reserved certainly *deserve* it. But it is hardly necessary to comment on the maudlin weakness of an age which has abolished the punishment of death for rape, and practically abolished it for infanticide. To this source of mischief, for which no class of writers or politicians is especially responsible, must be added the tendency of those who have given their minds wholly to the subject of prison discipline to think of the prisoner rather than of his victims, and to consider rather his moral benefit and advancement than the protection of society at large. Even Mr Hill appears to us to sin somewhat in this respect, and the tendency of writers on these topics is generally to favour the villains in whose reformation they are interested, forgetful of what is due to the innocent members of the community. If there is one thing more certain than another in regard to prison fare and prison discipline, it is that the condition of the criminal ought to be notoriously worse than that of the poorest honest man who lives decently by the sweat of his brow. The prison authorities will scarcely venture to say that this is anywhere the case at present. We are sorry, therefore, that the author of the pamphlet before us rather encourages than blames what we cannot but consider a very dangerous and vicious tendency in our whole system of penal legislation and administration.

From this vice there has been, as was natural, a certain reaction in practical minds towards the *principle* of the old system—the doctrine that punishment should be adapted to frighten the offender back into respectability. Those who entertain this opinion forget that the crimes against property are committed almost entirely by a professional class—a body of men who *live by crime*, and have no other means of living. No punishment is so severe as death by starvation; and, therefore, no punishment will frighten from stealing the man who must steal or starve. But at present our system of prison discipline is so mild, and our sentences for petty larcenies are so short, that men who have the chance of living by labour open to them sometimes try it for awhile, and then deliberately return to a career of plunder by preference; taking their chance of passing three months out of twelve in prison in tolerable comfort, and nine months out of prison in sensual luxury. A system under which such a choice is probable, is as unfavourable to reformation as it is unjust and demoralising in the contrast it creates between the well-provided thief and the hard-worked labourer. The advocates of greater severity are, we believe, right in every point except in their depreciation of reformatory discipline. Give the criminal a fair chance after his release, and a fitting preparation before release, and then the more severe his previous punishment, the better for him and for others.

The Irish system, so far as convicts sentenced to penal servitude are concerned, is less censurable in this respect than is usually thought. Nine months' solitary confinement precedes a period really spent in "hard labour" on public works—chiefly the fortifications of Spike Island. Then follows, in the case of well-conducted convicts, removal to what are called "Intermediate Prisons," in which a certain degree of liberty is allowed, and the prisoner, who has hitherto been under absolute coercion, is left in a limited degree to his own self-control: the rules by which he is bound being still severe, and still stringently enforced; but the opportunity of breaking them being now open, and obedience being left to the prisoner's own choice, under penalty of removal back to the previous stage of compulsory labour on Government works. It is this intermediate state between strict imprisonment and release which is the characteristic feature of Captain Crofton's system. That officer justly considers that a man released from prison after having been for years under absolute restraint is utterly unfit, however good his intentions, to resist the temptations which will assail him when at perfect liberty: and, moreover, that good behaviour during solitary confinement or labour with others under a warder's eye is no sufficient test of reformed character; and that a gradual approach to liberty is both desirable for the benefit of the well-meaning prisoner, and necessary for the protection of society, as affording a proof of fitness for return to it. Hence the intermediate stage which we owe to Captain Crofton's sagacity, and which M. von Holtzendorff highly approves.

The stage of "release on ticket-of-leave" was the last in the Irish system; the prisoner being restored to the pleasure and temptations of liberty after the expiration of at least two-thirds of his sentence, subject to the revocation of his licence if his conduct was unsatisfactory during the remaining term to which he had been originally condemned. On this arrangement our author bestows the following commendation:—

> In Ireland, the police supervision enables the prison directors, at any moment, to ascertain the conduct of each person released on licence. They can, through the police, prevent too many from congregating in certain districts; but, above all things, they endeavour to ascertain their mistake, should any convict on licence misconduct himself, and instead of depending on accident for such information, they obtain it with certainty through the police authorities. The only difficulty is, that the convict at present is able to withdraw from police inspection by crossing over to England or Scotland, where he will be under no control. This arises from a want of unity in the administration, which must be considered as an evil.
>
> The police, the employer, and the directors are in constant communication with each other; their objects are the same, and tend to the same end. There is, therefore, good reason to assume, that the conditions of discharge will, most probably, be adhered to, and that the breach of the regulation, under which the prisoner was discharged, cannot in most cases pass undiscovered.
>
> Experience shows the success with which this system has been worked—as out of 559 licences, the entire number granted up to the end of September, 1857, only seventeen, that is three per cent., have been revoked. [Out of these, two were for not reporting themselves to the police, three for keeping bad company, one for drunkenness, one causing a disturbance in the street, and one for travelling by railway without a ticket.] Although we may suppose that some convicts on licence succeed in evading all surveillance, others, perhaps, emigrate unnoticed, and not a few go to England, as we may assume from the much-talked-of roving character of the Irish labourer, produced by the constant change of employment, which is more irregular in Ireland than in any other country; notwithstanding all this, it is still evident that the results are most decidedly satisfactory.

Unhappily in England the proposed and promised control was never exercised. Unless a convict released on licence committed some offence subjecting him to renewed imprisonment, his licence was seldom or never recalled. In fact, the release amounted to nothing more than a discharge in anticipation of the term fixed by the Judge—a reduction of the nominal sentence in the case of well-conducted convicts, useful as an instrument of order in the prisons, but in no other manner. It was this failure of the promised surveillance and security which led to the general outcry against this part of the reformatory process on the part of the public, and to its condemnation by the Home Office.

The translator of this pamphlet has the merit of having rendered it into good and clear English—so good, that it might be supposed to have been originally written in that language. But the insertion of the author's notes in the text is most ill advised and inconvenient; and the translator's notes are neither numerous nor valuable enough to render such an arrangement at all necessary.

The Wild Sports of India. With Remarks on the Breeding and Rearing of Horses, and the Formation of Irregular Cavalry. By Captain Henry Shakespear, Commandant Nagpore Irregular Force. Smith, Elder, and Co., Cornhill.

This is one of the best books of its kind that has come under our notice: not as containing the most exciting adventures, or hair-breadth escapes,—for, though these are neither tame nor few, yet they are equalled, if not surpassed in variety and number, by those of Gordon Cumming, Andersen, and others,—but for the manly spirit that animates, and the merciful spirit that regulates, the writer's ardent love of the chase, and for the open fairness of his strife with the wild beasts of jungle and forest. In his battles, the skill and courage of the man are brought face to face with the strength and fierceness of the brute. They were seldom carried on from the shelter of trees, or holes concealed in the earth, but were often what may be called stand-up fights, as the one in which he fought two rounds with a huge panther, the victory nearly remaining with the wrong side; or the following single-handed encounter with a bear:—

> The bear charged down from thirty yards at full gallop directly she saw me, and I stopped her with a spear in the withers. I had before this told my shikaree (or native hunter), who had my guns in his hand, that I would spear this bear, and that he was on no account to shoot unless the bear got hold of me in the scuffle. Directly the bear received the spear, she threw herself on her back, and I was not strong enough to hold her down. The shaft of the spear, being made of the ground-rattan, or cane, was not stiff enough to bear her weight. The bear disengaged herself, and before I could straighten the spear again, rushed upon me. The crooked shaft prevented me from spearing straight, and the blade passed only through the side. She very nearly caught me round the waist, but I drew out the spear, and as she again charged me in blind fury, I allowed her to pass me, in doing which I sent the spear in behind her shoulder. As usual, she threw herself upon her back. My shikaree with the rest of the men had bolted. I was lame, and, if I had

any intention of running, could not have done so. As the bear, however, performed the usual feat of rolling over on her back, she exposed the horse-shoe on her chest; and, before she could recover herself, putting my right hand and shikar knife between her fore-paws, I sheathed it in her heart, killing her dead. This was about the most delicious blow I ever dealt.

Hunting in India—following up the the tiger, panther, wild boar, bear, elephant, and buffalo through the tangled jungle, or over rough ground and heated rocks, under a tropical sun—is a sport, if it can rightly be called by such a name, that exercises not only the courage and animal vigour, or even the skill of a man in the use of his weapons, but his steadiness of nerve, his presence of mind, his promptness of resources in emergencies, his contempt for ease, and his capability of endurance. It cannot be doubted that such qualities are most important in a soldier, or that Captain Shakespear is right when he urges them upon the attention of the younger men in the Indian army as a recreation "innocent, manly, and useful," that "will keep them fit for their duty as soldiers, both in body and in inclination." He has himself sons in India, for whom in the first place he has written this work, and to whom he gives his own experiences in a few words :—

After upwards of twenty-five years' of service; after having, on three separate occasions, had bones broken in hunting—twice from horses falling and rolling over; having been wounded by a wild boar, wounded by a panther, and again wounded in action, the author of these pages is still in good health, and capable of riding a hundred miles in the day: this he has actually done, and even a greater distance than this at different times, within the last few years.

Spearing the wild hog from horseback is, perhaps, Captain Shakespear's favourite sport; it seems to be tolerably lively and perilous. The most thrilling adventure to our mind is the destruction of the man-eating tiger and tigress which had depopulated a whole village. Panther shooting is also an exciting sport, as, though smaller and less powerful than the tiger, he makes up for want of bulk by added ferocity; but the fiercest of all the beasts of chase is the wild boar. This beast will run up the spear in order to reach the hand that has sent it through his body; will quench his thirst at the river between two tigers, and has been known to fight the tiger till both have been left dead upon the field of battle. For the destruction of each kind of wild beast special instruction is given by Captain Shakspear, together with advice respecting the weapons to be used. His book may safely "trust for support to its matter" with the general reader, and "to its utility" with the sportsman. In the latter portion of the work, the rearing of horses for the Indian army, and the advantages of irregular over regular cavalry in that country, are discussed with the ability and thoroughness of one well acquainted with his subject, and are well worthy of careful attention.

How We Spent the Autumn; or, Wanderings in Brittany. By the Authoress of the "Timely Retreat." Richard Bentley, New Burlington street.

Among the fragmentary recollections of Coleridge's conversation that have been handed down to us, is one in which he predicts that when "balloons, or the new roads on which they say it will be possible to travel fifteen miles an hour for a day together, shall become the common mode of travelling, women will become more locomotive." This anticipation is now amply realised. Unprotected females roam over the Continent from North to South,—elderly ladies journey alone round the world,—and young ones take pleasure trips to India and back, scaling the Pyramids as a diversion by the way. It can no longer be said of Englishwomen that they "discourage exercise, or the search for health beyond their own homes;" and if the world has failed to reap the precise benefits that were—over sanguinely we think—looked for by Coleridge,—if women do not occupy themselves on the whole less with their dress, nor have adopted a simpler form of head-gear, yet it has "benefited" in a way that he does not mention, and perhaps did not foresee. If there had arisen before him in prophetic vision all the "long array" of travels, tours, trips, letters, diaries, and even campaigns that would be added to our current literature by the opening of the new roads and the increased locomotion of women, would he have anticipated both events with such unmingled satisfaction? He might perhaps think that, like vaulting ambition, "we have o'erleaped ourselves and fallen o' th' other side," or that if travelling itself be not carried to excess now-a-days, the making of books out of our travels certainly is.

Among the most energetic users of the new roads, and we doubt not of balloons too whenever they shall come into general use, are the two ladies whose account of their "Timely Retreat" from India in 1857 will be remembered by some of our readers; not so much from its own merits, as from its connection with the awful events on whose verge the writers stood, and with which their light, thoughtless, and arrogant tone was in painful discordance. In their present work, the same smartness of style and quickness of observation is combined with a far more genial and pleasant tone of thought, and yet greater bodily activity. "It is to give those of our own sex who may wish to wander through Brittany some idea of the objects best worth seeing, and the easiest way to visit them all, that we have compiled these pages." "To visit them all": this is a comprehensive phrase, yet one which our authoresses are entitled to use. In the short space of some six weeks (as far as we can make out, for dates are ignored) they did visit an incredible number of places, and see all that was to be seen. Such energetic action may not be to every lady's taste; but those who wish to choose their route, to learn about inns, and conveyances, and the expenses of the road, will find this a good and entertaining guide book. The less personally interested reader will find it a readable and pleasant description of a tour, evidently thoroughly enjoyed by the travellers, through a wild and picturesque country, and a primitive people. Amongst other places they visited Ploërmel, where they found no *pardon*, the villagers asserting that none had ever been held there, but a fine old church of English origin :—

As we approached Ploërmel the country became very pretty—hilly and wooded. We told our driver to take us to the best hotel in the place; on which the honest man said: "I keep an hotel, but I will not tell you it is the best. Still people are very well at my house. However the best is the Lion d'Or, and there I will take you." So we were put down at the Lion d'Or, a quiet old-fashioned hotel, quite the best in Ploërmel, and possessing the great advantage of being close to the church. From a back staircase leading outside the house to some bed-rooms, you have a quiet uninterrupted view of its mossy and mouldering carvings. (There is a very dirty court-yard at your feet; but in Brittany you soon cease to observe such minor circumstances.) As soon as we had possession of our rooms, we ran out to have a nearer look at it. The rain had fortunately spent itself, and we stood ankle deep in mud, to the great edification of a few remaining market people, gazing unweariedly. This church was finished in 1556. It is very rich in detail, and peculiar in form. The gargoyles are very eccentric,—snaky dragons, with duck's feet, howling monks, and scaly monsters of all kinds. But it is at the north door you stand entranced; for here the architect has concentrated his genius, and the whole gable-end is covered with a profusion of detail that is perfectly bewildering. This is one of those "rare fronts of varied mosaic, covered with imagery wilder and quainter than ever filled a Midsummer Night's Dream," of which Ruskin speaks. Every stone has its separate story, and you can spend hours in tracing out their grotesque and fanciful meanings. Here is a hideous distorted monkey playing on a bag-pipe, which some one has picked out with pink chalk, as being, in his opinion, *the* stone of the building; there a graceful mermaid dances jauntily over a prostrate centaur, who is lying doubled back with astonishment, as he well may be; two twin children are two or three times repeated; inside one window I counted thirty figures; all round the gable-edge are carved in bold relief against the sky, fabulous snakes with their tails in their mouths. Inside the church are some lovely painted windows, but, unfortunately for us, they were in Paris being cleaned and repaired.....The country people always say, "*You* gave us that church—the English built it for us;" and I think they still retain a sort of kindness for the nation who left their town such an ornament.

The ancient traditions, both historical and legendary, of Brittany have been well studied by the writers. This gives an additional interest to their written, as it no doubt did to their actual tour. The illustrations of quaint chateaux, and even quainter costumes, are pretty and suggestive. On the whole, this book will not, in all probability, excite so much notice as the "Timely Retreat," but it is better deserving of success.

Fraser's Magazine for June. J. W. Parker.

"Fraser" for this month contains a more than usual amount of agreeable reading; it is determined not to be distanced by its young and flourishing rivals, and fully maintains its ancient reputation. Mr Peacock's tale of "Gryll Grange" is of course the most attractive article in the number; it is fast progressing to a happy matrimonial conclusion, and we fear that the Rev. Dr Opimian's quaint discussions and witty remarks must come to a close before long. We are glad to welcome Mr Peacock back to the literary world after his long absence; there is a relief to the mind in the leisurely way his characters discuss their opinions, as if there was abundance of time for everything, so different from the rattling characters of our present literature. From this charge we must, however, except the author of the pleasant essays by A. K. H. B., one of which, on "Growing Old," forms by no means the least pleasant part of this number. There is much quaint observation of things and men, relieved by humorous touches, which, though calming in its influences, is by no means dull. A sensible and interesting article on Mr Smiles' book on "Self-Help," one on "The Rochdale Pioneers," and the first part of a series of papers on the "Physical Theories of the Phenomena of Life," are the most prominent in point of interest of the remaining papers.

Foreign Correspondence.

(FROM OUR CORRESPONDENT.)

PARIS, Thursday.

The Senate has had a discussion on the treaty of commerce with England; and though by law the debates of that body are not allowed to be published, the Government has thought right to print this one on account of the importance of the subject. As, however, the Senate has no real legislative power, the only form in which it could discuss the treaty was to take into consideration certain petitions respecting it. The petitions in question were referred to a Committee, and that Committee charged M. Dumas, one of its members, to draw up a report on them. He is the eminent chemist, and was at one time Minister of Commerce, but unfortunately he is a passionate Protectionist, and his report accordingly is, on the whole, very unfavourable to the treaty. Among the petitioners were, it appears, 56 ironmasters of the

departments of the Haute Marne and the Meuse, and they prayed that the modifications in the duties on cast iron and iron, which the treaty says shall come into force on the 1st October next, shall be postponed to the 31st December, 1861. In support of this application they urged an extraordinary reason, namely, that they have already contracted for the wood they will require for the make of next year (they use charcoal instead of coal), and that, consequently, they "will be ruined" if they are subject to the competition of the English before that wood be consumed. The Committee, strange to say, supports the application for delay, forgetting that the treaty being signed and ratified the Government has no power to alter it; and, what is stranger still, it actually accepted the whine about the firewood. "The Committee hopes," says the report, "that the Government will be able to find some indirect means of repairing an injury done, the victims of which naturally recommend themselves to its benevolence, or rather to its equity. *To prevent their ruin* without having recourse to indemnities, may be difficult; but the Government of the Emperor is so anxious to relieve the evils which fall on laborious populations, that it is not necessary to indicate the method to be employed." The report next says that the Chamber of Commerce of Sedan requires that the maximum of the *ad valorem* duty mentioned in the treaty shall be continued for four years beyond the ten for which the treaty has been concluded, that is to say to 1874; and the Committee does not think this at all unreasonable. The report afterwards notices a very singular petition from sundry ironmasters, owners of glass-works, and manufacturers. This petition prays that the specific duties which may be adopted in place of the 30 and 25 per cent. *ad valorem* mentioned in the treaty, shall not be made the subject of an additional convention with England, but shall be imposed by law: and the reason assigned is, that if the specific duties be established by a convention, they will be binding for ten years as the treaty is; whereas if they be adopted by law, they can be modified at any time. But the Committee says that the President of the Council of State, who was one of the negotiators of the treaty (M. Baroche), had declared to it that the understanding with the English negotiators was that the convention relative to specific duties should form part of the treaty, and that, consequently, the prayer of the petitioners could not be granted without a breach of good faith. The report, however, shows that it was with manifest reluctance that the Committee came to this conclusion. As a set off, however, it pleads in the following terms for having the specific duties fixed as high as possible:—

Are not manufacturers in general, and the petitioners in particular, justified in saying to the negotiators—"Do not reduce the amount of your duties too low;—wait until experience shall have enlightened you. If, subsequently, it should be considered desirable to lower them anew, England would not object; but if it be necessary to increase them, you cannot do so if you are bound by a treaty. Do not forget that you are at this moment armed with a powerful prerogative; and do not leave it inefficacious in your hands. Sooner than resign themselves to accept the duties of 30 per cent. *ad valorem*, the English negotiators will accept the specific duties necessary for the just protection of French interests. Do not allow yourselves to be led way to generous acts of imprudence, or to facilities which will be regretted." In presence of England use all your advantages; keep the duties rather high. When the moment arrives, French manufacturers will submit to the law of necessity by accepting lower duties, if French interests, and if the advantage of the mass of consumers, require them.

Considering that the great bulk of official people in France are still wedded to the protective system, no surprise need be felt at seeing a Committee of the Senate, the most illiberal of all officials, reporting in the manner described; still we cannot help regretting that a great measure of commercial reform, which will undoubtedly be beneficial to France, should not have been more favourably treated.

The debate which ensued on the report was very long. Though, however, it took place about three weeks ago, the complete publication of it has not yet been effected in the *Moniteur*. The treaty was vehemently attacked by Baron Dupin, Count de Beaumont, and others, but in a manner which showed that the teachings of modern economic science have produced no enlightenment in their minds,—and it was very energetically, and I need not say ably and eloquently, defended by M. Michel Chevalier. I will endeavour on a future occasion to refer to some of the points raised on both sides: but really this discussion of the Senate is of no practical value, for it will not affect the treaty in any way, and is not likely to produce any influence on the Superior Council of Commerce, which is charged with the task of transforming *ad valorem* into specific duties. The only interest of the debate was, in fact, to show what one of the "great bodies of the State," as the French say, thinks of commercial reform. The Superior Council of Commerce is continuing its examination of witnesses, preliminary to fixing the specific duties to be imposed under the treaty. The little progress made thus far causes serious doubts to be entertained that it will be able to complete its task in time to conclude "a definitive convention" respecting those duties previous to the 1st July next, as required by clause 13 of the treaty. As, however, *ad valorem* duties will be in force, *en attendant* the convention, the only inconvenience sustained by commerce will be two changes of duties in a short interval.

By a Bill before the Legislature, which will soon have force of law, the prohibition to export bark for tanning will be repealed. This measure, it is believed, will be of utility to England. By another Bill the Government is to be authorised to make a new issue of bronze coinage to the amount of 12,000,000f.

The demands which railway companies will have to make on the money market, for loans for continuing the execution of new lines, are beginning to excite serious attention. Those demands will amount to somewhere about 300,000,000f (12,000,000*l*) sterling), and cannot be long delayed. Some uneasiness was caused by a report that the Government intended raising a loan of 400,000,000f or thereabouts, to assist manufacturers and others in the difficulties to which (they allege) they will be subjected by the treaty with England; but it is asserted that the rumour has no foundation. Another report current on the Bourse is, that the City of Paris will very soon be in the market for a loan of 150,000,000f or thereabouts, to continue the gigantic works it has in hand, and to continue those that are projected. It is, moreover, worthy of remark, that a great many other towns in different parts of the Empire have recently obtained authorisation to raise loans more or less considerable for local improvements; the City of Lyons, for example, is to raise one of 8,200,000f.

The last number of the ECONOMIST was seized by the police at the Post Office; that is, was not distributed to its subscribers. It doubtless contained some article which the vigilant "Press Bureau" charged with the examination of foreign newspapers considered dangerous to the stability of the Empire.

The report of the Committee of the Services Maritimes des Messageries Imperiales on the operations of 1859, presented at the recent meeting of shareholders, has just been published. It shows that the total receipts were 23,890,670f, and the total expenses (including sinking fund, assurances, and interest on bonds) 19,804,561f. The balance consequently was 3,286,109f, and this sum, after deducting 3 per cent. for the reserve, was sufficient to allow 60f per share to be distributed, and a sum of 241,804f to be carried over to next year. The company had afloat or in course of construction on the 31st Dec. last, 54 vessels of 14,800 horse-power. The company is (as has been already stated) just about to establish regular steam communication between France and Brazil and La Plata. On the whole, its situation is highly satisfactory, and its prospects not less so.

The Bourse is closed to-day, in consequence of the Emperor having decreed a *fête* in honour of the annexation of Savoy and Nice to France. On the whole, during the past week greater confidence has been manifested with regard to the political situation, owing chiefly to Louis Napoleon being about to have an interview with the Prince Regent of Prussia at Baden Baden,—a circumstance which, at all events, indicates that war between France and Prussia is not, as some persons feared, on the *tapis*. But, on the other hand, uneasiness is felt about the advance in the price of grain, which, on account of unfavourable weather and the appearance of the crops, has taken place almost everywhere. The following are the quotations:—

Subjoined is an account of the markets:—

FLOUR.—Although the recent marked advance in prices caused extraordinary large quantities to be brought to market, quotations have again advanced, and were yesterday at 64f to 70f the sack of 159 kilogs, according to quality, for the superior sorts; secondary sorts, 56f to 62f; four marks, for the present month, 68f 50c to 69f; for July, 69f 50c to 70f; July and August, 70f to 70f 50c.

WHEAT.—At *Paris*, yesterday, offers were considerable, and the attendance of dealers was unusually large, but prices were 39f to 42f the sack of 120 kilogs,—a new advance on last week's quotations. Towards the close of business, however, holders to effect sales would have been obliged to accept a reduction. Of the provincial markets, not fewer than 140 present a rise of from 10c to 3f the hectolitre; only 2 a fall,—one of 30c, the other of 1f; and only 4 remained unchanged.

COTTON.—At *Havre*, in the week ending Friday, business was regular without being animated, but, owing to the largeness of stocks and the desire of holders to sell, prices declined. The total sales of the week were 6,667 bales, and closing quotations were 2f lower for the "very low" of all descriptions, 1f lower for low Mobile, and other sorts unchanged. Low New Orleans was consequently 87f the 50 kilogs, and very ordinary ditto,

95f. The arrivals of the week were 19,019 bales. On Monday, Tuesday, and yesterday of the present week business was very dull.

SUGAR.—At *Havre*, in the week ending Friday, holders offered concessions in prices, but there were but few purchases. 350 hogsheads French West India went part at 47f the 50 kilogs duty paid; part at 46f 50c; 10 hogsheads, 49f. In Réunion and foreign nothing was done. The arrivals of the week were about 2,000 hogsheads French West India, 2,011 casks Havana, 1,017 casks from Dunkirk, and some smaller lots. This week, sales have not been numerous. French West India, 46f 50c to 47f duty paid; Havana, 27f 25c to 37f in bond. At *Bordeaux*, last week, the demand was not active, and prices fell: French West India being 45f 50c to 46f the 50 kilogs; Reunion, 50f to 50f 50c; Havana, 35f to 35f 50c. This week, some sales of French West India have been made at 45f 50c, and some of "usine" ditto at prices not stated. At *Nantes*, last week, 1,200 sacks Reunion, superior quality, went at 57f; and 230 ditto demi-gros grain, 60f. In refined there was a rather large decline, namely, 1f 50c, making 3f since the reduction of the duties. This week, some ordinary Reunion has been sold at 41f.

COFFEE.—At *Havre*, in the week ending Friday, the demand was not very active, but prices underwent little modification. 1,100 sacks Hayti for delivery went at 82f the 50 kilogs for Port-au-Prince, and 82f 50c for Jeremie; 100 sacks Gonaives disposable, 85f; 1,300 sacks Rio, not washed, disposable, 75f to 77f; 30 sacks Bahia, 80f; 200 sacks Macassar, 112f duty paid; 716 Malabar triage, 111f; 900 sacks Ceylon native, 105f 50c; 40 casks Guadeloupe, about 132f 50c. The arrivals were large—about 8,000 sacks. This week, several sales have been made. Java, at 117f to 120f duty paid; Rio, 77f in bond; Mocha, 132f duty paid; Gonaives, 85f in bond; Hayti, 81f; Porto Cabello, 89f to 98f. At *Bordeaux*, last week, the demand was regular, and prices were without variation, but firm. This week nothing has been done. At *Nantes*, last week, the sales made were principally of damaged. This week nothing done.

INDIGO.—At *Havre*, in the week ending Friday, only about 20 cases Bengal were sold, and they realised prices established. The arrivals were 33 cases. This week, 41 cases Bengal have been sold, but prices are not given.

HIDES.—The sales at *Havre*, in the week ending Friday, consisted of 1,400 Buenos Ayres and Monte Video, salted, at 85f the 50 kilogs duty paid, and 5,800 Mazatlan, dry, for delivery, 122f 50c; 169 Martinique, salted, 60f, and some small quantities of different sorts of damaged. The arrivals were large, exceeding 25,000. This week, Lima, salted, have been at 87f 50c; Monte Video, 85f.

WOOL.—The sales at *Havre*, in the week ending Friday, consisted of 21 bales La Plata, unwashed, at 1f 85c to 2f 70c the kilog; 332 bales Peru, 1f 85c; 5 Russia, 6f 80c; 12 sheepskins, 91½c to 1f 10c. The arrivals exceeded 1,000 bales. This week, Chili has been at 1f 30c to 1f 35c; Buenos Ayres, unwashed, 1f 90c to 2f 95c; La Plata sheepsckins unwashed, 1f 35c to 1f 75c. There have also been some sales of damaged.

TALLOW.—The sole transaction at *Havre*, in the week ending Friday, was 50 casks Russian for delivery in September and October, at 65f the 50 kilogs duty paid. The arrivals were 41 casks. No sales have been made this week. At *Paris*, yesterday, the 100 kilogs were 139f 70c—a rise on last week's quotations.

SPIRITS.—At *Paris*, yesterday, 3-6 of 80 degrees, first quality, were 108f the hectolitre; 3-6 Montpellier disposable, 86 degrees, 140f. At *Bordeaux*, the day before yesterday, 3-6 Languedoc of 90 degrees, first quality, was 108f.

COMMERCIAL AND MISCELLANEOUS NEWS.

We have letters from Sydney to the 23rd April. Since the last mail on the 17th March six escorts had been received in Melbourne. They brought altogether 221,687 ounces of gold, while those of 1859 brought 250,395 ounces. During the same period 192,689 ounces were shipped, while during the corresponding period of 1859, 246,515 ounces were exported. The Snowy River Diggings are the great feature of the mining intelligence. The *Herald* says:—The Snowy River Diggings have been proved to be the richest auriferous discovery that has yet taken place in the New South Wales territory. The most extraordinary finds of gold have been made even on the surface, and nuggets varying in weight from 20 to 70 ounces have been exposed to view a little below the ground. Trade, generally, is represented as in a most inactive state.

The following list has been received of Australian Insolvencies during the last seventeen years. The number in 1858 were three times as great as in 1857, last year there was a further increase of 50 per cent., and this year up to the middle of April the rate has experienced a fresh advance of about 70 per cent. The total liabilities of failed firms from 1842 to 1859 were 5,981,026*l*, and the assets stated in schedules amounted to 3,735,613*l*, but of the latter amount, if we may judge from the experience of such cases on this side, probably not 50 per cent. was ever realised.

RETURN of the NUMBER of INSOLVENTS from 1842 to 1859.

Year.	Number of Insolvents.	Amount of Liabilities.	Assets stated in Schedules.	
		£	£

Silver—Half dollars		9,000	0
Total coinage		1,390,000	0

The state of the Albany lumber market to the 30th ult. is thus reported:—The demand has been moderately active for lumber, and the sales to a fair extent. The shipments have been principally to the river towns, New York, New Jersey, and the Eastern States. Lumber continues to come forward slowly, but as freights from Oswego are down again to a moderate figure, the receipts will be larger hereafter from that quarter. The rains of the past week, which have been copious here and West, did not reach the upper waters of the Hudson, and there has been no freshet as yet to start the hemlock and spruce logs. This is the case also with the pine logs in some parts of Canada and Michigan, though generally enough have got through to give the mills a fair start. All kinds of lumber are in fair supply, the greatest deficiency being in pine tally boards and black walnut. The receipts by the Erie and Champlain Canals, during the fourth week in May, in the years named, were as follows:—

	Boards and Scantling, ft.	Shingles. M.	Timber. C. ft.	Staves. lbs.
1856	12053709	3920	..	158000
1857	10401807	5046	...	778800
1858	14724464	1955	2200	10134100
1859	13277000	3207	1020	6030500
1860	9813000	1328	..	1194927

The fourth week of the present season closes with the 31st, so that our figures for the week are necessarily two days short of the actual receipts, which may bring them up to about those of the same period last season. The receipts by the Erie and Champlain Canals, from the opening of navigation to June 1, in the years named, were as follows:—

	Boards and Scantling, ft.	Shingles. M.	Timber. C. ft.	Staves. lbs.
1856	20725550	4998	...	1215200
1857	18137419	7494	...	1150800
1858	52932761	7377	34035	11414300
1859	48771100	14316	34607	26535700
1860	35719600	6299	3000	10651527

The latest news from the West India Islands is very meagre and uninteresting. At Jamaica there had been a favourable change of the weather, and heavy rains had fallen. There had been no desire evinced to export sugar to any of the large markets, but a downward tendency seemed to have been checked by a moderate demand for Navy Bay, and an improved demand for consumption. Sales were reported at 16s to 17s for middling, and 17s 6d to 18s for fair. Coffee was very scarce, and there were no sales. At Barbadoes the weather continued very dry, and the heat and dust were distressing. The amount of produce shipped to date was:—Sugar, 22,532 hogsheads, 1,808 tierces, 5,147 barrels; molasses, 9,618 puncheons, 209 hogsheads, 250 barrels; rum, 189 puncheons, 228 hogsheads. From Grenada we learn that the quantity of sugar shipped from the 1st of January to date was equal to 2,725 hhds of 16 cwts, and of rum to 448 puncheons of 118 gallons.

During the month of May, the total quantity of coal and coke exported from the various coal ports of Great Britain was—of coal 714,096 tons, and of coke 21,020 tons. Of this quantity, which shows a large increase upon the exports of April, Newcastle exported 214,888 tons of coal and 10,617 tons of coke; Sunderland, 117,822 tons of coal and 1,873 tons of coke; Hartlepool and West Hartlepool, 68,171 tons of coal and 2,946 tons of coke; Middlesborough, 9,047 tons of coal and 2,680 tons of coke; Hull, 10,365 tons of coal; Liverpool, 64,278 tons of coal and 952 tons of coke; Cardiff, 90,179 tons of coal and 837 tons of coke; Swansea, 30,108 tons of coal; Newport, 20,702 tons of coal; Llanelly, 9,297 tons of coal and 1,080 tons of coke; and Charlestown, 11,059 tons of coal. The quantity of coal and coke shipped to London and other ports in the United Kingdom during the month was 796,844 tons of coal and 4,007 tons of coke; of which Newcastle shipped 161,474 tons of coal and 1,980 tons of coke; Sunderland, 142,775 tons of coal; Seaham, 66,819 tons of coal; Hartlepool and West Hartlepool, 104,846 tons of coal and 102 tons of coke; Middlesborough, 20,100 tons of coal and 440 tons of coke; Swansea, 19,299 tons of coal; Cardiff, 74,449 tons of coal and 1,333 tons of coke; Llanelly, 29,410 tons of coal; Newport, 52,602 tons of coal and 80 tons of coke; and Maryport, 34,143 tons of coal and 72 tons of coke. The number of vessels engaged in the trade was 7,548, of which 4,761 were engaged in the home and 2,787 in the oversea coal trade.

Last year 249,527 tons of coal were purchased for ships in the Royal Navy, without taking into account casual purchases made by captains at places where there are no naval depots. Of the total quantity of coal purchased, 188,507 tons were Welsh, and 61,020 tons North country. The steamers of the Peninsular and Oriental Steam Navigation Company are now burning 300,000 tons of coal annually, against 200,000 tons a year or two since.

The Bankers' Gazette.

BANK RETURNS AND MONEY MARKET.

BANK OF ENGLAND.

(From the GAZETTE.)

An Account, pursuant to the Act 7th and 8th Victoria, cap. 32, for the week ending on Wednesday, the 13th day of June, 1860.

ISSUE DEPARTMENT.

	£		£
Notes issued	29,909,910	Government Debt	11,015,100
		Other Securities	3,458,900
		Gold Coin and Bullion	15,434,910
		Silver Bullion	...
	29,909,910		29,909,910

BANKING DEPARTMENT.

	£		£
Proprietors' Capital	14,553,000	Government Securities (including Dead Weight Annuity)	9,764,196
Rest	3,233,519	Other Securities	19,819,863
Public Deposits (including Exchequer, Savings Banks Commissioners of National Debt, and Dividend Accounts	8,429,226	Notes	8,942,475
Other Deposits	12,411,115	Gold and Silver Coin	759,659
Seven Day and other Bills	659,243		
	39,286,103		39,286,103

Dated the 14th June, 1860. M. MARSHALL, Chief Cashier.

THE OLD FORM.

The above Bank accounts would, if made out in the old form, present the following result:—

Liabilities.	£	Assets.	£
Circulation (including Bank post bills)	21,626,678	Securities	29,505,969
Public Deposits	8,429,226	Coin and Bullion	16,194,569
Private Deposits	12,411,115		
	42,467,019		45,700,538

The balance of Assets above Liabilities being 3,233,519*l*, as stated in the above account under the head REST.

FRIDAY NIGHT.

The preceding accounts, compared with those of last week, exhibit—

A DECREASE of Circulation of	£322,102
An INCREASE of Public Deposits of	676,427
An INCREASE of Other Deposits of	230,516
An INCREASE of Government Securities of	5,103
An INCREASE of Other Securities of	356,522
An INCREASE of Bullion of	231,467
An INCREASE of Rest of	7,251
An INCREASE of Reserve of	531,662

From the above statement it will be seen that the circulation continues to decline, whilst there is an increase in all descriptions of deposits, and in bullion.

Subjoined is our usual weekly table, affording a comparative view of the Bank returns, the Bank rate of discount, the price of Consols, the price of wheat, and the leading exchanges, during a period of four years, corresponding with the present date, as well as ten years back, viz., in 1850:—

At corresponding dates with the present week	1850.	1857.	1858.	1859.	1860.
Circulation, including bank post bills	£ 20,637,875	£ 19,457,946	£ 20,241,535	£ 21,323,439	£ 21,626,678
Public deposits	8,415,694	7,603,966	6,062 680	8,577,343	8,429,226
Other deposits	9,646,380	9 441,178	13,651,427	14,797,501	12,411,115
Government securities	14,315,770	10,326 131	10,630,123	11,281,376	9,764,196
Other securities	11,057,149	18,679,198	14,648,140	18,712,469	19,819,863
Reserve of notes & coin	11,482,257	6,612,070	12,937,045	11,001,826	9,702,134
Coin and bullion	16,942,277	10,909,255	17,919,450	17,951,041	16,194,569
Bank rate of discount	2½ p. c.	6 p. c.	3 p. c.	3 p. c.	4 p. c.
Price of Consols	96 xd	93 xd	95¾ xd	92¾ xd	95⅝ xd
Average price of wheat	39s 11d	60s 0d	44s 7d	51s 1d	54s 2d
Exchange on Paris (short)	25 55 60	25 30	25 5	25 5 10	25 12½ 20
— Amsterdam ditto	12 1½ 2½	11 17 18	11 14½ 15	11 12 13	11 14½ 15
— Hamburg (3 months)	13 12½ 12¾	13 8½	13 6½ 7	13 3½ 4½	13 5½ 5¾

At the corresponding period in 1850, intelligence was received of the sudden and complete failure of the piratical attack on Cuba, under General Lopez.

In 1857, the Bank of England reduced its minimum rate of discount from 6½ to 6 per cent., a change which the increase in the bullion of over 600,000*l*, and of the reserve of a like amount, and the decrease of securities to the extent of 387,000*l*, fully accounted for.

In 1858, considerable anxiety was felt on account of the state of affairs on the Continent, and the threatening aspect of our relations with the United States, involving the question of right of search. The Bank of France, with 20,000,000*l* lying idle in its coffers, reduced its rate of discount ½ per cent.

In 1859, the Derby Ministry resigned, and Lord Palmerston was appointed Premier. This event produced an upward tendency, which was partially checked by the announcement that Prussia was mobilising a large portion of her army.

The amount of "other" deposits, as compared with the "other" securities, showed, in 1850, a deficiency of 1,410,769*l*; in 1857, a deficiency of 9,238,020*l*; in 1858, a deficiency of 993,713*l*; in 1859, a deficiency of 3,914,968*l*. In 1860 the deficiency is 7,418,748*l*.

The English funds have been pretty steady during the week, but with a tendency to heaviness, and there has been but little speculation in them. On Saturday, the first transactions in Consols for 10th of July were at 93¾ ⅞ ex div., which was the price they left off at on the previous day. On Monday, at the opening, some discussions as to the Government intentions in relation to new fortifications, which involved a probable outlay of 11,850,000*l*, caused a temporary depression of about ⅛; but from this a rally took place in the after part of the day, in consequence of improved accounts from Paris. Nothing has since occurred to affect the market materially one way or the other; the official Ministerial declaration that no foreign intervention is likely to take place in the affairs of Sicily having had the effect of quieting all apprehensions on that score. The closing price this day was 93⅞ ⅝ for the account. We subjoin our usual list of the highest and lowest prices of Consols every day, and the closing prices of the principal English and foreign stocks last Friday and this day:—

CONSOLS

New ditto, 4 per cent	101⅛ 2½	101¼ 2½

The demand for money has increased during the last few days, and more activity prevails than at the close of last week. The demands of the country bankers, in consequence of the effect produced amongst the farmers by the weather, have, with the announcement of foreign loans, tended to keep the market firm. At the large discount houses short first-class bills have been done at 3⅞ to 4, three months at 4, four months at 4¼ to 4½, and six months at 4½ to 4¾ per cent.

The Bombay steamer on Tuesday took 55,000*l* in gold, of which 30,000*l* had been withdrawn from the Bank in the course of last week, and 16,260*l* in silver.

The arrivals of bullion during the week have been about 400,000*l*, and include 127,000*l* from the West Indies, per Tasmania, of which 57,500*l* was in gold, and 69,500*l* in silver; 58,000*l* from New York, per Kangaroo, and 90,000*l*, per Adriatic; 4,000*l* from the West Coast of Africa, per Cleopatra; 5,960*l* from the Peninsula, per Tagus; 2,441*l*, per Indus, from India and China, via Alexandria.

A small portion of the above, only, has been sent to the Bank; the bulk having been taken for the Continent.

By the next China mail the Government will remit 100,000*l* to Hong Kong, and, with mercantile shipments, the total amount is expected to be 400,000*l*.

The new Sardinian loan is to be for 6,000,000*l*. The new Russian loan is expected to be in a 4½ per cent. stock at 94 or 95.

The Paris Bourse to-day was heavy, probably on account of the new foreign loans. The Three per Cent. Rentes closed at 68f 65c for money, and 68f 50c for the account.

New York advices announce an abundance of money there, which was freely offered at 5 per cent.; and that remittances to England were, therefore, likely to continue.

Messrs Pixley, Abell, and Langley's circular gives the following particulars in regard to bullion, the exchange on India, and the Indian Government paper:—

Gold.—Additional arrivals have taken place during the past week, and we have to mention the Fulton, with 20,000*l*; the Kangaroo, with 58,000*l*; and the Adriatic, with 90,000*l*, from New York; the Tasmania, with 57,500*l*, from the West Indies; and the Cleopatra, with 4,000*l*, from Africa; about 13,000*l* has also arrived from Russia; and the whole of these amounts, with the exception of about 6,000*l*, have been taken for exportation. The demand for the Continent we do not consider brisk, and the American gold coin could only be sold at a reduction from the

price of last week. In addition to the vessels mentioned in our circular of the 7th inst., as having sailed from Melbourne, we now furnish details of further departures:—The Marco Polo, out 86 days, with 50,000*l*; the Owen Glendower, out 82 days, with 91,000*l*; the Venilia, out 75 days, with 76,000*l*; the Prince of Wales, out 68 days, with 132,000*l*; the Maid of Judah, out 64 days, with 124,000*l*; the Eagle, out 57 days, with 132,000*l*; and about 310,000*l* may be considered as due. The Magdalena has taken 100,000*l* to the Brazils, chiefly in gold.

Silver.—The Tasmanian, has brought about 69,000*l* from the West Indies, and as there has been rather more demand for bars during the week for the outgoing mail to India and China of the 18th inst., we quote prices as slightly firmer at 61¾d per oz standard. Several amounts have been received from the Continent, and the shipment to the East by the mail before mentioned is likely to be about 400,000*l*. The Tagus has brought 5,960*l* from the Peninsula.

Mexican dollars have been in increased demand at gradually rising rates. The Fulton and Adriatic have brought about 40,000*l* from New York, but as the Government have been purchasers to the extent of about 100,000*l*, prices have been fully maintained, and we quote the rate at 5s 2¼d to 5s 2⅜d per oz. The outgoing mail to China will take out a considerable amount.

Exchange on India remains as quoted in our last, viz., 2s to 2s 0¼d for 60 days' sight Bank bills on Bombay and Calcutta. Madras, 1s 11⅞d to 2s. Bills with documents, 1s 11⅞d to 1s 11½d.

Indian Government Loan Notes.—The market continues inactive, and prices are unaltered. We quote 5 per Cents. 97½ to 98, and 5½ per Cents, 102½ to 103.

The commercial intelligence from the Australian Colonies is unsatisfactory. Advices from Adelaide to the 26th April, complain of a continuance of excessive shipments from England, and a general prevalence of speculation and overtrading. An unsound and vicious system had crept in, which called for a thorough reform, accompanied by an extensive weeding out of insolvent firms. In Sydney, New South Wales, money was very tight, and several failures had taken place, including nine houses with an aggregate of liabilities of 400,000*l*; of which amount three-fourths, it was expected, would ultimately be deficient, the loss falling on the banks and English creditors.

The failures referred to are Messrs David Jones and Co.; Thompson, Symonds and Co.; R. Harnett; E. M. Sayers; W. Fairfax and Son; E. Ogg; Macnamara, Son, and Co.; and J. V. Barnard and Co. These are independent of several other minor failures in various branches of business.

At Adelaide, South Australia, business was rather better, and the colonial productions and manufactures were so much improving that fewer imports of certain goods are necessary. The total imports of 1859 had been 1,507,494*l*. and the exports 1,502,165*l*. Burra Burra shares had experienced remarkable fluctuations, the prospect of a considerable number of the miners being drawn away to the newly-discovered gold fields at the Snowy River, and the annual report of the Directors reducing the dividends for the next six months to one-half the usual rate (the imports for the first quarter of the year having been 1,221,780*l* as against 1,799,262*l* in the corresponding period in the previous year) caused a fall in the price of shares from 160*l* to 110*l*, from which they afterwards rallied to 120*l*.

The Royal Commission on the Defences of the Country in their Report to Parliament recommend certain works of coast fortification, involving an outlay of 11,850,000*l* within four years, which will probably have to be raised by loan. A rumour, apparently based on authority, that it was the intention of Government to procure the money on the security of annuities terminable in 25 years, circulated on Thursday, produced an unfavourable effect, it being considered that the income tax would bear prejudicially on that species of security. The general feeling appears to be in favour of raising the money on Consols, in preference either to Annuities, Exchequer Bills, or any other form of security.

Upon the subject of a movement recently set afoot for reducing brokers' charges on the sale and purchase of railway shares and other securities, the Committee of the Stock Exchange have come to the following resolution, which was posted up on Tuesday:—

That the Committee decline to make any resolution to enforce a scale of brokerage, but they will be ready to consider, and, if approved, to recommend for general adoption, a scale of brokerage that may be proposed by the written assent, not of a committee, but of the general body of brokers, members of the Stock Exchange.

Serious charges have been brought against the Directors of the Buenos Ayres and San Fernando Railway Company, which have formed the subject of an investigation by the Committee of the Stock Exchange. It is alleged that no fewer than 2,070 shares have been issued in fictitious names, and that by certain means adopted the shares have been run up, unduly, to 7 premium. The case is still under inquiry, but, pending their ultimate decision, the Committee came to the following resolution on the subject, which was duly posted up at the Stock Exchange on Thursday:—

Buenos Ayres and San Fernando Railway Company.—The Committee, being engaged in investigating certain allegations made by members of the Stock Exchange respecting transactions in the shares of the above Company, it was unanimously resolved that no buying in or selling out of the shares shall take place without the authority of the Committee.

The Linares Mining Company have declared a dividend for the half-year this month of 5s per share.

The report of the St John del Rey Mining Company for the year ending 18th March last announces an increase in the yield of gold of 363,214 octavas, against 285,615 in the preceding year; and recommends a dividend of 40s per share free of income tax. A dividend of 17s 6d per share was made in December last.

A half-yearly dividend at the rate of 8 per cent. per annum, and also a bonus of 7 per cent., will be payable on the stock of the National Provincial Bank of England on and after the 12th proximo. The transfer book will be closed from to-morrow till the date mentioned.

At the half-yearly meeting of the proprietors of the Bank of Ireland, held in Dublin on Wednesday, the same dividend as that paid last year, 4½ per cent., was declared, the profits showing a surplus of 6,000*l* to be added to the "rest."

At a quarterly court of the Equitable Assurance Society the Directors announced their intention to adopt some recommendations long urged upon them to extend their area of investment, Consols and mortgages having hitherto alone been selected. At the same time strong representations were made by some of the policy-holders in favour of a reform of the system of management, which they consider to be close and antiquated, and such as to prevent the society from maintaining its proper rank.

The Peruvian Government have invited, by public advertisement, proposals for the consignment and sale of guano in Great Britain and various countries.

The British railway market has exhibited weakness, and prices generally have had a downward tendency. Subjoined is our usual list of the closing prices of the principal shares last Friday and to-day:—

	Closing prices last Friday.	Closing prices this day.

COMPARATIVE EXCHANGES.

The quotation of gold at Paris is about at par, and the short exchange on London is 25.12½ per 1*l* sterling. On comparing these rates with the English Mint price of 3*l* 17s 10½d per ounce for standard gold, it appears that gold is about 2-10ths per cent. dearer in Paris than in London.

By advices from Hamburg the price of gold is 423 per mark, and the short exchange on London is 13.3½ per 1*l* sterling. Standard gold at the English Mint price is, therefore, about 2-10ths per cent. dearer in Hamburg than in London.

The course of exchange at New York on London for bills at 60 days' sight is about 109¼ per cent., which, when compared with the Mint proportions between the two countries, shows that the exchange is about at par; and, after making allowance for charges of transport and difference of interest, the present rate leaves scarcely any profit on the importation of gold from the United States.

The Commercial Times.

MAILS FOR AUSTRALIA AND NEW ZEALAND.—The mails for the Australian Colonies and New Zealand, intended to be forwarded viâ Southampton, will, in future, be made up in London on the morning of the 20th of each month, instead of on the 12th, and the mails to be forwarded viâ Marseilles will be made up on the evening of the 26th instead of on the 18th of the month. On those occasions when the 20th of the month falls on Sunday, the mails for Australia, &c., will be made up on the previous evening, and when the 26th of the month falls on Sunday, the mails will be made up on the following evening. In consequence of this alteration, mails for Ceylon will no longer be despatched on the 12th and 18th of the month. The Australian mail packets will, in future, proceed no further than Melbourne, and, after leaving Point de Galle, will touch, to land and embark mails, at King George's Sound only. The mails for South Australia, New South Wales, and New Zealand will be landed at Melbourne, and will be forwarded thence to their destination by such means as may be provided by the Colonial Governments. Commencing with the month of July, the homeward mails will thenceforward be despatched from Melbourne on the 26th of each month, and ought to arrive in London with the mails from Calcutta and China due (viâ Marseilles) on the 12th, and (viâ Southampton) on the 18th of every month.

MAILS ARRIVED.

COMMERCIAL EPITOME.

FRIDAY NIGHT.

At Mark lane, to-day, the show of English wheat was only moderate; nevertheless, both red and white parcels moved off slowly at about Monday's currency. There was very little business doing in foreign wheat; however, the quotations were well supported. From our returns, it will be seen that liberal supplies of foreign produce have come to hand since this day se'nnight. The quantity afloat from the Baltic is, we understand, very large. There was a fair sale for barley, oats, beans, peas, and flour at full currencies. The imports have amounted to 16,830 quarters of wheat; 17,050 barley; 31,990 oats; 2,120 sacks and 4,900 barrels of flour.

The Liverpool market, this morning, was steady for most kinds of produce, at very full prices.

We have received the annexed report of the grain trade at Alexandria to the 2nd inst., from Messrs Briggs and Co.:—

Receipts of beans, considering the early state of the season, continue very abundant. The prices, after the despatch of last post on the 26th ult., underwent a slight advance, but now they have again declined to about the former figure. Arrivals of wheat are still very slight, and a large proportion is bought up for local consumption. The market is now nearly bare of Indian corn, but receipts of barley on the other hand are increasing. Lentils are excessively scarce, and the only sale during the past week has been of about 100 ardebs, taken for local consumption, at a price that would be equal to circa 29s per quarter, free on board. The following is the usual note of operations, since our last advices of the 26th ult., with present prices, f.o.b., viz.:—Wheat, Saide, 1,200 qrs, 37s 3d to 38s; ditto, Behera, 600 qrs, 35s 9d to 36s; beans, Saide, 5,120 qrs, 27s 4d to 27s 10d; ditto, Behera, 7,560 qrs, 26s to 26s 6d; barley, 1,170 qrs, 19s 8d to 20s; Indian corn, 160 qrs, 26s 6d per quarter. Freights—Owing to the scarcity of shipping, freights by sailing vessels are firm, at about 4s 6d to 4s 9d for beans to the United Kingdom for orders; other grain in proportion. To a direct port, the rate may be quoted 4s to 4s 2d per quarter. The rate by steamer to Liverpool has advanced to 3s per quarter.

The latest advices from New York state that a moderate business was doing in wheat, maize, and flour, on English account. The supplies, generally, were seasonably good.

The present has been another lifeless week in the Liverpool cotton market, but a fair extent of business has been transacted, the total sales amounting to 50,000 bales, including 40,000 bales to the trade, 2,000 bales on speculation, and 8,000 bales for export. Prices are reduced pretty generally to the extent of $\frac{1}{8}$d per lb during the week, it not being possible to maintain them in the face of the continued heavy stock, and favourable American accounts. The market closes dull and heavy to-day. Sales, 6,000 bales.

Messrs Briggs and Co., writing on the 4th inst., thus report the state of the cotton trade at Alexandria:—

Arrivals are scant, and the stock is estimated at 3,500 to 4,000 bales, nearly entirely of low quality. The sales since the 26th have been as follows:—345 bales very low ordinary to middling, at 6.33d to 8.35d; 260 bales good middling to fair, 8.77d to 9d; 3 bales fully fair to good, 10.10d per lb f.o.b.; total, 608 bales. Steamers are taking for the little cotton offering $\frac{1}{4}$d per lb, and are loaded chiefly with grain and beans, and fill up with rags or anything else they can get.

The accounts, in reference to the crop of cotton in the United States, continue favourable.

During the whole of the week, the tea market has been very inactive. In prices, however, no change has taken place.

On Tuesday, nearly all kinds of sugar declined in value 6d per cwt. Since then, however, an increased business has been passing, at last week's currency. Refined goods have varied but little in price.

Considerable firmness has been apparent in the coffee market, and, in some instances, prices have ruled a shade higher. Cocoa, however, has moved off heavily, on easier terms.

Owing to the late advance in the price of wheat, large quantities of rice have changed hands at very full prices. Compared with last year the stock is only moderate.

The silk market is in a healthy state, and the quotations now rule on a par, or nearly so, with those realised in January. Writing on the 11th inst., M. Arles Dufour and Co., of Lyons, thus refer to the state of the silk trade:—

A very fair business has been done in silk, and prices have risen from 4 to 6 per cent. This revival is, unfortunately, not due to the wants of our various consumptions, which are, and will remain, exceedingly limited as long as prices of raw material rule extravagantly high. The unfavourable prospects of the European crop, and the great scarcity of silk, have induced manufacturers, as well as speculators, to operate, and they have prepared reelers to purchase cocoons at prices which may again prove ruinous in the course of the season.

DELIVERIES of SILK through the LYONS CONDITION HOUSE.

	bales.	kilogs.
From April 1 to 30, 1859.....	2,520	190,000
From April 1 to 30, 1860.....	2,583	152,000
From May 1 to 31, 1859	3,200	243,000
From May 1 to 31, 1860	2,841	206,000

Inferior currants have been in improved request, but on easier terms. In the value of other kinds of fruit, no change of importance has taken place.

Indigo rules about stationary, and next to nothing has been passing in saltpetre.

In rum, the dealings have continued restricted; whilst the demand for brandy and grain spirits has been far from active.

A fine parcel of Russian hemp has realised 30*l* per ton, but the demand is still limited. Jute and coir goods have ruled steady in price.

Linseed oil has been quoted at 28s 3d per cwt on the spot. In the value of other oils no change of moment has been reported. The scarcity and high value of rough fat have had some influence upon the tallow market, which, for the time of year, is steady. P. Y. C., on the spot, has sold, to-day, at 52s 3d, and for delivery during the last three months, 52s per cwt. St Petersburg letters state that shipments of tallow were progressing steadily.

Scotch pig iron has sold at 50s 3d cash, mixed numbers. The exports from Scottish ports during the past six weeks have been as follows:—

	1860. tons.	1859. tons.
Week ending May 5	13,293	13,123
— — 12	16,015	11,233
— — 19	13,600	13,755
— — 26	11,600	11,451
— June 2	12,213	8,688
— — 9	10,417	9,069

The total shipments, it will be noticed, were 77,118 tons in the last six weeks, against 67,319 tons in the corresponding period of 1859.

"Inactivity," says the New York *Shipping List* of the 2nd inst., "is the most conspicuous characteristic of mercantile operations, not only in New York, but in all the other great centres of trade, while in money matters we think we do not overstate the matter when we say the tendency of things is to a condition of positive stagnation. The week closes with easier rates for money than ever. There is a tolerably active demand, but the supply continues so largely in excess of the wants of the community that lenders are glad to obtain the rates quoted below. The stock-brokers are less ready borrowers on call, the speculative feeling at the board, for the moment, being quite dormant. There is still a marked scarcity of prime commercial paper. We quote:—Loans on call, stock securities, 4½ to 5 per cent. per annum; ditto, other good securities, 6 to 6½; prime endorsed bills, 60 to 90 days, 5 to 6; ditto, 4 to 6 months, 6 to 7; first-class single signatures, 6½ to 7½; other good bills, 8 to 9; names less known, 9 to 10.

The market continues dull and heavy, and prices tend in favour of the purchaser. The sales for the three days are small, and to effect sales of any moment lower rates would have to be accepted. The sales since Tuesday comprise 3,500 bales, mainly for home use, the market closing quietly at the appended rates. We quote:—

The cotton market has remained in a depressed state throughout the week. The demand has been only moderate from the trade, and exporters confine themselves chiefly to the execution of orders. The import has not been large, and the accounts show a trifling diminution of stock. The supply of cotton in the market, however, continues large, and some holders are pressing sales, so that prices are still irregular and in favour of the buyer. We have reduced our quotations mostly ⅛d per lb, and at this reduction they must be looked upon as nominal. Egyptians are slightly lower. Brazil are also drooping. East India unchanged, but quotations nominal. The sales to-day are 7,000 bales. The reported export amounts to 8,080 bales, consisting of 2,590 American, 70 Brazil, and 5,420 East India.

MARKETS IN THE MANUFACTURING DISTRICTS.

Notwithstanding that the general trade of the country is in a flourishing state, the demand for goods in the manufacturing districts, this week, has been comparatively heavy, and, in some instances, the quotations have had a drooping tendency. The stocks, however, have not accumulated to any extent. Wool still continues in active request, and the currencies have rather improved. The iron trade has shown more firmness, but without leading to much change in the quotations. Coals have sold steadily for the time of year.

MANCHESTER, June 14.—The recent decline in prices seems to have brought in buyers to some extent for a few of the minor markets, the quotations which have now been arrived at seeming tangible for more or less business. On Monday, as also at the close of last week, there was a fair promise of transactions, but Tuesday's market brought a number of sellers from the country prepared for reductions, and most of the larger buyers for the East have again withdrawn. At the same time, any turn in price one way or the other is regarded with sensitive attention, and but little is required to change the present course of hesitation into one of either decisive action or inaction. What little has been done this week has chiefly shown a slight bias against the seller, though accompanied by offers at the nearest fraction less for very much larger quantities.

LEEDS.—A few seasonable articles have changed hands, but not in noticeably large parcels, and the same report applies to plain goods, which were just in demand, but were not briskly purchased. Stocks are accumulating in the warehouses, and there is no immediate prospect of their being reduced. At the same time the woollen trade is healthy and legitimate, and the manufacturers keep their hands satisfactorily employed in the production of goods for the balls.——ROCHDALE.—The warehouse trade is flat, and the few purchases are limited in extent. Yorkshire goods are little inquired for, but quotations are firmly sustained. There is not much doing in the local wool market; but this is chiefly attributable to the smallness of supply. Short wools would be purchased freely at current rates, but staplers have little to offer, and have great difficulty in replenishing. We have heard of the first local purchase of new clip, being by a manufacturing firm, of the produce of a flock at 19d per pound.——BRADFORD.—The tendency of wool in this market is still against the buyers, and stocks are very light. The amount of business done in worsted yarns and pieces has been very limited, and the market on the whole has been of a very quiet character.——HALIFAX.—The general wool business has been only slack, though a few warehouse sales have been effected of some better class kinds. Prices are very firm, and in the prospect of a late and limited supply from the approaching clip have an upward tendency. The effect upon other branches is a depressing one. Pieces especially are at present in very slow demand.——NOTTINGHAM.—There is rather more business doing in some branches of the lace this trade week. Plain goods are a better sale. The fancy trade remains as dull as for some time past. Foundation nets (commun Paris) continue a good sale, some houses being busy with this class of goods. The silk lace trade is without much change; if anything, however, there has been a trifle more doing during the past few days. The

hosiery trade is quiet, and there is very little change to report in any department.——Birmingham.—The trade of this town still continues languid, but that condition does not appear to increase in any department, the prevailing feature being rather a want of activity than positive depression. Complaints are still general as to the dulness which pervades the foreign trade in every department, and the prospects of improvement are looked upon as not favourable, especially so far as the Continental branch of it is concerned.——Bradford.—Prices of wool are firm. Consumers are very cautious, and buy only for present wants. The reports from the growing districts are very different—all is active there; higher rates are asked and paid. Spinners are asking higher rates for yarns; they have no alternative with the present high price of wool. This, however, checks demand, but still a fair business is doing. The piece market is unusually flat. Manufacturers are doing less on all sides, having to pay higher prices for yarns, or stop their looms. Goods can be bought for as little money as they could last year, and the cost to produce them is greatly enhanced by the increase in the price of wool.——Wolverhampton.—The official list of prices of Staffordshire finished iron is as follows:—Common Staffordshire bars, 7*l* 10s, at the works; best bars, 8*l* 10s; sheets, 9*l*; doubles, 10*l* 10s; nail sheets, 8*l* 10s; lstins, 12*l*; boiler plates, 9*l*; best and best best in proportion; common rods, 7*l* 10s, hoops, 8*l* 10s: gas strip, 8*l*; Canada plates, 12*l*; and all other sorts in proportion. Current prices of pig iron:—Staffordshire cold blast, 4*l* 7s 6d; best native hydrate pigs, 3*l* 15s to 4*l* 2s 6d; first-class all mine grey forge pigs, 3*l* 10s to 3*l* 15s; good mine pigs, with a modicum of flue cinder, 3*l* to 3*l* 5s; mine pigs, deteriorated by cinder, 2*l* 15s to 3*l* 2s 6d; grey forge cinder pig iron, 2*l* 15s to 2*l* 17s 6d; white forge cinder pigs, 2*l* 10s to 2*l* 15s; melters, Nos. 1, 2, and 3, 2*l* 17s 6d to 3*l* 2s 6d; superior makes of all mine melting iron, 3*l* 10s to 4*l*, according to make and quality. Favourite Shropshire and Forest of Dean brands, 4*l* 7s 6d.

CORN.

AMERICAN GRAIN AND FLOUR MARKETS.

New York, June 2.—Flour and Meal—Immediately subsequent to the date of our last review, the market became more animated, in consequence of light receipts, and transactions were moderately heavy, both for the local trade and for shipment, at an advance of 5 to 10 per cents per bbl all around. The demand for shipment has abated, however, and with only a moderate inquiry from the home trade, together with a considerable increase in the receipts, the market has become quiet, and part of the advance established on Wednesday has been lost. Export of wheat flour from 1st to 31st May, 108,810 bbls, against 55,197 bbls in 1859. Grain.—The market for spring wheat has been buoyant since our last, and, with a moderately active demand for export, and a fair inquiry from the home trade, prices have steadily advanced. The demand for corn has been fair at about previous rates for all kinds. Export from 1st to 31st May: wheat, 356,010 bushels, against 3,000 bushels in 1859; corn, 483,930 bushels, against 16,739 bushels in 1859.

New York, May 29.—Flour—The market was without change of importance. The demand for export and from the domestic trade was fair. The sales embraced about 15,000 bbls, closing within the following range of prices:—Superfine State, 5.10 dols to 5.15 dols; extra State, 5.25 dols to 5.30 dols; superfine Western, 5.10 dols to 5.15 dols; common to choice Western extra, 5.30 dols to 7 dols; St Louis extra, 6.40 dols to 7.50 dols; mixed to straight Southern, 5.75 dols to 6.20 dols; straight to good extra ditto, 6.25 dols to 7.50 dols; choice extra family and bakers' brands, 7.60 dols to 8.50 dols; rye flour, 3.45 dols to 4.25 dols; corn meal, 3.40 dols to 3.90 dols. Canadian flour was held with firmness, while inside grades were rather easier and extras more firm. The sales embraced about 1,200 to 1,500 bbls, closing within the range of the above quotations. Rye flour was steady at our figures, with sales of 200 bbls. Corn meal was quiet at the above figures. Wheat was without important change, with a fair local and export demand. The sales embraced about 3,000 bushels, including Milwaukee Club at 1.23 dol to 1.25 dol; red and white Southern mixed at 1.40 dol; good white Southern at 1.60 dol; and white Michigan at 1.54 dol. Corn—Owing to continued large receipts the market was heavy and lower, with sales for distilling, Eastern shipment and foreign export, including distilling cargoes at 53c to 54½c; 50c to 60c ditto for Eastern ditto, and prime mixed, in shipping order, at 63c to 65c. Jersey and Southern yellow and Southern white were nominal.

LONDON MARKETS.

STATE OF THE CORN TRADE FOR THE WEEK.

Mark Lane, Friday Evening.

Only limited supplies of wheat have been on offer in the leading markets here since we last wrote. Notwithstanding that the demand has been far from active, prices have, in most instances, advanced 1s to 2s per qr. There has been a steady, though not to say active, inquiry for wheat at slightly enhanced rates. The stocks in warehouse continue limited, and most of the fresh imported parcels go direct into the hands of the millers. The importations of produce from abroad into London this, compared with last, year to the 2d inst., are as under:—

Imports of Foreign Grain and Flour into London.
(From 1st Jan. to 2nd June, 1860, and same in 1859.)

	Wheat.	Barley.	Oats.	Flour.
	qrs.	qrs.	qrs.	brls.	sacks.
1859	251,737	295,475	437,093	14,524	71,923
1860	134,943	167,915	292,275	32,663	9,123
	116,794 Decrease.	98,560 Decrease.	144,818 Decrease.	18,139 Increase.	62,800 Decrease.

Here we find a considerable deficiency in the receipts from abroad, and it to some extent accounts for the continued upward movement in value; but, of course, the unfavourable advices at hand from most parts of the country in reference to the growing wheats have had some influence upon the trade, though it would be premature on our parts to state that next harvest will be a very deficient one.

The barley trade has continued healthy; but, as the arrivals from abroad have been sufficient to meet the demand, we have no improvement to notice in the quotations. The inquiry for malt has been chiefly restricted to small parcels on former terms. Oats, however, notwithstanding that supplies have come forward somewhat freely, have produced rather more money. Both beans and peas have advanced 1s per quarter, and flour has risen from 2s to 4s per sack, and fully 1s per barrel.

The continental markets have shown more firmness for wheat, and all kinds have produced higher rates. Spring corn, too, has moved off freely at very full prices. In the United States, a fair business has been passing in wheat and flour for shipment to England, at enhanced currencies.

In Scotland, wheat has ruled higher in price; nevertheless the trade has not been to say active. All other articles have commanded extreme quotations, with a good consumptive inquiry. The shipments to the South have somewhat increased.

The Irish markets have shown more animation than for some time past. Wheat, oats, and flour have produced more money, and other articles have continued very firm.

About an average supply of English wheat was on sale here to-day, and both red and white qualities moved off slowly at Monday's currency. In foreign wheat very little was passing; nevertheless, importers, generally, were very firm in their demands. Spring corn and flour supported previous rates.

Mr Edward Rainford states that 20 vessels have arrived off coast laden with grain since the 7th inst., and that a large business has been transacted in floating cargoes at very full prices.

The London averages announced this day were:—

COLONIAL AND FOREIGN PRODUCE MARKETS.

TRANSACTIONS OF THE WEEK.

For Report of This Day's Markets, see "Postscript."

Mincing Lane, Friday Morning.

Sugar.—There have again been rather large public sales, which passed off with less heaviness than generally expected, but soft qualities frequently sold upon terms slightly under those current on the 8th inst. Rather a better feeling has pervaded the market since then, and strong refining sugars go off more freely at last week's quotations. Floating cargoes of foreign still sell freely. Up to yesterday (Thursday), 4,586 casks West India found buyers, including many parcels by auction: Jamaica, brown and yellow, 37s to 42s; St Lucia, 33s to 40s; grainy Demerara, 41s 6d to 44s 6d; Barbadoes, yellow, 38s to 43s; brown, 35s 6d to 37s 6d. The clearances for home use now exceed those of last year by 1,800 tons, and the total quantity taken from the warehouses during the past week amounted to 5,310 tons. 8,700 tons were, however, landed, and the stock has increased to 68,250 tons, against 50,000 tons in 1859 at the same date.

Mauritius.—Of 11,830 bags in the public sales, a large proportion found buyers: grey and yellow, 37s to 40s; brown, 32s 6d to 36s 6d; black, 31s to 32s; grainy brown to fine yellow, 38s 6d to 43s; crystallised kinds, 44s to 46s 6d per cwt.

Madras.—1,554 bags partly sold: native brown and yellow, 31s to 34s; pasty soft brown and grey, 28s to 30s per cwt: the latter sorts were chiefly bought in.

Foreign.—700 casks 311 barrels Porto Rico, by auction, about half sold: brown, 37s to 38s; low heavy grey to fine yellow, 38s 6d to 45s. 1,400 boxes Havana chiefly found purchasers: brown, 36s to 40s; low & fine strong grey, 40s 6d to 44s 6d; grainy yellow and white, 44s to 46s 6d. Of 12,584 bags clayed Manilla, a small proportion sold at 36s for middling quality; the remainder withdrawn above the value; about half since sold at 36s to 37s. 1,358 bags Pernambuco partly found purchasers: soft yellow, 41s to 42s; washed white, 45s 6d. Four floating cargoes of Havana, No. 11½ to 12, have sold at 26s 7½d to 27s; two, No. 9½ to 10, at 25s 6d, for the United Kingdom; for export one, No. 11 to 11½, at 26s 9d; and one, No. 15, at 29s, for a near port; also one No. 12½ to 13, 29s per cwt, for the Mediterranean.

Refined.—A steady business has been done in dry goods, at about previous rates, common to middling qualities selling from 51s 6d to 52s 6d; crushed, 48s to 50s per cwt. The refiners' stocks have become very moderate.

Molasses.—250 puns have sold: Antigua, 18s to 18s 6d; Trinidad, 15s 9d per cwt.

Rum.—A better demand has sprung up for common qualities, and about 1,000 puns sold. Leewards, 1s 7d to 1s 8d; old, 1s 6d; Demerara proof, 1s 10d to 1s 11d; Jamaica, 3s 10d to 5s 3d per gallon. With very heavy landings the stock has increased to 27,600 puns 6,530 hhds, or 6,660 puns 550 hhds above that of last year.

Cocoa.—360 bags Grenada chiefly sold at stiffer rates, from 62s to 64s 6d for grey and red; one lot fine, 70s. 76 bags St Lucia went at 59s to 64s. By private contract, 200 bags Dominica sold at 63s per cwt.

Coffee.—There have been comparatively few public sales this week, and the market is exceedingly firm. 466 casks 276 barrels and bags plantation found buyers at very full prices, ranging from 66s 6d to 68s 6d for fine to fine fine ordinary, and 69s to 83s for low middling to superior quality. 1,847 bags good ordinary to good native, 61s to 62s. A floating cargo of Rio has sold for a near port at 55s 4½d, and one of good at 57s for the Mediterranean. A cargo of Santos has been reported, at about 58s 6d per cwt.

Tea.—Since last Friday there has been a limited business done at former prices, but the importers do not evince any disposition to press sales, and general quotations are unaltered. The stock in Great Britain on the 1st inst. amounted to 72,000,000 lbs, against 70,000,000 lbs at same date last year.

Rice.—Very extensive transactions of a speculative character have taken place at 3d to 6d advance, and, notwithstanding the favourable change in the weather during the past two days, the market continues firm at the above rise. The quantity sold on the spot cannot be accurately estimated, but it exceeded 80,000 bags to yesterday, the latest prices obtained being as follows: white Bengal, 10s to 12s 6d; pinky Madras, 10s to 10s 9d; Necrancie Arracan, 9s 6d to 10s; Rangoon, 9s 6d; low old, 9s; common Siam, 9s. 9,815 bags Java, by auction, partly sold at 11s 6d to 13s 6d for good bold white. Four floating cargoes of Necrancie Arracan have sold at 11s; one of Larong, for London or Liverpool, at 10s 3d; one of Moulmein, at 11s. Large quantities of Madras afloat are reported, latterly at 10s 3d landed, or 10s 6d per cwt ex ship.

Imports and Deliveries of Rice to June 9, with Stock on hand

	1860.	1859.	1858.	1857.
	tons	tons	tons	tons
Imports	11537	10060	52310	27300
Deliveries for home use	29235	11885	14600	15710
Exported	8020	11000	7460	28830
Stock	47135	73300	93500	37500

Spices.—Black pepper has been quiet. 1,834 bags Singapore, by auction, realised 4d to 4½d. 1,476 bags from Bangkok were taken in at 4d to 4½d for Borneo kind. White remains quiet at the late decline. 23 bags pimento realised 3⅝d per lb. 500 boxes cassia lignea partly sold at 84s to 85s for common pile 1; the remainder taken at 85s to 93s per cwt for third to first pile.

Saltpetre.—The market has continued quiet, yet holders generally have not accepted lower prices. A small parcel fine Bengal changed hands privately, refraction 3¾, at 45s 9d: refraction 17½ to 13 has realised 39s 3d to 40s 3d per cwt, partly for cash.

Imports and Deliveries of Saltpetre to June 9, with Stock on hand.

	1860	1859.	1858.	1857.
	tons	tons	tons	tons
Imported	6200	9050	5450	8050
Delivered	5640	8760	6910	5100
Stock	4380	3235	5150	5030

Deliveries last week 180 tons.

Cochineal is firmer, and 221 bags in the sales went as follows: Honduras silvers, 3s 2d to 3s 8d; black, 4s to 4s 4d; Mexican silvers, 3s to 3s 3d: Teneriffe, 3s 2d to 3s 4d; black, 3s 6d to 3s 8d per lb.

Other Dyestuffs.—327 bales Bengal safflower were only partly sold at 6*l* 5s to 8*l* for common to good quality. A large business is reported in Gambier privately at 17s 6d to 17s 9d. Cutch is quiet at 26s 6d to 27s.

Lac Dye.—Partial inquiries prevail for middling to good marks at previous rates.

Gums.—Animi sold steadily for Bombay: sorts, 9*l* 15s to 11*l* 17s 6d. Gum olibanum was rather dearer, fair to good clean qualities selling at 64s to 70s per cwt.

Metals.—The few sales effected this week do not establish any change in prices, and the market is still rather quiet. Several contracts have been made in spelter at 20*l* 5s to 20*l* 7s 6d per ton. English copper is steady. Foreign tin remains firm here as well as in Holland. Straits of good quality sold at 129s 3d to 129s 6d; Banca quoted 136s to 136s 6d per cwt. Scotch pig iron is firm at 50s 3d to 50s 6d per ton for mixed numbers. Other descriptions are unaltered.

Jute.—The market has continued steady notwithstanding the increased supplies brought forward. On Wednesday, 9,655 bales by auction found buyers: common to good, 13*l* 15s to 19*l*; fine, 19*l* 10s to 21*l* per ton, being about the previous value for most of the marks.

Hemp.—There has been little business done in Manilla.

Oils.—Sperm has advanced in America, and this market is firmer. Colonial has sold at 92*l* and is now held for higher rates. Olive remains dull at 56*l* to 62*l* 10s per tun. Linseed is active: 28*l* 7s 6d has been paid on the spot; 29*l* 10s for delivery in the last four or five months of the year. Rape continues in great demand: foreign refined, on the spot, 43s to 44s; brown, 41s 6d to 42s. 46s and 44s has been paid for delivery in the last four months of the year, with extensive sales. There is a good demand for cocoa-nut at improved rates. Cochin, 46s; Ceylon, 44s. Palm has been steady at 45s to 45s 6d per cwt for fine Lagos.

Linseed.—There has been a demand for America, and steady purchases made by consumers: Bombay, 51s to 51s 6d; Calcutta, 49s to 49s 6d. Several floating cargoes Taganrog have sold at 49s 6d to 50s for the United Kingdom. Calcutta, afloat, 48s 6d to 49s 6d; Bombay, 51s to 51s 6d per quarter.

Turpentine.—3,500 barrels of rough sold during the week at 8s 9d. Spirits are slow of sale at 35s to 35s 6d per cwt, including barrels.

Hides.—The sales of East India held yesterday went off flatly, and at ½d per lb reduction for some kinds.

Tallow.—The market is steady, and the home trade have been buyers to a moderate extent at full prices to 6d advance for foreign. First sort Petersburg Y.C. on the spot is quoted 52s 3d; forward deliveries, 52s per cwt.

Particulars of Tallow.—Monday, June 11.

POSTSCRIPT. Friday Evening.

Sugar.—Unusually extensive transactions have taken place in West India, the week's business amounting to 7,010 hhds. Considerable quantities of various kinds were brought forward at public sales. 763 bags Mauritius sold at previous rates. By private contract, 6,000 bags clayed Manilla sold at 36s to 37s. A floating cargo for the United Kingdom is reported at 27s, No. 12.

Coffee.—No public sales were held to-day.

Rice.—150 tons pinky Madras, at 10s 3d per cwt, was the only sale made to-day.

Spices.—550 bags black Singapore pepper sold at 4d to 4½d. 88 bags Singapore white, of good quality, brought 6½d to 6¾d. 722 bags pimento sold at 3⅝d to 3¾d per lb.

Saltpetre.—2,238 bags Bengal partly sold, including refraction 10, at 41s 6d; 3¾, 45s 6d. 645 bags low Bombay went at 35s 6d to 36s per cwt, the latter being rather dearer.

Cochineal.—182 bags went as follows, and partly sold: Honduras silvers, 3s to 3s 6d; black, 4s 4d to 4s 5d: Teneriffe silvers, 3s 1d to 3s 4d; black, 3s 7d to 3s 10d.

Metals.—Spelter sold at 20*l* 10s per ton to arrive.

Oil.—216 casks palm sold as high as 45s 3d for good. A few parcels cocoa-nut found buyers: Cochin, 45s 9d to 46s 3d; Ceylon, 44s 3d to 44s 6d per cwt.

Tallow.—Town and foreign unaltered. 88 casks South American, by auction, brought 51s 6d to 52s 6d per cwt.

ADDITIONAL NOTICES.

Refined Sugar.—The home market for refined sugar has been very steady this week, and closes with a firmer appearance; prices rather in favour of the seller. In Holland, some large sales have been made for Buenos Ayres, Valparaise, and Monte Video—about 800 tons. In consequence, the refiners are holding for 31s 9d to 32s for the standard qualities in barrels.

Green Fruit.—A steady business doing. Oranges in good demand; a cargo per Dispatch, from Valencia, sold by Keeling and Hunt at public sale, went at prices in character with condition and quality. Lemons improved in value; stock light. More inquiry for nuts, the rates for which may be quoted easier for buyers. The crop of West India pine apples is likely to be abundant, and shipments will be earlier than last season.

Dry Fruit.—The tendency in currants is downwards for ordinary and middling quality, which continue to drop in, and are offered freely from 25s to 30s per cwt. Raisins of all sorts are much depressed and difficult of sale, even at a slight reduction on former rates. Clearances large.

Colonial Wool.—The market remains firm but quiet.

Flax unaltered.

Hemp quiet, and very little business doing.

Cotton.—Sales of cotton wool from Friday, 8th June, to Thursday, 14th, inclusive:—600 bales Surat, at 3¾d to 4¼d for very middling to fully fair; 200 bales Madras, at 3¾d to 5d for very middling to fully fair Tinnivelly, and 3¼d for middling Western. The transactions have been small and the market dull, prices being very irregular and in favour of buyers, particularly for the lower qualities of Surat, which have declined ¼d per lb. 160 bales Surat and 100 Madras are advertised for public sale on Thursday, 21st inst.

Silk.—Trade a shade quieter.

Tobacco.—There has been an improved demand for useful descriptions for home trade, and sales effected to some extent. Middling and ordinary sorts have been taken at irregular prices, and chiefly in favour of buyers, but good and fine are steady at present quotations.

Leather and Hides.—The leather market has continued dull since the publication of our report of last week. The supplies of fresh goods at Leadenhall, on Tuesday, were short, but there was a very small attendance of buyers, and a limited business was done at previous quotations. At the public sale of sheep skins, last week, there was considerable animation, and an advance of 5s to 7s per dozen was realised on fine woolled skins over the quotations of the previous sale. By private contract, some sales of salted Buenos Ayres hides have been made at de-

clining rates. At the public sales, this week, every article was dull. Salted hides were generally ¼d to ⅜d lower. East India kips, of which 108,000 were offered and only 55,000 sold, must be quoted ¼d to ½d per lb below those of the previous sale. The River Plate hides were withdrawn.

METALS.—Business in metals continues to be limited in extent from an absence of speculation as much, or perhaps more, than from other causes. Copper does not rally materially in prices, but more inquiry has sprung up in the last few days. Iron is sluggish, but low prices induce sufficient business for manufacturers' employment. Scotch pig continues at about 50s 3d for m. n. warrants. Tin is strongly maintained in price in the continued absence of sellers of Banca. Spelter shows no change, keeping steady at last week's slight improvement. Lead is quiet, and tin plates the same.

TALLOW.—Official market letter issued this evening:—

	s	d
Town tallow	53	6
Fat by ditto	2	9½
Yellow Russian	53	6
Melted stuff	38	6
Rough ditto	22	6
Greaves	16	0
Good dregs	7	0

PROVISIONS.

The sale of bacon has greatly improved since our last at slightly advanced rates. There have been large arrivals of foreign butter this week; all sold freely at 2s to 4s less, quality good. Demand for hams very brisk at increased prices. Trade good.

METROPOLITAN CATTLE MARKET.

MONDAY, June 11.—The total imports of foreign stock into London last week amounted to 10,231 head. In the corresponding week in 1859 we received 3,111; in 1858, 3,605; in 1857, 4,359; in 1856, 2,500; in 1855, 3,239; and in 1854, 3,782 head.

The receipts of beasts fresh up from our own grazing districts were very moderate, and, for the most part, in middling condition. The few prime Scots, &c., on offer sold readily, at an advance in the quotation realised on Monday last of quite 4d per 8 lbs; inferior beasts were less active; nevertheless prices had an upward tendency. The supply of sheep was seasonably good as to number, but very deficient in quality. The mutton trade was in a depressed state, at a fall in value, compared with this day se'nnight, of from 6d to 8d per 8 lbs. The top quotation for the best Downs was 5s 6d per 8 lbs. We have to report a very dull sale for lambs—the show of which was rather extensive—at from 6d to 8d per 8 lbs decline. There was only a limited inquiry for calves, at further depressed rates.

SUPPLIES.

	June 14, 1858.	June 13, 1859.	June 11, 1860.
Beasts	3625	3780	3760
Sheep and Lambs	25820	24450	29570
Calves	287	246	335
Pigs	300	240	410

THURSDAY, June 14.—Our market to-day was very scantily supplied with beasts in, mostly, poor condition. The few prime breeds on offer commanded fully Monday's currency; otherwise, the beef trade was very inactive, on former terms. Sheep, the supply of which was only moderate, moved off freely, at full quotations. There was an improved inquiry for lambs, at Monday's decline in value. We had an active sale for calves, at 2d to 4d per 8 lbs more money.

Per 8 lbs to sink the offal.

	s	d	s	d		s	d	s	d
Coarse and inferior beasts	4	4	4	6	Prime Southdown sheep	5	4	5	6
Second quality ditto	4	10	5	2	Large coarse calves	4	6	5	2
Prime large oxen	5	4	5	8	Prime small ditto	5	4	5	8
Prime Scots, &c.	5	8	5	10	Large hogs	4	0	4	6
Coarse and inferior sheep	4	0	4	4	Small porkers	4	8	5	0
Second quality ditto	4	6	4	10	Suckling calves...each	19	0	23	0
Prime coarse-woolled do.	5	0	5	2	Quarter old store pigs	23	0	30	0

Lamb, 5s 4d to 7s 0d.

Total supply—Beasts, 709; sheep and lambs, 5,900; calves, 420; pigs, 220.
Foreign supply—Beasts, 252; sheep, 1,400 calves, 283.

NEWGATE AND LEADENHALL.

FRIDAY, June 15.—The supplies of beef continue very moderate; of mutton, lamb, veal, and pork, tolerably good. On the whole, the trade rules steady, as follows:—

Per 8 lbs by the carcass.

	s	d	s	d		s	d	s	d
Inferior beef	4	0	4	4	Mutton, inferior	3	10	4	2
Middling ditto	4	4	4	6	— middling	4	4	4	8
Prime large	4	6	4	8	— prime	4	10	5	2
Prime small	4	8	4	10	Large pork	4	4	4	8
Veal	4	4	5	0	Small pork	4	10	5	2

Lambs, 5s 0d to 6s 2d.

HOP MARKET.

BOROUGH, Monday, June 11.—The continuance of uncongenial weather has increased the unhealthy appearance of the bine, and prevented its progress. The reports of fly have not materially increased, except from the Worcester grounds, where the attack has become severe. The market continues very firm; but, with the exception of some large sales of Mid Kents, the transactions have been limited.

FRIDAY, June 15.—The market continues firm, with no alteration in prices since last quotations.

POTATO MARKET.

SOUTHWARK WATERSIDE, Monday, June 11.—During the past week the arrivals coastwise have been small, but there being more left over from the former week than required, the trade was heavy, and prices low. The following are this day's quotations:—York Regents, 90s to 120s; ditto Flukes, 90s to 120s; Lincolnshire Regents, 80s to 100s; Dunbar reds, 100s to 110s; Perth, Forfar, and Fifeshire Regents, 80s to 90s; ditto reds and Rocks, 80s to 90s; Irish whites, 70s to 80s per ton.

THURSDAY, June 14.—The arrivals of old potatoes continue moderate at this market, the season for which is drawing near to a close, but the supplies of new potatoes are on the increase. Trade for old Ware is generally inactive, and barely previous rates obtained. York Regents, from 90s to 120s; ditto Flukes, 100s to 120s; Scotch Regents, 100s to 110s; ditto Cups, 90s to 100s; Rocks, 80s to 90s per ton. New potatoes are 12s to 16s per cwt.

HAY MARKETS.—THURSDAY.

SMITHFIELD.—Meadow hay, 3*l* to 4*l* 15s; clover, 4*l* to 5*l* 15s; and straw, 1*l* 7s to 1*l* 14s per load. A moderate demand.

CUMBERLAND.—Meadow hay, 3*l* 3s to 4*l* 15s; clover, 4*l* to 5*l* 15s; and straw, 1*l* 7s to 1*l* 14s per load. A fair trade.

WHITECHAPEL.—Meadow hay, 3*l* to 4*l* 15s; clover, 4*l* to 5*l* 17s; and straw, 1*l* 6s to 1*l* 14s per load. Trade somewhat steady.

COAL MARKET.

FRIDAY, June 15.—Wall's-end South Hetton 19s 6d—Cassop 19s—South Kelloe 19s. 11 ships at market.

LIVERPOOL MARKETS.

WOOL.

(FROM OUR OWN CORRESPONDENT.)

FRIDAY, June 15.—There is a very fair amount of business doing this week, chiefly in such descriptions of foreign as are adapted to supply the place of English, the old stocks of which are now pretty well exhausted, and the new clip, being considerably later than usual, is only just about coming into the market.

CORN.

(FROM OUR OWN CORRESPONDENT.)

FRIDAY, June 15.—Grain market firm, good consumption in wheat and flour, at extreme rates. Indian corn 6d dearer; beans quiet; oats, oatmeal, and barley firm. Weather fine.

METALS.

(FROM OUR OWN CORRESPONDENT.)

FRIDAY, June 15.—There is still considerable dulness in the market for many descriptions of manufactured iron, and in such instances slightly lower prices have been accepted. In Scotch pig iron there has been little doing during the week, but prices remain with little or no alteration. The inquiry for copper at the quoted prices has been limited. Lead continues dull. Most other metals remain as before.

The Gazette.

TUESDAY, June 12.

BANKRUPTCIES ANNULLED.

H. Clemerson, Loughborough, ironmonger.
W. G. Martin, Chepstow, upholder.

BANKRUPTS.

R. Crowley, Brighton, builder.
J. Murley, St Chad's wells, Gray's inn road, carriage builder.
E. Caswell, Northampton, boot manufacturer.
J. W. Fergusson, Paternoster row, and New court, Middle Temple, bookseller.
J. T. Burgon, Bucklersbury, wholesale hardwareman.
C. H. Gilks, Union row, Tower hill, and Wapping, ironmonger.
W. Noak, J. Noak, and J. B. Clark, Droitwich, salt manufacturers.

T. Sweetlove, Great bridge, Staffordshire, chemist.
S. Hall, Oldswinford, carpenter.
S. F. Bourn, Lincolnshire, coach builder.
J. Hall, Monmouth, innkeeper, and Newland, Gloucestershire, brick maker.
G. W. B. Kiallmark, Puriton, Somersetshire, cement manufacturer.
J. Cooke, Batley, Yorkshire, joiner.
T. Crighton, Manchester, machinist.
J. Cooper, Manchester, butter merchant.
J. Bailes, Newcastle-upon-Tyne, leatherseller.

SCOTCH SEQUESTRATIONS.

D. M. Chisholm, Chisholm and Aigas, Inverness and Rossshire.
J. Simpson, Browshot, Carnwath, Lanarkshire.
J. Livingstone, Dundee, manufacturer.
A. Ingram, King Edward, Aberdeen, farmer.
J. Fraser, Mossend, Dallas, farmer.
J. Rostron, Edinburgh, mannfacturer.
J. P. Miller, Glasgow, commission agent.

GAZETTE OF LAST NIGHT.

BANKRUPTCY ANNULLED.

C. S. Duggan, Bridge house place, Newington causeway, wholesale stationer and account book manufacturer.

BANKRUPTS.

G. Seaton, Kingston-upon-Hull, currier.
J. Fulford, Manchester, brewer.
C. Allen, Risca, Monmouthshire, grocer.
J. Mowbray, Radford, Nottinghamshire, miller and baker.
M. Cohen, Landport, Hants, dealer in glass, china, and fancy goods.
H. P. Ballard and S. Newsome, Coventry, ribbon manufacturers.
C. England, Barton-upon-Humber, currier and leather dresser.
W. A. Stapley, Old Compton street, Soho, shoe mercer and grindery dealer.
H. Cooper, Great Cambridge street, Hackney road, and Pownall terrace, Queen's road, Dalston, shoe manufacturer.

SCOTCH BANKRUPTS.

R. D. Sullivan, shipowner, lately of Suffolk, now residing in Edinburgh.
J. Smith, innkeeper, Stewarton, Ayrshire.
J. Gillin and Co., wine and spirit merchants, Banffshire.

CRYSTAL PALACE.—The arrangements for the Great French Musical Festival of the Orpheonistes rapidly approach completion. M. Delsporte, and his little army of inspectors, have returned from their tours through the provinces of France, and the numbers from each society who will take part in the Festival are now exactly reported. Included in the selection of music for the first day, will be found the choruses of the Enfants de Paris, by Adolphe Adam; the Veni Creator of Besozzi; the Retraite of Laurent de Rille; the Depart du Chasseur of Mendelssohn &c., &c. (popularly known in England as the hunter's farewell), concluding the first part with the celebrated Septuor in the duel scene of Meyerbeer's Huguenots.

COMMERCIAL TIMES

Weekly Price Current.

☞ The prices in the following list are carefully revised every Friday afternoon, by an eminent house in each department.

LONDON, FRIDAY EVENING.

Add 5 per cent. to duties on carrants, figs, pepper, tobacco, wines, and timber, deals, wood, &c., from British Possessions.

EPITOME OF RAILWAY NEWS.

TRAFFIC RETURNS.—The traffic returns of railways in the United Kingdom for the week ending June 2 amounted to 562,560*l*, and for the corresponding week of last year to 487,060*l*, showing an increase of 75,500*l*. The gross receipts of the eight railways having their termini in the metropolis amounted to 242,868*l*, and for the corresponding week of 1859 to 215,018*l*, showing an increase of 27,850*l*.

RAILWAY AND MINING SHARE MARKET.

LONDON.

MONDAY, June 11.—There was a general absence of business in the railway market. In the colonial market, Great Western of Canada shares receded, and Grand Trunk stock continued dull at 31 to ½. Foreign shares were inactive. South Austrian and Lombardo-Venetian, after marking ¼ dis., improved to ¼ dis. to par. Pernambuco left off at 1¾ to 1½ dis.; Bahia, ⅝ to ½ dis.; and San Paulo, ⅝ dis. In American railway securities the shares of the Michigan Central, New York Central, and New York and Erie declined. There was not much business done in mines, but in some adventures an advance took place, especially St John del Rey. Ottoman Bank shares improved. Union of London were also firmer. In miscellaneous descriptions, Red Sea Telegraph shares were less steady, at ¾ to ⅞ dis. Victoria debentures, new, were last quoted 107; the Canadian loan, 102½ bonds, and 3 to ½ pm scrip.

TUESDAY, June 12.—The railway market was heavy the whole day, and left off at a general decline. Great Northern A stock is 2 per cent. lower, and other descriptions ¼ to ½. The tendency at the close was rather unfavourable. In colonial descriptions, Grand Trunk of Canada stock was higher, at 31¼ to ⅜. Foreign shares showed increased strength, especially French. An improvement in South Austrian and Lombardo-Venetian, however, was not maintained; the final quotations being ¼ discount to par. The shares of the New York and Erie declined. British mines were fairly supported, Stray Park particularly exhibiting an advance. No change of importance occurred in joint stock banks. In miscellaneous descriptions, Van Diemen's Land shares improved. Red Sea Telegraph also rallied to ⅛ dis. to par. Victoria debentures, new, left off at 107; the Canadian loan, 102½ bonds, and 3¼ pm. scrip.

WEDNESDAY, June 13.—There was a better feeling in the railway market this afternoon, several of the heavier stocks closing at an advance. South-Eastern especially has improved ⅝ per cent. Business, however, continued very limited, the apprehension of a falling off in the traffic returns of the next half-year from the less favourable state of trade tending in some degree to check speculation. Great Northern stocks were depressed. In colonial descriptions, Great Western of Canada and Grand Trunk again declined. East Indian was quoted lower at one period of the day, but afterwards rallied to 102 to ½. There was not much doing in the foreign market, the principal movement being an advance in Great Luxembourg, and South Austrian and Lombardo-Venetian. Illinois Central and New York Central shares likewise improved. Mines were inactive, and in one or two cases presented a decline. In joint stock banks, Australasia shares were dull, while City Bank showed a firmer tendency.

THURSDAY, June 14.—The railway market showed less buoyancy to-day, and closed with rather a heavy appearance. In some cases the final prices exhibited a decline, although all quotations were for the new account. In the colonial market, Buffalo and Lake Huron shares were lower, while Grand Trunk stock improved to 31 to ½. East Indian left off without change at 102 to ½. There were few transactions in foreign shares, and prices were generally the same as yesterday. South Austrian and Lombardo-Venetian, however, receded to ¼ discount to par. American securities were firm, particularly the shares of the New York and Erie. No important alteration occurred in mines. In joint stock banks, Ottoman and Union of London were slightly stronger, and in miscellaneous descriptions a fractional rise took place in National Discount. There was a better demand for Great Ship shares, and the price has advanced to 12s 6d. Victoria debentures, new, were last quoted 107 to ¼; the Canadian loan, 102½ bonds, and 3 to ½ pm. scrip; Ocean Marine Insurance, 1¼ pm.; Universal, ½ to ¾ pm.; London and Provincial, ¼ dis.; Thames and Mersey, 1¼ to ½ pm.; London and South African Bank, ¼ dis.; and Bank of Turkey, 1⅜ to 1½ dis.

FRIDAY, June 15.—A very limited business was transacted in railway shares, and prices sympathised with the heavy tone in the Consol market. Great Westerns receded to 68⅞. North-Westerns to 101½ 101¾. South-Westerns to 93¼ 93¾. Midlands to 116⅛ 116¼, and South-Easterns to 85½ 85¾. London and Blackwall advanced to 71; and London and Brighton to 115 and 115¼. The foreign and colonial lines have also been exceedingly inactive. Antwerp and Rotterdam realised 4⅛, and San Paulo 11. Grand Trunk of Canada declined to 30¾ 31. Great Western of Canada to 11⅛ 11¼; and East Indian were firm at 102½.

NO MORE MEDICINE.—

For Habitual Constipation, Indigestion (Dyspepsia), Diarrhœa, Nervous, Bilious, and Liver Complaints.

DU BARRY'S delicious Health-restoring REVALENTA ARABICA FOOD.—Certificate No. 36,418. In our practice we have been enabled to appreciate the virtues of Du Barry's Food. In its effect on chronic Dyspepsia (Indigestion), Nervousness, Constipation, Diarrhœa, Bilious and Liver Complaints, Cough, Asthma, Debility and Incipient Consumption, we find it the safest remedy. Dr Ure, M.D., F.R.S.; Dr Harvey; Dr Bright, Dr Shorland; Dr Campbell.

At a cost of about a penny per meal, it speedily cures constipation, dyspepsia (indigestion), nervousness, flatulency, distension, phlegm, biliousness, liver complaints, hysteria, neuralgia, sleeplessness, acidity, congestion, blood to the head, headaches, loss of memory, indecision, nervous fancies, palpitation, heartburn, eruptions, impurities, fever, irritability, low spirits, diarrhœa, dysentery, noises in the head and ears, debility, diabetes, pains between the shoulders, cramps, spasms, nausea and sickness, sinking, fits, colds, catarrhs, cough, asthma, bronchitis, consumption, debility, gout, rheumatism, hœmorrhoids, also children's complaints, and saves fifty times its cost in medicine. It does not interfere with a liberal diet, but imparts a healthy relish for lunch and dinner, and restores the faculty of digestion and nervous and muscular energy to the most enfeebled. We extract a few of many thousand cures:

Cure No. 1,771.—Lord Stuart de Decies of many year's dyspepsia.——Cure No. 49,832.—"Fifty year's indescribable agony from dyspepsia, nervousness, asthma, cough, constipation, flatulency, spasms, sickness and vomiting, have been removed by Du Barry's excellent food."—Maria Joly, of Lynn, Norfolk.——Cure No. 58,816.—Field Marshal the Duke of Pluskow, of dyspepsia, constipation, nervousness, and liver complaints, which had resisted all baths and medical treatment.——Cure No. 47,121.—Miss Elizabeth Jacobs, of extreme nervousness, indigestion, gatherings, low spirits, and nervous fancies.——Cure No. 54,816.—From the Rev. James T. Campbell, Syderstone Rectory, near Fakenham, Norfolk: "In all cases of indigestion, and particularly when the liver is affected, I consider Du Barry's Revalenta Arabica food the best of all remedies."—James T. Campbell.

Sold in canisters, 1 lb, 2s 9d; 2 lbs, 4s 6d; 12 lbs, 22s; 24 lbs, 40s. Super-refined quality, 5 lbs 22s; 10 lbs, 35s. The 10 lb, 12 lb, and 24 lb canisters carriage free, on receipt of post-office order by Barry Du Barry and Co., 77 Regent street, London; Fortnum, Mason and Co. 181 Piccadilly, London; Abbis, 60 Gracechurch street and all grocers and chemists.

Observe the only Establishments of Lawrence Hyam are:—City, 36 Gracechurch street; West-end, 189 and 190 Tottenham court road.

SUMMER ATTIRE.—

E. MOSES and SON beg to state, that their preparations for Spring and Summer exceed any of their former efforts as well in extent as in variety. They have visited the principal markets both at Home and Abroad for the best and newest manufactures, and have succeeded in collecting such an assortment of goods as has never before been exhibited under one roof in this or any other country.

Their Bespoke Tailoring Departments have been supplied with an endless variety of the choicest and most popular fabrics

Their Ready Made Clothing Stock is complete in every respect, and they venture to say that for Elegance of Style, Durability of Material and Workmanship, Tastefulness of Finish and Cheapness, it is quite unequalled, even in the Metropolis of England.

No less care has been bestowed on the Hosiery, Hat and Cap, and Boot and Shoe Departments, which have been furnished with an entirely new stock of fashionable and seasonable goods at such prices as enable the proprietors to offer their patrons very great advantages.

N.B.—E. MOSES and SON take this opportunity of announcing, that they intend giving their customers the full benefit of the abolition of the duty on silks, gloves, &c.

E. MOSES and SON, Corner of MINORIES and ALDGATE, and Corner of NEW OXFORD STREET and HART STREET.

COUNTRY BRANCHES—Bradford & Sheffield, Yorkshire.

E. MOSES and SON wish it to be particularly observed that if any article be not approved of it will be exchanged, or the money returned without hesitation.

Their Book for Spring and Summer, containing "The Growth of an Important Branch of British Industry," with rules for self-measurement, and list of prices, may be had gratis on application, or post free.

THE "INDISPENSABLE" SUIT,

made in various colours and patterns, and particularly adapted for walking, riding, travelling, and business. This is universally acknowledged to be the most comfortable and serviceable suit ever introduced. Price from 35s.—To be obtained of E. MOSES and SON, Corner of MINORIES and ALDGATE, and Corner of NEW OXFORD STREET and HART STREET.

TOURISTS AND EXCURSIONISTS

are specially provided for at
E. MOSES and SON'S,
MERCHANT TAILORS, HATTERS, HOSIERS, BOOTMAKERS, &c.,
Corner of MINORIES and ALDGATE,
Corner of NEW OXFORD STREET and HART STREET,
BRADFORD and SHEFFIELD, YORKSHIRE.

A TOILETTE REQUISITE FOR

THE SPRING.—Among the many luxuries of the present age, none can be obtained possessing the manifold virtues of OLDRIDGE'S BALM of COLUMBIA. If applied to the roots and body of the hair, it imparts the most delightful coolness, with an agreeable fragrance of perfume. It also at this period of the season prevents the hair from falling off, or if already too thin or turning grey, will prevent its further progress, and soon restore it again. Those who really desire to have beautiful hair, either with wave or curl, should use it daily. It is also celebrated for strengthening the hair, freeing it from scurf, and producing new hair, whiskers, and moustache. Established upwards of thirty years. No imitative wash can equal it. Price 3s 6d, 6s, and 11s only.—C. and A. Oldridge, 22 Wellington street, Strand, W.C.

CONSUMPTION AND ASTHMA

CURED.—Dr H. JAMES discovered, while in the East Indies, a Certain Cure for Consumption, Asthma, Bronchitis, Coughs, Colds, and General Debility. The remedy was discovered by him when his only child, a daughter, was given up to die. His child was cured and is now alive and well. Desirous of benefiting his fellow-creatures, he will send, post free, to those who wish it, the recipe, containing full directions for making and successfully using this remedy, on receipt of their names, with stamped envelope for return postage.—Address to O. P. Brown, 14 Cecil street, Strand.

HOLLOWAY'S PILLS AND OINTMENT.—Mental Weakness.

—To the stomach, liver, or circulation, must we generally look for the gloomy thoughts which sometimes oppress us. A single dose of appropriate medicine has prevented many an act of suicide. Whenever apathy and depression overshadow us, let us take timely warning, and regulate the sources of health by Holloway's remedies, which will infallibly set right the digestion, and purify and invigorate the circulation. The ointment should be rubbed twice a day over the liver and stomach, and over the heart if palpitation distresses. It will be absorbed and wonderfully assist the pills in their salutary operation, without distressing or unduly weakening the system. This treatment, perseveringly followed, soon banishes melancholy and mental hallucinations.

THE BEST REMEDY FOR INDIGESTION.

NORTON'S CAMOMILE PILLS

are confidently recommended as a simple but certain remedy for Indigestion, which is the cause of nearly all the diseases to which we are subject, being a medicine so uniformly grateful and beneficial, that it is with justice called the "Natural Strengthener of the Human Stomach." NORTON'S PILLS act as a powerful tonic and general aperient; are mild in their operation; safe under any circumstances; and thousands of persons can now bear testimony to the benefits to be derived from their use.—Sold in Bottles at 1s 1½d, 2s 9d, and 11s each, in every town in the kingdom.

CAUTION!—Be sure to ask for "NORTON'S PILLS," and do not be persuaded to purchase the various imitations.

VALUABLE INFORMATION.—

GRATUITOUS EDITIONS of the following LECTURES, delivered at the Royal Institute of Anatomy, Science, and Medicine, 369 Oxford street, London, by W. B. MARSTON, the Principal, are being issued, with plain directions for SELF-TREATMENT and CURE in each of them.

No. I.—NERVOUS DEBILITY (the result of youthful error), loss of memory, shortness of breath, dimness of sight, exhaustion, and general incapacity. Addressed specially to Young Men.

No. II.—MARRIAGE: Its Obligations and Impediments. Addressed to those who contemplate Marriage, and to the Married who desire Children.

No. III.—THE BRAHMIN'S ELIXIR OF LIFE: Its History—Secret Remedies of the Hindoos no Fable—Full Particulars of this Extraordinary Specific—Its Amazing Powers as a Reinvigorator of the Impaired Functions, and in all Cases of Nervous Debility.

No. IV.—THE DISEASES INFLICTED UPON MANKIND BY THE GREAT SOCIAL EVIL. With a simple means of complete Cure without Mercury.

Each Lecture, neatly printed and bound, will be sent GRATIS, on receipt of two stamps to prepay postage, or THE WHOLE FOUR, BOUND TOGETHER, with numerous additions, and full directions for SELF-TREATMENT and CURE, 160 pages, 8vo, post free, for Six Stamps. Address, Treasurer, Royal Institute, 369 Oxford street, London.

Post free for Two Stamps.

EXTRAORDINARY DISCOVERY

of an Entirely NEW THEORY of CURING DISEASE, being the recorded experience of 30 years' special practice in Great Britain, France, and America—with evidence of the actual effects of the latest Scientific Discoveries, denominated NEW LOCAL REMEDIES, with the adjuncts of Constitutional Treatment not yet generally known, even by the medical faculty of the British Empire, but which have been recently introduced into England. Sent free on receipt of two stamps to defray postage, &c, by W. HILL, Esq, M.A., No. 27 Alfred place, Bedford square, London, W.C.—Daily consultations from Eleven till Two, and Six to Eight Evening.

THE HUMAN HAIR

Just published, price 1d, the 76th edition of

GRIMSTONE'S THREE MINUTES'

ADVICE on the Growth, Cultivation, and Preservation of the Human Hair. This unique little work contains two engravings and many letters of undoubted authority, proving Grimstone's Aromatic Regenerator to be the only article that will produce a new growth of human hair, eyebrows, moustachios, whiskers, with a new growth of hair upon bald places. Sold in triangular bottles, 4s, 7s, and 11s. This size contains four of the 4s size; by post 12s, case and postage included

Grimstone's Eye-Snuff for exportation. Sold in Jars 8s per lb; or in Tin Canisters, 8d, 1s 3d, 2s 4d, 4s 6d and 6s 6d. His Medicated Eye-Snuff, samples 1s 1½d 2s 9d, and 4s 6d. This snuff is intended for Ladies or Gentlemen who are not Snuff Takers. All letters to William Grimstone, merchant, 52 High street, Bloomsbury.

A New Edition of

THE PHILOSOPHY OF MARRIAGE.

By JOSEPH KAHN,

Graduate in Medicine, Surgery, and Midwifery in the Royal and Imperial University of Vienna, Erlangen, &c., &c.

This popular work (which has been translated into four different languages) has now gone through forty-one editions of 10,000 each, and is designed to impart accurate knowledge on subjects which involve, the means of securing moral and physical happiness.

Price One Shilling, or, post free, for Twelve Stamps, direct from the Author, 17 Harley street, Cavendish square, London, W.

A Boon to Nervous Sufferers.

GIVEN AWAY.—26,000 COPIES

of a Medical Book, for the benefit of Nervous Sufferers, sent, post free, by the author, secure from observation, on receipt of a directed envelope, enclosing two stamps, the Private Medical Friend, a new work on the Self-cure of Nervous Debility, Loss of Memory, Dimness of Sight, Lassitude, Indigestion, Dislike to Society, &c, which, if neglected, result in consumption insanity, and premature death, with plain directions for perfect restoration to health and vigour. The true guide to those who desire a speedy and private cure.—By HENRY SMITH, Esq., 8 Burton crescent, Tavistock square, London, W.C.

HUBBUCK'S PATENT WHITE ZINC PAINT.

By their process, which is patented, Pure White Zinc Paint is cheaper than White Lead. It is the most durable and beautiful paint known, and does not stain or discolour with the London atmosphere.

CHEAPNESS.—Two hundred-weight of this Paint, with six gallons of Oil, covers as much surface as three hundred-weight of White Lead and twelve gallons of Oil. It is cheaper in the first instance, as well as desirable on every consideration.

ADULTERATIONS.—Prejudice is caused by some Paint Grinders selling Zinc Paint adulterated with Sulphate of Barytes, some even to the extent of thirty per cent. Whether this is sold under the name of "Improved Zinc Paint," or is candidly sold as Number Two or Three qualities, no Painter can produce good work with it. He naturally condemns Zinc Paint altogether.

That Painters have never seen the best Zinc Paint is evident, or they would not use any other paint for their best work. To prevent the prejudice which the inferior article must produce, each Cask of Pure White Zinc is stamped

"HUBBUCK, LONDON, PATENT."

THOMAS HUBBUCK and SON, WHITE LEAD, OIL, PAINT and VARNISH WORKS, 24 LIME STREET.

Messrs ALLSOPP and SONS take the opportunity of announcing to private families that their Ales, so strongly recommended by the medical profession, may be procured in Bottles and Casks, and on Draught, from all the most respectable wine and beer merchants and licensed victuallers, on "ALLSOPP'S PALE ALE" being especially asked for.

When in bottle, the genuineness of the lable can be ascertained by its having "ALLSOPP and SONS" written across it upon red and white ground striped.

The Brewery, Burton-on-Trent, April 30, 1860.

TEETH.—MR ESKELL,

Sargeon Dentist, 314 Regent street (facing the Polytechnic), supplies his PATENTED INCORRODIBLE TEETH, which can be matched so closely in shape and colour to those left in the mouth, and are formed so exactly to nature, that the closest observer cannot detect the difference, and in all cases they restore perfect articulation and mastication. These teeth are fixed from one to a complete set upon Mr Eskell's never-failing and painless principle of SELF-ADHESION, without extracting any teeth or stumps, or giving any pain whatever; and being incorrodible, they possess the superior advantage of never changing colour nor decaying. Mr Eskell's celebrated OSTEOPLASTIC ENAMEL for stopping Decayed Teeth is a preparation which never changes colour nor affects the colour of the tooth, and is free from any injurious properties either as regards the teeth or general health. Its application is easily performed, and without giving the slightest pain. Deficiencies of palate effectually remedied. Loose teeth fastened. Teeth regulated. Discoloured teeth restored, &c. Hours, Ten to Six. Consultation free. Charges strictly moderate.—314 Regent street, London (opposite the Polytechnic). Established 1847.

DEANE'S TWO-HOLE BLACK PENS

which are unequalled for their durability and easy action, are adopted by the gentlemen of the Stock Exchange, and the principal bankers, merchants, and public companies of the city of London, besides several of Her Majesty's judges, the most eminent counsel, and the reverend the clergy. Their cheapness and popularity ha induced many unprincipled people to put forth imitations of the genuine articles, which are equally useless to the purchaser, and disgraceful to the vender. The public are therefore cautioned, and respectfully requested not to purchase any as DEANE'S GENUINE TWO-HOLE BLACK PENS, unless each pen is stamped

"G. and J. Deane, London Bridge,"

and the box, which contains exactly twelve dozen, has thereon a variously coloured label, inscribed

"G. and J. DEANE'S Two-Hole Black Pens, 46 King William street, London bridge."

DINNEFORD'S

PURE FLUID MAGNESIA

has been for many years sanctioned by the most eminent of the Medical Profession, as an excellent remedy for acidities, heartburn, headache, gout, and indigestion. As a mild aperient it is admirably adapted for delicate females, particularly during pregnancy; and it prevents the food of infants from turning sour during digestion. Combined with the Acidulated Lemon Syrup, it forms an effervescing aperient draught which is highly agreeable and efficacious.

Prepared by DINNEFORD and CO., Dispensing Chemists (and General Agents for the Improved Horse Hair Gloves and Belts), 172 New Bond street, London, and sold by all respectable Chemists throughout the empire.

SEQUELIN'S OIL.—

This vegetable preparation is most successful as an instantaneous restorative, strengthening weak hair, opening pores of the skin, most effectual in the growth of hair and eyebrows, &c., preventing its falling off, curing the scurvy, giving also brightness, softness, and keeping its natural colour, and checking the most obstinate baldness in two months One bottle is sufficient. Price one guinea. Sold by S. Sequelin, 40 Wharton street, Lloyd square, W.C. Depot, G. Jozeau, 49 Haymarket; Metcalfe, Bingley, and Co., 131 Oxford street. The most satisfactory testimonials shown upon application.

FIRST-CLASS PROTESTANT

EDUCATION, at the Royal Continental Collegiate Institution, Bushey heath, Herts.—In addition to all its qualities as a first-rate classical and commercial school, it is also highly recommended for a thorough French education. Some of the parents who are continually visiting France, and whose sons have scarcely been two years at this school, are most happy to assure those parents who are desirous that their children should acquire a thorough knowledge of the French language, without wishing them to neglect their English and classical education, that their sons speak far better and more grammatically than any of the sons of their friends who have spent two or three years in schools in France merely for the purpose of acquiring that language. Terms inclusive, and vary, according to age and requirements, from £40, £50, to £60 per annum—1d est, four terms, each of 75 days' duration, with two months' holidays. Pupils are received any day, their term beginning from the day of their arrival. No restrictions to parents. Not one case of illness has occurred since the school has been established (1857).—Address, stating age and requirements, Professor Vellère (late of the Harrow Preparatory School), Bushey heath, Herts. The pupils wear a uniform very elegant and becoming.

RIMMEL'S TOILET VINEGAR,

by its cooling properties and delightful aroma, renders the daily bath or ablutions doubly pleasant and salubrious. Price 1s and 2s 6d. Sold by all perfumers and chemists. Made only by E. Rimmel, Perfumer, 96 Strand, and 24 Cornhill, London, and 17 Boulevard des Italiens, Paris.

FREDERICK DENT,

Chronometer, Watch and Clock Maker to the Queen and Prince Consort, and the maker of the Great Clock for the Houses of Parliament, 61 Strand, and 34 Royal Exchange. No connection with 33 Cockspur street.

RUPTURES.—BY ROYAL LETTERS PATENT

WHITE'S MOC-MAIN LEVER

TRUSS is allowed by upwards of 200 Medical Gentlemen to be the most effective invention in the curative treatment of HERNIA. The use of the steel spring, so often hurtful in its effects, is here avoided, a soft bandage being worn round the body while the requisite resisting power is supplied by the MOC-MAIN PAD and PATENT LEVER, fitting with so much ease and closeness that it cannot be detected, and may be worn during sleep. A descriptive circular may be had, and the Truss (which cannot fail to fit) forwarded by post, on the circumference of the body two inches below the hips being sent to the Manufacturer,

Mr WHITE, 228 Piccadilly London.

Price of a single Truss, 16s, 21s, 26s 6d and 31s 6d; Postage, 1s. Double ditto, 31s 6d, 42s, and 52s 6d; postage, 1s 8d. Post-office orders to be made payable to ohn White, Post-office, Piccadilly.

ELASTIC STOCKINGS KNEE

CAPS, &c., for VARICOSE VEINS, and all cases o WEAKNESS and SWELLING of the LEGS, SPRAINS, &c. They are porous, light of texture, and inexpensive, and are drawn on like an ordinary stocking. Price rom 7s 6d to 16s each; postage, 6d.

WHITE, MANUFACTURER, 228 Piccadilly, London

JULLIEN FUND.

Committee Room—50 New Bond street.

The Committee of the Jullien Fund, fearing that the subscriptions have been materially checked by the unfortunate death of Mons. Jullien, desire to explain that a widow and others, members of his family, can be protected from want only by the kind aid of those who appreciate the great services rendered by the late lamented maestro to the cause of the musical education of the English people.

The Committee confidently appeal to that benevolence for which their countrymen are so distinguished, for such prompt and liberal additions to the subscription list as shall enable them to do some justice to the memory of M. Jullien, and at the same time afford adequate relief to his bereaved family.

COMMITTEE for the DISTRIBUTION of the JULLIEN FUND.

NEW THEATRE ROYAL ADELPHI.

Sole Proprietor and Manager, Mr B. Webster.

On Monday and Wednesday, THE SERIOUS FAMILY. Messrs L. Murray, J. L. Toole, Billington; Miss Woolgar, Miss K. Kelly. OUR FEMALE AMERICAN COUSIN. Miss Julia Daly. And DINORAH UNDER DIFFICULTIES. Tuesday, TO PARENTS AND GUARDIANS, OUR FEMALE AMERICAN COUSIN, and THE BIRTH-PLACE OF PODGERS. Thursday, and rest of the week, a New Drama, entitled ROCK CREEK; or, A Tale of the Channel Islands. Messrs L. Murray, P. Bedford, Billington, C. J. Smith; Miss Woolgar, Miss K. Kelly. OUR FEMALE AMERICAN COUSIN. And other attractive entertainments. Commence at 7.

ASTLEY'S ROYAL AMPHITHEATRE.

Proprietor and Manager, Mr Wm. Batty.

New engagement and first appearance in London of Madlle Leontine, the renowned Equestrienne from the Cirque Imperiale, St Petersburg. Immense success of the gorgeous hippo-drama—the new and splendid scenery, the magnificent costumes and decorations, the intensely interesting and thrilling incidents with which it abounds, render it the most superb and beautiful production ever placed upon this stage.

On Monday, June 18, 1860, and during the week, the Entertainments will commence with the grand historical spectacle in three acts, entitled FAIR ROSAMOND, or the AMAZON CRUSADERS. Succeeded by an unusually brilliant programme of the Scenes of the Cirque, introducing the celebrated British and Continental Equestrian Artistes, including Madlle Leontine, in their unequalled performances; concluding with a Popular Farce. The Magnificent Chandeliers manufactured by Messrs Defries and Sons, of Houndsditch.

Doors open at ½-past 6, commence at 7. Box-office open daily from 11 till 4. Stage Manager, Mr W. West.

ICE, AND REFRIGERATORS FOR

preserving Ice and cooling Wine, Butter, Cream, Water, Jellies, and provisions of all kinds, manufactured by the WENHAM LAKE ICE COMPANY (now removed to 140 Strand, W.C.), of the best make and at the lowest cash prices. No agents are appointed in London for the sale of the Company's Ice or Refrigerators. Pure spring-water Ice, in blocks, delivered to most parts of town daily, and packages of 2s 6d, 5s, 9s, and upwards, forwarded any distance into the country by "goods" train, without perceptible waste. Wine-coolers, ice-cream machines, ice planes for sherry-cobblers, freezers, moulds, &c. Detailed printed particulars may be had, by post, on application to the Wenham Lake Ice Company, 140 Strand, London, W.C.

HARVEY'S FISH SAUCE.—

Notice of injunction.—The admirers of this celebrated Fish Sauce are particularly requested to observe that none is genuine but that which bears the back label with the name of WILLIAM LAZENBY, as well as the front label signed "Elizabeth Lazenby," and that for further security, on the neck of every bottle of the Genuine Sauce will henceforward appear an additional label, printed in green and red, as follows:—"This notice will be affixed to Lazenby's Harvey's Sauce, prepared at the original warehouse, in addition to the well-known labels, which are protected against imitation by a perpetual injunction in Chancery of 9th July, 1858."

6 Edwards street Portman square, London.

CROSSE AND BLACKWELL,

Purveyors in Ordinary to Her Majesty, invite attention to their PICKLES, SAUCES, TART FRUITS, and other Table Delicacies, the whole of which are prepared with the most scrupulous attention to wholesomeness and purity. C. and B. have for many years enjoyed the high honour of supplying Her Majesty's Table with their Manufactures. A few of the articles most highly recommended are—Pickles and Tart Fruits of every description, Royal Table Sauce, Essence of Shrimps, Soho Sauce, Essence of Anchovies, Orange Marmalade, Anchovy and Bloater Pastes, Strasbourg, and other Potted Meats, Calf's-foot Jellies of various kinds for table use, M. Soyer's Sauces, Relish, and Aromatic Mustard, Carstairs' Sir Robert Peel's Sauce, and Payne's Royal Osborne Sauce. To be obtained of all respectable oilmen, grocers, &c., and wholesale of Crosse and Blackwell, 21 Soho square, London.

EVERY WEDNESDAY, PRICE 3d.

THE LONDON AMERICAN:

THE SECRETARY OF STATE FOR

INDIA in Council hereby gives notice, that he has received from Bombay the undermentioned Schedules:

Schedule of all administrations whereof the final balances have been paid to the persons entitled to the same, specifying the amount of such balances, and the persons to whom paid, prepared from the 30th June last to 31st December, 1859, under section 34 of Act No. 8, of 1855.

Schedule of all sums of money, bonds, and other securities, received by the Administrator-General on account of each estate remaining under his charge; together with the payments made thereout, and the balances. Prepared up to 31st December, 1859, under section 34 of Act 8, of 1855.

And that the said Schedules are open to the inspection of the public at the Department of the Agent to the Administrators-General, in this office.

India Office, June 7, 1860.

MERSEY DOCK ESTATE.—

LOANS OF MONEY.—The Mersey Docks and Harbour Board hereby give notice, that they are willing to receive LOANS of money, on security of their bonds, at the rate of £4 5s per centum per annum interest, for terms of three, five, or seven years, at the option of the lenders. The Board will accept loans for a longer period than seven years, on such terms as may be agreed upon.

Interest warrants for the whole term, payable half-yearly at the bankers' of the Board in Liverpool, or their correspondents in London, are issued with each bond.

All offers to be addressed to George J. Jefferson, Esq., Treasurer, Dock office, Liverpool.—By order of the Board, DANIEL MASON, Secretary.

Dock office, Liverpool, May 10, 1860.

PERUVIAN CONSULATE,

No. 11 New Broad street, 12th June, 1860.—In pursuance of orders received this day from the Government of Peru, the undersigned begs to call the attention of any parties who may be disposed to make Tenders for the Consignment and Sale of the CHINCHA GUANO consumed in the United States, Great Britain, its colonies and dependencies, France and all its possessions, Germany, Belgium, and Italy, to the following notice, published in the official Gazette El Peruano, dated Lima, 12th May, 1860, a copy of which is transmitted by the Government to the undersigned, for the purpose of giving all publicity to the same.

HENRY KENDALL, Consul for Peru.

OFFICIAL NOTICE.

The contracts for the sale on consignment of guano in the United States, Great Britain, France, and other points included therein, will terminate at the end of 1861 and beginning of 1862; and the Government, being desirous that there should never be wanting abundant supplies of that manure, in order that the sinking fund and interest of the foreign debt should be supplied and paid from its products with the same exactness and punctuality as heretofore, has determined, in fulfilment of the law of 10th November, 1849, cited at the foot hereof, to make known that proposals which parties may like to make for the consignment of Peruvian guano in the United States, Great Britain, its colonies and dependencies, France and all its possessions, Germany, Belgium, and Italy, will be received in the Administration of Finance, during the term of 100 days from the publication of the present notice in this capital. The said proposals must be delivered, closed and sealed, for each of these nations separately, and only those will be received of mercantile houses, of whatever country they may be, which are known for their responsibility, connections, available capital, and honourable precedents, observing at the same time, that under equality of circumstances, the preference will be given to the proposals of natives of this country, according to the above-named law. Proposals which do not possess the afore-mentioned requisites, and are not clear in their conditions, cannot be taken into consideration, neither can any be received from anonymous companies, nor from the representatives of other persons without the corresponding powers and legal authorisation, for past experience renders indispensable such exclusion, in order to decide with justice, and secure opportunely the interests of the State.

Lima, May 12, 1860.

(The Law above referred to.)

PERUVIAN CONGRESS.

Lima, November 6, 1849.

Excellent Sir,—The Congress has approved of the contract made in London on the 4th January this year by the Minister Plenipotentiary, Don Joaquin I. de Osma, with the house of Antony Gibbs and Sons, in respect to the temporary consignment of guano, and has resolved that your Excellency incites throughout the world, by means of your agents and consuls to a consignment which may be more economical, after the termination of the present, or to biddings by tender, or other means of realising the guano most advantageously for the nation, always giving the preference to the natives of this country.

We communicate the same to your Excellency for your guidance and its fulfilment.

God preserve your Excellency.

ANTONIO GUTIERREZ de la FUENTE.
JERVASIO ALVAREZ, Senator, Secretary.
SANTOS CASTANEDA, Deputy, Secretary.

To His Excellency the President of the Republic.

Decree.

Lima, 10th November, 1849.

Let it be fulfilled, notified, and published.

Rubrica of the President, MELGAR, Minister.

MR LEWIS AND SON,

113 Strand.—The Royal Lewisian Systems of Writing, Arithmetic, Bookkeeping, and Shorthand, as taught for upwards of fifty years by Mr Lewis, the real inventor and first teacher of these world-renowned and only infallible systems, insures perfection in any of the above branches after a few easy and interesting lessons. Persons unable to take the lessons may obtain the inventor's works for self-instruction at his only institution, 113 Strand

LABUAN COAL COMPANY

(Limited).—Capital £100,000, in 10,000 shares of £10 each; deposit, £1 per share. Registered under the Joint Stock Companies Act.

DIRECTORS.

Sir Jas. Dalrymple Elphinstone, Bart., M.P. | The Hon. William Napier.
James T. Mackenzie, Esq. | William Walter Cargill, Esq.
William Miller, Esq., M.P. | Edward Price, Esq.

BANKERS IN LONDON—Messrs Smith, Payne, and Smiths, 1 Lombard street.

BANKERS IN SINGAPORE—The Oriental Bank Corporation.

AGENTS IN SINGAPORE—Messrs Middleton, Harrison, and Co.

SOLICITORS—Messrs Baxter, Rose, Norton, and Spofforth, 6 Victoria street, Westminster Abbey.

BROKERS—Messrs George Burnand and Co., 69 Lombard street.

AUDITORS—Messrs Coleman, Turquand, Youngs, and Co.

SECRETARY pro tem.—Mr A. Wilson.

Temporary Offices, 69 Lombard street.

OBJECTS OF THE COMPANY.

This Company is formed to work the coal mines in the British possession of Labuan.

Within the last few years there has been an enormous increase in the consumption of coal in the East by the vessels of war of the British, French, Dutch, and Spanish Governments, and also by mercantile steamers. The demand is now so immense that a permanent local supply of coal has become of the utmost national and commercial importance. It is from the British possession of Labuan alone, with its unrivalled coalfields and its highly advantageous position, that the realisation of this important object is most confidently anticipated.

The Island of Labuan is situate on the north-west coast of Borneo, and may be described as a continuous coalfield, having seams of unusual thickness and coal of superior quality. Labuan is also admirably adapted for the cultivation of such tropical productions as indigo, sugar, cotton, tobacco, &c. M'Culloch, in his "Geographical Dictionary," observes that it lies "near the best route for shipping from the Straits of Singapore to China," and points out its advantages "as a harbour of refuge, and convenient station for steamers and other ships of war." He adds, that in time of war "its possession would give us the entire command of the China Sea." The island is 700 miles from Singapore, and, as shown by the Admiralty charts, possesses a fine harbour at Victoria, with a good anchorage in five fathoms of water, within 200 yards of the shore. Its situation is shown in the map, which will be found in the Appendix, together with sections of the coalfields, and analysis of the coal.

Arrangements with the Government.—Her Majesty's Government, being fully impressed with the great importance of securing the immediate and efficient working of the Labuan coal, and being aware that this only could be effected by the employment of ample capital, have recently conceded an exclusive grant to work the entire coal on the island on highly advantageous terms, both as regards the royalty to be paid to the Crown, and the price at which this Company is to supply Her Majesty's navy with coal (on condition that certain existing rights, plant, machinery, buildings, &c., were acquired). The transfer of this valuable concession, with the plant, machinery, &c., on the island available for the immediate working of the coal, with the other important rights and privileges contained in the concession relating to the purchase of land, cutting timber, &c., has been arranged for in consideration of 2,500 fully paid-up shares of the Company. The correspondence, with the terms and conditions of the grant, can be seen at the Company's office.

Immediate Working of the Mines, and Abundant Supply of Coal.—From the annexed report of Mr David Smith, of Bilston, an eminent coal viewer, who surveyed the Labuan coalfield last year, it will be seen that the Company's operations can be commenced at once. The pit already sunk, with a moderate outlay for existing and additional plant and machinery, will yield 606,144 tons of marketable coal; and a further reasonable expenditure will enable the Company to sink another pit and win saleable coal to the extent of 1,293,600 tons. It should be observed that this calculation refers only to the small portion of the coalfield actually explored, and that the inexhaustible supply of coal stated in Mr Smith's report to exist in the island and its superior quality for steam purposes is confirmed by the annexed reports of other practical surveyors who have examined these coal measures, and by letters of the present Governor of Labuan, the Hon. George Edwardes. It is the intention of the Directors to work the mines, under European superintendence, by contract, with Chinese miners, on conditions similar to those on which coal is raised in this country, experience having shown that by the payment of fair remunerative rates for labour, any number of efficient Chinese can be obtained.

Quality of the Coal.—The accuracy of the annexed reports by the engineers of the Peninsular and Oriental Company and other practical parties who have used the Labuan coal on its excellent quality, and that for steam purposes it is equal to the best English coal, is corroborated by the fact that Her Majesty's Government are prepared to take a regular supply for the use of the navy, and that the Peninsular and Oriental Steam Navigation Company have already used it in their steamers to the extent of 20,000 tons.

Present Price of Coal in the East.—The present prices of coal at Singapore and China—equal in quality to that of Labuan—are from 60s to 65s per ton; and the last contract price paid by Her Majesty's Government for coal delivered at Singapore was 59s per ton, and at Hong Kong the new contract is 68s.

Profit.—The probable profit of the undertaking will be seen by reference to the report of Mr Smith, who has acquired personal experience in working coal in the East by Chinese miners. With reference to his statement, that it is "the most lucrative mining adventure ever submitted to our countrymen," the Directors would observe that, high as this estimate may appear, the data on which it is founded are so strongly confirmed by the annexed abstracts from reports by other practical authorities who have visited the island, that they see no reason to doubt their general accuracy. Mr Smith estimates the cost of raising the coal and placing it on board ship at Labuan at 5s per ton. Mr Robert Coulson, a practical English coal miner, who has resided on the island, has offered to work the mines by contract, and to put the coal on board ship at 6s 9d per ton, all charges included, on condition that the Company find plant and machinery. Taking the latter price (6s 9d per ton), and adding 3s 3d for agency, management, &c., the cost of the coal on board ship at Labuan would stand the Company 10s per ton. Assuming even 14s per ton for freight to Singapore, a distance of only 700 miles, the cost of the Labuan coal when delivered at that port would be 24s per ton against 60s, the present price there of English coal equal in quality; and it is estimated that, when the Company is fairly at work, it could easily raise and dispose of 100,000 tons of coal annually, which rates, after making ample allowances for all contingencies, leave a large margin for profit.

Capital.—In conformity with the arrangements made with Her Majesty's Government, the proposed capital has been fixed at £100,000 in 10,000 shares of £10 each; £1 to be paid on allotment of the shares. The Directors have been fortunate in securing the services of Mr John McLaren, a practical engineer, whose experience of machinery, and in the management of great works in the East, eminently qualifies him for the important charge committed to his trust, and who proceeds forthwith to Labuan. Further calls will be made, subject to his advices from Labuan, confirming the reports of the other engineers, that the description of the additional machinery they have recommended is the best adapted for raising the coal on the island; but it is not the intention to call up the whole capital until experience has realised the profitable results which are confidently anticipated.

Directors' Remuneration.—In order that the emoluments of the Directors should be contingent upon the success of the Company's operations, it has been arranged that they shall not receive any remuneration until the shareholders are paid each year a dividend of 10 per cent, from bona fide profits, when a commission of 10 per cent. on the net profits shall be divided among the Directors in lieu of all fees for their services.

FORM OF APPLICATION FOR SHARES.

No.

N.B.—This must be presented to the Brokers, or the Secretary of the Company pro tem.

To the Directors of the Labuan Coal Company (Limited).

Shares £10 each.

Gentlemen,—I request that you will allot me shares of £10 each in the capital of the Labuan Coal Company (Limited); and I hereby agree to accept the said shares, or any smaller number that may be allotted to me, and to pay the deposit of £1 on each share so allotted, and the calls when made, and to sign the articles of association when required to do so; and, in default thereof, I agree to forfeit the said deposit, and authorise you to cancel the allotment.

EAST INDIAN RAILWAY COMPANY.

Notice is hereby given, that the Transfer Books of this Company will be closed from Monday, the 18th day of June, 1860, to Thursday, the 12th day of July, 1860, both days inclusive, for the purpose of making up the Interest Account to the 30th day of June, 1860. The Interest warrants will be forwarded on the 12th July to the proprietors who are registered in the Company's books on the 16th day of June instant.—By order of the Board,

D. I. NOAD, Secretary.

East Indian Railway House, Alderman's walk, New Broad street, London, June 5, 1860.

N.B.—Transfers will not be received at the office while the books remain closed.

INVERNESS AND ABERDEEN JUNCTION RAILWAY.

ISSUE OF NEW SHARES.

The Inverness and Aberdeen Junction Railway Company having, under the powers of "The Inverness and Aberdeen Junction Railway Act, 1860," resolved upon issuing further Capital to the extent of £100,000, in shares of £10 each, bearing a Preference Dividend, payable Half-yearly, at the rate of 4½ per cent. per annum, the Directors are now prepared to receive applications from the public for portions of the same.

These shares represent the only stock in the Company having any preference, and the dividend on them will be paid before any dividend is paid upon the existing or ordinary shares of the Company, the whole being amply secured by a surplus income.

Applications may be made for one or more shares to the Secretary, at Inverness, or through a Broker or Agent.—By order of the Board,

AND. DOUGALL, Secretary.

Company's office, Inverness, 30th April, 1860.

THE SCINDE RAILWAY COMPANY.

CHAIRMAN.

W. P. Andrew, Esq., 26 Montague square.

GOVERNMENT DIRECTOR.

Sir James C. Melvill, K.C.B.

Sir Herbert Maddock (late Deputy-Governor Bengal).
J. Edmund Anderdon, Esq. (Director of the Bank of London).
Major J. A. Moore, F.R.S. (Director of the National Provincial Bank of England).
Harry Borradaile, Esq. (late Bombay Civil Service).
Thomas Williams, Esq., Grove End road, Regent's Park.
Sir Frederick Arthur, Bart. (Gloucester square, Hyde Park).

AUDITORS.

Philip Anstruther, Esq. (Deputy-Chairman of the Bank of Egypt).
George Gordon Macpherson, Esq. (Director Agra Bank).

The Directors are prepared to receive tenders of sums of not less than £100 of the unappropriated portion of the £250,000 Debentures, payable in five years, about to be issued under the guarantee of the Secretary of State for India in Council, bearing 5 per cent. interest, and convertible into Stock at par, at the option of the holder.—By order of the Board,

THOS. BURNELL, Secretary.

Gresham House, Old Broad street, April 10, 1860.

CEYLON RAILWAY COMPANY.—

Notice is hereby given, that the Transfer Books of this Company will be closed from Friday, the 29th day of June, to Thursday, the 12th day of July, 1860, both days inclusive, for the purpose of making up the interest account to the 30th day of June, 1860. The Interest Warrants will be forwarded on the 11th July to the proprietors who are registered in the Company's books on the 28th day of June instant.—By order of the Board,

G. E. COOPER, Secretary.

9 Broad street buildings, London, June 14th, 1860.

PERUVIAN FOUR-AND-A-HALF

per CENT. EXTERNAL DEBT, proceeding from the Six per Cent. Internal.

The Coupon falling due on the 1st of July next will be paid by the Financial Agents, Messrs Antony Gibbs and Sons, on any following day between the hours of Eleven and Two.

Lists may be had on application after the 20th inst., and the Coupons must be left three clear days for examination.

15 Bishopsgate street within, London, June 15, 1860.

NEW ORLEANS, JACKSON, AND GREAT NORTHERN RAILROAD.

FIRST MORTGAGE CONSTRUCTION BONDS in STERLING, bearing Eight per Cent. Interest.—The Half-Yearly Dividend, due 1st July, 1860, on the under-mentioned 601 Bonds, Nos. 26 to 389, 400 to 525, 983 to 1,050, 1,351 to 1,388, 2,811 to 2,815, domiciled in London, will be paid at the counting house of Messrs J. Henry Schroder and Co., 145 Leadenhall street, on Monday, 2nd proximo, and any succeeding day, between the hours of 11 and 2. The coupons, with a list in numerical order, must be left two clear days for examination. Printed forms may be had on application as above.

London, June 15th, 1860.

SOUTH CAROLINA BONDS.—

The Half-Yearly Dividend on the above Bonds, negotiated by Messrs Palmer, Mackillop, Dent, and Co., due on the 1st of July next, will be PAID at the counting house of Messrs Dent, Palmer, and Co., on Monday, the 2nd of July next, and every subsequent day (except Saturday), between the hours of 11 and 3. The coupons, with a list in numerical order, must be left two clear days previously for examination. Printed forms may be obtained upon application at the office of Messrs Dent, Palmer, and Co., 11 King's Arms yard, London, E. C.

June 13, 1860.

CANADA STERLING BONDS.—

Messrs Baring, Brothers, and Co., and Messrs Glyn, Mills, and Co., Financial Agents of Canada, beg to acquaint the holders of Canada Sterling 5 per Cent. and 6 per Cent. Bonds, that the option of converting these securities into Canadian Consolidated 5 per Cent. Stock or Bonds, in conformity with the circular of the Hon. A. T. Galt, dated 31st December, 1859, will cease after the 30th inst. Messrs Baring and Glyn will receive until that date the bonds for conversion without the coupons falling due on 1st July next, which the holders will retain for payment when due; and the corresponding coupons will be detached from the new bonds issued in exchange for the same.

It is requested that persons intending to convert their bonds will present them for that purpose at the counting house of Messrs Baring, Brothers, and Co., as early as convenient, in order that the New 5 per Cent. Bonds may be obtained from Canada without unnecessary delay.

London, 5th June, 1860.

CANADA PROVINCIAL

CURRENCY BONDS and CONSOLIDATED MUNICIPAL LOAN BONDS. — Messrs Baring, Brothers, and Co., and Glyn, Mills, and Co., Financial Agents of Canada, are authorised to PURCHASE these BONDS until 30th inst., but not after that date, on the following terms, viz.:—Canada Provincial Currency Bonds at par and exchange £1 4s 4d, or £82 3s 10d sterling per £100 currency, adding ½ per cent. premium for each year the Bonds have to run, and interest at the rate of 6 per cent. to the date of purchase; Consolidated Municipal Loan Fund Sterling Bonds at par; and Currency Bonds at par and exchange £1 4s 4d, or £82 3s 10d sterling per £100 currency, with interest at the rate of 6 per cent. until the date of purchase.

London, June 5, 1860.

FINAL SALE OF FORFEITED SHARES.—CAPE TOWN RAILWAY AND DOCK COMPANY.

Notice is hereby given, that the Directors are ready to receive tenders for the purchase of all or any portion of 3,982 shares in the Company, being the remainder of the shares forfeited on the 31st March last, which will be issued as having £3 paid upon each of them.

These shares will bear interest at the rate of £6 per cent. per annum (guaranteed by the Colonial Government), from the 1st day of April, 1860.

Sealed tenders, addressed "The Directors of the Cape Town Railway and Dock Company—Tender for Shares," will be received at the office of the Company up to Twelve o'clock (noon), on WEDNESDAY, the 20th June, 1860.

Each tender must be accompanied by the banker's receipt for a deposit of ten shillings per share tendered for. The balance to be paid on allotment.

Forms of tender may be obtained at the offices of the Company, or at the brokers', Messrs P. Cazenove and Co., 52 Threadneedle street, London.

The Directors do not bind themselves to accept any tender.

The capital of the Company is divided into shares of £20 each, upon which calls have been made to the amount of £3 per share.

Payments in anticipation of calls, either in full or to the amount of £5, £10, or £15, will be received at any time.

Interest at 6 per cent. per annum upon the amount paid up is guaranteed by the Colonial Government, and payable in London or the Cape half-yearly, in the months of April and October.—By order of the Board,

G. LATHOM BROWNE, Managing Director.

261 Gresham House, Old Broad street, June 1, 1860.

THE SEASON AND THE POSSIBLE EFFECTS ON THE MONEY MARKET AND THE REVENUE.

THE last eight months will be long remembered as a season of very peculiar characteristics. Not only have several storms of great violence visited our shores, and left behind them unusual traces of their destructive force, but a certain irregularity has marked the whole period. The winter was exceedingly protracted, and the ordinary summer weather is not come yet. Almost every exceptional season is trying in some respect or other to trade and industry, and this one may be, though we hope it will not be, *very* trying.

The prospects of the harvest are not as yet such as to warrant any very positive prediction. The accounts which reach us from various quarters are of a mixed character. In some places it is stated that the wheat crop is injured, but in the majority we believe no great harm is as yet done, though much apprehension is entertained with regard to the future. It seems, however, certain that, at all events, the crop is much more likely to be under the average than to be above it. We may not have a very scanty season, but we are sure not to have a very prolific season. This is the more important, as the amount in this country is, according to the most reliable estimates, not nearly so great as it was last year.

If the season should be very unfavourable we must look for a very large import of corn; and even if it be only slightly unfavourable we must expect some import. The most cautious and experienced merchants are, we believe, of this opinion, and we have no doubt but that it is the correct one.

It cannot be denied that a bad harvest would have serious effects on our money market. There is no ground for alarm—as yet no reason for serious apprehension,—but there is ground for watchfulness and for caution. Experience shows that no circumstance has so *dislocating* an effect on the money market as a very bad harvest. And it is not unreasonable that such should be the case. A very bad harvest implies that a most important part of our industry has been very unproductive. It means that much fewer commodities than usual have been produced. The country is greatly impoverished by the unexpected inefficiency of its industry, and we should expect, in fact, the lamentable results. A bad harvest operates in two ways. First, it causes a heavy drain on the reserve of bullion in the Bank of England, and it specially tends to diminish the reserve of notes in the Banking Department. The reason is obvious. We have all at once to pay for a commodity which we did not expect, which we could have produced at home if the physical circumstances of the year had permitted, and we must pay for it *in hard cash*. The nations from whom we import grain are not on a sudden prepared to take a proportionate quantity of our productions. They will not, as a rule, be prepared to buy more of our manufactures than they have been used to buy. A regular trade implies a regular interchange of the characteristic commodities of each country. But a *casual* trade, such as a bad harvest immediately produces, does not imply it. The nation which suffers from the calamity must expect to have the hoard of bullion which it keeps in store as a reserve against contingencies materially and suddenly reduced by it. We know how grievously this country suffered in 1847 from this cause.

	£
On 26th June, 1847, the reserve of notes was.....	5,664,955
— — bullion	10,511,597
On 30th October, 1847	1,176,740
— —	8,438,874

This shows how immediately a bad harvest requires payment in cash, and how powerfully the necessity for foreign payments operates on the reserve in the Banking Department. We have now a much stronger reserve than we had in 1847, and the business of banking is much better understood now than it was then. By this week's return—

	£
The reserve of notes was	10,146,576
— — bullion	16,498,501

But, on the other hand, we must remember that the transactions of the Bank of England have also increased since 1847. The comparative account is—

	June 26, 1847.	June 20, 1860.
	£	£
Public deposits	9,796,647	8,688,191
Private ditto	7,920,706	12,115,000
Other securities	18,315,772	19,325,818

Showing a remarkable increase in the private deposits of the Bank and in the discounts, which are the two parts of the Bank account most likely to be affected by a bad harvest and a consequent drain of bullion. The demand for discounts at the Bank is always greater than usual when there is any degree of apprehension abroad, and the drain on the bullion for foreign purposes acts almost entirely by a corresponding reduction in the private deposits. The transactions of the country, too, are enormously greater than they were in 1847.

	1847.	1859.
Total imports.....	90,921,866	179,334,931
Total exports.....	58,842,377	130,440,427

Although, therefore, we have every reason to think that our position as a mercantile nation is much better than it was in 1847, we must nevertheless bear in mind the great growth of our trade since;—we must not forget that great transactions require great resources, and that a much larger reserve than would have been enough in 1847 is requisite for us now.

We must bear in mind, also, that the unfortunate discord between the Bank of England and the bill-brokers must necessarily enhance any tendency to an apprehension in Lombard street. At such a time it is peculiarly advantageous that all parties should be on amicable terms, and that the great operations of the discount market should be on the best possible footing. No one can say that such is the case

now. We must, therefore, consider with care and caution what the effects of an unfavourable harvest would be upon the reserve in the Bank of England and upon Lombard street. We must be watchful, although we are not alarmed.

And though this is the principal mode in which a bad harvest deranges the course of our industry, it is not the only mode. An unusually high price of provisions tends, likewise, to diminish the ordinary demand for all other commodities. The earnings of the people are not augmented, and as they have to spend more on food, they must spend less on clothing and on enjoyment. In consequence, the general home trade of the country is immediately slackened; and just at the moment that the money market of London is exposed to the possibility of a panic, the whole country is rendered uneasy by a stagnation in the usual course of industry, by the diminution of employment, and by the consequent suffering among the lower classes.

Such are the effects of a bad harvest upon the money market and upon trade. Its effects on the revenue are equally lamentable. We have on several occasions observed that although we are dubious as to the particular anticipations which Mr Gladstone announced in February last,—although we should not like to count upon the additional revenue from the additional consumption of articles affected by the Budget of this year on which he then reckoned; yet that we have great confidence in the natural growth of the ordinary revenue of the country. The revenue derived from the ordinary articles of consumption must increase rapidly if our prosperity increases rapidly; the income tax must yield more and more in proportion as our incomes become greater and greater. But a bad harvest interferes with those happy prognostications almost more than any other cause can. On a sudden, instead of becoming richer, we are become poorer. The consumption of duty-paying articles is diminished, and the revenue inevitably falls off; our home trade is slackened and disorganised, and trade incomes, instead of growing greater, tend to become less. In the event, therefore, of a bad harvest, we could not rely on the general elasticity of our regular revenue in aid of the somewhat sanguine anticipations which Mr Gladstone formed as to the effects of the alterations which he has this year proposed.

In ordinary years such would be the effect of a bad harvest on the revenue, but this year it would be aggravated. Butchers' meat is now so high, that in several towns large meetings have been held and resolutions have been passed to abstain from it for the present. The causes of this, though very remarkable, are not to our present purpose. But the effect is. A bad harvest would this year come upon us at a time when other kinds of food are unusually dear. In consequence, its effect on the consumption of duty-paying articles would be greater than usual. If the nation should have to buy dear bread as well as dear meat, it will have comparatively little to expend on the articles from which the Chancellor of the Exchequer obtains his income; and the trade which produces those articles—we may, perhaps, say the general home trade of the country—will at this time be more impaired by a bad harvest than it would be at any other time.

We are not alarmists. We are far from saying that these calamities are this year to be expected. We hope and trust they are not to be expected. But as the possibility of a bad harvest is in every one's mouth, it is well that men of business should consider what its effects would be, and how widely it would affect the trade and industry of the country.

M. ABOUT'S PAMPHLET ON PRUSSIA IN 1860.

Semi-official political pamphlets have now more than once anticipated the action of the French Government, and are half expected by Europe as the premonitory symptom of French intervention. Since, moreover, M. About had already been once made the Emperor's ally in preparing Europe for his diplomatic schemes, in the publication of his pointed and popular *Question Romaine*, the appearance of a new pamphlet on Prussia, signed with his name, on the very eve of the Baden Conference, has created great uneasiness; the more so, because, being destitute of the peculiar point of his style, it seems not to be even in part the fruit of his literary imagination or his political prepossessions, but to have the air of plenary political inspiration. The title, which is said to have been originally "Napoleon III. and Prussia," was modified, we are told at the last moment, when the Baden Conference seemed likely to be less private and satisfactory than was intended, to "Prussia in 1860," with which it now appears.

We will give our readers a sketch of what the pamphlet contains, and then briefly discuss its probable political significance. In its present form, then, M. About's pamphlet does not, like the famous Italian oracle which preceded the Italian war, directly maintain the necessity or desirability of foreign intervention in Germany. Of course the situation is exceedingly different. No foreign army occupies Germany like the Austrian army which then occupied Lombardy and Venetia. The only evils which the pamphleteer wishes to aid the Regent of Prussia in removing, are the evils arising from an unpopular bureaucratic system, and the extreme subdivision of Germany into small and illiberal governments. He cannot, therefore, boldly demonstrate, like the author of the former pamphlet, the absolute necessity for French intervention, and contents himself with hinting in his concluding sentence that the Emperor of the French "is, perhaps, called to render great services to Prussia, "provided she herself is not quite unwilling to ac- "cept them" (*pourvu qu'elle s'y prête un peu*). M. About begins by pointing out that the foreign policy of France under the Empire has been throughout a liberal and popular one. France interfered in conjunction with England to save the independence of Turkey. She interfered to save the Moldo-Wallachians from the complete subjection to Turkey, and to constitute them into a distinct nation. Lately, French armies opened the road by which Italy, under the guidance of Piedmont, is now fast regaining liberty and independence. The most important step left to be taken is the union of the free German States under Prussia. "If God permit this "grand work to be accomplished, and a nation of 26 millions "to organise itself at our doors, France will not take um- "brage. Faithful to her generous traditions, she will sacrifice "her particular susceptibilities to the general good and to "the future of peace; for European order will not be solidly "established till the day when there shall no longer be "oppressed nationalities or kings insupportable to their "peoples."

M. About then goes on to show that Germany is oppressed with a desire for unity which it is too feeble to realise. It was never really so great, he says, as when contending with Napoleon in the years 1813—1815. "When it is a French- "man who speaks with admiration of campaigns so terrible "to France, his testimony deserves to be accepted. The "sentiment of German honour and independence, in insur- "rection against conquest, worked miracles. Germany had "but one passion, but one heart. She rose like a single "man, and the defeat of our incomparable armies showed of "what efforts German unity was capable." Once again, as the pamphleteer tells us, such a state of the national mind was attained in Germany. In 1849 the Frankfort Assembly was willing to offer to the King of Prussia the Crown of Germany, but Frederick William refused the offer of the people, and professed that he would accept only the vote of the Princes; Prussian troops were put in motion to defend the cause of 'Princes by divine right,' against the revolutionary party,—and even political executions took place, by way of punishing the heads of the revolution, in Baden and elsewhere. Nay, even now, greater social and political freedom is permitted in some of the minor States than is allowed in Prussia. "A Prussian "democrat recently wrote to his friends in Wurtemburg, "'Why do you delay to unite yourselves with us?' 'If we "'were Prussians,' was the reply, 'all our patriots and "'the poet Uhland at their head would be again exiles.' "Nothing seems less like the truth than this. Yet nothing "is truer. Since the popular movements of 1848 all the "Princes of Europe, the Holy Father not excepted, have "granted amnesties. The Prussian amnesty is still to be "looked for. If the Prince Regent has the noble ambition to "reign legitimately over all Germany, let him begin by re- "calling those exiles whose only crime it was to proclaim "the will of the nation as dictated by universal suffrage. "Let him do better: let him be the testamentary executor of

the Parliament of 1849, as the Napoleons are the testamentary executors of the French Revolution."

M. About then goes on to express a wish that the Prussian press and Prussian orators would be as cautious in their language concerning France, as the French press and orators are in their language concerning Prussia. "When M. de Vincke in full assembly speaks of reconquering from us Alsace and Lorraine, the French nation is not moved to arms by such levity, but it affirms with pleasure that such imprudences are never committed in France." With regard to the accusation that France is hungering for the "natural frontier of the Rhine," M. About remarks:—

It is certain that if you were to accost the most quiet and inoffensive man in the street and say to him, 'Sir, you mean to give me a slap in the face. Do not swear the contrary, for I should not believe you on your oath; I know that you wish to give me a slap in the face. But I am stronger than you, and I don't fear you at all. I would crush you as I would a fly, and I defy you to give me your slap in the face,' this inoffensive and quiet man would end by finding excellent reasons for giving that which was asked of him, and the slap would fall of itself on the cheek of him who provoked it. But it is not provocations that can turn France from the part which she has traced out for herself. Whatever pleasure other peoples find in aggrandisement, we have too much generosity and too much justice to wish to conquer the territory of a foreign nationality. Would that the German Confederation were animated by the same spirit. It would never have acquired either the Grand Duchy of Posen, nor attacked the North of Schleswig, nor declared Trieste a German town. As for us, we do not fear to assert that Alsace and Lorraine are French, because they have proved it even against the Germans. We keep what belongs to us, and ask nothing more. We hold that all the natural frontiers and all the water-courses in Europe are not worth so much for the defence of our territory as a charge of Zouaves or Foot Guards with fixed bayonets.

This is the substance of the pamphlet, which is ended by reflections on the exceedingly oppressive and discreditable character of some of the Prussian police. The gist of the whole appears to be to hint that, if Prussia would avail herself of the expressed national feeling of Germany to absorb the minor States, to assimilate her constitution to that of France, and to claim for the Crown a right grounded on universal suffrage, she would have a powerful ally in France, who wishes to see nationalities strong and indivisible. At the same time it is hinted that Germany would be expected to make reparation to Denmark, and, were it not too late, even to Poland.

What political significance, if any, has this pamphlet? The semi-official French papers of course deny that it has any political inspiration at all. The same thing was asserted at first with regard to the pamphlet on Italy. Taken in connection with the Baden visit, it seems to indicate that the Emperor had some hopes that Prussia might be induced to rely on his support in attempting the consolidation of the German nation, or of such parts of it as are not included in Austria. Support tendered disinterestedly at first, might eventually earn for France a territorial equivalent, as in the case of Sardinia. But the first step, no doubt, was to make the King of Prussia feel that, instead of *opposing* a fusion of German States, France would approve and support it. The position of Prussia in Germany, however, is very different from that of Sardinia in Italy. The absence of any foreign invader renders the offer of foreign assistance rather an insult than an aid to Prussia in this national enterprise. Nothing could more completely ensure her failure than the appearance of accepting French countenance against German Sovereigns. The Prince Regent felt this, and very wisely insisted that any interview with the Emperor from which the minor Sovereigns were excluded would make Prussia an object of national suspicion. And thus the opportunity for any secret compact between France and Prussia was lost.

If the Prince Regent continues, as there is every reason to hope, to pursue the same wise and national policy, France will not easily be able to get in the thin edge of the wedge. If the Rhine is to be played for at all, it must be by the help of an open quarrel, and not through any compact with German Powers. Prussia will win her advantage best by heading the strictly national party,—and, as M. About himself unconsciously indicates, nothing would be so likely to consummate that fusion of Northern Germany, which Prussia must desire, as a successful defensive war with France, in which all the minor States should feel that their liberties had been protected, and could be maintained, by Prussia alone.

STARTLING DISCREPANCIES BETWEEN THE FRENCH AND ENGLISH CUSTOM HOUSE RETURNS.

STATISTICIANS and political economists who take an interest in the condition and progress of commerce in various countries, have for some time been perplexed by the extraordinary discrepancies which exist between the French official returns and our own, and the apparent impossibility of reconciling them. It is obvious that if both sets of documents were complete and accurate, the French accounts of what they send us, and the English accounts of what we receive from them, ought to tally both in quantities and values. So far, however, is this from being the case, that agreement is the exception and discrepancy the rule. The April number of the "Edinburgh Review" called attention to the fact, but did not attempt either to measure its extent, analyse its nature, or assign its explanation. Further attention was called to the subject by an extraordinary statement contained in Viscount Chelsea's Report to Lord John Russell on the operation of the vine disease in France, to the effect that nearly twice as much wine was recorded by the French Custom House authorities as sent to England than was acknowledged by our Customs as received here;—a discrepancy which, in his Lordship's opinion, pointed to the inference of extensive smuggling, if not of much guilty connivance. The statement was so startling that we proceeded at once to verify Lord Chelsea's figures, and to our surprise we found them altogether inaccurate. We here contrast them with the real figures, as taken from the "*Tableau Générale du Commerce de la France*," and the corresponding quarto of English Official Returns—the "Annual Statement of the Trade and Navigation of the United Kingdom." Lord Chelsea gives the following figures:—

	Hectolitres of Wine declared at the *French* Custom House.	Hectolitres of Wine declared at the *English* Custom House.
1852	56,917	34,628
1853	54,452	26,114
1854	59,231	22,567
1855	37,155	24,332
1856	52,034	32,275

The true figures are as follows—adding the wine sent hither *in transit*, which is included in the French Exports, but not in the English Import returns:—

	Hectolitres declared at the *French* Customs.	Hectolitres declared at *English* Customs as imported.	Hectolitres declared at *English* Customs in transit.	Total declared at *English* Customs.
1852	49,020	25,459	1,580	27,039
1853	55,039	36,647	3,509	40,156
1854	59,856	45,663	4,273	49,936
1855	37,411	24,361	3,237	27,598
1856	52,148	32,359	3,487	35,846

It will be seen that Lord Chelsea's figures are entirely inaccurate, and the discrepancy is not nearly as great as he alleges. Still it is startling enough; and, coupled with other facts, has induced us to inquire carefully into the general nature and causes of the differences between the French statistics and our own; and the result of that inquiry we will now lay before our readers.

But, in the first place, we must explain in a few words whence the materials for these statistics are derived, and what precautions are taken on either side of the Channel to ensure such accuracy as may be attainable. All articles, whether imported or exported, are required to be reported to the Customs' authorities of the two countries, who have it in their power to verify the account of the imports, and do so pretty closely, whether the articles are free or dutiable. They exercise a certain check also upon the exports, though of course comparatively a very slight and imperfect one, inasmuch as no duty is involved; and while the merchants have little motive for deception, the Customs' officers have little inducement, and indeed only a very inadequate means, to detect inaccuracy. The French export returns we believe to be more correct than ours, which hitherto have certainly been often deplorably inacurate;—the merchants' declaration of quantities and values having been necessarily relied upon, with only occasional queries and corrections.

With imports the case is very different. With the exception of smuggled goods—the amount of which now we believe to be trifling—all articles introduced into either country are entered at the Custom House, and carefully recorded by authorised officers. The quantities, whether by weight or

measure, are duly verified, and much pains is taken to ascertain the actual values. In neither country is the estimate of the importer accepted. In England the real market value of the article (independent of course of duty) is calculated from actual prices obtained by the statistical authorities at the Custom House from the most respectable and qualified merchants and dealers, and checked by any other sources of information which lie within their reach. The valuation of our imports, therefore, we believe to be now as accurate as it can be made—with a tendency, if any, to be too low rather than too high, especially perhaps in silk goods. The value affixed is the wholesale price of each article in England and in bond.

In France, at least equal efforts are made to ensure correctness. Since 1849 a perpetual commission has sat every year to ascertain the actual price of each article at the frontier or port of arrival, and it does its work with a minuteness which seems to us almost pedantic. Any one who wishes to learn the particulars of its mode of proceeding may consult the "*Dictionnaire Universel de Commerce et de Navigation*"—art. "*Commission des Valeurs.*" These gentlemen value the exports as well as the imports, and we therefore consider the French export statistics to be more authentic and reliable than our own. They appear, however, in estimating these to lean to the higher rather than the lower side. Our import accounts, however, we think may be considered to be fully on a par with theirs.

With these preliminary explanations, we will now proceed to compare the total export and import trade of the two countries with all the world, for the five years ending 1858.

I.—Total Import and Export Trade of England, showing the so-called "Balance of Trade":—"*real*" or "*declared*" values.

	1854	1855	1856	1857	1858	Total
	£	£	£	£	£	£
Imports	152,389,000	143,543,000	172,544,000	187,844,000	164,584,000	820,904,000
Exports	115,821,000	116,691,000	139,220,000	146,174,000	139,783,000	657,689,000
Excess of Imports	36,568,000	26,852,000	33,324,000	41,670,000	24,800,000	163,215,000

II.—Total Import and Export Trade of France, showing the so-called "Balance of Trade":—*actual* values.

	1854	1855	1856	1857	1858	Total
	£	£	£	£	£	£
Imports	72,200,000	86,400,000	100,600,000	107,600,000	86,560,000	462,360,000
Exports	78,080,000	86,680,000	106,400,000	105,600,000	102,440,000	479,200,000
Excess of Imports	...	...	3,200,000	2,000,000	...	...
Excess of Exports	5,880,000	280,000	...	...	15,880,000	16,840,000

From these tables it would appear that, whereas England's Imports habitually exceed her Exports, by a sum averaging 32,653,000*l* annually, showing an apparent *profit* to that extent on her foreign transactions,—the balance in France fluctuates from year to year, showing on the average an apparent *loss* of 3,362,000*l* annually. Now, as no nation does or can long carry on a losing trade with all the world, constantly sending out a larger aggregate value of commodities than she receives back in payment, we apprehend we may fairly deduce from this account a prevalent disposition on the part of France to overvalue her exports or to undervalue her imports, or to do both;—a disposition natural to all who hold, as she does, the exploded notion that a nation's wealth and grandeur are diminished by what she receives from others, and enhanced by what she sends them. There is a perhaps unconscious wish to make out that foreign nations are more *indebted* to her than she to them. This, however, can only be regarded as a conjectural and imperfect explanation of the phenomenon (Bullion is of course excluded from all these accounts.)

The next comparison we have to make is that of the trade between France and England, as given by the respective Blue-Books of the two countries. It is obvious that if the official documents are made up on the same plan, if both are complete, and if both are accurate, the exports from France to England ought to tally precisely with our imports from France; and *vice versâ*. There are, however, two differences in the mode of constructing the official tables of commerce of the two countries, which render the comparison to a certain extent and at first sight imperfect. The French exports *to* England and imports *from* England include the goods sent "in transit," or for transmission to other countries:—the English import and export accounts include neither. But in the following tables we have removed this source of discrepancy by adding the transit goods to the English accounts, so that, as far as this matter is concerned, the figures are fairly comparable. But the exports from France to England, as given in the French accounts, include the goods sent not merely to the United Kingdom, but to the European possessions of Great Britain, *i.e.*, to Gibraltar, Malta, the Ionian Islands, and the Channel Islands. The English accounts of the imports from France take cognisance only of the goods arriving in the United Kingdom itself. How far this difference may impair the completeness of the comparison it is impossible to say, as we have no means of rectifying the figures. It is not probable, however, that, except in the case of wine and spirits, the amount of articles sent by France to these small extra-British possessions will prove to be very material. But it is essential to notice this element of inaccuracy in our comparison, and to take it for what it may be worth. The figures then—corrected so far as *transit* goods are concerned—stand thus:—

III.—Exports from France to England—Real Values.

	1854	1855	1856	1857	1858	Total
	£	£	£	£	£	£
French account	21,464,000	17,936,000	21,284,000	21,940,000	23,048,000	105,672,000
English account	14,308,000	11,806,000	13,423,000	14,972,000	16,346,000	70,855,000

IV.—Exports from England to France—Real Values.

	1854	1855	1856	1857	1858	Total
	£	£	£	£	£	£
French account	8,060,000	14,312,000	17,324,000	17,012,000	14,820,000	71,528,000
English account	6,440,000	10,573,000	10,604,000	11,404,000	9,309,000	48,330,000

For discrepancies so enormous and so irregular as these, it is difficult to assign or even to imagine any explanation. It will be seen that, both in the case of imports and exports, the English amounts are scarcely more than two-thirds those given by France. It is natural that they should value the goods they receive from us higher than we value the same goods when shipped hence, because they are more valuable when they reach France than when they leave England by the addition of freight, insurance, and estimated profit. But this, which could only account for a small portion of the discrepancy in Table IV., can account for none at all in Table III., where the converse of the above cause ought to operate. Nor can the "extra-British" trade, of which we have spoken above, be held answerable for more than a very small amount of the difference, which varies from a million and a half to seven millions in the one table, and from six to eight millions in the other. We can only surmise that the French standard of valuation must be much higher than our own. The idea of a large contraband trade—even if supposable—is of course wholly inapplicable to Table IV.

Being anxious, therefore, to ascertain whether the discrepancy lay in *valuations* only, or in actual differences in the *quantities* of the various articles exchanged, we have constructed other tables, as far as the means at our disposal would allow; and, in the first place, we proceeded to compare the returns of coin and bullion transmitted between the two countries, as being articles respecting which no difference of valuation could exist, and the quantities of which were likely to be entered with especial accuracy and subjected to a peculiarly careful scrutiny. Even here, however, very great discrepancies exist. Previous to 1858 no account was kept in Great Britain of the quantity of the precious metals *imported*, so a five years' comparison is beyond our reach. But an account—which ought to be an essentially accurate one, inasmuch as a drawback was allowed on plate—was

kept of the amount *exported*. But this is very far from agreeing with the French account. Between 1854 and 1858 inclusive, *we* report only 56,768,267*l* as sent to France:—*they* report 72,174,628*l* as received from us. The comparison for 1858 is as follows:—

V.

	French Account.	English Account.
Gold sent—	£	£
From France to England.....	649,380	654,000
From England to France.....	12,160,692	10,530,095
Silver sent—		
From France to England.....	2,398,520	2,079,204
From England to France.....	490,830	390,552

Here, again, it is observable that, with one single and trivial exception, the French figures are higher than ours. It is possible enough that small quantities of gold and silver may leave England and enter it without being reported; though we cannot understand these quantities amounting in the aggregate to one million and half in a single year, as the above table would seem to indicate. The only other source to which we can attribute the discrepancy is the practice, which we understand is suspected to prevail to some extent, of exporting boxes of gold as boxes of silver, by way of cheating the Railway and Steamboat Companies of the proper amount of freight.

In pursuit of our subject, we annex tables of the wine and spirits sent from France to England, as reported in the French and English accounts. We have (as before and for the reason before stated) perfected the comparison by adding to our import accounts the wine sent hither for transhipment, but that sent to the Channel Islands and to our Mediterranean colonies (and included in the French account but not in ours) still remains an incurable source of discrepancy.

VI.—Wine Exported from France to England.

	1855. gallons.	1856. gallons	1857. gallons.	1858. gallons.
French account.....	823,900 ...	1,147,700 ...	1,091,700 ...	971,840
English account ...	607,156 ...	788,616 ...	858,290 ...	691,703

The following table gives the comparison for Spirits (brandy, liqueurs, &c.); and here we must observe that the French tables are very apt to mislead uninitiated readers; inasmuch as their exports are given in *pure alcohol*; our imports being recorded in the denomination of *proof spirit*, which is about 56 per cent. of the strength of pure alcohol. In the following table, therefore, we have reduced the French article to the same denomination as our own, which reduces the apparent discrepancy within very explicable limits:—

VII.—Proof Spirits Exported from France to England.

	1855. gallons.	1856. gallons.	1857. gallons.	1858. gallons.
French account.....	2,168,250 ...	3,322,620 ...	3,270,530 ...	1,876,250
English account ...	1,907,700 ...	2,632,950 ...	2,975,400 ...	1,246,880

The French figures are still higher than ours, both for wine and spirits; but considering that Malta, Gibraltar, and Corfu are garrison stations, and that much French wine (it is believed) is sent to the Channel Islands to be *doctored* for the British market, we think a very considerable amount of the difference in the quantities recorded, may be accounted for by the fact of the trade to these extra-British possessions being included in the French returns and not in ours.

The last table we propose to offer to our readers gives a view of the principal articles sent from this country to France, as recorded in the official Blue-Books of the two countries; and here still the French figures of *value* are higher than our own, though the *quantities*, where ascertainable, do not vary much:—

VIII.—Articles Exported from England to France in 1858.

	French Account. Quantity. tons	French Account. Value. £	English Account. Quantity. tons	English Account. Value. £
Coal	1,303,000 ...	926,800	1,325,000 ...	578,232
Iron	113,000 ...	753,200	95,000 ...	533,876
Cotton manufactures..	... ...	490,000	... ...	282,400
Linen —	... ...	190,990	... ...	151,400
Woollen —	... ...	701,800	... ...	457,500

We confess ourselves unable to offer any satisfactory explanation of these remarkable discrepancies, and we think the subject is one which requires full investigation.

THE EUROPEAN ARMY IN INDIA LOCAL OR IMPERIAL?

It is satisfactory to find that one of the predictions confidently made at the time of the transfer of India to the Crown is not likely to be fulfilled. It was said that Indian questions, instead of being considered purely on their merits, would be mixed up with the party interests of English politics. That assertion is now on its trial, and we see no indication that it was a true prophecy. It is true that Her Majesty's present Government are preparing to incorporate the European local army in India with the Imperial army, and that their Conservative predecessors were disposed to adopt a different course,—namely, to keep up a local force of which two-thirds would have been European and one-third native. But that these different views are not the results of Tory or Whig differences is shown by the fact that General Peel, who was the Minister of War under Lord Derby, sides with Her Majesty's present Government, while Lord Stanley, the Indian Secretary under Lord Derby, heads the Opposition.

In the elaborate speech in which Lord Stanley argued in favour of the continued existence of a local army he omitted to note one important financial consideration. If we have no independent local army in India, it is supposed that a larger number of men will be required in order to protect India as efficiently as before. The same number of men will not, it is said, suffice in both cases. The army, whose officers have been serving all their lives in India, and who are generally, therefore, well versed in Indian habits and speech, will do much more efficient service, in proportion to its numbers, than the army whose officers are only resident in India for a time, and are looking to European service for their career. It will therefore be needful, it is thought, to have a larger Imperial army of Europeans than would be necessary with local troops; in other words, there will be less economy to India in the one case than in the other. And even if the advantage to the English army is so considerable as to outweigh the objection, India at least should not be saddled with the extra expense. On the hypothesis, then, that a larger force and a greater Indian expenditure will be needful, if the two armies are consolidated, than on the present system, and that the plan is adopted from considerations of the benefit to accrue to the Imperial service, it would only be fair that some subsidy, representing the difference between the cost of the two methods to India, should be paid out of the Imperial into the Indian Exchequer.

This question, then, important as it is to Indian financiers, need not seriously affect the decision of Her Majesty's Government, so long as the expense of any change, made out of consideration for the advantage of the Imperial army alone, is defrayed by England and not by India.

The *presumption* is, of course, against a double service where one will do, and the duty of rebutting this presumption of course devolves on the advocates of the local army. Still the *primâ facie* arguments in favour of a local army are not inconsiderable. Lord Stanley asks first what we are to do with the *native* force, which, as is agreed on all sides, must be kept up. This force *must* be local, and cannot be amalgamated with the Queen's army. If a European local army were also kept up, the native force would be amalgamated with it, and there would be no distinction of position between the officers of the European and the officers of the native force, who might often, indeed, be interchanged. But if the native be the only local army, invidious distinctions will grow up. The native army will be less looked to, less trusted, employed in the drudgery of war so as to economise European life, and altogether will occupy an inferior position. The officers of the native army (who must in large measure be a special staff of Europeans) will feel their position an inferior one, and the native force would prove "a refuge for those who can find no other employment." This is an objection of much apparent force,—but we think its force would not be great if the officers of the native corps were *better* paid than officers of the European army. They certainly would be entitled to higher pay, because, as belonging to a necessarily local force, their prospects would be limited to India, and because their relations with the native troops under their command ought to imply a considerable knowledge of Indian languages and character. In this way Lord Stanley's objections might even, we think, be turned the other way. If the pay were higher, and the officers in a native corps were expected to show considerable knowledge of Indian languages, the service would become, instead of a refuge for the least successful and least capable, the resort of the more enterprising soldiers who were willing to make India their home. And thus the native service would get a better class of men,—men more competent to understand, and more anxious to be understood by, the native troops,—than ever before.

The next objection urged is that officers of the line who have a chance of going home rarely resist the temptation, and so the civil service of India would no longer have the life-long aid of the many able military officers who have been attached to it from the local army. This is Lord Canning's objection. The reply is, that men disposed and competent for such service would be separated from their regiments and formed into a separate Staff with the express intention of looking to India as their future field of service. And it is believed that this class will be much more numerous when it may be recruited from all the officers of the Queen's army than it is at present.

On the whole, the discussion resolves itself into the two great arguments,—on the one hand, that the Indian army will not be so efficient when the mass of its officers are ordinary English regimental officers constantly hoping for the time of their recall to England,—on the other hand, that the British army at large will be *more* efficient when all the regiments in turn get that experience of active service which British India, of all the possessions of the British Crown, is alone likely to afford. The one service will in any case gain whatever the other loses,—and, as we may hope, *more* than the other loses. For India will probably become the one field in which officers of ability can gain distinction, and therefore promotion, in the service. Hitherto, a Company's officer has known that his position in the Company's army, however high, was never likely to lead to any reputation or command at home. Even in India itself, Sir Patrick Grant was, we believe, the first Company's officer who ever attained the position of Commander-in-Chief. This will now be no longer the case. The men who reap distinction in India will know that they may be qualifying themselves for high office in case of a European campaign. This will add to their exertions during their stay in India, and tend to neutralise any evil effect resulting from the shortness of that stay. On the whole, we see no reason to think that the Government are taking a false step in accepting the recent mutiny in the local European army as a natural solution of the question whether or not that army ought to be maintained.

THE REPEAL OF SIR JOHN BARNARD'S ACT.

The Act which has long been known as Sir John Barnard's Act, and which has just been repealed, is remarkable as one of the last remnants of the once prevalent disposition to regulate artificially the morality of commerce. Sir John Barnard was a very eminent and upright merchant of the last century. Like other traders of his time, he seems to have been deeply impressed by the mischievous speculations connected with the South Sea scheme, which were analogous to those of the railway mania of 1845, and to have believed that the Legislature could prevent the recurrence of similar calamities. He wished to confine men to legitimate trade. The preamble of the Act is distinct on this point. "Whereas," it says, "great inconveniences have arisen and do daily arise "by the wicked, pernicious, and destructive practice of stock-"jobbing, whereby many of His Majesty's good subjects "have been and are diverted from pursuing and exercising "their lawful trades and vocations, to the utter ruin of them-"selves and families, to the great discouragement of in-"dustry, and to the manifest detriment of trade and com-"merce: for remedy thereof may it please your most Ex-"cellent Majesty that it may be enacted"....." That all "contracts and agreements whatsoever, which shall from and "after the first day of June, one thousand seven hundred "and thirty-four, be made or entered into by or between any "person or persons whatsoever, upon which any premium or "consideration in the nature of a premium shall be given or "paid for liberty to put upon, or to deliver, receive, accept, "or refuse, any public or joint stock or other public securities "whatsoever, or any part, share, or interest therein, and also "all wagers and contracts in the nature of wagers, and all "contracts in the nature of puts and refusals, relating to the "then present or future price or value of any such stock or "securities as aforesaid, shall be null and void to all intents "and purposes whatsoever;" and that all persons making or participating in such transactions should be subject to a penalty of 500*l*.

The Act further prescribes that, "for preventing the evil "practice of compounding or making up differences for "stocks or other securities" bought or sold; those who were concerned in such transactions should be liable to a penalty of 100*l*; and all persons who contracted to sell stock of which they were not actually possessed at the time of such sale should be liable to a penalty of 500*l*.

The Act has, of course, been wholly inoperative. Half the business of the Stock Exchange has been carried on in spite of it. Trade will not allow itself to be restricted by statutes of this kind, and it is fortunate that it should be so. The motive of the framers of the Act was good, but their legislation was not beneficial. Like every other market, the stock market should be as free as possible. There is no more harm in buying stock deliverable at a distant day than in buying tallow so deliverable—there is no harm in selling either under such circumstances—and there is no harm in selling stock which you are not at the time possessed of; if you have not got it, you must proceed to get it. It is true that all trading transactions that deal with future times and future events have some element of chance in them; what is future is necessarily uncertain. It is also true that all transactions which have an element of chance in them may be made the means of gambling. The buying and selling of all commodities may be made so if the parties to the transactions wish it. But we should not prohibit the ordinary transactions of life because of their exceptional abuses; we must not prohibit regular commerce, because persons who are so disposed may gamble under its forms. The Stock Exchange will now have no peculiar law of its own on this subject: it will be subject to the general policy of the law as to wagers and gambling, but will not have peculiar penalties and special disabilities of its own.

Agriculture.

DAIRY HUSBANDRY.

MR STRATTON'S SHORTHORN HERD.

The high prices obtained for dairy produce of all kinds for some years past have directed the attention of the agricultural community to dairy husbandry in a greater degree than during any period of the current century. In the early part of the century, when corn of all sorts sold at extravagant rates, numerous districts wherein great part of the land had been devoted to the dairy were so largely converted to arable and sheep farming, that they have ceased, or nearly ceased, to produce any butter or cheese for the general market. This was particularly the case in Suffolk and parts of Norfolk, and it occurred more or less throughout England. The present season has warned us that in spite of draining there are many tracts of land whereon sheep will in a series of years prove less profitable than cattle, and where some system of husbandry not altogether dependent on a dry season ought to be adopted. The tendency of opinion amongst many of our most judicious farmers is, that a combination of dairy and cattle-breeding may usefully be extended where now in use, and adopted in many other instances. This, however, to be done profitably must be well done. The cattle kept must be such as are suitable for all purposes, and they must be properly fed and cared for. It will not do, as on some of the old-fashioned dairy farms, to allow the stock to get so low in condition during the winter, that when the spring arrives the cows will not at once give full supplies of milk, and the young stock require half the summer to get into anything like fair condition. Dairy farming must be a pursuit guided by the lights of modern husbandry.

A very useful "Handbook of Dairy Husbandry," by Mr J. C. Morton, has lately been published by Longman and Co., which presents the subject in a very intelligent and attractive form. It deals with dairy statistics, the food of the cow, the choice and treatment of cows and their milk, butter and cheese-making, and general management, and gives a monthly calendar of dairy operations. It seems that one pound of butter is produced from every 18 to 21 pints of milk, according to the condition, breed, and state of the cows. We have tried this in a mixed dairy of Shorthorns and Guernsey cows, and we find that about 20 pints of milk produce one pound of butter. Of cheese, one pound is produced from every 7½ or 8 pints of milk. In Dorsetshire, where the milk is much used in making butter and skim-milk cheese, the average yield of a cow is 168 pounds of butter and 200 pounds of such cheese yearly. A good dairy farm will keep a cow for every three acres of pasture, "and under good management, with some arable land in addition, a much smaller extent will suffice." Most of the dairy produce of the country is, however, made from grass-fed cows. "There is, however, room for a great deal of economy yet in the utilising of the dairy farm, by adapting its arable part more directly to cow-feeding, and so enabling the keeping of a larger stock of cattle." And Mr Morton cites several examples of 26 or 27 head of cow stock kept on 50 acres of land by means of roots and green crops, whereas such a farm wholly in pasture would not keep more than two-thirds of that number of stock.

In all our best dairy districts the Shorthorn is gradually displacing other breeds of cattle, and though this breed is usually considered beef-producing *par excellence*, many of the Shorthorn strains are remarkable for their yield of milk. The milk is not so rich in butter, in proportion to the quantity of milk, as some other breeds, but for cheese none are so productive. Mr Morton states the capital and profit of a dairy farm as it ought to be rather than as it is generally found to be, as follows:—A farm of 500 acres of good ordinary quality, at 36s a year for rent and taxes, should have 380 acres of pasture in convenient fields well supplied with water. There should be 120 acres of arable land. The yards and stalls should accommodate 120 cows and 30 heifer calves, yearlings, and two-year-olds. To this should be added pigsties, pigs being essential adjuncts to the dairy. The arable land should be divided into 20 acres of wheat, 20 acres of mangold, 20 acres of beans, 20 acres of cabbages and carrots, 20 acres of wheat or other grain, and 20 acres of clover. Of the pasture, 250 should be grazed, and 130 mown for hay. He estimates this plan would produce 30,000 lbs of succulent food, or its equivalent, daily throughout the year. Of this, 120 cows at 150 lbs per diem, 30 calves at 40 lbs, 30 yearlings at 80 lbs, and 30 two-year-olds at 120 lbs a day, would consume 25,200 lbs, leaving enough for three pairs of horses, and 30 old cows to be fattened. On most farms of this kind, some sheep and grazing oxen would be kept in place of part of the cows; but it must be noted that many sheep are not desirable on a dairy farm, for they interfere with the quality of the cheese. The estimated produce and cost are as under:—

Annual Produce.	£
1,560 bushels of wheat at 5s	390
760 bushels of beans at 5s	190
120 cows dairy produce at 9*l* 10s each	1,140
30 old cows, sold at 12*l*	360
90 calves	90
Total	2,170

Annual Cost.	£
1. Rent and taxes at 36s	900
2. Seeds (50*l*), manure (50*l*), for arable land	100
3. Labour, arable, 50s per acre £300	
Ditto, pasture land, 5s per acre 100—	400
4. Tradesmen's bills	80
5. Loss by death and disease of live stock, 5 per cent., and by depreciated value of dead stock, 10 per cent	180
Total	1,660

Leaving a net profit, including interest on capital, of 510*l* per annum.

For such a business the capital required is:—

		£
1. Rent and taxes for a year		900
2. Seeds and manure		100
3. Labour and bills		480
4. Live stock—		
120 cows at 18*l*	£2,160	
30 yearlings	180	
30 two-year-olds	360	
6 horses	240	
Swine	60—	3,000
5. Implements		300
Total		4,780

Here we find a capital of 9*l* per acre is necessary for the sufficient management of a dairy farm, and the return amounts to 12*l* per cent. on the capital so employed. Few dairy farmers are in practice so well supplied with capital, or rather we should say few use so much on their farms; for our own experience and observations tell us that dairy farms enable their occupiers to acquire considerable wealth. They are, however, generally economical in their personal and family expenses.

Let us now take a glance at the account of the largest dairy and Shorthorn breeding farm in England, that of Mr Richard Stratton, at Broad Hinton, in Wiltshire. Mr Stratton occupies two considerable farms, one at Broad Hinton, where he resides, and the other at Salthrop, in Wroughton parish, nearly adjoining. Both farms are situated partly on the strong marl clay which lies at the foot of the Marlborough Downs or chalk hills, and partly on a lower step in the North Wilts vale which is on the oolite formation. The clay land at the foot of the chalk is very tenacious, full of springs, and requires much draining, but, when drained, is productive as wheat and bean land, though difficult to work in wet seasons. It is all arable. The Broad Hinton farm, which extends to 1,800 acres, was formerly occupied by the late Mr William Ruddle Brown, and the Salthrop farm, which is 2,000 acres, by the late Mr Robert Hughes, both in their day eminent as agriculturists, and for the esteem in which they were held by farmers and landowners as valuers and referees in matters agricultural. Both of them were examined before the Agricultural Distress Committee of 1833, both were strenuous advocates of high prices, and expressed strong opinions that if the then prices of corn continued, there must be an abatement of 30 per cent. on the rental. Mr Brown had suffered from the rot in his sheep which the springy land he occupied produced in wet seasons. He kept but a small dairy. Mr Hughes also based his system on sheep and corn-growing. Mr Hughes left his farm in 1830, Mr Brown quitted his in 1833; both belonged to the old race of farmers. Mr Stratton is of the new generation. He commenced as a breeder of Shorthorns when occupying Calcott farm, near Cricklade (Wilts), in 1838. Afterwards he removed to Salthrop farm, and in 1851 settled at Broad Hinton, holding Salthrop farm or the greater part of it with the Broad Hinton farm. Both farms belonged to the late Duke of Wellington, who did everything in the way of draining, building, and general permanent improvements—under the direction of his able auditor the late Mr John Parkinson, of Lincoln's inn fields—which a sensible landlord would do for a good tenant. It is several years since we visited that district, but some particulars of Mr Stratton's operations have appeared in the *Mark Lane Express*, under the head of "The Herds of Great Britain," from which we gather a few facts in illustration of modern systems of dairy and breeding husbandry. The climate being very moist, Mr Stratton grows no barley, and the wheat, being late, is not often of very high quality. The beans, too, are very late. Artificial grass for hay, with some roots for his cattle, occupy a considerable breadth of the arable land. Unlike his predecessors we have named, Mr Stratton breeds no lambs, but buys about 1,000 Hampshire Downs in the spring to feed off the clover and tares, selling them fat in the autumn. There are 350 Shorthorns on the farm, and 15 men are employed in attending upon them, the number of work-people on the farm being 100. There are 50 bulls and bull calves, no less than six bulls being used on the farm, and others are let. He has also some steers for making the magnificent beasts he produces at the Smithfield and Birmingham Christmas fat cattle shows. He employs a Fowler's steam plough on his widely-extended arable fields; and by the use of it he has reduced his beast labour, and dispensed with 20 working oxen and six farm horses. He works such of his two-year-old Shorthorn heifers as may happen to be barren or slip calf, and they do their work quite as well as Devon or Hereford steers. They work four in a plough and six in the scarifier, from seven in the morning to four in the afternoon, with only half an hour's stoppage in the middle of the day. During the summer and autumn they get nothing but grass—the rest of the year they have hay, wheat-chaff, and some bruised corn. This is new in this country, but it is worthy of imitation. None of the dairy cows get any oilcake; and for all his numerous herd, including young animals and prize beasts, Mr Stratton only uses 25 tons of oilcake annually. Even the prize animals seldom get more than from 6 lbs to 9 lbs of cake a day. This is less than many farmers give to their ordinary feeding bullocks. Mr Stratton's success as a prize-taker proves that extravagant feeding is not essential to Shorthorn breeding, as has been sometimes supposed.

About eighty young bulls and yearling and two-year-old heifers are sold yearly—many of them going to Australia and America. The dairy cows number 110, and they are kept without roots, on grass in the summer, and on hay in the winter. The produce of cheese is about half-a-ton per week, and of butter from 180 lbs to 200 lbs per week. A horse and the bull "Nottingham" work the churn. The cows are all housed in the winter half of the year. Here we find a herd of the most valuable description of cows performing the business of a dairy farm as completely and economically as the most ordinary dairy stock. Nor is there any useless expense incurred in rearing the calves. The calf usually sucks the cow for a month, then it has a gallon of new milk twice a day for a fortnight, which is gradually diminished, and ceases altogether at the end of ten weeks; and in that time it has learnt to eat hay and oilcake enough to keep it in condition and grow up vigorously. Of course, the bull calves for showing and letting are kept longer on milk.

It is beside our present purpose to trace the rise of Mr Stratton's herd and reputation as a breeder, from his purchase of "Phœnix" in 1838, and his success at local shows and markets, to their present condition of world-wide celebrity. We may mention, however, that one of the main founders of his herd was Moss Rose, bred by Phœnix, from a heifer purchased by Mr Stratton in Highworth market. Indeed, it is to Mr Stratton's accurate perception of the points of a Shorthorn that much of his success as a breeder is due, and, like the late Earl Spencer, he has been able to obtain some very valuable stock from unpedigreed cows.

Young Moss Rose by Lottery was, by a mistake of the herdsman, put to her own sire, and the produce was the cow Elegance, which proved a great milker, and bred in succession three cow calves by the Red Duke of first-rate character. It may be mentioned that Mr Stratton's first prize, six guineas for the best cow and calf, was taken at Devizes in 1837, and during the next three years the whole of his prize takings amounted to only 18 guineas. In 1841 he began to take largely of the local prizes, and in 1847 he took the first prize for bulls at the Gloucester show and his first prize at the Smithfield show. This year his winnings were 135*l*. Since then his money prizes have amounted to 3,577*l*, besides eight gold and twenty-one silver medals. In 1850 he first exhibited at the Royal Agricultural Society's shows, at the Exeter meeting, but was not then successful. So slowly but surely has he won his way to fame. We close this notice with the following description of the bull "Nottingham":—At the dairy stalls "the six-year-old Nottingham reigns, and, supported by hay alone, leads a life of patient and amiable industry, such as no bull living can match. Sometimes he is out in the bush harrow, and as he has also formed a work-

ing partnership with an old bay of apocryphal age, the two have made three ricks of stubble between them. In fact, in a dirty lane difficulty, they consider him equal to two horses and a half. His fine forehand and thighs strike you in spite of his very low condition; and it is not until you have seen his collar and blinkers removed, and hung on a nail behind him, that you can compass the idea that he is a bull at all. Mr Stratton has used him ever since he got him in 1855, with the exception of one season when he was let to Mr Moore of Hanley; and, so far, there have been about 100 calves at Broad Hinton by him." The manner in which Mr Stratton has adapted his system to his farm is worthy of commendation, and marks the progress made by our modern farmers. The farms which were once farmed as corn and sheep farms by two of the best farmers of their day, and given up by them as hopelessly unprofitable when the price of corn had become low, are now, when adapted to their natural purposes, breeding cattle and the dairy, eminently useful and profitable farms.

Literature.

THE RIGHTS OF NATIONS; or, the New Law of European States, applied to the Affairs of Italy. By COUNT MAMIANI, Minister of Public Instruction in the Kingdom of Sardinia. Translated from the Italian, and Edited, with the Author's Additions and Corrections, by ROGER ACTON. London and Brighton: W. Jeffs. 1860.

(SECOND NOTICE.)

IN our former notice of this work, we indicated, in general terms and by extracts, the method of the author, and the spirit in which he wrote; and pointed out a few considerations which in our views rendered Mr Acton's translation a valuable addition to the literature of juridical philosophy in England. We now proceed to give some account in detail of the contents of the work.

The task is one of considerable difficulty. It is impossible, in one or two columns of a weekly newspaper, fairly to represent a treatise such as that before us. We might by quotations convince the reader that it contains many just thoughts and elevated sentiments felicitously expressed; but we should fail to give any connected idea of its main doctrines and the direction of its general argument. If, on the other hand, we should attempt to give a summary of the conclusions which the author aims to establish, and an outline of the reasoning on which he rests them, we should, even if we succeeded in rendering his meaning with tolerable correctness, substitute a dull and bald abstract for an animated disquisition, rich in illustration and in application. We shall endeavour, so far as is practicable, to combine both courses. But we must beg the reader not to form his impression of the worth and interest of the book from our meagre statement of its principal points, or from the brief passages which we may incidentally quote.

The science of international law has, of course, and as its name implies, for its subject, the reciprocal rights and duties of States. The first question, therefore, which arises is, What constitutes a *State?* Why is the name allowed to some communities and withheld from others? "The State," says Mamiani, "is a certain congregation of families, which provides by laws and tribunals for its own welfare, and for its own protection," and "it is distinguished and differentiated from the others its peers, by virtue of this, that the families of which it is composed are those intending, beneath a certain zenith and within certain frontiers of the soil, to attain together by their assiduous co-operation, the ultimate degree of social conjunction and reciprocity, according as they may be affected by the special circumstances of their land, of their race, and by other particular contingencies. Therefore, the State does not subsist solely by the contiguity of lands and dwellings, but through a certain conjunction or unity of minds and dispositions." In order, however, to this effectual co-operation, self-rule within, and independence of foreign powers without, or, as Mamiani calls them, inward and outward autonomy are essential conditions. The end for which the State exists, is the progressive improvement of individuals and the community, and without this double freedom that end cannot be realised. Hence no community is justified in surrendering its independence to another,—though it may, under certain conditions, merge itself into, and become a constituent part of, another free State; nor can any State rightfully intervene by force in the affairs of another State, so as to deprive it of its autonomy. Where this moral unity does not exist, the State does not exist; rather there are many conflicting States, which ought to be separate, artificially held together. The Hungarian and Venetian provinces of the Austrian Empire are instances in point. Where the sense of a common country is found, there *de jure* one State exists. It is the presence of this feeling throughout the Peninsula, which lies at the basis of, and justifies the demand for, the unification of Italy.

"The *Patria*," says Mamiani, "is that specific territory and that particular congregation of men, to which every inhabitant and member feels himself bound by all the duties and rights, by all the instincts, the hopes, and affections of their common life. Hence it is an obligation, as it is a constant and unremitting privilege for him to share in all its good and in all its ill, in every damage, and in every compensation, in its prosperous fortunes and in its disasters, now and for ever, in life and death."..... For "if such an associative and affectionate union could admit of exceptions and reservations, and if it were to be understood that each component member embraces and maintains it for so long as shall be profitable to him, reserving it to himself to break it at discretion, and seek another better country to belong to, the real, true, and effectual *own country* would never come into being anywhere. But the attainment of the aims which nature has pre-ordained for us, through civil greatness and prosperity, is a very slow, laborious, and difficult work. For this it is needful, that every man should mean, with regard to his own country, to maintain unconquered and unalterable, the fulness of such mutual faith, both for the present time, and for the remotest future, in the same way as our fathers were wont to feel and will that entire fidelity of theirs; and to sum up all, the own country considered in its entire moral significance, implies the complete security of each for all, and of all for each."—Pp. 35-36.

To claim these rights and privileges for one's self and one's own country is to acknowledge them as valid for other nations; and adds to the devotedness of antique patriotism the largeness of Christian charity, while it avoids the absurd cosmopolitism which is the caricature of the Christian doctrine of human brotherhood.

From this conception of the State and of the *patria*, the chief doctrines of a true code of international law follow. Domestic tyranny and foreign oppression can acquire, by long continuance, no *prescriptive rights* in a State; for their very existence is incompatible with the existence of the State, justly conceived. Only when prescription generates a new fact,—the consent of the people, does it exchange its false title for a valid one. A nation cannot alienate its public liberty, any more than a private individual can sell himself into slavery; for "liberty, being natural and essential to mankind, and the necessary concomitant of all goodness," "can in law never cease, as in the exercise of it, it can only partially and temporarily cease; and every agreement, compact, assent, or occupation to that effect, is conditional and liable to be revoked." *Intervention* is illegal except as a means of resisting wrongful intervention. Each nation possessing distinguishing characteristics of its own, is called to discharge a peculiar work in the providential government of the world; it has its own special and incommunicable destiny to fulfil; and, therefore, the free and unfettered development of all its resources, the unchecked exercise of its moral influence, is a right which cannot justly be gainsaid it,—whether on the pretence of preserving the balance of power, or on any other pretext. Its influence may be pernicious or the reverse. But the principle holds good that

In a juridical point of view, all those actions of a State which are internal, are free; and all those are absolutely internal from which no other immediate effect proceeds outside than by the efficacy of their example and by the inevitable communication of opinions and sentiments. Now, the essence of this kind of actions is not changed, because the spiritual efficacy which accompanies them converts itself elsewhere into facts which are not only positive but grievous and disastrous. Let every State provide against that in its own interior; and since we hear such talk of pestiferous miasma from abroad, let each erect its *lazaretto* at home.

The only just exception to the principle of non-intervention, itself springs from that principle, and consists in "opposing the wrongful intervention of others, and undoing the certain and immediate effects which it has induced." The latter clause of this sentence, it will be observed, would justify (and it seems to us on good ground, so far as *the right* is concerned) assistance being granted,—to take an example,—to the Neapolitans in throwing off the yoke of the Bourbons; for though the actual intervention of Austria has been withdrawn, it remains in its effects.

From the consideration of every real State, as a moral person, with a right to the free development of its resources and genius, so long as it refrains from interference with other States, otherwise than by the moral influences radiating from it,—Count Mamiani deduces the principle of the juridical equality of all the European States; and the destruction of the unbalanced ascendancy of the "Pentarchy," or five great Powers. Rightfully, they have no title to exclude from the Congresses of Europe the less powerful States; or to restrict them to an inferior number of votes.

The abstract justice of these doctrines we do not suppose any one will deny. That the time is very rapidly approaching when they will be carried into effect, Count Mamiani himself can hardly imagine. It is, nevertheless, by no means useless to proclaim them. At a time when a re-settlement of European questions is impending, it is desirable to determine on what principles the new settlement *ought* to take place. Probably it will take place on no principles at all. Might will concede to right just so much as it finds it impracticable to withhold from it. Since the Treaty of Vienna there has been, however, a decided advance towards a higher moral standard in judging of international affairs; and this advance will probably not be without effect on the public law of Europe. Count Mamiani's volume will, if it obtain the influence it deserves to have, do good service in the same direction. Mr Acton deserves the thanks of all public-spirited politicians for his excellent translation of an admirable work, which we conclude by once more strongly recommending to our readers.

THE NEW REVOLUTION; or, the Napoleonic Policy in Europe. By R. H. PATTERSON. Blackwood. 1860.

"THE NEW REVOLUTION" proceeds from a pen to which one of our weekly contemporaries has of late been deeply indebted. It is, indeed, little more than a *refacimento* of articles which have lately appeared in the *Press* and in "Blackwood's Magazine." Written chiefly as leading articles, they do not make a good book, or even a valuable pamphlet. There is an amount of repetition which indicates carelessness, and a newspaper style which detracts from the effect of opinions substantially sound. There is, naturally, a preponderance of declamation and a poverty of fact which mars the force of a treatise with whose leading idea all minds are by this time familiar, and with the views set forth in which nearly all in the main agree. With a pardonable vanity, Mr Patterson reproduces certain predictions made in the beginning of last year, and calls on us to observe how they have been justified by the event. But he has very little that is new or striking to suggest with regard to the necessities of the present or the perils of the future; and we do not think that his articles, though unquestionably useful to the journals in which they appeared, and creditable to himself, were of such permanent value as to merit reproduction in their present shape. It is but just, having said this, to remark that Mr Patterson differs in one important qualification of a public writer from the majority of those attached to the Conservative party. They are too generally neglectful of facts, somewhat careless of principle, and prone to personality. In the present *brochure* we are glad to notice that the writer's evident party bias never leads him astray in this direction; and that even Mr Bright is mentioned in a manner corresponding with the dignity of the critic.

The chief—almost the sole—object of the writer is to enforce the truth that England is in danger, soon or late, from the machinations of Napoleon III.; and secondarily, to indicate the direction in which he believes that those machinations at present tend. The first point is one on which the nation at large is by this time pretty well agreed. The ostrich-party of peace at any price thrust their heads into the mazes of a commercial treaty and refuse to see the peril. The nation is aware of the danger which threatens it from the proximity of a despotism founded on crime and seated on bayonets; a despotism with hereditary ambitions to gratify, and an inheritance of defeat to avenge. The point to be established is not that Napoleon III. may any day, and must one day, be our enemy; but rather that we are not as yet by any means prepared to meet him as such. There is little doubt as to his will to acquire popularity in France by humiliating England; the one thing to be seriously discussed is his power to do so, and our means of resistance. On this point there is in many places a dangerous negligence; a lingering hope that the worst may not come, a lingering dread of incurring Mr Bright's displeasure by vigorous and expensive preparation for it. It is of the highest importance that our rulers should be taught two things: first, that they may do their duty in spite of a party whose influence has been most ludicrously overrated by their fears; and second, that they *must* do their duty, or give place to those who will. The Chief of the Government and the Head of the War Department are both men to whom, from the high spirit of the one and the earnest conscientiousness of the other, the country would be well inclined to trust its defence: it behoves them to deserve a confidence which is essential to the national safety, and which, if forfeited by them, will not be so readily reposed in any successors. The statesman who shall first declare himself determined to provide at whatever cost for the adequate protection of the country against all possible invaders, will rally round him a support which will sweep away at once the advocates of a penny-wise economy and the fanatics of pacific impossibilities; and may rely on it that no colleague or opponent among recognised statesmen will dare openly to stand forth as the enemy of national security.

The few who are foolish or fanatical enough to doubt the probability of an eventual quarrel with France are not likely to be enlightened by Mr Patterson. He traces with considerable ingenuity what he believes to be the policy of the present master of France; but he omits almost entirely the consideration of the graver fact that France herself is an accomplice in this part of her Sovereign's criminal self-seeking. It is the folly of a certain school to imagine that all countries are like Great Britain—fond of peace, averse to the perils and cost of war, and free from the greed of conquest. The slightest acquaintance with any other people, the most superficial study of history, ought to have made them ashamed of such a delusion. Nay, were they but acquainted with the third of the United Kingdoms, they might have known better. Were the Irish element for but a few years predominant in our governing body, what chance would there be that British policy would continue to be guided by an honest desire for honourable peace? The French have much of the Irish love of fighting, coupled with an extravagant love of military glory, and a lust of national aggrandisement. Peace and wealth are with the bulk of the French people secondary objects to fame and extension of territory. They covet the frontier of the Rhine more than they dread the duplication of their taxes. They have no sense of international justice; no such respect for the tenth commandment as would restrain Englishmen from coveting their neighbour's provinces. While France has fought for conquest, England has never entered into war but for the defence of what her people considered the rights of themselves or their allies. While France is uneasy in peace, England is to the last moment passionately averse to war. While England thinks sorrowfully of her "eight hundred millions of recognisances to keep the peace," France is never restrained by a debt pressing much more heavily on her wealth from indulging her passion for glory and her hunger for land. Napoleon III. may die to-morrow; but while the French army remains the finest on the Continent and the French navy at least the second in the world, Europe will never be safe. Once only since the days of Louis XI. has France had a really pacific monarch; and his reign ended in a "*Revolution de mépris.*" The slaughter of millions of Frenchmen did not teach France to execrate the memory of the first Napoleon; the same love of war surrounds and impels, the same indifference to carnage will survive the third. Only by being strong for self-defence can England ever be safe from a French invasion.

One of the worst tendencies involved in the pacific temper of England is that which the author indicates, but does not dwell upon—the tendency to begin her resistance too late. This is the peril which makes Mr Bright so dangerous. Once let danger visibly approach our own shores, and if self-regard did not keep him silent, popular rage and contempt would drown his voice. It is while the enemy is silently gathering his own strength and impairing ours that misstatements of facts, imputation of bad motives to those who see the danger, and violent declamations on behalf of peace and of the national enemy, are mischievous: mischievous even then, rather because statesmen are timid, than because the nation is deceived. It is not when Napoleon III. menaces us from Cherbourg, but when he approaches the Rhine, that his English allies and admirers will and can assist him. If England decline to assist Prussia then; if she neglect the insidious schemes on Belgium, in regard to which one of the Napoleonic organs in London has already attempted to sound the feelings of this country; if she permit her enemy to gain step by step on the Continent, and alienate her last friends from her,—the task of the French party in this country will have been performed. After that time, Napoleon III. will have no further need of them; and then we shall understand the value of "cordial understandings." If our statesmen will but be persuaded to trust their countrymen, and steadily to resist the next encroachment of France, whether in the East, the South, or the North; to make common cause with the German Powers on the one hand, and the Italian Constitutionalists on the other; to reconcile, if possible, the threatening quarrel between Prussia and Denmark, and draw close the bonds of amity among all who have reason to dread the ambition of France,—we may yet avoid the danger of being left to encounter her whole force, directed against us at the time she herself may choose. The danger is too clear to leave the slightest excuse to those who neglect to prepare for all the imperilled common means of self-protection.

Foreign Correspondence.

(FROM OUR CORRESPONDENT.)

PARIS, Thursday.

Article 13 of the Treaty of Commerce requires, as you are aware, that the *ad valorem* duties on British productions imported into France shall be converted into specific duties by a supplementary convention "to be concluded before the 1st July." It is now quite certain that this convention cannot possibly be terminated by that date. The Superior Council of Commerce, to which is intrusted the task of transforming the *ad valorem* into specific duties, has not yet ended its investigation into the questions of iron and steel, and the articles made of them; it is just now, I believe, occupied with that part of the inquiry which refers to machinery: and, in addition to iron and steel, there are other matters which will require not less elaborate elucidation. According to all appearance, then, weeks, and perhaps months, will pass away before the supplementary convention will be concluded. This is of course to be regretted, inasmuch as it is the interest of commerce to have contemplated tariff changes made known with

full precision as quickly as possible; but under the circumstances it was, perhaps, unavoidable.

I have been favoured with the opportunity of perusing a copy of the evidence taken before the Council in its sittings of the 25th and 26th of last month,—the latest I believe which has yet been put into type. I repeat what was said in a previous letter, that it is a pity the Council does not make a rule of publishing the evidence it receives, instead of reserving it for the exclusive use of its members and some few interested parties. The inquiry the Council is making is the most important which has been undertaken for years, and the whole community has consequently the right to know the manner in which it is conducted, and the results it attains. Englishmen, too, are largely concerned in it, and would naturally be glad to know how it progresses.

In the sitting of the 25th ult., Mr R. Jackson, master cutler, and Vice-Chairman of the Chamber of Commerce of Sheffield, gave a mass of most interesting evidence relative to cutlery and other articles manufactured in that town, detailing the cost of material, fuel, workmanship, &c.; and setting forth the duties which he thinks ought to be imposed on them on their import into France. He expressed, in the name of himself and the Chamber of Commerce of Sheffield, a strong preference to *ad valorem* instead of specific duties. Indeed, he made use of this language:—"The Chamber of Commerce of Sheffield entertains the firm conviction that if specific duties be established on the numerous and varied articles manufactured in the district it represents, those duties will be unjust, and will be very prejudicial to the extension of commercial relations between France and England. Moreover, if the duties be not moderate, the treaty will be practically useless." The amount of *ad valorem* duty which he represented to be desirable on most articles was about 10 per cent. He opposed strongly the project which appears to be entertained of having two sorts of duty on steel, according to quality. He declared that in France many articles—carpenters' tools for example—are as well made as in England; and, in answer to M. Michael Chevalier, he even went further: "I believe," said he, "that if the cutlers of England were to come to Paris they would find a host of articles of cutlery *which the French can make better than we can*. But the cutlers of England do not come into France on business because cutlery is prohibited. I say that there are a great many things made in Paris which would be imported into England if they were known there."

As to the French witnesses who were examined, most of them, as on previous occasions, stood out manfully for the highest duties possible. Some of them admitted that France makes as good steel as England, that she can supply any quantity of it, and can even dispense with Swedish iron in the making of it; and yet they affected to be terrified at English competition in that article. Several of them dwelt strongly on the difference between the price of coal in England and in France, as a sufficient reason for maintaining exaggerated protection; and they were perfectly unmindful of the fact that this is to a great extent compensated by the greatly higher wages which have to be paid for labour in England. One of them, a M. Petin by name, a partner in large steel works in the department of the Loire, also contended that in France taxes are higher than in England; but M. Michel Chêvalier showed him triumphantly that on the profits which he admitted his establishment gained, he would, if in England, have to pay 108,000f for income tax alone, saying nothing of poor rates, paving rates, lighting rates, and all the other taxes with which Englishmen are burdened; whereas, in France, all his taxes largely counted are only 99,417f.

In the course of the investigation before the Council, a circumstance which is of grave political as well as of commercial importance has been referred to more than once. It is that superior qualities of French iron and steel are infinitely better than any of the same class made in England, and that the consequence is, that *the plates made in France for covering ships are impervious to cannon balls, whilst the plates made in England for that purpose cannot resist shot.* The aforesaid M. Petin was one of the witnesses who made a statement to that effect:—"The English," he said, "have just sent to Vincennes steel plates for covering ships; and I have learned, with pleasure, that they *were smashed into a thousand pieces* on being fired at, whilst *French plates perfectly resisted.*" I hope this fact, if it really be one, and from the confident manner in which it is affirmed there is no reason to doubt it, will not escape the attention of our Government.

I find another fact of importance stated by the same gentleman. It is that the French are making steel sheets which are peculiarly suitable for ship-building, and that as the sheets are thinner than iron, a vessel made of them would give considerably greater tonnage than one of the same size in iron, whilst the expense would not be much higher.

In a previous letter, the statement was made that the manufacturers of cotton goods at Rouen had raised an outcry against the high price which spinners make them pay for yarn, and had petitioned the Government to allow cotton yarn to be imported even at a lower duty than that contemplated by the negotiators of the treaty. The manufacturers of the departments of the Aisne, the Nord, and the Somme have just held a meeting at St Quentin, and have drawn up a petition to the Government representing that the excessive dearness of yarn seriously checks manufactures, and praying that English yarn may be admitted at a duty not exceeding 5 per cent.,—such duty to come into force not later than October next.

The annexation of Savoy and Nice to France has naturally extended to them the Customs *regime* of the latter country, and sundry decrees of the Emperor for carrying into effect that *regime* have been issued. These decrees present nothing of interest to English readers, except it be that at Nice the importation of articles paying more than 20f the 100 kilogrammes, of coffee, sugar, wool, machinery, &c., is allowed.

An exhibition of horses, sheep, cows, and other animals, all of French production, is now taking place in the Champs Elysées. Competent authorities say that it proves that the French are making rapid progress in the art of breeding; especially of cows and sheep.

Some account of French commerce during the last three years is given in a table published in the *Moniteur* of this day,—that table being given *en attendant* the large volume of commercial statistics which is brought out annually. This document (the details of which must from want of space be postponed) gives these results:—

The *actual value* of all goods IMPORTED into France was:—

1857	1858	1859
f	f	f
2,689,400,000	2,164,400,000	2,354,600,000

The actual value of all goods EXPORTED was:—

1857	1858	1859
f	f	f
2,639,300,000	2,561,100,000	3,057,100,000

It will be observed that last year, though the imports were considerably below those of 1857, the exports were much larger. The *official value* in the same three years was:—

1857.	IMPORTS. 1858.	1859.
		f
2,235,800,000	2,034,900,000	2,148,200,000
	EXPORTS.	
f	f	f
2,356,700,000	2,441,900,000	2,755,600,000

It it to be observed that all the preceding figures form what the French call *Commerce General;* that is, in imports, all articles brought in not only for consumption, but in transit and for re-exportation; and in exports, not only all French productions, but foreign ones also. The share which France had in the aforesaid imports—that is what she consumed—the French call it *Commerce Special*—was in *actual value*:—

1857.	1858.	1859.
f	f	f
1,872,900,000	1,562,800,000	1,640,700,000

And her share in the exports *(Commerce Special)*—that is the export of her own productions, or those which by payment of duty or otherwise were made hers, was, *actual value*:—

1857.	1858.	1859.
f	f	f
1,865,900,000	1,887,300,000	2,266,400,000

Here again we have a marked decline in imports in 1859 compared with 1857, and a very marked increase in exports.

The precious metals are not included in these figures relative to France; and the return respecting them is this:—

	1857.	1858.	1859.
		SILVER.	
	f	f	f
Imported	98300000	160600000	210360000
Exported	458100000	175600000	382100000
		GOLD.	
Imported	568700000	553600000	726800000
Exported	122900000	66500000	187500000

The last monthly return of the Bank of France was very unsatisfactory; in discounts there was a decline of about 30,000,000f.

The Imperial visit to Baden Baden, though represented to be satisfactory, has not, it will be seen from the quotations below, produced any very great effect on the Bourse. It is said that the issue of bonds on behalf of the railway companies is to commence on Monday.

	Wednesday, June 13.	Thursday, June 21.

The monthly Customs returns just published bear sad testimony to the depression in commerce, caused partly by the changes in the tariff, partly by political anxieties. The amount of import duties in the month of May last were only 9,910,257f, whilst in the corresponding month of last year they were 17,967,813f, and in that of the year before 18,127,885f. For the first five months of the present year the import duties were 57,212,595f; same period last year, 76,539,267f; and of the year before, 73,758,176f.

The quantities of the principal imports for French consumption were as follow:—

	May 1860.	May 1859.	May 1858.
Oxen and sheep .....head	38509	33684	28531
Wines .....hectolitres	28140	12012	10333
Alcohol	7389	2664	2238
Cocoa .....quintals	4083	3675	3247
Coffee.....	36602	35766	25552
Grain	16337	110844	76649
Flour	58		
Cotton	588173	51760	74193
Flax and hemp yarn	934	191	145
Oleaginous seeds	105290	74342	49958
Coal.....	4022188	4019592	4207647
Coke	451619	346708	...
Indigo.....	5104	1049	654
Wool	78632	20266	23075
Cast iron	12658	34595	61393
Bar iron	229	371	9346
Silk.....	2977	1969	3007
Colonial sugar	60946	87140	103747
Foreign sugar	30131	72962	51061
Flax and hemp fabrics.....	1366	506	643

The large increase in cotton, indigo, and wool will be noticed:—it is of course owing to the reduction of duties. But in cocoa and coffee, which have also been reduced in duty, the increase it will be seen is very insignificant, whilst in sugar, on which duties have likewise undergone a large diminution, there is it will be observed a heavy decline. The extent to which the new duties will affect the revenue may be judged of from the fact that the 588,173 quintals of cotton above mentioned imported last month only paid 393,552f, whilst the 51,760 of May, 1859, paid 1,197,731f; and that whilst the 78,632 quintals of wool of last month paid 83,542f, the 20,266 of May of last year paid 418,906f.

The principal exports of French productions in the same months were as follow:—

	May 1860.	May 1859.	May 1858.
Oxen and sheep .....head	7699	7002	8063
Wines .....hectolitres	215823	400906	187899
Brandies.....	11281	31706	11467

Oilcake	16429	12455	...

Of the wine, England took 10,603 quintals in May last, but in the same month of the preceding years she took none at all. The wine was ordinary, and the introduction of that quantity is of course owing to the treaty. Of the brandy she took 6,687 quintals, but in May of last year she received about the double,—namely, 12,921 quintals. Of the millinery she received 74,437f worth, to 70,496f last year. Her share in other articles is not specified.

The following is a detail of the precious metals:—

	May 1860.	May 1859.	May 1858.
Silver.	f	f	f
Imported	12947160	14105540	10705500
Exported	10956960	49712960	9926800
Gold.			
Imported	22340000	211583100	66162000
Exported	5809200	22374300	4420200

The principal stocks at the end of May of the three years were as follow:—

	1860.	1859.	1858.
Cocoa .....quintals	21011	31392	17746
Coffee	139695	90821	140947

1858.....	4987	817952	4114	584575

The following is an account of the markets:—

Flour, at *Paris*, has made a new advance, but the market is calmer. Yesterday, the first qualities were 69f to 71f the sack of 159 kilogs; other sorts, 65f to 68f. The four marks were 69f for the current month; 70f for July; 70f 50c for July and August.

Wheat.—At *Paris*, yesterday, there was a very large attendance of the farmers who have come up to the capital to witness the cattle show, and they made numerous offers. The consequence was that prices, which opened at 39f to 42f the sack of 120 kilogs, the quotations of last week, closed 50c to 75c, and on some sorts even 1f lower. At *Marseilles*, prices have advanced; and of the provincial markets, 120 present a rise of from 10c to 2f 67c the hectolitre, 23 a fall of from 23c to 1f, and 14 have remained unchanged.

Cotton.—At *Havre*, the sales of the week ending Friday were 5,990 bales, and the arrivals only 2,425. Brokers fixed the closing prices at 86f the 50 kilogs for low New Orleans, and 95f for very ordinary ditto. The market was not animated on Monday or Tuesday, but yesterday about 2,000 bales were sold. "Low" New Orleans was not quoted, but "good low" was 86f to 87f.

Coffee.—At *Havre*, in the week ending Friday, holders made some slight concessions, and the sales were: 650 sacks Gonaives, disposable, at 84f to 85f the 50 kilogs in bond; 1,500 sacks Port-au-Prince, 81f; 1,556 sacks Rio, not washed, disposable, 74f to 78f; 2,779 sacks Porto Cabello, 89f to 98f; 800 sacks Java, 115f to 120f duty paid; 26 Demerara, 120f; some small lots of Ceylon plantation from London, part at 126f 50c, part at prices kept secret; and a lot of Mocha, for delivery, at 132f. Some lots of damaged Hayti and Ceylon also sold. The arrivals did not amount to 1,500 sacks. This week, sales have not been numerous. Rio, 75f to 76f 50c; Ceylon triage, 108f 50c duty paid; Java, 118f. Various lots of different sorts of damaged have been made by auction. At *Bordeaux*, last week, business was not active. 320 sacks Mysore went at 118f; 1,000 ditto at prices kept secret. This week, some small lots of Santiago have been sold at 100f and 101f the 50 kilogs. At *Nantes*, nothing has been done. At *Marseilles*, last week, 140 sacks Rio went at 73f to 76f; and a lot of Mocha at 100f to 120f.

Sugar.—Business at *Havre*, in the week ending Friday, was somewhat more animated, and prices rose. 138 casks French West India disposable went at 46f 50c to 47f the 50 kilogs, duty paid; 810 ditto for delivery, 47f to 47f 50c; and a small lot of "usine" ditto, 52f. Some lots of damaged were also sold. The arrivals were upwards of 3,600 casks. Sales have been unimportant this week: French West India "usine," 56f duty paid. At *Nantes*, last week, 173 casks French West India went at 47f 50c to 48f the 50 kilogs; two small lots of ditto "usine," 64f to 68f; a lot of Java, 59f; 2,820 sacks Reunion, 53f 50c; 660 sacks Reunion, very common, 41f; 747 Mayotte, 46f. The arrivals were 9,000 sacks. This week, a large lot of Reunion has been sold at 50f 50c to 53f 50c; and some small quantities of French West India at 47f to 48f; Java, 58f 50c and 59f; Mayotte, 48f; Mauritius "gros grain," 55f in bond. At *Bordeaux*, the demand last week was not without importance: 285 casks Martinique went at 45f 50c to 46f; several lots ditto "usine," 53f 50c to 55f; 1,600 bales Reunion "gros grain," 57f; 2,600 Reunion small grain, 49f 75c to 50f; Havana was 35f to 36f. Some small lots of French West India have been made this week, but prices are not stated.

Indigo.—At *Havre*, in the week ending Friday, about 90 cases Bengal were sold at 35c to 70c above the estimates, and a lot of Guatemala at 6f 40c the ½-kilog duty paid. The arrivals were 10 cases. This week, some cases Bengal have been sold at prices kept secret. At *Bordeaux*, last week, upwards of 150 cases were sold; and there have been some small sales this week, but prices are not given.

Hides.—Business at *Havre*, in the week ending Friday, was not animated: 232 Rosario dry went at prices kept secret; 1,400 Buenos Ayres calf dry, 125f; 1,144 Monte Video salted disposable, 85f; 221 Martinique salted, 72f 50c; 655 Lima drysalted, 87f; 1,193 New Orleans salted, 50f 50c. Some lots of damaged were also sold. The arrivals were nearly 16,000 of different sorts. This week, a fair amount of business has been done. New Orleans salted, 50f duty paid; Monte Video salted, 66f; ditto cow, 80f.

Wool.—The demand at *Havre*, in the week ending Friday, was regular. 186 bales La Plata unwashed went at 97½c to 3f the kilog: 41 bales Russia washed, 7f 90c to 8f 30c; 15 bales Chili unwashed, 70c to 1f 40c; 27 bales sheepskins, La Plata unwashed, 80c to 1f 75c. A fair amount of business has been done this week: Syria unwashed, 1f 35c to 1f 40c; Monte Video unwashed, 2f 40c.

Tallow.—At *Havre*, in the week ending Friday, there were no sales and no arrivals. The same has been the case this week. At *Paris*, yesterday, the 100 kilogs were 142f 50c—a rise on last week's quotations.

Spirits.—At *Paris*, yesterday, 3-6 of 90 deg. was 108f the hectolitre; Montpellier, 86 deg., 140f. At *Bordeaux*, the day before yesterday, 3-6 Languedoc was 135f; and beetroot, first quality, 103f.

COMMERCIAL AND MISCELLANEOUS NEWS.

A commercial report from Bombay, dated the 23rd ult., says:—The active season for the sale of imports may now be considered to have closed, for, though the weather is still fair and few signs of the monsoon show themselves, up-country orders are so limited in extent that the dealers are unusually quiet, and exhibit no inclination whatever to stock

themselves for speculative purposes. The past fortnight has probably witnessed fewer sales of cotton goods than any for some years past, the last two monsoons having been marked by the uncommon occurrence of an active demand throughout their continuance. The most marked feature of the fortnight has been the great abundance of money in European quarters; for, though the Bank of Bombay has not lowered its advertised rates, the other banks have been ready to lend on very low terms, and it is said that in some instances 2 and 3 per cent. per annum has been accepted for short periods. This abundance has had the effect of raising the value of bank shares and public securities, the latter of which have gradually advanced to 85½ per cent. for Four, 99¼ for Five, and 105½ for Five-and-a-Half per Cent. paper. Among the native traders who do not deal with the banks money has been somewhat less plentiful. Metals, with a few exceptions, are in slight inquiry. The demand for exports from English houses is very languid, in consequence of the disproportionate prices asked by the dealers, as compared to the late home quotations. Coffee of both kinds is quoted higher, and a parcel of Barbara, just arrived, has been taken at 14r 2s to 14r 8s.

The *Moniteur* has published the following monthly debtor and creditor account of the Bank of France, made up to Thursday se'nnight. The corresponding figures of last month are added :—

The prices quoted are for fair refining Cuba muscovado.

The following report—forwarded by Messrs Forsyth, Bell, and Co.—shows the state of the Quebec timber trade to the 1st inst. :—White pine, in the raft, for inferior and ordinary according to average, &c., measured off, 4¾d to 6d; for superior ditto ditto, 6½d to 9¼d; in shipping order according to average and quality, 5½d to 9½d; red pine, in the raft, measured off, ditto ditto ditto, 8d to 1s 1d; in shipping order, 40 feet, 11d to 1s 1d; oak, ordinary, by the dram, 1s 1d to 1s 3d; Lake St Clair, measured off, by the dram, 1s 3d to 1s 4d; elm, by the raft, according to average and quantity, 7½d to 1s 2d; in shipping order, 35 to 40 feet, 11d to 1s 2d; tamarac, square, according to size in the raft, 6d to 9d; flatted ditto, 5d to 7d; staves for specification merchantable std., 40*l* to 42*l* 10s; ditto all pine, according to thickness, 42*l* 10s to 44*l*; ditto W. O. puncheon merchantable, 12*l* 10s; deals, bright according to specification, 15*l* for firsts, two-thirds for seconds; ditto, floated, 13*l* 10s to 14*l* for firsts, two-thirds for seconds; ditto, spruce, 7*l* 15s to 8*l* for firsts; ditto, ditto, 5*l* 15s to 6*l* for seconds; ditto, ditto, 3*l* 15s to 4*l* for thirds. English specification of deals are 12 and 13 feet long, one-ninth under 11 inches broad, and eight-ninths 11 inches broad and upwards; one-half firsts and seconds are worth 2 to 3*l* more than the above quotations, and, if first quality alone, from 3*l* to 5*l*. Parties in England will bear in mind that timber sold in the raft subjects the purchaser to great expense in dressing, butting, and at times heavy loss for culls; if sold in shipping order, the expense of shipping only to be added. Some fresh elm has arrived, for which 1s is asked for 40 feet average, a small lot of 42 feet was sold at 1s. We make no alteration in our quotations, though we believe some parcels of bright pine deals have brought a higher figure. Freights are rather lower, and 30s may be quoted as the rate to Liverpool and the Clyde.

Annexed is a return forwarded by Mr Archer, Registrar-General, showing the population of Victoria on 31st December, 1859 :—

	Males.		Females.		Persons.

The demand since Friday last has been light, and nearly all grades have depreciated in value. We quote a decline ⅛c on middling and ¼c on the lower grades, to which we conform our quotations. The sales for the three days aggregate 5,000 bales, including 700 to arrive and 1,200 in transit, the market closing dull, and holders anxious to realise. We quote:—

NEW YORK CLASSIFICATION.

	Uplaud.	Florida.	Mobile.	New Orleans and Texas.

The week opened with a continuance of the dulness and depression noticed in our last, and in American descriptions many sales were made at ¼d per lb below the previous quotations. During the latter portion of the week both the trade and exporters have purchased more freely. The increase of demand has caused a greater regularity in prices, and we only reduce our quotations by ⅛d per lb. The import is moderate in amount, and the stock has suffered a further reduction. Egyptian have been in fair demand, but are sold at irregular prices. Brazil are without change. East India have gone off freely for export at last week's rates. The sales to-day are 10,000 bales. The reported export amounts to 17,160 bales, consisting of 8,300 American, 270 Brazil, and 8,590 East India.

MARKETS IN THE MANUFACTURING DISTRICTS.

Compared with last week, the demand for goods in the manufacturing districts has shown more firmness, both for home use and export to India and the Continent, and, in some instances, prices have had an upward tendency. The stocks have not accumulated; indeed, for the time of year, they are very moderate. The iron trade has exhibited symptoms of improvement, but without leading to any upward movement in the quotations. The transactions in coals have continued to a full average extent.

MANCHESTER, June 21.—The market has become slightly duller in the course of this week, though no change can be reported generally in prices. Early in the week a considerable business was being manifested, which was checked on receipt of the Indian advices. In 40's mule, sellers having been previously above the offers of buyers have given way, and a number of sales have been effected at the rate of 11¼d for qualities which at the highest some weeks ago were worth 1s 0⅜d to 1s 0½d. In shirtings, though a few sales have been made, the demand has been languid, buyers rather withholding their recent offers. Other cloths have been without much business. Cop yarns for the home trade have been worse to sell, and partially lower.

LEEDS.—The market does not present much animation, but a steady average business is passing. The merchants are quietly and steadily reducing existing stocks, as it is quite evident the present state of the wool market points to a certain and considerable enhancement in prices.

ROCHDALE.—The state of trade throughout the district is not very cheerful, for, while flannel is inactive, cotton spinning is less profitable, and the silk trade is so depressed that a great number of hands are unemployed at Middleton. Yorkshire goods are still quiet, but firm. The inactivity in the local wool market is in the actual trade rather than in the inquiry, which is brisk for low wools, of which numerous sales could have been made if any had been on offer, but the staplers are kept bare of stock of low qualities. Fine wools are less inquired for, and users are very cautious in their offers in the present state of the market.

DONCASTER.—Ewe wool makes 22s to 22s 6d; mixed parcels, 22s 9d to 24s 6d; and all hog, from 25s to 26s per 14¼ lbs. Prices were unaltered from last week, and the trade very steady.

HALIFAX.—The piece market is very flat. Machinery is kept employed, but manufacturers do so only to keep their hands together; while in every other way, short of actual short time, they are lessening production. Yarns are slightly better, but spinners complain of prices. For two-folds they can obtain what may be termed fair rates; but for all other kinds the demand is but trifling, and prices below value.

GLASGOW.—There is little change to report in the wool trade. Stocks of old wools are now fast wearing out, and any odd clips that come into the market find a ready sale. Laid and white Highland and laid Cheviot are in active demand, and good parcels (which are extremely scarce) command very high prices. Fine white wools of the new clip are now coming into the market, and are eagerly bought up at extreme rates.

BRADFORD.—Wool—There is a slow, dragging trade, without any appreciable variation of prices; although the tendency is rather in favour of the buyer. Stocks of old wool are nearly cleared out, and the bulk of the new wools that has come here is unusually light. Noils and brokes are taken off as produced. Yarns—The export houses, especially for the Russian market, are ready buyers where they can find anything worth the money, and, in some instances, give a slight advance upon recent quotations. The demand for the home trade is very quiet. Pieces—There is a great dearth of orders for this time of the year, and many manufacturers are stopping their looms. Prices are firm, owing to the difficulty of production.

HUDDERSFIELD.—We have had an improved business; several buyers from London and other wholesale houses have been in attendance, and have been buying more freely. Black and mixture doeskins at various prices have sold more largely, as also kerseys and cassimeres. The demand for better class unions at about 3s per yard keeps good, although lower-priced fabrics are still slow of sale. Manufacturers of high-priced fancy trouserings are busily engaged in delivering winter goods to order.

LEICESTER.—Most branches of the hosiery trade remain in a quiet condition. There is not so much doing for export, and the home trade is dull. The same state of things exist at Loughborough, Hinckley, and other country hosiery districts, and manufacturers do not evince any desire of increasing their stock. Yarns are high, and wools remain firm at extreme rates.

NOTTINGHAM.—The lace trade continues slightly to improve, and rather more has been doing during the last few days. The buyers for the American markets have not yet purchased to much extent, and the continental houses are hardly doing an average business. The silk-lace trade is dull, and the workpeople are not fully employed. Manufacturers continue to keep stocks as low as possible, making chiefly to order. In hosiery there is not much change to note. There are a few foreign orders in course of completion. The home trade remains exceedingly quiet.

WOLVERHAMPTON.—The iron trade continues steady in all the manufacturing districts, particularly in Middlesborough and the works on the Tees. The North Staffordshire works are likewise well off for orders, for bars and plates. There are some good orders in hand in Shropshire for wire rods; and the demand in South Staffordshire continues satisfactory for plates and sheets, the run in the latter kind being particularly on doubles and latten. Canada plates of late are seldom inquired for, and the orders for rods for Shanghai, Canton, and Foo Chow Foo have likewise diminished here, and the same may be said with regard to common bars. On the whole the trade is steady and satisfactory, all the works being in full operation. The official list of prices of Staffordshire finished iron is as follows:—Common Staffordshire bars, 7*l* 10s, at the works; best bars, 8*l* 10s; sheets, 9*l*; doubles, 10*l* 10s; nail sheets, 8*l* 10s; latins, 12*l*; boiler plates, 9*l*; best and best best in proportion; common rods, 7*l* 10s; hoops, 8*l* 10s; gas strip, 8*l*; Canada plates, 12*l*, and all other sorts in proportion. Welch bars, 5*l* 10s to 6*l* 12s; rails, 5*l* 5s. Current prices of pig iron:—Staffordshire cold blast, 4*l* 7s 6d; best native hydrate pigs, 3*l* 15s to 4*l* 2s 6d; first class all mine grey forge pigs, 3*l* 10s to 3*l* 15s; good mine pigs, with a modicum of flue cinder, 3*l* to 3*l* 5s; mine pigs, deteriorated by cinder, 2*l* 15s to 3*l* 2s 6d; grey forge cindur pig iron, 2*l* 15s to 2*l* 17s 6d; white forge cinder pigs, 2*l* 10s to 2*l* 15s; melters, Nos. 1, 2, and 3, 2*l* 17s 6d to 3*l* 2s 6d; superior makes of all mine melting iron, 3*l* 10s to 4*l*, according to make and quality.

The Bankers' Gazette.

BANK RETURNS AND MONEY MARKET.

BANK OF ENGLAND.

(From the GAZETTE.)

An Account, pursuant to the Act 7th and 8th Victoria, cap. 32, for the week ending on Wednesday, the 20th day of June, 1860.

ISSUE DEPARTMENT.

	£		£
Notes issued	0,150,985	Government Debt	11,015 100
		Other Securities	3 459,900
		Gold Coin and Bullion	15,675,985
		Silver Bullion	...
	30,150,985		30 150,985

BANKING DEPARTMENT.

	£		£
Proprietors' Capital	14.553.000	Government Securities (including Dead Weight Annuity)	9,761,106
Rest	3,240,081	Other Securities	19,325,818
Public Deposits (including Exchequer, Savings Banks Commissioners of National Debt, and Dividend Accounts	8,688,191	Notes	9,324.060
		Gold and Silver Coin	822,516
Other Deposits	12,115,000		
Seven Day and other Bills	640,228		
	39,236,500		39,236,500

Dated the 21st June, 1860. M. MARSHALL, Chief Cashier.

THE OLD FORM.

The above Bank accounts would, if made out in the old form, present the following result:—

Liabilities.	£	Assets.	£
Circulation (including Bank post bills)	21,467,153	Securities	29,011,924
Public Deposits	8,688,191	Coin and Bullion	16,498,501
Private Deposits	12,115,000		
	42,270,344		45 510,425

The balance of Assets above Liabilities being 3,240,081*l*, as stated in the above account under the head REST.

FRIDAY NIGHT.

The preceding accounts, compared with those of last week, exhibit—

A DECREASE of Circulation of	£159,525
An INCREASE of Public Deposits of	258,965
A DECREASE of Other Deposits of	296,115
No change in the amount of Government Securities.	
A DECREASE of Other Securities of	494,015
An INCREASE of Bullion of	303,932
An INCREASE of Rest of	6,562
An INCREASE of Reserve of	444,442

The above statement shows again a decrease in circulation, an increase in bullion, reserve, and public deposits, and a decrease in other deposits and other securities.

Subjoined is our usual weekly table, affording a comparative view of the Bank returns, the Bank rate of discount, the price of Consols, the price of wheat, and the leading exchanges, during a period of four years, corresponding with the present date, as well as ten years back, viz., in 1850:—

At corresponding dates with the present week	1850.	1857.	1858.	1859.	1860.
Circulation, including bank post bills	£ 20,034,140	£ 19,452 767	£ 20,152,914	£ 21,195,367	£ 21,467,153
Public deposits	9,273,119	7,799 602	7,296,156	9,304 619	8,688,191
Other deposits	9,473,140	9 298,594	12,582,872	14,019,013	12,115,000
Government securities	14,815,770	10,327 242	10,656,138	11,281,376	9,764,106
Other securities	11,115 436	18,481 953	14,614,369	18,370,275	19,525 818
Reserve of notes & coin	12,113,913	6,844,037	13 058,941	12,134,789	10,146,576
Coin and bullion	16,066,823	11 172,862	13,033,136	18,110,414	16,498,501
Bank rate of discount	2½ p. c.	6 p. c.	3 p. c.	3 p. c.	4 p. c.
Price of Consols	96 xd	86½ xd	95¾ xd	92⅛ xd	95½ xa
Average price of wheat	40s 5d	69s 1d	43s 10d	49s 11d	54s 11d
Exchange on Paris (short)	25 45 50	25 25 30	25 21 10	25 5 10	25 12½ 20
— Amsterdam ditto	12 2 2½	11 17½ 18	11 15 15½	11 12 12⅝	11 14½ 15
— Hamburg (3 months)	13 11 11½	13 8½ 8¾	13 7	13 3½ 4	13 5⅛ 5¼

In 1850, the disputes connected with certain claims of Don Pacifico on the Greek Government, and the consequent slight disagreement between the Government of this country and that of France, still occupied people's minds; Mr Roebuck having given notice of his motion for Monday following in support of the policy of Ministers.

In 1857, the Bank of France reduced its rate of discount on commercial bills to 5½ per cent., maintaining the rate of interest on advances at 6 per cent.

In 1858, nothing of importance occurred to affect the markets; money being easy.

In 1859, whilst at home all was calm, and confidence in the new Government of Lord Palmerston; abroad a little anxiety was occasioned, owing to the turn the war in Italy was taking, and the menacing attitude towards France which Germany appeared to be on the eve of assuming.

The amount of the "other" deposits, as compared with the "other" securities, showed, in 1850, a deficiency of 1,642,296*l*; in 1857, a deficiency of 9,183,359*l*; in 1858, a deficiency of 2,031,497*l*; and in 1859, a deficiency of 4,357,262*l*. In 1860, the deficiency is 7,210,818*l*.

The market in the ENGLISH FUNDS has been remarkably heavy during the week, from the causes previously alluded to. Consols, which at the beginning of the week were 93¾ for the opening in July, have receded to 93½; New 3½, from 93½ to 93⅛; 3 per Cent. Reduced, from 93½ to 93 to ⅛, at which latter prices they close this afternoon. Exchequer Bills have fallen from 4s to 7s pm. to par to 2s pm. India Bonds are quoted 12 to 7 discount.

The transactions in Indian securities have been very limited, and the markets are steady.

The transactions in the FOREIGN FUNDS have been of a most limited nature. Prices, with the exception of Turkish Bonds, which are rather firmer, have varied but little. The last quotation of French funds to-day is 68.65, being 5c lower than yesterday.

The following are the closing quotations as compared with those of last week:—

	Consols. Money Lowest.	Money Highest.	Account. Lowest.	Account. Highest.	Exchequer Bills.
Saturday	shut	shut	93⅛	93⅜	par 5s pm
Monday	—	—	93⅛	93⅜	2s pm 7s pm

There has been a very steady demand for money during the week, both in the discount market and in the Stock Exchange; and to day it has been very active, the rate on Government securities being from 4 to 4½ per cent.

Among the discount houses nothing has been done during the week under the Bank rate of 4 per cent. Yesterday 4¼ was charged; and to-day the rate is fully 4¼ to ½ per cent. for short bills; and as much as 5½ has been paid for bills having six months to run. The demand seems to be general for discount, not only in London, but from the manufacturing districts, especially for bills having six months to run.

It is possible that the anticipation of a general holiday to-morrow, and having to make provision for two days, may have caused a greater demand than usual to-day; but the real cause is doubtless to be attributed to the heavy payments into the Exchequer at the close of the quarter. There have, however, been special causes for the demand for money in the Stock Exchange, which it is necessary to mention, viz, large amounts of Government securities, New 3½ per Cents., 3 per Cents. Reduced, and Exchequer bills have been sold during the week by the Government broker, causing these markets to be glutted with stock, so much so that they are fully ⅜ per cent. cheaper in proportion than Consols. Exchequer bills have been sold to-day at par; but, paying as they do only 2*l* 5s 7½d per cent., it is not to be wondered at that they barely sustain themselves above par when money is in demand from 4 to 4½ per cent. We must also mention that preparations have been made in some quarters for the anticipated Government loan for fortifications and the Chinese war, and also for a new Russian loan for 8,000,000*l* in a 4½ per cent. stock, which, it is confidently stated, will be introduced next week into the market by Messrs Baring.

The absence of purchases on account of the Savings Banks since the 31st December last is a matter for comment, since it is asserted the Government has in its hands 1,500,000*l* belonging to these institutions, which not being, as is usually the case, invested, causes any pressure of stock to be more severely felt.

The calling in of a large loan of 300,000*l*—it was understood by a single discount house—to-day, together with the supply of stock by the Government broker, has caused an active demand on the Bank by the members of the Stock Exchange for advances on stock at the Bank rate.

As another cause of the demand for money, French Railway obligations to the extent of 12,000,000*l* sterling are about to be issued. The Bank of France will receive subscriptions from the 25th inst. to the 2nd July. The obligations are for 500f each, bearing interest at 3 per cent. from the 1st July next. Those of the Orleans and Lyons lines are to be issued at 293f 75c, those of the Eastern of France at 292f 50c, and those of the Dauphine and Ardennes at 291f 25c, so that they will pay an average of 5 per cent. In addition to these loans, the City of Paris is about to issue bonds to the amount of 6,000,000*l* sterling, and the Government of Sardinia are about to raise 6,000,000*l* sterling.

It is not anticipated, however, that any very large amount of Russian 4½ per Cent. stocks will be taken up in this country: in most instances foreign loans have of late caused severe losses to those who have subscribed for them. Russian stock is a favourite investment on the Continent, and if we look at the rate of money in the various capitals of Europe, it will be found that it is lower in most places than in England.

The following are the rates of discount in—

	Bank rate. Per cent.	Open market. per cent.
London	4	4¼ to 4⅜
Amsterdam	3	2½
Brussels	3	3
St Petersburg	5	5 to 6
Berlin	4	4
Frankfort	2	1
Hamburg	No Bank rate	1⅝
Vienna	5	4¼
New York	4	4½

The foreign exchanges have shown but little variation during the week. The exchange on Vienna showed a further decline, being to-day 12.95—13.10.

From abroad, the telegraphic report to-day gives:—At Frankfort, the exchange on London was 116⅝; on Vienna, 91¼. Berlin exchange on London, 6.17¼.

The following important resolution has been come to by the Committee of the Stock Exchange, relative to the Buenos Ayres and San Fernando Railway Company:—

The Committee for General Purposes having examined the documents upon which the Directors of the Buenos Ayres and San Fernando Railway Company obtained a quotation for the shares in the official list of the Stock Exchange, and having compared the said documents with the books and vouchers of the Company, are of opinion that the representations originally made to the Committee were neither correct in themselves, nor in accordance with the letter and spirit of the requirements contained in the printed rule of the Stock Exchange:—

Resolved,—That the name of the Buenos Ayres and San Fernando Railway Company be struck out of the official list of the Stock Exchange.

Having passed this resolution, the Committee desire to state that they have every reason to believe that the Directors generally had no cognisance of the misrepresentation referred to, but the Committee refrain from making any observation upon certain evidence received by them relating to the original distribution and subsequent transfers of and dealings in the shares of the Buenos Ayres and San Fernando Railway Company, as it is within their knowledge that a legal tribunal may be called on to decide the whole case.

This being the case, of course any comment is out of the question, but the decision is most important, inasmuch as large dealings have taken place in the shares, which have been quoted as high as 7 premium. The Committee decided that up to the date of their passing the above resolution all dealings in the shares as between the members of the Stock Exchange must be recognised.

The movements in bullion this week have been quite unimportant, so far as transactions with the Bank of England are concerned. The specie taken to the East by the Ripon amounts to 385,620*l*, of which 10,000*l* was gold and the rest silver. Government forwarded to Hong Kong 98,562*l*. Subjoined are the particulars:—For Hong Kong, 189,503*l*; Shanghai, 182,026*l*; Calcutta, 8,281*l*; Madras, 4,662*l*; Singapore 875*l*; and the trifling remainder for Alexandria.

The Government have purchased Mexican dollars to the extent of 50,000*l* for remittance by the next steamer.

About 39,000*l* in gold have been sold to the Bank to-day, there being little or no demand for the Continent.

The following gold ships are now on their way from Australia:—Southampton, out 104 days, 78,000*l*; Dream, out 104 days, 26,900*l*; Marco Polo, out 93 days, 51,000*l*; Owen Glendower, out 89 days, 93,000*l*; Venetia, out 82 days, 77,000*l*; Prince of Wales, out 75 days, 145,000*l*; Maid of Judah, out 71 days, 122,000*l*; Eagle, out 64 days, 145,000*l*; Kent, out 39 days, 236,000*l*; total about 973,900*l*.

The New York steamer, Glasgow, with 414,000 dollars (about 83,000*l*) was reported to-day.

Messrs Bell, Son, and Co., report:—There is no new feature in the market for American securities, and the actual business during the past week has not been to an extent or of a character to claim particular notice.

Messrs Pixley, Abell, and Langley's Circular gives the following particulars in regard to bullion, the exchanges on India, and Indian Government paper:—

Gold.—The Omar Pasha has arrived from Melbourne with 61,000*l*, but as her gold will not be deliverable until the 22d inst., we are unable to say whether any portion will be purchased for exportation. The Bavaria and Persia have also arrived from New York, the former with 25,000*l*, and the latter with 110,000*l*; about 20,000*l* of these receipts have been sent into the Bank, about 35,000*l* taken for the Continent, and the balance remains to be dealt with. We have to add to the list of vessels having sailed from Melbourne, the Kent, that ship having left on the 23d April, with 59,000 oz. The Atrato has taken 5,000*l* to the West Indies.

Silver.—The silver ex Tasmanian was sold at 61¾d per oz standard, for all that was fine enough for the China market; and as the demand for the Bombay mail is not very good, we quote that price as rather flat. Some small amounts are to hand from the Continent. The Atrato has taken 5,320*l* to the West Indies.

Mexican Dollars.—The Persia brought about 40,000*l* from New York; these were sold at 62¼d per oz, at which rate the Government have been purchasers for the next mail to China. About 99,000*l* was sent to China, on account of Her Majesty's Government, by the last mail of the 20th inst., besides a considerable sum on private account.

Exchange on India has rather a downward appearance; we quote 2s to 2s 0d½ for Banks' 60 days' sight drafts on Bombay, and 1s 11⅞d to 2s 0⅛d for the same on Calcutta. Madras, 1s 11⅞d. Bills with documents, 1s 11⅝.

India Government Loan Notes are unchanged; if anything, a little weaker. There is not much doing, and prices are almost nominal. We quote—5 per Cents., 97¼ to 97¾, and 5½ per Cents., 102¼ to 102¾.

Quotations for Bullion.—Gold—Bar gold, 77s 9d per oz std; bar gold, refinable, 78s per oz std; Spanish doubloons, 76s 6d per oz, last price; South American doubloons, 73s 9d to 74s per oz, last price; United States gold coin, 76s 2¾d per oz, last price. Silver—Bar silver, 5s 1⅝d to 5s 1¾d per oz std; bar silver, containing 5 grs of gold, 5s 2d per oz std; fine cake silver, 5s 6¼d to 5s 6⅜d per oz; Mexican dollars, 5s 2¼d per oz, last price; Spanish dollars (Carolus), 6s 2d per oz, last price; five-franc pieces, 4s 11⅝d to 4s 11¾d per oz, last price.

The dividend on Antwerp and Rotterdam Railway shares for the year ending December last, amounting to 7f, or 5s 6½d per share, less income tax, will be payable on the 25th instant.

The half-yearly interest is advertised on Victor Emmanuel Railway Bonds.

The dividends due the 30th instant on Spanish Bonds are advertised for payment in due course.

Messrs John Gladstone and Co. announce the half-yearly interest in the 8 per cent. debentures of the province of Wellington, New Zealand.

Messrs Baring Brothers and Co. announce the half-yearly dividends, due the 1st July, on Russian Four-and-a-half per Cents., Canada Sterling debentures, Nova Scotia Six per Cent. Sterling bonds, New Brunswick Six per Cent. Sterling bonds, Virginia State Sterling Five per Cent. bonds, South Carolina State Sterling Five per Cent. bonds, Boston City Sterling Four-and-a-half per Cent. bonds, and Havana Railroad Seven per Cent. Bonds.

The report of the Directors of the South Australian Banking Company, in anticipation of their annual meeting on Tuesday next, states that the profit and loss accounts from the branches show the following results:—Balance on May 30, 1859, 37,870*l* 8s 8d; net profits from all offices for 1859-60, 44,978*l* 10s 9d; total, 82,848*l* 19s 5d. Dividend, July, 1859, 17,498*l* 14s 8d; ditto, January, 1860, 17,742*l* 6s 2d; income tax, 1,090*l* 15s 3d; total, 36,331*l* 16s 1d. Balance on May 28, 1860, 46,517*l* 3s 4d. This balance is subject to a deduction of 4,652*l* to be carried to the reserve fund, which thus amounts to 73,073*l* 13s 6d. The net profit will then be 41,865*l* 3s 4d, from which it is proposed to pay a dividend of 10 per cent per annum, in half-yearly instalments, free of income tax.

The Directors of the Provincial Bank of Ireland have declared a dividend for the half-year ending Midsummer, at the rate of 4 per cent. on the paid-up stock, besides an ex

traordinary dividend of 1*l* 10s per 100*l* share, and 12s per 10*l* share.

The Royal Exchange Assurance Corporation, at a meeting on Wednesday, declared a dividend of 14 per cent. for the six months, free of income tax, making 18 per cent. for the year.

A further dividend of 5*l* per share has been announced on the shares of the Western Bank of London, and Mr F. Maynard, the accountant, in a circular to the shareholders, says that "he is happy to be able to state that by the judicious management and firmness of the liquidators, sacrifices have been avoided in the realisation, and that there is every probability of the assets remaining to be collected yielding fully sufficient to pay another 5*l* per share in the course of another year."

Notice has been given that 8 per cent. on all shares in the Portuguese Railways Royal Company, with 8*l* (200f) paid up, will be due for interest and dividend, and will be payable on and after the 1st proximo.

The allotment of shares in a new undertaking, the Labuan Coal Company, was made on Thursday. The shares were quoted on Thursday at 1⅜ to ½ prem.; to-day they closed at ⅞ to 1⅛ pm.

At a special meeting of the Border Counties Railway, held at Hexham on Thursday week, the bill for the amalgamation of the company with the North British Railway was unanimously agreed to.

At a special meeting of the Vale of Neath Railway Company, on Tuesday, Mr. Bruce, the chairman, after arguing that the completion of the Briton Ferry Floating Dock would not only be in itself a remunerative undertaking, but also materially improve the mineral traffic on the Neath line, moved that the directors be authorised to guarantee the payment of dividend (to be hereafter determined) on all, or so much as they shall approve (but not to exceed 40,000*l*) of the new unissued share capital of the Dock Company. After a long discussion the motion was agreed to; as were also resolutions authorising the creation of debenture stock to be applied in liquidation of the company's debenture debt, and also the creation and disposal of the unissued share capital of the company as authorised by the acts of 1855 and 1859, the former authorising 40,000*l*, and the latter 150,000*l*.

A special general meeting of the London, Chatham, and Dover Railway Company was held on Wednesday to consider certain Bills now before Parliament. The Metropolitan Extension Bill was approved of. Mr Holroyd stated that the Company had agreed to purchase the portion of the West End and Crystal Palace Railway lying to the eastward of the Brighton line, the Brighton Company having purchased the portion to the west of their line. This gave to the Chatham and Dover Company a line of their own from the Brighton line to the Dover line, with the exception of a short line of a mile and a half between Bromley and Bickley, in regard to which they had an agreement to pay a proportion of the fares. It had been originally intended to abandon the Farnborough extension; but as the landowners held that a pledge had been given, the Directors, having taken the line of the Crystal Palace Company with all their obligations, felt bound to carry out that undertaking. It was a line which might be made at a small expense, and one which would, no doubt, develop a large residential traffic. It was only four miles in length, and the cost of construction would be but 50,000*l*.

At a special meeting of the North-Western Railway Company held on Thursday, the Marquis of Chandos in the chair, a resolution was passed;—"That, in pursuance of the powers and authorities given by Parliament in that behalf, the Directors of this Company be and are hereby authorised to agree with all or any of the shareholders in the Shropshire Union Railway and Canal Company for the conversion of all or any of the stock and shares of that Company into ordinary stock of the London and North-Western Railway Company upon the terms and conditions following, that is to say: that in respect of each 100*l* of stock or shares in the Shropshire Union Railway and Canal Company (and so in proportion for any greater or less amount) converted, there shall be issued 50*l* (and so in proportion for any greater or less amount) of the London and North-Western Railway."

The Brighton and South Coast Railway Company, at an extraordinary general meeting on Thursday, agreed to a resolution approving of the Bill for the transfer of the Epsom and Leatherhead Railway to the South-Western Railway Company, and the Brighton and South Coast Company. The meeting adjourned to the 28th inst., for the purpose of considering other Bills before Parliament.

The committee appointed to investigate the affairs of the Great Western Railway of Canada, "considering that a complete examination is necessary to be made into the condition of the lines of railway, bridges, plant, &c., in order to render the inquiry entire and satisfactory, have determined that Mr Giles, the engineer, shall at once proceed to Canada for that purpose."

It appears that Mr Cross, the manager of the Bilston bank of Messrs John Forster and Co., which has stopped payment, is a partner in the firm of Thomas Cross and Co., ironmasters, of West Bromwich, and it is stated that he has been making advances from the bank to his own firm, without the knowledge of his employers. The bank stopped on discovering these transactions, and the firm of Thomas Cross and Co. has stopped also.

Notwithstanding the depression of the English stock market, that for RAILWAYS has evinced remarkable firmness, and prices have, for the most part, risen. This goes far to show that the depression in the funds is of an exceptional character, or railways would have partaken of their dulness. We subjoin the list of the closing prices of the principal shares last Friday and to-day:—

	Closing prices last Friday.	Closing prices this day.

COMPARATIVE EXCHANGES.

The quotation of gold at Paris is about at par, and the short exchange on London is 25.12½ per 1*l* sterling. On comparing these rates with the English Mint price of 3*l* 17s 10½d per ounce for standard gold, it appears that gold is about 2-10ths per cent. dearer in Paris than in London.

By advices from Hamburg the price of gold is 423 per mark, and the short exchange on London is 13.3⅜ per 1*l* sterling. Standard gold at the English Mint price is, therefore, nearly 3-10ths per cent. dearer in Hamburg than in London.

The Commercial Times.

MAILS FOR CANADA AND THE UNITED STATES, FROM GALWAY.—Her Majesty's Government having entered into a contract with the Atlantic Royal Mail Steam Navigation Company for the conveyance of mails once a fortnight between Galway and the United States, mails will be made up in London on the evening of Monday the 25th instant, and on the evening of every alternate Monday, and forwarded to Galway, to be despatched on the following day to their destination. The packets will proceed alternately to New York and to Boston. All letters, &c., for the United States or Canada, which are posted in time, will be forwarded in these mails. Letters, &c., for any other British North American colony, except Canada, intended to be sent by these packets, must be specially directed viâ the United States. The first homeward packet of this line will leave New York on Tuesday the 17th July, and will be due at Galway on the 27th July. The next will leave Boston on Tuesday the 31st July, and will be due at Galway on the 10th August.

MAILS TO BE DESPATCHED

This evening, to West Coast of Africa; to America (New York line), by British packet, via Cork.
On Monday evening, to Canada and United States, via Galway.
On Tuesday evening, to India (Calcutta line), China, Mauritius, Australia, &c., via Marseilles.
On Wednesday morning, to India (Bombay line), via Southampton; to Spain and Portugal; to America (New York), by United States packet, via Southampton.
On Wednesday evening, to Canada and United States, by Canadian packet, via Londonderry.
On Thursday evening, to Constantinople, by French packet.
On Friday evening, to Constantinople, by French packet.
On Saturday evening next, to America (Boston line), and Newfoundland, by British packet, via Cork.

MAILS ARRIVED.

LATEST DATES.

On the 16th, UNITED STATES, per steam ship Persia, via Liverpool—New York, 6th inst.
On the 16th, MEDITERRANEAN, per steam ship Pera, via Southampton—Alexandria, 4th inst.; Malta, 7th inst.; and Gibraltar, 11th inst.
On the 21st, PENINSULA, per steam ship Sultan, via Southampton—Lisbon, 17th inst.
On the 21st, CANADA, per steam ship Palestine, via Queenstown—Quebec, 9th inst.
On the 21st, UNITED STATES, per steam ship Glasgow, via Queenstown—New York, 9th inst.

Imports of the week ..... 220,608 qrs.

COMMERCIAL EPITOME.

FRIDAY NIGHT.

Owing to the return of fine weather, and to heavy importations of foreign produce, no disposition was shown on the part of millers to purchase any kind of English wheat at Mark-lane to-day. The demand for both red and white qualities was, therefore, heavy, and, to have forced sales,

1s to 2s per quarter less money must have been submitted to by the factors. Foreign wheat, the show of which was on the increase, was very dull, and nominally lower than on Monday. We may here observe that a large portion of the week's arrival has gone direct into the hands of the millers. Flour was somewhat freely offered at a decline of 1s per sack. There was very little inquiry for barley, the prices of which were barely supported. Oats were quite 6d cheaper. In the value of other produce no change took place.

The stocks of all kinds of foreign produce in the United Kingdom are nearly one million quarters less than at the corresponding period in 1859. From the most reliable private returns, we learn that the stocks are as follows:—In London, 139,000; Liverpool, 220,000; other English ports, 345,000; Ireland, 274,500; and in Scotland, 134,000 quarters. Here, then, we have a total supply only equal to 1,132,500 quarters. In that quantity is included about 600,000 quarters of wheat and flour, and 270,000 Indian corn; the remainder of the stocks being composed of barley, oats, beans, peas, &c.

The week's imports from abroad into London have been 23,190 quarters of wheat; 7,760 barley; 82,370 oats; and 5,280 sacks of flour.

Advices at hand from our various grain districts, to-day, state that Talavera wheat is now in ear; but that the plants, generally speaking, do not exhibit a favourable appearance. We are arriving at a most critical period for the crop, and much, as regards yield, will, no doubt, depend upon the state of the weather during the blooming time. Fortunately for the consumers, there is now considerably more corn on passage to England than at this time last year. From a return furnished to us from the first sources of information, we learn that there are now upwards of 500 vessels on passage to this country laden with grain from Constantinople, Galatz, Ibrail, Odessa, and Sulina, and that unusually heavy shipments of wheat, &c., are now in progress in nearly the whole of the Baltic ports.

Most of the continental markets come high for all kinds of produce, owing to an unusually active demand for England. Advices from New York to the 8th instant state that wheat and flour were in request at full prices. Several parcels had been taken for England.

Messrs Briggs and Co. report the state of the grain trade at Alexandria, to the 12th inst., as follows:—

Our markets, considering the early period of the season, have continued to be freely supplied with Saide beans, and receipts of Behera beans, as will be observed by the memorandum of sales at foot, have been unusually abundant. Receipts of wheat and barley are also gradually increasing. Prices of all descriptions are generally lower. The following is the usual note of sales since our last, with to-day's prices per qr f.o.b., viz:—Wheat, Saide, 4,400 qrs, 36s 3d to 37s; ditto, Behera, 1,700 qrs, 34s to 35s; beans, Saide, 4,890 qrs, 26s 8d to 27s; ditto, Behera, 12,820 qrs, 24s 8d to 25s 8d; barley, 1,430 qrs, 18s 6d to 19s; Indian corn, 712 qrs, 26s 6d to 27s 3d per qr; cotton seed, 397 tons, 4*l* 15s to 5*l* per ton. Freights—Grain to Liverpool by steamer 4s per qr, by sailing vessels 3s 6d. Beans to the United Kingdom for orders, 5s to 5s 3d or 5s 3d to 5s 4d, with liberty to ship other grain at proportional rates. Exchange on London at 3 months' date, 97 piastres per £; France, 5f 19c to 5f 21c per dollar of T. P. 20.

There has been on the whole a rather better demand in the Liverpool cotton market during the week, and the total sales have amounted to 62,000 bales, and include 43,000 bales to spinners, 2,000 bales on speculation, and 17,000 bales for export. Prices, however, are barely maintained, and sales have been made in many instances ⅛d per lb below the quotations of Friday last, so large is the quantity still offering. To-day the market closes with a fair business; sales 10,000 bales, but without any improvement in prices. The present stock in Liverpool is 1,307,400 bales.

We have received the annexed report of the cotton trade at Alexandria to the 12th inst., from Messrs Briggs and Co.:—

Business in cotton is slack, both on account of the unsatisfactory accounts from Europe, as from the smallness of supplies and the lowness of quality. The sales since the 4th have been as follows:—650 bales very low ordinary to middling at 5¼d to 8d; 180 bales fair, 8.90d per lb f.o.b. Freights continue at ¼d in full, per steamers. Exchange opened at 96¾ piastres, touched 97½, and has receded again to 96¾ piastres. Export of cotton in bales from 18th to 31st May, 1860:—Great Britain, 2,024; France, 558; Austria, 714—total, 3,296.

"The cotton market," observe Messrs Volkart and Co., of Bombay, whose communication is dated the 24th ult., "became a little easier after the mail had left, in consequence of a large number of boats arriving simultaneously, and prices receded to 113 rs for Dhollera. At the same time however, several private messages of 27th April were published, quoting an advance of ¼d to ⅜d, which caused holders immediately to raise prices. Since then the market has been fluctuating pretty much, but nothing was sold below 115 rs, whilst in one instance 119 rs was paid, and to-day's quotations is about 2 rs above our last. This unsettled state is principally owing to the transactions amongst the natives themselves, the supplies having lately fallen off, so that many of our dealers are unable to furnish cotton contracted for and have to buy on the spot. Dhollera is getting scarce, and it seems that the natives do not expect any large arrivals before the monsoon, as they begin already to fill their godowns. Here, as well as in the neighbouring districts, the weather has been unsettled since a few days, and people are afraid we shall have the rains early this year. Broach likewise is not abundant, and this scarcity of the two principal descriptions will probably tend to maintain their value. Of Oomrawattee, stocks are large; the European houses have bought much less of this description than in former seasons, as the quality is decidedly inferior, and the natives have not shipped much on their own account lately. From Comptah the first imports of the new crop, consisting of a few hundred candies sawginned cotton, arrived some days ago; the quality is very fair. For China, sales are not very important, but shipments continue on a very large scale. Stocks of all descriptions about 40,000 candies."

Cotton Exports from Bombay since 1st January this Year.

	1860 bales		1859 bales
To Europe	235285		242435
To China, &c.	70407		43780
Total	305692		286216
Showing an increase of		19476 bales.	

The cotton trade at New York on the 8th instant was somewhat heavy. The sales amounted to 12,000 bales, at 11¼d for middling upland. "Accounts of the growing crop to latest mail dates," write Messrs Neill and Co., "continue of a favourable tenor. The weather is everywhere reported warm and seasonable, and cotton growing finely, though more rain would be desirable in some localities. We hear of few complaints from any quarter, and, on the whole, the crop is considered in a promising condition. Blooms are already reported throughout most of the cotton country, which is earlier than last year."

The demand for nearly all kinds of tea has been somewhat restricted; nevertheless, compared with last week, no change has taken place in the quotations.

There has been a slightly improved inquiry for most descriptions of raw sugar, at, in most instances, very full prices. The refined market has continued steady.

No change has taken place in the value of coffee, for which the inquiry has ruled firm. Cocoa, however, although a Government contract for 120 tons is out, has changed hands heavily.

The rice market has continued steady at very full prices.

Public sales of silk have been held this week. "The quantity offered," observe Messrs Durant and Co., "was about 2,000 bales Bengal and 7,000 bales China. As usual, the whole was passed rapidly without biddings. This, however, is not matter of surprise, seeing the large business that had been doing for the last six weeks, and the high prices at which importers bought in their silk. Fair business is doing by private contract, home consumers being still very barely supplied. The deliveries of this month have been unusually large, telling heavily upon the stock, which hitherto has received but small reinforcements since the 1st instant."

Hemp has moved off somewhat freely at full currencies; St Petersburg having realised 28*l* 15s to 29*l* per ton. Flax, however, has met a dull inquiry.

Saltpetre, indigo, rum, and brandy have sold slowly; nevertheless, very little change has taken place in their value.

The metal market has been far from active. Scotch pig iron has sold at 50s 3d cash. Straits tin has realised 130*l* cash. From Holland we learn that the Dutch Trading Company have fixed the quantity of Banca tin to be offered at the sale at Rotterdam on the 28th inst., at 151,513 slabs, being 10,000 slabs less than the quantity which they had the power of offering.

The oil market has been tolerably firm. Linseed oil has realised 28s 6d per cwt; but olive has gone rather cheaper. Tallow still rules high in price, owing to the scanty supply of home make on offer. To-day, P.Y.C., on the spot, has sold at 52s 9d, and the same quotation for delivery during the last three months. Town tallow is 52s net cash.

"The dry goods trade," observes the New York *Shipping List* of the 6th inst., "is without essential change, and we have to note a continuance of the quietude which has characterised the trade for so long a time, but which is gradually giving place to a better feeling. The Western trade is backward, and the expectations entertained some time since have not been realised, the quantities of goods shipped since the resumption of canal navigation having been small, while buyers from the Western countries have for the most part confined their purchases to the immediate wants of their customers, which in most cases have proved light. The inquiry for domestics for export continues unabated, and the shipments since our last have been unusually heavy, amounting to 6,850 pkgs. Foreign goods are steady, without material alteration in values at private sale, though at auction prices have varied considerably, with sales to a fair extent. Money never was plentier, nor so easily obtainable on passable security. On call, we retain our quotations, with the remark, however, that transactions were reported yesterday at ¼ to ½ per cent. lower. Loans on call, stock securities, 4½ to 5 per cent. per annum; ditto, other good securities, 5 to 6; prime endorsed bills, 60 to 90 days, 5 to 6; ditto ditto 4 to 6 months, 6 to 7; first-class single signatures, 5½ to 6, other good bills, 6 to 7½; names less known, 8½ to 9."

CORN.

AMERICAN GRAIN AND FLOUR MARKETS.

New York, June 6.—Flour and Meal.—With a continued moderate inquiry for all descriptions of State and Western flour the market during the past three days has been somewhat depressed. The aggregate sales are not so heavy as during the preceding three days, notwithstanding holders reduced their pretensions about 5c per bbl, in order to induce purchasers to operate freely. The demand has been about equally divided between the local trade and shippers, and the total sales since Friday last are 34,000 bbls, at the reduction noted above. Canada flour has been in moderate request, and the market is a shade easier. The sales comprise 1,650 bbls, at 5 dols 45c to 7 dols 40c per bbl. Southern flour has been in limited request, and the transactions are to only a moderate extent at reduced rates. Export from 1st to 5th June: wheat flour, 28,119 bbls, against 16,431 bbls in 1859.

Grain.—The wheat market has been more or less buoyant, under a continued moderately active inquiry for spring wheat, for consumption and shipment, at prices showing an appreciation equal to 2c or 3c per bushel over the quoted rates of Friday last. Transactions amount in the aggregate to 136,000 bushels, included in which are 58,300 Milwaukee at 1 dol 28c to 1 dol 30½c; 10,000 white Indiana, 1 dol 48c to 1 dol 50c; 6,000 ditto Ohio, 1 dol 50c; 2,500 ditto Kentucky, 1 dol 65c; 2,000 ditto Michigan, 1 dol 58c to 1 dol 60c; and 5,500 Chicago spring, 1 dol 25c. Also embraced in the above aggregate are 41,750 bushels yesterday, including 28,000 Milwaukee Club at 1 dol 30c, delivered; 1,500 amber Michigan, 1 dol 40c; 5,800 white Indiana, 1 dol 54c; 1,200 ditto Michigan, 1 dol 58c to 1 dol 60c; 750 ditto Canada, 1 dol 50c; 1,500 mixed Michigan, 1 dol 50c; and 3,000 white California, on private terms. The demand for corn was moderately active on Saturday, and the sales were to a fair extent, at about previous rates. Export from 1st to 5th June: wheat, 120,300 bushels; corn, 221,451 bushels, against 3,171 bushels in 1859.

Export of Breadstuffs from the United States to Great Britain and Ireland, since September 1, 1859.

LONDON MARKETS.

STATE OF THE CORN TRADE FOR THE WEEK.

Mark Lane, Friday Evening.

Notwithstanding that the advices from most of our leading grain districts (some of which state that Talavera wheat has come into ear) are by no means favourable—the plant being represented as much discoloured, and somewhat thin upon the ground—and that only moderate supplies have been on offer in the leading markets, the demand for English wheat has ruled very inactive during nearly the whole of the week. Fine dry qualities have mostly sold at full prices; but the value of low and damp parcels has been with difficulty supported. Owing to large importations, foreign wheat has ruled heavy; nevertheless, holders have shown no disposition to force sales of any kind. The barley trade has continued very quiet, on former terms; but the sale for malt has been much restricted. Oats have slightly receded in value. Both beans and peas have commanded very full prices. The flour trade ruled inactive, and inferior country marks have been offering on lower terms.

Throughout the Continent, large quantities of wheat continue to find buyers on English account, and at high rates. In spring corn too, the transactions have been on an extensive scale, at very full prices. The latest accounts from the United States inform us that full average quantities of produce were coming forward, and that both wheat and flour were rather lower to purchase. In reference to prices, and the state of the crops in France, the *Echo Agricole* has published the the annexed observations:—

The rise in prices of wheat, experienced last week, in most French corn markets, originated principally in the following causes: the backwardness of the crops generally—the reduction in the quantity of grain stocks on hand, with the prospect that the old stocks will have to supply the wants of consumption longer than in ordinary seasons—and numerous complaints raised by a large number of growers respecting the unfavourable prospects of the growing crops in the neighbourhood of Paris. That the growing crops are generally backward—that the consumption this year will have to feed upon old stocks two or three weeks longer than in ordinary seasons, appears to be beyond a doubt, but the presumed inferiority of the growing crops is not quite so certain. The wheat plants have the appearance of weakness more than ordinarily, in proportion to the backwardness of their growth, but it would be presumption to judge at present of the probable yield. It is quite possible that the season, although backward, may yet be favourable during the blooming and ripening period. It is difficult enough to judge accurately of the produce of a crop even after its being cut, but to estimate the probable yield before the plants have got into ear is only exposing ourselves to be misled. From all quarters—fine, dry, warm weather is called for. A moderate temperature would be most desirable now, but the transition to great heat might prove more injurious than useful. In the South of France the crops are reported favourably. In Bretagne complaints are heard of the crops being slow to get into ear, but otherwise, with favourable weather, the crop of 1860, it is hoped, will be better than that of 1859. In the East, from Lyons to Strasbourg, the growing wheat crops do not appear much injured, but, as everywhere else, the plants are backward. In the northern departments the appearance is backward, but, on the whole, good. Around Paris, however, the appearance of the growing crops is less satisfactory. The accounts from Beauce are also more or less doubtful.

The Scotch markets have been fairly supplied with wheat, in which the transactions have been somewhat restricted, at previous rates. There has been a moderate inquiry for all spring corn, at full prices; but the shipments to the South continue on a limited scale.

In Ireland, there has been very little inquiry for wheat. Holders, however, have refused to accept lower rates for either home or foreign parcels. The spring corn trade has ruled steady.

Our market, to-day, was rather scantily supplied with English wheat, nevertheless the demand ruled heavy, and in some instances prices gave way 1s per qr. Foreign wheat was very dull, and lower to sell. Barley and malt were heavy at late rates. Oats ruled dull at 6d per qr decline. In the value of other articles no change took place.

Mr Ed. Rainford states that 28 vessels have arrived off coast laden with grain since this day se'nnight, and that floating cargoes have continued in good request, at very full prices.

COLONIAL AND FOREIGN PRODUCE MARKETS.

TRANSACTIONS OF THE WEEK.

For Report of This Day's Markets, see "Postscript."

Mincing Lane, Friday Morning.

Sugar.—There has been a steady demand during the week, especially for the better descriptions, these obtaining full prices. Yesterday, very extensive sales of West India were again made, said to be for the outports. The business transacted in three days amounted to 3,940 casks. 263 casks Barbadoes, by auction, went at 36s to 43s, and some various other parcels at the previous valuations, including grainy Demerara at 40s to 46s. There are few floating cargoes offering, and higher rates now required. The landings last week amounted to 6,425 tons, and the deli-

veries were 4,500 tons, consequently the stock has increased to 70,200 tons, against 49,900 tons in 1859, and 56,100 tons in 1858.

Mauritius.—Dark brown descriptions are in demand for export, and have obtained rather higher rates. The public sales have comprised 8,508 bags, which went off steadily, and generally at previous rates: brown, 32s 6d to 37s, grey and yellow, 37s 6d to 42s; grainy, 39s to 44s; crystallised, 43s to 47s per cwt. Business has been done in low sugars by private contract.

Bengal.—550 bags sold at 42s to 43s 6d per cwt for syrups.

Madras.—2,624 bags grocery sold as follows: grainy yellow and white, 43s 6d to 48s; a small quantity very fine as high as 49s 6d; soft yellow, 37s 6d to 40s. 239 bags native brown and yellow, 31s to 35s 6d per cwt.

Penang.—The chief portion of 4,120 bags sold as follows: soft grey to very good yellow, 38s to 43s; brown, 32s 6d to 37s per cwt.

Foreign.—1,750 boxes Havana partly met with buyers: brown, 36s to 39s 6d; low to fine yellow, 40s to 45s; florettes and white, 47s 6d to 48s 6d. 1,670 casks 270 barrels Porto Rico: brown, 36s to 38s; grey to fine yellow, 38s 6d to 45s 6d. 181 bags Siam: good yellow, 42s to 42s 6d. By private contract, a floating cargo of Havana, No. 10 to 10½, sold for the United Kingdom, 26s 6d.

Refined.—The market has been steady, and the trade have purchased to a moderate extent. Common to middling quality, 52s to 52s 6d; crushed, 48s to 50s 6d; pieces, 43s to 47s per cwt.

Molasses.—70 puns Antigua are reported at 17s per cwt.

Rum.—Several sales have been made in common qualities at last week's quotations. Demerara, 1s 9d to 1s 10d for common to fair; and Leeward proofs at 1s 7d to 1s 8d per gallon.

Cocoa.—The market is quiet, notwithstanding the appearance of another Government contract for 150 tons. A small portion of 909 bags Trinidad sold at 70s to 75s; some few lots of fine red, 95s to 95s 6d. 211 bags Grenada partly sold at 62s to 63s 6d per cwt. The stock of West India has been materially augmented by late arrivals, but it is still 4,300 packages less than the heavy one at the same date last year.

Coffee.—For some kinds of plantation Ceylon rather higher rates have been obtained, and the market is still very firm, although several vessels have arrived from Colombo. 397 casks 626 barrels and bags, by auction, found buyers at 68s to 75s 6d for fine fine ordinary to good middling. 132 casks 175 bags native brought 60s to 62s for good ordinary to superior quality. 217 casks 610 barrels and bags Jamaica went at 58s to 72s for ordinary to middling quality. Privately, 350 bags good ordinary Rio have sold at 58s 6d per cwt.

Tea.—Since last Friday the market has been inactive, partly attributable to the absence of further news from China, and also to the large public sales announced for the ensuing week.

Rice.—The continued wet weather has caused some uneasiness with reference to the growing crops, and holders of rice have generally showed increased firmness; still high prices cannot be quoted excepting for fine new white Bengal and pinky Madras. Transactions by private contract to yesterday reached about 25,000 bags, including low to fine white Bengal, at 10s 9d to 15s 6d; good pinky Madras, 10s 9d; and a few parcels Moulmein, at 9s 3d to 9s 6d; Necrancie Arracan, 10s 3d. A floating cargo of Bassein has sold at 10s 9d for the Continent. By auction, 2,807 bags Bengal partly found buyers: very good new pearly white, 15s to 15s 6d; low middling to good old, 11s 6d to 13s 6d per cwt.

Imports and Deliveries of Rice to June 16, with Stock on hand.

	1860.	1859.	1858.	1857.
	tons	tons	tons	tons

Stock	47800	72430	96060	37700

Sago.—1,200 boxes partly sold at about previous rates: white small grain, 22s; common to good greyish, 16s 6d to 18s; common large, 15s 6d per cwt.

Spices.—White pepper is unaltered. 168 bags by auction realised 6d to 6½d for Singapore and Penang. 3,265 bags Singapore black and 2,562 bags Penang found buyers at steady rates: the former at 4d, coming-in lots, 4½d; the latter at 3¾d to 3¾d. The sound portion of 241 bags Zanzibar cloves was bought in at 3¾d per lb. Public sales of nutmegs and mace will be held to-day. Pimento is steady. 77 cases Cochin ginger sold at 66s 6d to 79s 237 casks, &c., Jamaica, 4*l* 7s to 7*l*; 487 bags rough Bengal, 21s 6d to 22s per cwt.

Saltpetre.—This article remains dull, and there are sellers of Bengal at easier rates. A small parcel of fine was reported on Wednesday at 44s, but the sale could not be traced. The last transaction known privately was at 45s per cwt for 5 per cent.

Imports and Deliveries of Saltpetre to June 16, with Stock on hand.

	1860.	1859.	1858.	1857.
	tons	tons	tons	tons
Imported	6700	9710	5725	8270
Delivered	5850	9000	7135	5330
Stock	4710	3670	5210	5000

Cochineal.—There is little Honduras offering for sale, owing to the recent reports of a short crop. 100 bags other kinds sold as follows: Mexican, 3s to 3s 4d; Teneriffe, 3s 2d to 3s 6d per lb.

Lac Dye has been quiet, but holders remain firm. 159 chests, by auction, partly sold at 1½d to 1¾d per lb for very low quality.

Logwood.—150 tons St Domingo are reported sold afloat at 5*l* per ton for a near port.

Other Dutsalteby Goods.—There has not been any change in the markets. Gambier keeps firm.

Drugs.—The public sales held yesterday, although numerous, did not contain a very large assortment of goods in the aggregate. Castor oil barely supported its previous value.

India Rubber.—Fine Para has sold at 2s 8d in London and Liverpool. East India commands 2s 2d to 2s 2½d per lb.

Metals.—The few changes in prices have been rather favourable to the buyers, and the markets are generally devoid of animation. British copper was reduced ¼d per lb by the smelters yesterday. A limited business has been done in spelter: present quotation, 20*l* 5s to 20*l* 10s per ton. Foreign tin has met with partial inquiries, good Straits commanding 130s to 131s per cwt. British is unchanged. More inquiry has prevailed for Scotch pig iron. This morning mixed was done at 50s 3d per ton cash.

Hemp.—Russian remains without improvement. Petersburg clean is firmer at 29*l*. Business has been done in Manilla at prices rather above the lowest lately accepted by auction. The jute market has become quiet. 3,426 bales offered on Wednesday promptly sold at previous rates, from 14*l* to 20*l* 10s per ton for low middling to good quality.

Turpentine.—Rough has sold at 8s 9d. Spirits have been dull. American, 35s per cwt.

Oils.—Sperm is unaltered. Other fish oils exhibit little change. New seal to arrive can be bought at 35*l*. Olive has been dull at 55*l* 10s to 62*l* per tun. Nothing doing in floating cargoes. A good demand has prevailed for linseed at 28*l* 10s to 28*l* 12s 6d on the spot, and 29*l* 10s per ton for delivery in the last four months. Quotations of rape are steady: foreign refined, 44s; brown, 41s 6d to 42s: 46s and 44s paid for delivery in the last four months. Palm is in moderate demand at 45s to 45s 6d. The market for cocoa-nut has been active: Cochin, 46s 6d to 47s: Ceylon, 45s to 46s per cwt. Speculative business is reported to have been done for arrival.

Linseed.—The late advance is slightly exceeded, notwithstanding the heavy imports from the East Indies. Bombay, 51s 6d to 52s; Calcutta, 49s to 50s 6d per quarter.

Tallow.—Consumers have shown increased confidence in the market, which has advanced 3d to 6d per cwt. This morning, first sort Petersburg Y. C. is quoted 52s 9d; for forward deliveries, 52s 6d to 52s 9d per cwt. The wet weather, if continued, seems likely to reduce the future home production.

Particulars of Tallow.—Monday, June 18.

POSTSCRIPT. Friday Evening.

Sugar.—The market was active to-day. 5,813 hhds West India have sold for the week. 6,070 bags Mauritius, 1,586 bags native Madras, and 387 bags Bengal went at previous rates. A floating cargo of Cuba sold for the United Kingdom at 25s 6d; one of Havana, No. 13, at 28s per cwt; besides several parcels various sorts on the spot.

Coffee.—28 casks plantation Ceylon sold at full prices.

Rice.—Only 4,000 or 5,000 bags changed hands at former quotations.

Spices.—134 cases brown nutmegs sold: low to very good bold brown, 1s 5d to 3s 11d. 26 cases mace, 1s 1d to 1s 4d. 22 cases Penang cloves, 1s 1½d to 1s 4d per lb. 518 bags Bengal ginger partly sold at 22s to 22s 6d per cwt. 767 bags pimento realised 3½d to 3¾d per lb.

Saltpetre.—3,637 bags Bombay, refraction 62½ to 29½, 35s to 36s 6d; 66 cases, refraction 9, 37s 6d. Of 1,200 bags Bengal, a few lots sold: refraction 5½, sold at 44s; and some 16½, at 38s 6d per cwt.

Lac Dye.—283 chests about one-third part sold: low to common, 2½d to 5¾d; fair to good marks, 1s 2d to 1s 5d per lb.

Shellac.—Good reddish orange sold at 9*l* 17s 6d per cwt.

Brazil Wood.—299 tons were bought in at 23*l* to 25*l* per ton.

Oil.—Cochin sold by auction at 46s to 46s 6d; Ceylon, 45s 3d to 46s. 123 casks palm, by auction, brought 41s 9d to 45s 6d per cwt. 30 tuns Southern sold at 34*l* 15s to 36*l* per tun.

Tallow.—Town unaltered. Foreign quiet. By auction, 273 casks South American part sold at 51s to 53s per cwt.

ADDITIONAL NOTICES.

Refined Sugar.—The home market for refined sugar has been well supported this week for most descriptions of goods, and closes with firmness. In Dutch crushed some few sales have been made at 31s 9d to 32s in barrels for A S R No. 2, V O and B & H No. 1, f.o.b. in Holland. The accounts from there come very firm, with an improved tendency.

Green Fruit.—Stock of oranges and lemons reduced to a few packages; some Lisbon of the former, and Palermo of the latter, sold by Keeling and Hunt at public sale, went at an advance in price. A moderate sale of nuts, the backward state of vegetation in this country causing a greater demand than is usually the case at this period of the year.

Dry Fruit.—A limited business in currants during the week; 24s is the lowest quotation in the market. Raisins quiet. Low offers have been refused for large parcels of Valentias for export.

Seeds.—The unfavourable state of the late weather has made the seed trade advance in price.

English Wool.—The market quiet, and prices continue firm.

Colonial Wool.—The market is without change.

Flax unaltered.

Hemp.—Market steady, and a fair business doing.

Cotton.—Sales of cotton wool from Friday, June 15, to Thursday, 21st, inclusive;—306 bales Surat, at 2¾d to 4¾d for very ordinary to fully fair; 700 bales Madras, at 4½d to 5½d for fair to good fair Tinnivelly. The market continues dull, and prices are irregular; the quotations, however, remain nominally the same as last week. Yesterday, 410 bales Surat, 90 sawginned, and 150 Western and Northern Madras were offered at public sale. The Surats were sold at 3d to 3¾d, being about previous rates; the sawginned and Madras were bought in. 3,000 bales, mostly fully good fair Dhollera and Oomrawattee, are advertised for public sale on Thursday, July 12.

Tobacco.—The market has assumed a steadier position, and a fair extent of business transacted in good and fine sorts at outside quotations.

Middling and common descriptions of Western strips have found more inquiry, and sales made of some small parcels.

LEATHER AND HIDES.—The leather trade has not materially improved during the past week: there is no change in the position of the market, and prices remain nearly unaltered. Good light common dressing hides are the article most scarce and in request. No public sale of foreign raw hides was held last week; but the sales by private contract comprise 100 salted Buenos Ayres heavy ox, 59¼ lbs, at 8½d; 550 light ox, 47¾ lbs at 8d; and 200 cow, 43½ lbs, at 7½d, with usual tares.

METALS.—The prevailing quietness in all kinds of business is unbroken, and hence there is little to report upon metals. Copper has been reduced in price by the English houses to our quotations. This change had been expected awhile ago, but ores having got dearer, the expectation had gone off, and the market was getting settled and improving. It is now disturbed and inactive again. Tin has become dearer, and as the Dutch sale approaches, some speculation shows itself to the stiffening of prices. Iron exhibits no change, being uniformly quiet in all the districts. Spelter has had but little attention. Tin plates are selling cautiously, both manufacturers and buyers wishing to see the result of the tin sale.

TALLOW.—Official market letter issued this evening:—

	s	d
Town tallow	53	
Fat by ditto	2	9½
Yellow Russian	54	3
Melted stuff	38	6
Rough ditto	22	6
Greaves	16	0
Good dregs	7	9

Imports this week 891 casks.

PROVISIONS.

There is a rapid rise in the bacon market this week; as much as 78s has been given for next week's shipments of fine brands. We may shortly expect a fall quite as great, as, in addition to the incentive offered of high prices to the foreign producer, the price must tend to check the consumption. Prime Hamburg bacon may now be bought at 70s landed. Very little doing in hams, prices ruling higher.

METROPOLITAN CATTLE MARKET.

MONDAY, June 18.—The total imports of foreign stock into London last week amounted to 9,764 head. In the corresponding week in 1859 we received 4,574; in 1858, 5,229; in 1857, 4,432; in 1856, 3,580; in 1855, 4,659; and in 1854, 5,452 head.

From our own grazing districts the arrivals of beasts fresh up this morning were limited as to number, and very deficient in quality. The high quotations demanded by the salesmen checked business; hence nearly all breeds moved off slowly at irregular quotations. The best Scots were mostly sold at 5s 8d per 8 lbs. Compared with Monday last, there was a considerable falling off in the show of sheep. Most prime breeds changed hands steadily at full quotations, the best Downs having sold at 5s 6d per 8 lbs. Otherwise, the mutton trade was in a sluggish state on former terms. There was a moderate inquiry for lambs, the supply of which was tolerably good at late rates. Although the supply of calves was extensive, the veal trade ruled firm at 2d to 4d per 8 lbs above the currencies realised on this day se'nnight.

SUPPLIES.

	June 21, 1858.	June 20, 1859.	June 18, 1860.
Beasts	3788	3570	3780
Sheep and Lambs	28390	30540	25080
Calves	499	312	319
Pigs	430	300	620

THURSDAY, June 21.—The supply of beasts here to-day was very moderate, and in middling condition. Prime breeds sold steadily at extreme rates; otherwise the beef trade was tolerably firm, at full prices. We were well supplied with sheep. Downs and half-breds moved off freely, other breeds slowly, at Monday's currency. The show of lambs being larger, the trade ruled heavy, at about previous rates. We have to report a dull inquiry for calves, at 2d per 8 lbs less money.

Per 8 lbs to sink the offal.

	s	d	s	d		s	d	s	d
Coarse and inferior beasts	4	4	4	6	Prime Southdown sheep	5	4	5	8
Second quality ditto	4	10	5	2	Large coarse calves	4	4	4	10
Prime large oxen	5	4	5	6	Prime small ditto	5	0	5	6
Prime Scots, &c.	5	6	5	8	Large hogs	4	0	4	6
Coarse and inferior sheep	4	0	4	4	Small porkers	4	8	5	0
Second quality ditto	4	6	4	10	Suckling calves...each	20	0	23	0
Prime coarse-woolled do.	5	0	5	2	Quarter old store pigs	23	0	30	0

Lamb, 5s 4d to 7s 0d.

Total supply—Beasts, 950; sheep and lambs, 11,600; calves, 340; pigs, 300.
Foreign supply—Beasts, 220; sheep, 1,400 calves, 213.

HOP MARKET.

BOROUGH, Monday, June 18.—Our market has exhibited increased firmness; and though the few hops on offer has limited the business effected, prices must be quoted a shade higher. The reports from the plantations are decidedly less favourable; the wet and cold have increased the sickly and unkind appearance of the plant, and in some of the low grounds the bine is dying away. The reports of fly are more general. At Worcester, the attack is very much worse, and has become threatening. The duty is nominally 170,000*l* or 175,000*l*, but without backers.

FRIDAY, June 22.—The market is very firm, at fully late prices.

POTATO MARKET.

SOUTHWARK WATERSIDE, Monday, June 18.—During the past week the arrivals coastwise have been light, and the trade better, at the following quotations:—York Regents, 90s to 130s; ditto Flukes, 110s to 140s; Lincolnshire Regents, 90s to 110s; Dunbar reds, 110s to 120s; Perth, Forfar, and Fifeshire Regents, 90s to 110s; ditto reds and Rocks, 90s to 100s; Irish whites, 80s to 90s per ton.

THURSDAY, June 21.—The supply of old potatoes is still very short, no material alteration having taken place in the arrivals coastwise or by land carriage since Monday last, and not many new potatoes have come to hand. Trade is tolerably brisk at full prices.

HAY MARKETS.—THURSDAY.

SMITHFIELD.—Meadow hay, 3*l* to 4*l* 17s; clover, 4*l* to 5*l* 18s; and straw, 1*l* 7s to 1*l* 14s per load. Trade steady.

CUMBERLAND.—Meadow hay, 3*l* to 5*l*; clover, 4*l* to 5*l* 18s; and straw, 1*l* 7s to 1*l* 14s per load. A fair demand.

WHITECHAPEL.—Meadow hay, 3*l* to 4*l* 17s; clover, 4*l* to 5*l* 18s; and straw, 1*l* 7s to 1*l* 14s per load. Trade firm.

COAL MARKET.

FRIDAY, June 22.—Walls End Kepier Grange, 18s—Walls End Russell Hetton, 18s—Walls End Braddylls Hetton, 18s—Walls End Tanfield Moor, 13s 3d—Walls End Beardon, 17s—Walls End Tunstall, 17s—Walls End Cassop, 18s—Walls End Haugh Hall. 17s 6d—Walls End South Kellos, 16s—Walls End Whitworth, 15s—Tanfield Moor Butes, 13s 3d—West Hartley, 15s 6d—Wylam, 16s 6d—Buddle's Hartley, 16s 6d—Bebside Hartley, 16s 6d—Lambert's Hartley, 16s 3d—North Holywell Main, 16s. Ships at market, 71.

LIVERPOOL MARKETS.

WOOL.

(FROM OUR OWN CORRESPONDENT.)

FRIDAY, June 22.—There is a moderate amount of business doing at current rates. Public sales are announced to be held here from the 27th inst. to 4th July, consisting of about 10,000 bales East India, and about 6,000 bales other low wools. There will also be offered 1,000 sheets English skin and fleece wool on that occassion.

CORN.

(FROM OUR OWN CORRESPONDENT.)

FRIDAY, June 22.—Under the influence of fine weather the grain market is less active; wheat, however, enjoys a good demand at steady prices; flour firm; corn and oatmeal cheaper; beans, oats, and barley steady.

METALS.

(FROM OUR OWN CORRESPONDENT.)

FRIDAY, June 22.—The market for manufactured iron remains quiet, with only a comparatively limited demand, but with little change to note in prices. Scotch pig iron has been more steady during the past week, and a fair business has been done at about previous rates. The price of copper has again been reduced this week to the extent of ¼d per lb on manufactured, and 5*l* per ton on tile and cake copper. Lead continues dull, and most other metals are only in limited request.

The Gazette.

TUESDAY, June 19.

BANKRUPTCIES ANNULLED.

W. and J. Noak, Droitwich, salt manufacturers.

BANKRUPTS.

C. Maidlow, Alma square, Hill road, St John's wood, builder.
A. and T. Wentworth, Skin market, Bermondsey, hide salesmen.

J. Young, Highbridge, Somersetshire, draper.

SCOTCH BANKRUPTS.

J. Arnott, and Co., warehouseman, Glasgow.
D. Cormack, merchant, Wick.
A. Milne, baker, Hilton, Dundee.

The course of exchange at New York on London for bills at 60 days' sight is about 109¼ per cent., which, when compared with the Mint proportions between the two countries, shows that the exchange is about at par; and, after making allowance for charges of transport and difference of interest, the present rate leaves scarcely any profit on the importation of gold from the United States.

SURREY GARDENS.—This popular place of amusement on Monday night was crowded on the occasion of a grand concert. To Mr Sims Reeves the honours of the evening were reserved. His three songs were redemanded, and, in spite of his apparent indisposition, he good-naturedly repeated them all. "The Last Rose of Summer," and a new ballad by Hatton, "Sweet Love, Good Night to Thee," afforded opportunities for the exhibition of his graceful style of vocalisation; while in the fine song from "Maritana," "Let me like a Soldier Fall," he excited the audience to enthusiasm by his manly and energetic delivery.

EPITOME OF RAILWAY NEWS.

TRAFFIC RETURNS.—The traffic returns of railways in the United Kingdom for the week ending June 9 amounted to 509,738*l*, and for the corresponding week of last year to 488,446*l*, showing an increase of 21,292*l*. The gross receipts of the eight railways having their termini in the metropolis amounted to 225,668*l*, and for the corresponding week of 1859 to 215,542*l*, showing an increase of 10,126*l*.

GREAT WESTERN OF CANADA.—It appears that the committee appointed to investigate the affairs of this company intend to act under the full powers given them by the shareholders, as they consider it necessary to make a complete examination into the condition of the lines of railway, bridges, plant, &c. In order to render the inquiry entire and satisfactory, they have determined that Mr Giles, the engineer, shall proceed at once to Canada.

RAILWAY AND MINING SHARE MARKET.

LONDON.

MONDAY, June 18.—The railway market opened without change, but subsequently improved with Consols. Most of the leading stocks left off ¼ to ½ per cent. higher, Midland, Lancashire and Yorkshire, and South-Eastern being especially firm. North British was rather dull. In the colonial market no alteration of importance occurred. Great Western of Canada shares closed at 11½ to ⅝; and Grand Trunk stock at 30 to ½. Foreign shares were steady; Paris and Lyons and South Austrian and Lombardo-Venetian advanced, the latter after regular hours going to ¼ to ½ pm. In American railway securities the bonds and shares of the Illinois Central were firmer. The transactions in mines were rather numerous, and in some cases an improvement took place. Joint stock banks and miscellaneous descriptions closed about the same as on Saturday. Victoria debentures, new, were last quoted 107½ to ¾. The Canadian loan left off at 102½ bonds, and 3 pm. scrip.

TUESDAY, June 19.—In the railway market to-day the principal movement was a rise of fully 1 per cent. in North British, the first price marked being 61¼, and the final quotation 62½ to 63. Midland and North-Eastern York also slightly improved, while Lancashire, Yorkshire, and Great Western were quoted an eighth lower. Other descriptions were steady, with only a limited business. Colonial descriptions left off without alteration. Grand Trunk of Canada stock, after touching 30¼, was last quoted 30 to ½; and Great Western shares, 11½ to ⅝. No transactions were recorded in the foreign market, and almost the only change was a reaction in South Austrian and Lombardo-Venetian. Pernambuco and Great Luxembourg were a trifle firmer. American railway securities closed about the same as yesterday. There was not much business in mines, and occasionally a decline took place. East Bassett partially relapsed. Joint stock bank and miscellaneous descriptions showed no material change.

WEDNESDAY, June 20.—The railway market to-day was very inactive, but with a steady tendency, some of the principal stocks, especially Great Northern and Caledonian, closing slightly higher. North British also experienced a further fractional advance. Canadian descriptions advanced, Great Western shares leaving off at 11⅝ to ¾, and Grand Trunk stock 30½ to ¾. Indian guaranteed continued without much alteration. In the foreign market, South Austrian and Lombardo-Venetian were dull at par to ¼ pm. In American railway securities the bonds of the New York Central and Pennsylvania Central improved, while the shares of the Michigan Southern and New York and Erie bonds were flatter. The transactions in mines were limited, but in a few instances the final quotations were higher. Joint stock banks left off about the same as yesterday. In miscellaneous descriptions, National Discount shares advanced an eighth.

THURSDAY, June 21. The railway market continued inactive but good in character, notwithstanding the heaviness in the funds. To-day, North British and Caledonian were chiefly supported at an advance of ½ to ⅝ per cent. Midland and several other stocks also improved. In the colonial market there was a strong tendency, Grand Trunk of Canada having advanced to 30½ to 31, and East Indian to 102½ to ¾. No change of importance occurred in foreign descriptions. South Austrian and Lombardo-Venetian remained at par to ¼ prem., and Pernambuco at 1⅛ to ⅜ dis. New South Wales debentures were higher. In American railway securities the shares of the Illinois Central were firm, while a decline took place in those of the New York and Erie. Mines were dull, and in several cases exhibited a reduction. Joint stock banks closed without material alteration. In miscellaneous descriptions, Canada Land shares receded. Victoria debentures, new, left off at 107⅛ to 108; the Canadian loan, 102¼ bonds, and 3 to ¼ pm. scrip. The shares of the Labuan Coal Company have advanced 1¼ to ⅝ pm.

FRIDAY, June 22.—The railway share market to-day was decidedly firm, and, notwithstanding the continued inactivity of business, an improvement of ¼ to ½ per cent. took place in most of the principal stocks. East Indian Railway stock was in fair demand.

FREDERICK DENT
Chronometer, Watch and Clock Maker to the Queen and Prince Consort, and the maker of the Great Clock for the Houses of Parliament, 61 Strand, and 34 Royal Exchange. No connection with 33 Cockspur street.

SEQUELIN'S OIL.—
This vegetable preparation is an infallible restorative of the human hair, producing its growth, checking its falling off almost instantly, and imparting to it unequalled softness and brilliancy. Testimonials and references on application. One bottle is sufficient. Price one guinea. Sold by S. Sequelin, 40 Wharton street, Lloyd square, W.C. London agents: G. Jozeau, 49 Haymarket, and Metcalfe, Bingley, and Co., 130a Oxford street.

A TOILETTE REQUISITE FOR THE SPRING.—Among the many luxuries of the present age, none can be obtained possessing the manifold virtues of OLDRIDGE'S BALM of COLUMBIA. If applied to the roots and body of the hair, it imparts the most delightful coolness, with an agreeable fragrance of perfume. It also at this period of the season prevents the hair from falling off, or if already too thin or turning grey, will prevent its farther progress, and soon restore it again. Those who really desire to have beautiful hair, either with wave or curl, should use it daily. It is also celebrated for strengthening the hair, freeing it from scurf, and producing new hair, whiskers, and moustache. Established upwards of thirty years. No imitative wash can equal it. Price 3s 6d, 6s, and 11s only.—C. and A. Oldridge, 22 Wellington street, Strand, W.C.

DINNEFORD'S
PURE FLUID MAGNESIA has been for many years sanctioned by the most eminent of the Medical Profession, as an excellent remedy for acidities, heartburn, headache, gout, and indigestion. As a mild aperient it is admirably adapted for delicate females, particularly during pregnancy; and it prevents the food of infants from turning sour during digestion. Combined with the Acidulated Lemon Syrup, it forms an effervescing aperient draught which is highly agreeable and efficacious.
Prepare by DINNEFORD and CO., Dispensing Chemists (and General Agents for the Improved Horse Hair Gloves and Belts), 172 New Bond street, London, and sold by all respectable Chemists throughout the empire.

THE FORTY-SEVEN SHILLING SUITS
ARE MADE TO ORDER FROM Scotch Cheviot Tweeds, and Angolas, all wool, and thoroughly shrunk, by B. BENJAMIN, Merchant and Family Tailor, 74 Regent street, W. The Two Guinea Dress and Frock Coats, the Guinea Dress Trousers, and the Half-Guinea Waistcoats. N.B.—A Perfect Fit guaranteed.

LAWRENCE HYAM announces that his New Stock of Clothing for the Season of 1860, consisting of the largest and choicest variety of Spring and Summer attire ever designed, is now ready for inspection, and to which he solicits a public attention and patronage. The greatest confidence may be placed in the durability and style of all garments, combined with the utmost economy in price.

LAWRENCE HYAM invites attention to his Surtout and Dress Coats, varying from 25s to 50s. The Material, Style, Fit, and make are perfect, and cannot fail to give general satisfaction.

LAWRENCE HYAM'S Spring and Summer Overcoat and Undress Jackets are first in fashion, serviceable to wear, and beautiful in design. Price, 16s, 21s, 30s, 42s, and 50s.

LAWRENCE HYAM'S Guinea Coats, 38s Suits, 15s and 17s Trousers, and 6s Vests, are "Household Words" in every family. An immense variety of the newest patterns to select from, specially made for the Spring and Summer Season of 1860.

LAWRENCE HYAM'S Ordered Department is complete in all its arrangements. The most talented cutters and best workmen only are employed, whereby perfection in Fit, Elegance, and Style, are always secured at moderate prices.

Observe—The only Establishments of Lawrence Hyam are:—City, 36 Gracechurch street; West-end, 189 and 190 Tottenham court road.

SUMMER ATTIRE.—E. MOSES and SON beg to state, that their preparations for Spring and Summer exceed any of their former efforts as we'l in extent as in variety. They have visited the principal markets both at Home and Abroad for the best and newest manufactures, and have succeeded in collecting such an assortment of goods as has never before been exhibited under one roof in this or any other country.
Their Bespoke Tailoring Departments have been supplied with an endless variety of the choicest and most popular fabrics
Their Ready Made Clothing Stock is complete in every respect, and they venture to say that for Elegance of Style, Durability of Material and Workmanship, Tastefulness of Finish and Cheapness, it is quite unequalled, even in the Metropolis of England.
No less care has been bestowed on the Hosiery, Hat and Cap, and Boot and Shoe Departments, which have been furnished with an entirely new stock of fashionable and seasonable goods at such prices as enable the proprietors to offer their patrons very great advantages.
N.B.—E. MOSES and SON take this opportunity of announcing, that they intend giving their customers the full benefit of the abolition of the duty on silks, gloves, &c.
E. MOSES and SON, Corner of MINORIES and ALDGATE, and Corner of NEW OXFORD STREET and HART STREET.
COUNTRY BRANCHES—Bradford & Sheffield, Yorkshire.
E. MOSES and SON wish it to be particularly observed that if any article be not approved of it will be exchanged, or the money returned without hesitation.
Their Book for Spring and Summer, containing "The Growth of an Important Branch of British Industry," with rules for self-measurement, and list of prices, may be had gratis on application, or post free.

THE "INDISPENSABLE" SUIT, made in various colours and patterns, and particularly adapted for walking, riding, travelling, and business. This is universally acknowledged to be the most comfortable and serviceable suit ever introduced. Price from 35s.—To be obtained of E. MOSES and SON, Corner of MINORIES and ALDGATE, and Corner of NEW OXFORD STREET and HART STREET.

TOURISTS AND EXCURSIONISTS are specially provided for at E. MOSES and SON'S, MERCHANT TAILORS, HATTERS, HOSIERS, BOOTMAKERS, &c., Corner of MINORIES and ALDGATE, Corner of NEW OXFORD STREET and HART STREET, BRADFORD and SHEFFIELD, YORKSHIRE.

HOLLOWAY'S OINTMENT AND PILLS.—Consolation for the Troubled.—All sufferers from colds, asthma, chest complaints, and shortness of breath, should have this Ointment well rubbed upon the back and breast twice a day; after diligent friction with it for a short time, respiration becomes easy and the circulation calmed. Holloway's Pills should be taken whilst his Ointment is being used, as they will remove any impurities from the general system which the local application of the Ointment would be slow in reaching. In indigestion and dyspepsia Holloway's remedies are invaluable. On the liver and kidneys they exercise the most salutary effect; in fact, they regulate every function of the body, and contribute to keep mind and body in a healthy state.

VALUABLE INFORMATION.—GRATUITOUS EDITIONS of the following LECTURES, delivered at the Royal Institute of Anatomy, Science, and Medicine, 369 Oxford street, London, by W. B. MARSTON, the Principal, are being issued, with plain directions for SELF-TREATMENT and CURE in each of them.
No. I.—NERVOUS DEBILITY (the result of youthful error), loss of memory, shortness of breath, dimness of sight, exhaustion, and general incapacity. Addressed specially to Young Men.
No. II.—MARRIAGE: Its Obligations and Impediments. Addressed to those who contemplate Marriage, and to the Married who desire Children.
No. III.—THE BRAHMIN'S ELIXIR OF LIFE: Its History—Secret Remedies of the Hindoos no Fable—Full Particulars of this Extraordinary Specific—Its Amazing Powers as a Relnvigorator of the Impaired Functions, and in all Cases of Nervous Debility.
No. IV.—THE DISEASES INFLICTED UPON MANKIND BY THE GREAT SOCIAL EVIL. With a simple means of complete Cure without Mercury.
Each Lecture, neatly printed and bound, will be sent GRATIS, on receipt of two stamps to prepay postage, or THE WHOLE FOUR, BOUND TOGETHER, with numerous additions, and full directions for SELF-TREATMENT and CURE, 160 pages, 8vo, post free, for Six Stamps. Address, Treasurer, Royal Institute, 369 Oxford street, London.

DR KAHN CONTINUES TO deliver Daily, at Three and Eight o'clock, his popular Lecture on the "Philosophy of Marriage," at his Anatomical Museum, top of the Haymarket.
The Museum is open (for gentlemen only) from Twelve to Five, and from Seven to Ten. Admission, One Shilling.

GIVEN AWAY.—26,000 COPIES of a Medical Book, for the benefit of Nervous Sufferers, sent, post free, by the author, secure from observation, on receipt of a directed envelope, enclosing two stamps, the Private Medical Friend, a new work on the Self-cure of Nervous Debility, Loss of Memory, Dimness of Sight, Lassitude, Indigestion, Dislike to Society, &c., which, if neglected, result in consumption Insanity, and premature death, with plain directions for perfect restoration to health and vigour. The true guide to those who desire a speedy and private cure.—By HENRY SMITH, Esq., 8 Burton crescent, Tavistock square, London, W.C.

HUBBUCK'S PATENT WHITE ZINC PAINT.

By their process, which is patented, Pure White Zinc Paint is cheaper than White Lead. It is the most durable and beautiful paint known, and does not stain or discolour with the London atmosphere.

CHEAPNESS.—Two hundred-weight of this Paint, with six gallons of Oil, covers as much surface as three hundred-weight of White Lead and twelve gallons of Oil. It is cheaper in the first instance, as well as desirable on every consideration.

ADULTERATIONS.—Prejudice is caused by some Paint Grinders selling Zinc Paint adulterated with Sulphate of Barytes, some even to the extent of thirty per cent. Whether this is sold under the name of "Improved Zinc Paint," or is candidly sold as Number Two or Three qualities, no Painter can produce good work with it. He naturally condemns Zinc Paint altogether.

That Painters have never seen the best Zinc Paint is evident, or they would not use any other paint for their best work. To prevent the prejudice which the inferior article must produce, each Cask of Pure White Zinc is stamped

"HUBBUCK, LONDON, PATENT."

THOMAS HUBBUCK and SON, WHITE LEAD, OIL, PAINT and VARNISH WORKS, 24 LIME STREET.

S. W. SILVER AND CO.,

OUTFITTING WAREHOUSES, 66 and 67 CORNHILL, E.C.

Manufactory, Silvertown, opposite H.M. Dockyards, Woolwich.

DEANE'S TWO-HOLE BLACK PENS

which are unequalled for their durability and easy action, are adopted by the gentlemen of the Stock Exchange, and the principal bankers, merchants, and public companies of the city of London, besides several of Her Majesty's judges, the most eminent counsel, and the reverend the clergy. Their cheapness and popularity ha induced many unprincipled people to put forth imitations of the genuine articles, which are equally useless to the purchaser, and disgraceful to the vender. The public arn therefore cautioned, and respectfully requested not to purchase any as DEANE'S GENUINE TWO-HOLE BLACK PENS, unless each pen is stamped

"G. and J. Deane, London Bridge,"

and the box, which contains exactly twelve dozen, has thereon a variously coloured label, inscribed

"G. and J. DEANE'S Two-Hole Black Pens, 46 King William street, London bridge."

ALLSOPP'S PALE ALE.—

FINDLATER, MACKIE, TODD, and CO., beg to announce that they are now prepared to supply ALLSOPP'S PALE ALE, of the finest quality, in Bottles, and Casks of 18 gallons and upwards.—Stores, under London Bridge Railway Station; Entrance, 215 Tooley street, S.E.

ALLSOPP'S PALE OR BITTER ALE.—

Messrs SAMUEL ALLSOPP and SONS beg to inform the Trade, that they are now registering orders for the March Brewings of their Pale Ale in Casks of 18 Gallons and upwards, at the Brewery, Burton-on-Trent; and at the undermentioned Branch Establishments:—

Messrs SAMUEL ALLSOPP & SONS

LONDON	61 King William street, City.
LIVERPOOL	Cook street.
MANCHESTER	Ducie place.
BIRMINGHAM	Upper Temple street.
DERBY	London road.
WOLVERHAMPTON	Exchange street.
CHESTERFIELD	Low Pavement.
STOKE-UPON-TRENT	Wharf street.
DUDLEY	Burnt Tree.
WORCESTER	The Cross.
SOUTH WALES	King street, Bristol.
DUBLIN	Crampton quay.
CORK	Cook street.
EDINBURGH	Union street lane.
GLASGOW	St Vincent street.
PARIS	279 Rue St Honoré.

Messrs ALLSOPP and SONS take the opportunity of announcing to private families that their Ales, so strongly recommended by the medical profession, may be procured in Bottles and Casks, and on Draught, from all the most respectable wine and beer merchants and licensed victuallers, on "ALLSOPP'S PALE ALE" being especially asked for.

When in bottle, the genuineness of the lable can be ascertained by its having "ALLSOPP and SONS" written across it upon red and white ground striped.

The Brewery, Burton-on-Trent, April 30, 1860.

TEETH.—MR ESKELL,

Surgeon Dentist, 314 Regent street (facing the Polytechnic), supplies his PATENTED INCORRODIBLE TEETH, which can be matched so closely in shape and colour to those left in the mouth, and are formed so exactly to nature, that the closest observer cannot detect the difference, and in all cases they restore perfect articulation and mastication. These teeth are fixed from one to a complete set upon Mr Eskell's never-failing and painless principle of SELF-ADHESION, without extracting any teeth or stumps, or giving any pain whatever; and being incorrodible, they possess the superior advantage of never changing colour nor decaying. Mr Eskell's celebrated OSTEOPLASTIC ENAMEL for stopping Decayed Teeth is a preparation which never changes colour nor affects the colour of the tooth, and is free from any injurious properties either as regards the teeth or general health. Its application is easily performed, and without giving the slightest pain. Deficiencies of palate effectually remedied. Loose teeth fastened. Teeth regulated. Discoloured teeth restored, &c. Hours, Ten to Six. Consultation free. Charges strictly moderate.—314 Regent street, London (opposite the Polytechnic). Established 1847.

HANDSOME BRASS AND IRON BEDSTEADS.—

BROWN AND POLSON'S

PATENT CORN FLOUR.—

The LANCET states, "This is superior to anything of the kind known."—The most wholesome part of the best Indian corn, prepared by a process patented for the Three Kingdoms and France, and wherever it becomes known obtains great favour for Puddings, Custards, Blancmange; all the uses of the finest arrow root, and especially suited to the delicacy of Children and Invalids. —BROWN and POLSON, Manufacturers to Her Majesty the Queen, Paisley, Manchester, Dublin, and London.

VOLUNTEER PIPE.—

RIFLE BORE.—The most delightful, economical, and permanent medium for the enjoyment of tobacco ever invented. This new pipe only to be had of the patentee. Sample pipe in case sent post free for 23 stamps.—EDWARD PILLINER, 53 Great Queen street, London, W.C.

RUPTURES.—BY ROYAL LETTERS PATENT

WHITE'S MOC-MAIN LEVER TRUSS

is allowed by upwards of 200 Medical Gentlemen to be the most effective invention in the curative treatment of HERNIA. The use of the steel spring, so often hurtful in its effects, is here avoided, a soft bandage being worn round the body while the requisite resisting power is supplied by the MOC-MAIN PAD and PATENT LEVER, fitting with so much ease and closeness that it cannot be detected, and may be worn during sleep. A descriptive circular may be had, and the Truss (which cannot fail to fit) forwarded by post, on the circumference of the body two inches below the hips being sent to the Manufacturer.

MR WHITE, 228 Piccadilly London.

Price of a single Truss, 16s, 21s, 26s 6d and 31s 6d; Postage, 1s. Double ditto, 31s 6d, 42s, and 52s 6d; postage, 1s 8d. Post-office orders to be made payable to John White, Post-office, Piccadilly.

ELASTIC STOCKINGS KNEE CAPS, &c., for VARICOSE VEINS, and all cases of WEAKNESS and SWELLING of the LEGS, SPRAINS, &c. They are porous, light of texture, and inexpensive, and are drawn on like an ordinary stocking. Price from 7s 6d to 16s each; postage, 6d.

WHITE, MANUFACTURER, 228 Piccadilly, London.

ENGRAVING AND PRINTING.

HENRY BRADBURY AND CO.,

BANK-NOTE MANUFACTURERS,

FOREIGN, ENGLISH, AND COLONIAL;

Designers, Engravers, and Printers of Bonds, Coupons, Bills of Exchange Cheques, Certificates, Drafts, Shares, &c.

MERCHANTS and BANKERS are respectfully informed by HENRY BRADBURY (late of Whitefriars), that the Business of BANK-NOTE ENGRAVING and PRINTING, which, under his personal direction, has hitherto been carried on by Messrs BRADBURY and EVANS, is now conducted by a separate Firm under the title of HENRY BRADBURY and CO.

"TIMES' City Article, January 28, 1860:—"A Series of Specimens of Bank-Note Engraving of a very remarkable character has just been issued by Mr Henry Bradbury, who has spent some years in perfecting that art. Apart from their beauty of design and finish, they present the essential advantage of being producible only by machinery so costly and so complex as to prevent all chance of successful forgery."

*** The above Specimens may be had upon application.

OFFICES: 12 and 13 FETTER LANE, FLEET STREET, E. C. (Facing Her Majesty's Record Office.)

UNION BANK OF LONDON.—The Court of Directors hereby give notice, that the Annual General Meeting of the Proprietors will be held at the London Tavern, Bishopsgate street, on Wednesday, the 11th day of July next, at Twelve o'clock precisely, to receive a Report from the Directors, and to consider and determine upon any measures relating to the affairs of the Company arising out of such Report, and upon the declaring of a Dividend, and for other purposes.

The following Directors retire under the provisions of the Deed of Settlement, viz., Major-General Matheson, Archibald Boyd, Esq., and Charles Lyall, Esq; and Archibald Boyd, Esq., and Charles Lyall, Esq., offer themselves, and are recommended by the Court, for re-election. Fleetwood Pellew Wilson, Esq., of George yard, Lombard street, a duly qualified Proprietor, has given notice of his intention to become a Candidate for the office of Director at this Meeting.—By order of the Court, H. NEWMARCH, Secretary.

2 Princes street, Mansion House, June 18, 1860.

Copies of the Report will be forwarded to the Proprietors prior to the Meeting.

CHARTERED MERCANTILE BANK of INDIA, LONDON, and CHINA.

HEAD OFFICE, 52 Threadneedle street.

Agencies and Branches at Bombay, Calcutta, Madras, Colombo, Singapore, Penang, Hong Kong, Shanghai, and Mauritius.

The Bank, at its Head office in London, grants Drafts on its various Agencies and Branches; issues Letters of Credit; purchases approved Bills on India, China, Ceylon, and Mauritius; undertakes the purchase and sale of Indian Government and other Securities, and the collection of Private and Mercantile Bills, at the ports and places at which its Agencies are established; receives Deposits at Interest for Fixed Periods, the terms of which may be ascertained on application; and transacts generally all Indian Banking business, including the receipt of Pay, Pensions, and Dividends on Stock of all kinds.

ORIENTAL BANK CORPORATION.

Incorporated by Royal Charter, 30th Aug., 1851.

Paid-up capital, £1,260,000; reserved fund, £252,000.

The Corporation grant Drafts, and negotiate or collect Bills payable at Bombay, Calcutta, Madras, Ceylon, Hongkong, Singapore, Mauritius, Melbourne, Sydney, Auckland, and Wellington, on terms which may be ascertained at their office. They also issue Circular Notes and Letters of Credit for the use of Travellers by the Overland Route. They undertake the agency of parties connected with India, the purchase and sale of Indian Securities, the safe custody of Indian Government Paper, the receipt of Interest, Dividends, Pay, Pensions, &c., and the effecting of remittances between the above-named dependencies.

They also receive deposits of £100 and upwards, repayable on a notice of 10 days, and allow interest thereon at 1 per cent. below the Bank of England minimum rate at discount, rising and falling therewith. Deposits subject to longer notices of repayment bear higher rates which may be ascertained at their office.

Office hours 10 to 3. Saturdays, 10 to 2.

Threadneedle street, London, March 23, 1860.

THE AGRA AND UNITED SERVICE BANK (LIMITED); established in India 1833, Incorporated by Letters Patent 1857. Paid-up capital £1,000,000 sterling. Reserve fund £190,000. Branches at Calcutta, Bombay, Madras, Agra, Lahore, Hongkong, and Shanghai.

Head Office—27 Cannon street, London, E.C.

Current or floating accounts opened with Individuals and Firms bearing interest, when the minimum monthly balance at credit is not less than £100, at the rate of two per cent. per annum.

Sales and purchases effected in British and Foreign Securities, in East India Stock and Loans; and Army, Navy, and Civil Pay and Pensions realised.

Deposits for Fixed Periods are received at Interest, particulars of which may be obtained at the Bank.

Bills issued at the Exchange of the day, and free of any extra charge, on the Branches of the Bank.

Approved Bills drawn against Funds, or upon Parties in India, purchased.

Bills payable in India sent out for collection.

Circular Notes, payable at the principal Cities of Europe, granted.

Interest on Indian Government Securities drawn, and the equivalent paid to parties interested, without charge.—By order of the Board,

WILLIAM SHIPMAN, Officiating General Manager.

Hours of business, 10 to 4; Saturdays, 10 to 3.

ENGLISH, SCOTTISH, AND AUSTRALIAN CHARTERED BANK.

Capital paid up, 500,000*l.*

BANKERS—Messrs Glyn, Mills, and Co.

The Directors are prepared to grant Debentures for loans of sums of £100 and upwards, for periods of 3, 5, 7, or 10 years.

Any information required can be obtained on application to the Secretary. FRED. FEARON, Secretary

Moorgate street, London.

JULLIEN FUND.

Committee Room—50 New Bond street.

The Committee of the Jullien Fund, fearing that the subscriptions have been materially checked by the unfortunate death of Mons. Jullien, desire to explain that a widow and others, members of his family, can be protected from want only by the kind aid of those who appreciate the great services rendered by the late lamented maestro to the cause of the musical education of the English people.

The Committee confidently appeal to that benevolence for which their countrymen are so distinguished, for such prompt and liberal additions to the subscription list as shall enable them to do some justice to the memory of M. Jullien, and at the same time afford adequate relief to his bereaved family.

COMMITTEE for the DISTRIBUTION of the JULLIEN FUND.

Mr John Mitchell	Mr W. Duncan Davison
Mr W. R. Sams	Mr Julius Benedict
Mr Thomas Chappell	Mr A. Blumenthal

HONORARY TREASURERS

Mr John Mitchell, 33 Old Bond street

Mr T. Chappell, 50 New Bond street

Mr W. R. Sams, 1 St James's street

BANKERS.

Messrs Coutts and Co., Strand

Heywood, Kennards, and Co., Lombard street

London and County Bank, Hanover square

Who, as well as the honorary treasurers, have kindly consented to receive subscriptions.

April, 25th, 1860.

NEW THEATRE ROYAL ADELPHI.

Sole Proprietor and Manager, Mr B. Webster.

First time this season of the powerful Adelphi drama of THE FLOWERS OF THE FOREST, 9th week of the Popular American actress Miss Julia Daly. Monday and during the week, THE FLOWERS OF THE FOREST. Messrs J. L. Toole, P. Bedford, C. Selby, Billington, C. J. Smith, Stewart, Eburne, Romer; Miss Woolgar, K. Kelly, Mrs Billington, and Miss Laidlaw. And OUR FEMALE AMERICAN COUSIN. Miss Julia Daly. Commence at 7.

FIRST-CLASS PROTESTANT EDUCATION, at the Royal Continental Collegiate Institution, Bushey heath, Herts.—In addition to all its qualities as a first-rate classical and commercial school, it is also highly recommended for a thorough French education. Some of the parents who are continually visiting France, and whose sons have scarcely been two years at this school, are most happy to assure those parents who are desirous that their children should acquire a thorough knowledge of the French language, without wishing them to neglect their English and classical education, that their sons speak far better and more grammatically than any of the sons of their friends who have spent two or three years in schools in France merely for the purpose of acquiring that language. Terms inclusive, and vary, according to age and requirements, from £40, £50, to £60 per annum—Id est, four terms, each of 75 days' duration, with two months' holidays. Pupils are received any day, their term beginning from the day of their arrival. No restrictions to parents. Not one case of illness has occurred since the school has been established (1857).—Address, stating age and requirements, Professor Villère (late of the Harrow Preparatory School), Bushey heath, Herts. The pupils wear a uniform very elegant and becoming.

SCOTTISH WIDOWS' FUND AND LIFE ASSURANCE SOCIETY.

HEAD OFFICE—No. 9 St ANDREW SQUARE, EDINBURGH.

Established 1815.

This Society is constituted on purely Mutual principles. The Members (Policy-holders) alone form the Society, there being no Proprietary Body (Shareholders) controlling its affairs and participating in the Profits arising from the Contributions of the Members. The whole funds belong to the Assured, and the profits are divided among them alone.

These principles have found very extensive acceptance in the past operations of this Society, having been applied in such a way as to afford the amplest returns to the members, while, at the same time, careful regard has been had to the establishment and preservation of that unquestionable security, which is essential in the business of Life Assurance.

The Realised and Invested Funds at 31st December last Amounted to

Three Millions Five Hundred and Eighteen Thousand Two Hundred and Thirty Pounds,

which exceeded the whole Liabilities, and yielded a Surplus Fund of

Nine Hundred and Ninety-two Thousand Six Hundred and Three Pounds,

out of which there was reserved as a Guarantee Fund

Three Hundred and Thirty Thousand Eight Hundred and Sixty-Eight Pounds,

and the remainder of this Surplus Fund

(Less an unappropriated Balance of £11,860), amounting to

Six Hundred and Forty-Nine Thousand Eight Hundred and Sixty-Seven Pounds,

being divided among the Members according their respective rights, yielded a

Bonus of from £1 12s 6d to £3 6s per cent. per annum on the original sums assured,

besides providing a prospective Bonus upon an increased ratio for such policies as shall become claims prior to next division of Profits, all which taken together are equivalent to

An Average Bonus of £2 5s 8d per cent. per annum, one of the largest Bonuses ever declared by any office.

Viewing the Policies of the SCOTTISH WIDOWS' FUND simply as Investments for Money, a Table, attached to the Report read at the Annual General Meeting of Members held on 25th May, 1860, shows the lowest Bonus declared (on Policies newly opened) to be 58½ per cent., and the highest Bonus (on the oldest Policies) to be 111 per cent. of the Premiums paid. Thus, in the latter case, more than the whole premiums paid have been added in bonuses, the interest alone has been more than sufficient to provide the original sum assured.

For example:—

	£	s	d
A. B., aged 33, opened a Policy in 1819, for	1,000	0	0
There has been added as bonuses	1,262	1	5
Present amount of Policy	2,262	1	5
Deduct from this amount the Principal of the whole Premiums paid	1,136	0	7
The difference shows the Amount of Insurance purchased by the Interest alone	1,126	0	10

Being an improvement of Money which may challenge comparison with many other modes of investing sums of small amount, the advantage of an assured sum in the event of death at any time after the commencement of the Policy being also secured.

The Substantial Benefits accruing under the Society's System are not confined to a favoured class of Policies, but are proportionally distributed among the whole body of Assured Members.

New Entrants may safely rely on the continuance of a Scale of Bonus as ample as that which has hitherto prevailed, because, irrespective of a permanent guarantee fund, the margin of Profit in the Premiums payable, which forms the main index of any Life Assurance Society's Bonus-giving power for the future, remains wholly untouched in the additions hitherto declared.

The magnitude and select character of the Business,—the very small average of Expenses of Management,—the favourable rate of mortality and interest,—and all the other elements productive of Surplus, are therefore combined in the position and prospects of the Society, and afford inducements and guarantees to intending Assurers of the most satisfactory kind.

The Directors, in terms of the Constitution and Bye-Laws, afford to Members every facility and privilege consistent with due regard to the general interest of the Society.—In particular—

(1.) Declared Bonuses may be surrendered for present cash, or applied in reduction of future Premiums, the right to share in subsequent Divisions on the Sums remaining Assured not being thereby lost.
(2.) Surrender Value is allowed upon every discontinued Policy, although no more than One Premium has been paid.
(3.) When Policies attain the value of £50, Loans are made to Members without expense, and at a medium rate of interest, as upon first-class securities.
(4.) Members are permitted to Travel and Reside in any part of the World, either without charge, or subject to moderate extra rates of Premium suitable to the risk.
(5.) In the Settlement of Claims, the wishes and convenience of parties are carefully attended to, and the full sums due are made payable without charge in any part of the Kingdom.
(6.) Members are allowed, without any Extra Charge, to serve in Volunteer Rifle and Artillery Corps, within the United Kingdom.

Reports, Prospectuses, Forms of Proposal, and all information, will be promptly supplied from the Head office and Agencies.

June, 1860.

Illustrated Catalogues for 1860, by post for two stamps.—J. W. ALLEN, Manufacturer of Officers' Barrack Furniture and Military Outfitter (see separate catalogue), 18 and 22 Strand London

HARVEY'S FISH SAUCE.—Notice of Injunction.—The admirers of this celebrated Fish Sauce are particularly requested to observe that none is genuine but that which bears the back label with the name of William Lazenby, as well as the front label signed "Elizabeth Lazenby," and that for futher security, on the neck of every bottle of the Genuine Sauce will henceforward appear an additional label, printed in green and red, as follows:—"This notice will be affixed to Lazenby's Harvey's Sauce, prepared at the original warehouse, in addition to the well-known labels, which are protected against imitation by a perpetual injunction in Chancery of 9th July, 1858." 6 Edwards street, Portman square, London.

IMPORTANT NOTICE.
GLENFIELD PATENT STARCH is the only STARCH used in HER MAJESTY'S LAUNDRY.
And as some unprincipal Parties are now making and offering for Sale an Imitation of the GLENFIELD STARCH, we hereby caution all our Customers to be careful, when purchasing, to see that the word GLENFIELD is on each Packet, to copy which is Felony.
WOTHERSPOON and CO., Glasgow and London.

SOYER'S SULTANA SAUCE Relish, Succulante, Aromatic Mustard, &c.—These excellent preparations, of which the Lancet, in its sanitary analysation of Articles of Food, reported so favourably of their purity and wholesomeness, are to be obtained of all grocers and Italian warehousemen in the United Kingdom. They are indispensable with Fish, Meat, Game, Poultry, Hashes, Stews, and all made dishes, impart also to Chops, Steaks, and Cutlets a most delicious flavour. Wholesale, CROSSE and BLACKWELL, Purveyors to the Queen, 21 Soho quare, London.

PORTUGUESE RAILWAYS ROYAL COMPANY.

Notice is hereby given, that 8 per cent. on all shares in the above-named Company with £8 (200f) paid up, will be due for Interest and Dividend, and may be received on and after the 1st of July next:—In Paris, at the office of the Société Générale de Credit Industriel et Commercial, 66 Rue de la Chaussée d'Antin; in Lisbon, at the Company's offices; in Madrid, at the office of Mr J. de Salamanca; and in London, at the office of Messrs G. E. Ballieras and Co., 23 Philpot lane.

NEW ORLEANS, JACKSON, AND GREAT NORTHERN RAILROAD FIRST MORTGAGE CONSTRUCTION BONDS in STERLING, bearing Eight per Cent. Interest.—The Half-Yearly Dividend, due 1st July, 1860, on the under-mentioned £610 Bonds—Nos. 26 to 389, 400 to 525, 844 to 852, 983 to 1,050, 1,351 to 1,388, 2,811 to 2,815—domiciled in London, will be paid at the counting house of Messrs J. Henry Schröder and Co., 145 Leadenhall street, on Monday, 2nd proximo, and any succeeding day, between the hours of 11 and 2. The coupons, with a list in numerical order, must be left two clear days for examination. Printed forms may be had on application as above.

London, June 15th, 1860.

MERSEY DOCK ESTATE.—LOANS OF MONEY.—The Mersey Docks and Harbour Board hereby give notice, that they are willing to receive LOANS of money, on security of their bonds, at the rate of £4 5s per centum per annum interest, for terms of three, five, or seven years, at the option of the lenders. The Board will accept loans for a longer period than seven years, on such terms as may be agreed upon.

Interest warrants for the whole term, payable half-yearly at the bankers' of the Board in Liverpool, or their correspondents in London, are issued with each bond.

All offers to be addressed to George J. Jefferson, Esq., Treasurer, Dock office, Liverpool.—By order of the Board, DANIEL MASON, Secretary.

Dock office, Liverpool, May 10, 1860.

INVERNESS AND ABERDEEN JUNCTION RAILWAY.
ISSUE OF NEW SHARES.

The Inverness and Aberdeen Junction Railway Company having, under the powers of "The Inverness and Aberdeen Junction Railway Act, 1860," resolved upon issuing further Capital to the extent of £100,000, in shares of £10 each, bearing a Preference Dividend, payable Half-yearly, at the rate of 4½ per cent. per annum, the Directors are now prepared to receive applications from the public for portions of the same.

These shares represent the only stock in the Company having any preference, and the dividend on them will be paid before any dividend is paid upon the existing or ordinary shares of the Company, the whole being amply secured by a surplus income.

Applications may be made for one or more shares to the Secretary, at Inverness, or through a Broker or Agent.—By order of the Board,

AND. DOUGALL, Secretary.

Company's office, Inverness, 30th April, 1860.

THE SCINDE RAILWAY COMPANY.

Chairman.
W. P. Andrew, Esq., 26 Montague square.

Government Director.
Sir James C. Melvill, K.C.B.

The Political Economist.

THE POSITION OF THE CABINET WITH REFERENCE TO THE *PRIVILEGES* OF THE TWO HOUSES.

It is now certain that the Committee which was appointed by the House of Commons to consider and report on the rejection by the House of Lords of the Bill repealing the Excise duty on paper, have agreed to a report which does not recommend to the House any definite course. They have stated the facts, and have left the House to form their own judgment. They have placed the materials for a decision before the House, but they have not themselves suggested that decision.

Considering the constitution of that Committee, such a course was all which could well be anticipated from it. It is a very numerous Committee, as various in its composition as the House itself. It was selected to represent every section of the House truly and perfectly, and, in consequence, if an unanimous report were agreed upon, it could only be so by the omission of much of the most interesting part of the question—of most of the disputable elements in it. Upon a difficult constitutional question, so miscellaneous a Committee could only be harmonious when all the contrasted elements from which it was taken were harmonious likewise; and, in this case, that condition is not fulfilled. Serious discrepancies of opinion as to the best mode of dealing with the decision of the House of Lords undoubtedly exist. A committee of investigation cannot be in its nature a committee of resolution. The variety in its composition which fits it for the one, is the exact circumstance which unfits it for the other.

Nevertheless, the adoption of an indecisive report by the Committee appointed to search for applicable precedents is, in a political point of view, a serious misfortune. They have not attempted to guide the House of Commons; and if they have not done so, how is the House of Commons to be guided? A numerous assembly of such a character is necessarily subject to the direction of some one. It can suggest nothing; it is long before it can determine on anything. Even experienced observers are often long in doubt what its opinion is, and it is always helpless in shaping and in moulding the expression of that opinion.

The usual answer will be that the Government must suggest a course. The Cabinet, it will be said, must decide. But in the case before us there is a peculiar anomaly. The Cabinet is a Committee of *both* Houses of Parliament. The question at issue is a question of the relative constitutional powers of the two Houses. From motives and feelings, which it is easy to foresee, the members of the two Houses lean respectively in favour of the privileges of the body to which they belong. The ordinary feelings of human nature have so determined it. No one can for very many years be a distinguished member of a distinguished body, no one can take a deep and daily interest in its proceedings, no one can take a daily part for many months in severe and constant labours that are incumbent on it, no one can have his own name at home and abroad inseparably connected with it, without feeling a personal interest in its interests, a sort of personal pride in its pride. A certain *esprit de corps* is an inseparable, is in its way and in its degree a desirable, part of human nature. We must expect members of the House of Commons to lean in favour of the power of the House of Commons, and members of the House of Lords not to be indifferent to the constitutional importance of the House of Lords. If they have no bias in favour of the assembly to which they belong, they are in all likelihood either indifferent to the duties of their station, or are by nature too unsympathising to be the best actors in political affairs.

But if this be so, how, upon questions affecting the relative power of the two Houses, is a Cabinet to be united? By its very composition it contains within itself some of the most earnest, the most active, the most zealous members of either House. It contains men who for very many years have identified themselves with the greatness of the respective Houses; it contains men who for many years have had their best energies engrossed by the duties of these Houses, who have made their names celebrated throughout Europe in connection with them. It was said, and we believe correctly said, of the late Sir Robert Peel, that he was hardly happy when out of the House of Commons, except when he was thinking of something which was in some way or other connected with it. Every important Cabinet Minister shares perhaps to some extent in such a feeling. How, then, is it to be anticipated that a Cabinet should be united on a question which sets the characteristic feelings of one section of its members against the other; which excites in each the inevitable associations,—we may venture to say, the inevitable prejudices,—which each has contracted during the conscientious performance of the absorbing duties of many years?

We have no authority to speak on the particular case before us. It is for the event to show whether Lord Palmerston's Cabinet can or cannot agree in this case on any decision. But we believe that, upon principle and in general, we cannot count upon the unanimity of the Cabinet in questions that are at issue between the House of Lords and the House of Commons. If, indeed, it *is* unanimous, it is exceedingly likely to be right in its decision. If a large committee of the best members of the two Houses is unanimous on a question of their relative powers, it would have almost conclusive moral weight. But it is not likely to be unanimous. All probable anticipation is against it. We have not encountered this evil as yet in our constitutional experience, because such differences between the two Houses are happily rare events. The Cabinet is a comparatively recent institution. As we know, the Cabinet Council—the "Interior Council" it used to be called—is still utterly unknown to the written law: its very origin can be easily dated. The necessity of its unanimity is a modern necessity. For many years

after the Revolution of 1688—the time from which our substantial constitution dates its existence,—there was scarcely a vestige of it. Since the Cabinet has filled the place in practical usage which it now fills, we have had few difficult questions between the two Houses to decide. We have had none of importance comparable to that which is at issue now.

Another circumstance must be mentioned. Some of the most important members of the Cabinet—if the ordinary channels of political information be in this case correct—cannot, after what has passed, enter on the discussions of the Cabinet with unbiassed minds. They can hardly affect to be open to conviction. We do not presume to penetrate the mystery which still hangs over the deliberations of the Committee of Investigation; but some of our contemporaries have not been so respectful. If Lord Palmerston, Lord John Russell, and Mr Gladstone, have taken the part which is attributed to them in the deliberations of the Committee, we cannot suppose that their minds are not conclusively made up. At all events, their decisions have been announced. The votes of that Committee on the various reports which are said to have been brought before it will indicate the opinions of the respective members. No one of those members could concur in a different decision, either from change of conviction, or from deference to his colleagues in the Cabinet, without making an elaborate statement to the House of Commons. And no one is very willing, in such circumstances, to make such a statement.

But is this a topic on which it is necessary to exact unanimity from a Cabinet? We believe that it is not. A Cabinet is a committee of politicians associated together to guide the *permanent* affairs of the country in accordance with certain fixed *principles* in which they concur. But many cases must arise on which these principles afford no guidance. In the present case it is perfectly possible that a consistent Conservative might believe that the House of Lords had, by long disuse, practically abandoned the right of rejecting Bills which repeal taxation. On the other hand, a consistent Whig may think that there is no legal mode of distinguishing between what the House of Lords has heretofore done and that which it has now done. 'It has often, he may argue, be-'fore rejected money bills: how are we to know its reasons? 'They may have been rejected on pecuniary grounds or on 'non-pecuniary grounds: we do not know—we have no 'means of knowing. We have, it is true, certain reports 'more or less accurate of the speeches of certain Peers, but we 'have no legal cognisance of the correctness of those speeches. 'We know that they were reported and published in defiance 'of the privilege of Parliament; and, even if they are correct, 'how are we to infer the motives of the silent majority from 'the motives of a minority who chance to have spoken? The 'indisputable precedents seem to us conclusive.' We are not now saying that this view is true, nor that it is false; but it is one which an intelligent Liberal may consistently advocate. We see, therefore, that neither a Tory Cabinet nor a Whig Cabinet are necessarily unanimous on the question that is now to be decided: it is an anomalous and exceptional question, which lies apart from almost all others—which is entirely separable from the political opinions which divide our two great parties.

And not only is this question an exceptional question; it is, which is equally important, an isolated question. On all permanent questions of policy a Cabinet must be substantially agreed. On a decision of peace or war with a particular country—though not affecting permanent principles at all—though depending for its correctness or its incorrectness on the different estimate of perplexed facts—a Cabinet must be unanimous. For such a decision affects the whole policy of the Government; it affects every question of administration; it may be the principal topic of public attention for years; it may be the single subject on which the decision of the Cabinet will affect posterity. But the constitutional question which is now at issue, most important as it is, is an isolated question; it does not affect our general policy, it colours nothing else.

Upon these grounds, therefore, we believe that a constitutional question between the House of Lords and the House of Commons is not one upon which unanimity can be expected from a Cabinet; that in this case there are special reasons rendering such unanimity unlikely; that there are special reasons why it should not be exacted; that we should be content to allow leading members of the Cabinet to dissent from the decisions at which it may arrive. We may hope that an unanimous decision will be adopted. Nothing could, in such a case, be more satisfactory, if it is possible. But if it is not possible, we hope that it will not be required. We hope that an erroneous deference to a mistaken usage will not be allowed to involve us in a political perplexity.

THE DANGER MENACING ITALY.

The intelligence which reached us yesterday of the violence offered to Baron Brenier, the French Ambassador at Naples, by the Neapolitan mob, is a matter of very grave concern to the friends of Italy. There can be no doubt as to the true origin and intention of that assault. It is the act of lazzaroni, hired by the Sanfedist party in Naples, for the express purpose of bringing about French intervention in the affairs of Naples. That Louis Napoleon is anxious for a respectable excuse to interfere, we have but too good reason to know. French statesmen have for some time been *inclined* to think that the power of the Neapolitan mob is too dangerous to the party of order in Italy to render it safe to abandon the Neapolitan Government to its fate. Hitherto this predisposition for intervention on the part of France has been kept in check by the attitude of England and other causes. Will it be kept in check any longer now? By the machinations of the despotic party the life of a French Ambassador has been endangered, and the excuse so given for interference for which the Emperor has been on the watch. Other influences, we fear, will co-operate. We say it with deep regret, but we have good reason to think that the telegram which attributed to the Prince Regent of Prussia a very anti-liberal speech respecting the present state of Italy represents correctly the general attitude of the Prussian Government on that question. The influence exerted by the Baden Conference over the affairs of Italy will be anything but favourable. France will, we fear, have learned from it that no sympathy is felt by the Executive power in Prussia for Italian unity and independence, and will have been encouraged thereby to assume once more the guidance of Italian affairs with a view to French interests. That that Conference is likely to check rather than stimulate for the present any meddling with the German frontier seems now generally admitted; and if, therefore, the great Napoleonic policy of extending French influence in Europe is to be pursued with success, it must be pursued on the Italian side.

We have often pointed out the motives which will sway France in this direction. It is clear that a united and powerful Italian kingdom on her Southern frontier, allied by constitutional sympathies with the united and powerful British kingdom on her North-west frontier, would tend to diminish her present exceptional influence in Europe. Besides, a powerful Italian kingdom could not but divide with France the command of the Mediterranean, which could never then become a "French lake." In short, if the Napoleonic foreign policy for France is still the main idea in the Emperor's mind, a united Italy will present formidable obstacles to its realisation. And a united Italy is now no dream; it is, if not prevented by foreign intervention, all but a political certainty. The highest authorities in Naples inform us that, after the first engagement in Calabria, Garibaldi would have a triumphant march to Naples,—that the Government is already crumbling away, and that no power remains to offer the shadow of effective resistance. And the army of Lamoricière would not, if we may trust all we hear, long survive the army of Naples. The spirit of the Roman people is roused almost as effectually as the spirit of the Neapolitan people; and when once Garibaldi reaches Naples, it will not be long before Rome is added to the area of the reclaimed kingdom. Excepting Venetia, Italy and Sicily may soon be free and combined under one crown. The enthusiasm for annexation to Piedmont is, we believe, as deep and universal in Naples

as it is in Sicily. A year ago no one would have thought of Italian unity as anything but a dreamer's wildest dream. Now it is a prospect that can only be marred by foreign meddling.

The great question of the day for England is,—Shall this meddling be permitted? We believe it is in the power of England to prevent it. The policy of France is still undecided. The Emperor would never hazard war with England after the spectacle of English unanimity and martial preparation which last Saturday witnessed. Were a positive veto put by England on intervention,—were an English fleet sent to Naples to resist it on the first rumour of that contingency,—we do not think France would ever commit herself to that policy. But all now depends on the firmness of our English Ministers. France is aware that the Russian Government would be indifferent, if not pleased, that the Prussian Government would be glad, and the Austrian Government thankful, to see a drag put on the present movement in Italy. England alone protests, and all must depend on the vigour and tone of her protest. The fitting opportunity is come; the French Ambassador at Naples has been insulted, and a way opened, therefore, for the assertion that French interests require the interference of the French Government. Will the English Government, relying firmly on the support of the English nation, have courage to expose the true nature of the plot, and to resist any inference favourable to intervention? Will they tell France that it is the money of the despotic and not of the Liberal party which has armed the wretched lazzaroni of Naples, and impelled them to an attempt likely to bring about the long-desired assistance of France? Will they say at once that foreign meddling in Italy has failed so conspicuously in procuring anything like peace and tranquillity for the Peninsula, that they are determined to secure for Italy the chance of settling this time its own affairs? If they will do this, they will secure not only the hearty and enthusiastic support of the English nation, but the lasting gratitude of the new kingdom. And the result will doubtless be that, before many months are past, Garibaldi will have consummated his great enterprise, and, after a bloodless triumph in Naples and Rome, have surrendered to Victor Emmanuel the power which he has so heroically gained, and so nobly used.

RUSSIAN FINANCE.

It is much to be desired that the Russian Government would communicate somewhat more full information respecting their finances than the public is now possessed of. They would probably gain much by so doing. The natural advantages of the Empire are great; its social condition is improving; its industry is profitable: its commerce, notwithstanding recent speculations at St Petersburg, is sound and progressive. Russia is exempted by her imperfect civilisation from one of the principal causes which depresses the financial credit of many European States. There is no dread of a Russian revolution. The Government of the Emperor is satisfactory to the great mass of his subjects. Its despotism does not offend them: they would not comprehend a free Government: they would think it cumbrous and perplexing. They understand the rule of a single person; and if he is a tolerable person, they are thoroughly well satisfied with it. On the Continent this gives to the Russian Government very great financial advantages. It is known that funds of many nations may at any moment be immediately and greatly depressed by a political movement like that of February, 1848, in France, which no one could count upon, which it is difficult to explain after the event. Whatever other defects the Russian Government may have, it is a stable Government; it is likely to last; there is no fear that the Russian funds will be depressed 20 per cent. by an *émeute* at Moscow or St Petersburg. But the Russian Government are unwise to base their financial anticipations wholly on their political credit. They ought to show us in detail what use they are making of their immense natural gifts, and of their settled social condition. What we know seems satisfactory, but it is not a sufficient basis for a business-like confidence.

The last account which we have of the Russian revenue is the following, which relates to the year 1852, and is in many respects a remarkable one:—

		£
Imperial domains, mines, other properties and other monopolies		32,948,320
DIRECT TAXES.		
Capitation	3,172,640	
Revenue from roads	330,560	
Passports	1,200,000	
		4,703,200
INDIRECT TAXES.		
Customs	4,960,000	
Excise on beetroot sugar	72,000	
Stamps, &c.	362,000	
		5,384,000
Miscellaneous		1,040,000
		44,075,520

This may seem but a small revenue when we look at the size of the Russian Empire. It is certainly insignificant in comparison with the 72,000,000*l* which the Emperor raises from France; or the nearly equal revenue which we raise from two small islands. But if we compare the Russian revenue with almost the only other revenue in the world which is a fair standard of comparison for it, viz., that which we derive from our Indian Empire, we shall not be so much surprised at its smallness. It may still seem small, but it will not seem so *very* small as before. In 1858-1859, we only raised 36,060,788*l* from all our Indian Empire, which so much exceeds the two islands of Great Britain and Ireland in population and in size. We learn, therefore, from our own experience, not to measure the taxability of a rude, barbaric, and semi-oriental Empire, by the taxability of small and cultivated communities.

The nature of this revenue is also surprising; so large a portion of it is derived from property, and not from taxes. But in this also the experience of British India comes to our assistance. We know that the land revenue and the opium revenue in the East Indies yield about two-thirds of the entire revenue. It is in the nature of a half civilised country to be difficult to tax; it is in the nature of the Government in such a country to create monopolies and to acquire properties which give to it a vast income.

With regard to the debt, with the interest of which this revenue is charged, we have more information, but even this has not been quite accurate. It was understood that the last loan which the Russian Government had to raise was entirely "placed;" but we now learn that this is an error. The amount which the Government wished to raise was 12,000,000*l*, but they only succeeded in obtaining 7,000,000*l*. They took the rest "themselves," which is only a disguised way of saying that the public, on the terms then proposed, did not think fit to lend it to them. The best statement of the Russian debt which we can obtain is as follows. It professes to show the amount of the debt on 1st January, 1860, and is, we believe, approximatively correct, but sums less than a million of roubles are omitted in all the items.

	£
Consolidated old debt	82,560,000
— new —	56,000,000
Loan of 1859	7,000,000
Polish and Finland debt	5,760,000
	151,320,000
But to this we should add the paper money which has been issued by the Russian Government, and which is, therefore, one of its liabilities	103,200,000
	254,520,000

And we should also add whatever liabilities the Government may be under by way of guarantee to railway companies and others, though we have no means of saying what they are.

Confining, however, our attention to the direct liabilities of the Russian Government, and omitting to reckon all subsidiary liabilities by way of guarantee, or otherwise, it appears that the gross revenue of Russia is 44 millions sterling, and that her liabilities are about six times as much. So we take the revenue of British India at 36,000,000*l*, and its debt is only 97,000,000*l*.

As to the present expenditure of Russia, we have absolutely no data. We know that there have been immense changes in all parts of its administration since 1852. The charge of the debt is very much increased, and great efforts have been made to improve both the civil and the military administration doubtless at very great cost. Although, therefore, the accounts for 1852 showed a considerable surplus, we do not believe that any such can now exist.

This brief statement proves that the information which the Imperial Government has vouchsafed to us ought to be enlarged. A nation which seeks to borrow from foreign countries is peculiarly bound to furnish detailed information. At home, the progress of every country is a matter of notoriety; the circumstances which affect its finances may be guessed at; the probable future wants of the Government may at least be estimated. But abroad, capitalists are dependent on authenticated statements and distinct figures. These are the only *data* by which they can judge, and the only ones to which they will attend. General conversation as to the improvements of a country goes with them for very little; they have hardly the means of testing it, and it is not precise enough to affect their calculations. The Russian Loan just announced has not as yet been favourably received in this country; probably the limit fixed was too high; but it would have had at least a better chance of success if it had been accompanied with the usual information which all great States furnish to their creditors—if we had received likewise the balance sheet of Russia at the present time.

THE SLAVE TRADE ON THE EAST COAST OF AFRICA.

A FORTNIGHT ago we called attention to the motion, of which notice had been given by Lord Stratheden, to appoint a new Consul at Mozambique, and explained the reasons which rendered this appointment an obvious duty for an Anti-Slave Trade Government. Lord Stratheden's motion for an address to Her Majesty, that she might "be pleased to appoint a "Consul at Mozambique, with a view to promote the in- "terests of commerce and the execution of the treaties be- "tween Great Britain and Portugal on the Slave Trade," was, we are happy to say, carried, though in a very thin House, by a majority of five (11 to 6),—Lord Granville, Lord Wodehouse, and the Duke of Somerset resisting the motion in the name of the Government. Lord Stratheden had an unanswerable case, stated it unanswerably, and was ably supported by Lord Brougham and the Bishop of Oxford. The Government fairly broke down in the attempt to extemporise excuses. In fact, the arguments with which they opposed the motion were so exceedingly flimsy and inapt, that it became quite obvious that they did not put the real reason forward. The objections urged to the motion were three,—that the Slave Trade could only be prevented by encouraging the spirit of legitimate commerce among the natives in the interior of Africa,—that a sum equivalent to the cost of an English Consul at Mozambique had been spent on Dr Livingstone's expedition with that view,—and that, finally, it is of no use making further efforts to stop the supply of slaves on either coast of Africa while the demand for slaves in Cuba is so shamelessly sanctioned by the Spanish Government.

It is, we need hardly say, written on the very face of these objections, that they are not the true objections entertained by the Government to this measure. They are apologies for objecting to the appointment of a Consul, but not objections. It is said that the only means of checking the Slave Trade is to encourage the spirit of legitimate commerce among the nations in the interior of Africa, while, as every one knows, the main reason for keeping up these external checks on the Slave Trade is, that while the gains offered by the Slave-traders to the native chiefs are so much greater than any which legitimate commerce will bring them, there is no hope of the development of a legitimate commerce at all. What is the object of sound commerce but gain? And while the immediate gains of criminal commerce are far greater, how can the former be expected to supersede the latter? The objection is not only hollow, but it is known to be hollow. The House of Lords' own report in favour of the African squadron effectually disposed of it. The argument from expense is still more trivial. The cost of an English Consul at Mozambique, and even of keeping a ship of war on that station to protect him, is a mere trifle compared with what we spend every year on our African squadron,—and if the presence of an English Consul at an important station adds to the efficiency of the measures taken to suppress the Slave Trade, the Government perfectly well know that the nation is willing and eager to defray the cost. The argument that while Cuba continues to keep up the demand or slaves no check is of any use, of course points to the immediate and total cessation of our efforts to keep down the Slave Trade, and not to so feeble a conclusion as the neglect of one trivial additional precaution which would render those efforts more efficient. A weaker triad of excuses was never presented by any orator to any assembly of rational thinkers.

The true objection of the Government to the measure no doubt was, that seeing how the English Consul at Mozambique had exposed the French Slave Trade on the East Coast of Africa,—and not believing in the sincerity of the French Emperor's expressed wish to put down that traffic,—they fear that the reappointment of another Consul will again have the effect of embroiling Portugal, and therefore ourselves, with France. We must say that on every ground we protest against the unworthy character of this policy. We do not even believe it *prudent* in the narrow sense of the Government. The Emperor of the French has already shown clearly enough in the celebrated letter to his "dear cousin," that he has no wish to brave the opinion of Europe by sustaining the Slave Trade. There is no ruler who, in his foreign policy, is more anxious for the appearance of a good cause. In 1858 he deliberately abandoned this Eastern Slave Trade as a bad cause,—and it only needs the firm persistence of the English Government in bringing to light what takes place on the East Coast of Africa to induce him effectually to suppress that iniquitous commerce. If the English Government withdraw their agents,—in other words, say ostentatiously to France, 'We are going to shut our eyes, because we do not want to be 'involved in any more disputes with you,'—why of course the French Government, not being very scrupulous on its own account, will despise us and go on. But if England sets her face steadily against it, and says,—'Do this if you 'please, but it shall be known to Europe, and known by the 'reports of English agents, what you are doing,'—France will desist, and this Eastern Slave Trade, whatever happens to the Western, will be effectually checked. It is a grave and unworthy error to abandon a line of policy essentially English, which the English Government has now pursued systematically in spite of all discouragement for a very long series of years, simply in order to avoid the possibility of a collision with France. We could not in any distincter language say that we are afraid of her. If there be one international duty more than another which England has performed with spirit and fidelity, it is that of resisting this shameful traffic. Are we for the first time to desist in those efforts, to relax that fidelity, *not* from any diminished success, not from any despair of ultimately attaining our end, —but because a powerful and unscrupulous neighbour chooses to encourage in secret a traffic which he openly condemns, and because we are unwilling to incur the odium of exposing him?

LORD MALMESBURY'S LAST BLUNDER.

LORD MALMESBURY has taken much pains to show that blunders ought to be overlooked at the Foreign Office,—that a young *attaché* is none the worse for not knowing how to write his own language. In his own person he seems anxious to convince us that he does not limit his charity to inaccuracies of form, and that even a statesman who has been more than once at the head of the Foreign Office may be as inaccurate as possible in his statements concerning foreign affairs, without discredit to himself or his department. His recent *animus* in dealing with Italian politics has been so thoroughly illiberal that it becomes a duty to watch and scrutinise his errors, lest any change in the situation of English parties should again place him at the head of the Foreign Office. A more constant sympathy for the despotic Governments of Italy, and a more active dislike to Garibaldi and his great enterprise, are not, we believe, to be found in the mind of any statesman—unless it be Mr Disraeli—than in that of Lord Malmesbury.

Three weeks ago Lord Malmesbury made a statement in the House of Lords by way of apology for the Neapolitan bombardment of Palermo. The report of his statement in the *Times* was subsequently authenticated by Lord Malmesbury in a letter to the *Morning Post*, in which he says: "The *Times*, as usual, has reported quite correctly the sense "of my observations, and before I made them I had heard "from Lord Hardwicke, by whom I was sitting, and to whom "you refer me for information of an exact account of the

"whole affair." If this last obscure sentence import that Lord Hardwicke is responsible for the statement made by Lord Malmesbury, it is still more desirable that Garibaldi and the Government of Victor Emmanuel should be vindicated to the English public. Lord Malmesbury's statement was as follows:—

He could not too earnestly impress, both upon the noble and learned Lord (Lord Brougham) who had called attention to the tragical events now occurring at Palermo, and other members of their Lordships' House, how careful they ought to be as to the public expression of judgments upon Italian subjects. (Hear, hear.) When they blamed the King of Naples for the loss of life which had been caused by the bombardment of Palermo, did they not expose themselves to be answered, that at no more distant period than the year 1849 his brother Sovereign, Victor Emmanuel, bombarded Genoa, then invaded in the same manner and by the same man, Garibaldi? (Hear, hear.) God forbid that he should justify either of these acts. He only wished to impress upon their Lordships, that when, either by our diplomacy, or by rash observations made in that House, we interfered in the affairs of Italy, we exposed ourselves to very severe observations, and to difficulties of still greater importance than those observations.

Now, what were the facts of the case? First, Garibaldi was not in Genoa at all; he was at Rome at the time, and has never at any time lifted his hand against the Government of Victor Emmanuel. The rising in Genoa was the work of the Republican party led by Avezzana, and due to the defeat at Novara, which was erroneously ascribed to the treachery of the Sardinian Government. The first point of Lord Malmesbury's innendo against Garibaldi, therefore, falls to the ground; and we must ask Lord Malmesbury how he can justify such hasty assertions respecting a man whose reputation is now a matter of European consequence? Of course he believed what he said,—but it is of the first importance that eminent statesmen should not trifle with the reputation of others without having the best grounds for believing what they say.

In the second place, it is not true that the transaction in question was in any proper sense a bombardment of Genoa, or was anything that could bear comparison for a moment with the events at Palermo with which Lord Malmesbury compared it. The bombardment amounted to this. La Marmora, who had been sent down by the Government to suppress the insurrection, threw some shells at the fort which commands the entrance to the town; and when he had taken it a truce was agreed upon between the Royal forces and the Republicans. The municipality and people of Genoa never seem to have taken any cordial part with the insurgents, and in the end acted definitively against them by giving notice to Lord Hardwicke, who commanded the English ship in the bay, of the insurgents' intentions. The truce was *broken* by the Republicans, and then, the royal general, La Marmora, directed, we believe, a brisk fire for a few hours against the town: at least this is the report of Sir Archibald Alison, who professes to derive his information in some measure from Lord Hardwicke,—and of the *Annuaire Historique* for that year. This was all that occurred in the way of a bombardment, and it was directed against insurgents occupying an unwilling city,—a city apparently anxious to get rid of the restless intruders. Can any series of facts less bear out the gloss put upon them by Lord Malmesbury as justifying, by a precedent taken from the Sardinian Government itself, the recent barbarities of the Government of Naples? Lord Malmesbury is a perfectly honest bungler no doubt,—but he should take more pains to be accurate when party feeling obliges him to do what in him lies to divert public sympathy from a cause so great as that of Italian liberty.

THE BOARD OF TRADE RETURNS FOR MAY.

The Board of Trade returns for May are not marked by any very striking feature. The exports of the month show some little increase in value on the exports of the corresponding month in last year, and the exports of the five months as nearly as possible the same increase—the increase being, in fact, limited to May. The "declared values" are:—

May			Five Months ended May 31		
1858.	1859.	1860.	1858.	1859.	1860.
£	£	£	£	£	£
10,264,643	10,485,744	10,949,188	43,226,371	52,337,268	52,783,535

The change, therefore, as compared with last year, in the declared value of our exports is immaterial.

That there has been a considerable falling off in our Australian and Indian export trade our readers are aware.

One of the most remarkable of the compensating increases is to be found in the increased exports of our woollen manufactures to the Hanse Towns, especially of worsted yarn. The year of the largest previous exports of these manufactures to the Hanse Towns was 1856. And we will go back, therefore, to 1856 in order to show the start which this trade is now taking.

Declared Values of Exports of Woollen Manufactures to Hanse Towns—Five Months ended May 31.

	1856.	1857.	1858.	1859.	1860.
	£	£	£	£	£
Woollens (mixed stuffs, flannels blankets, &c.)	93,715	118,497	56,896	96,813	106,906
Worsted stuffs	221,379	239,160	187,671	368,812	460,087
Woollen and worsted yarn	627,192	493,408	421,161	470,197	901,172
	942,286	851,065	665,728	935,822	1,468,165

This trade with the Hanse Towns alone has, therefore, increased in one year to the amount of 50 per cent. on its largest amount in any previous year. Our great cotton exports, which are at least three times as valuable as our woollen exports, show no increase of this kind in the last year. Of cotton yarn the exports have, indeed, been decidedly larger,—but in cotton manufactures there is but little increase,—the depressed state of the Indian and Australian markets being the principal cause of the temporary check.

With regard to the imports, the treaty of commerce with France does not, at present, seem to have produced any considerable effect. The only remarkable increase in quantities entered for home consumption is in tea; though some of the articles sent us from France, from which the import duty has recently been taken, show a decided but not remarkable increase, as brandy and wine. As regards raw material, the quantities of cotton received for the month of May are large, and of wool small, owing to the unusually small receipts from Australia, which do not amount to more than half the ordinary month's quotum.

As regards the "computed real value" of our imports, these returns only take us up to the end of April, that is, are only made out for the first four months in the year. The value of the imports for April are not up to the mark of 1857, but for the four months they show some advance on 1857 (the year of largest imports previously known). The great increase is in tea, of which the real value is given as follows:—

April			Four Months ended April 30		
1858.	1859.	1860.	1858.	1859.	1860.
£	£	£	£	£	£
604,558	682,149	1,224,787	1,550,093	1,792,552	3,225,823

Of corn the receipts have been small this year, though we must expect them to increase largely if the present unfavourable season lasts much longer.

INDIAN FINANCE.

[Continued from the letter of May 3rd, printed in our impression of the 9th inst.]

TO THE EDITOR OF THE ECONOMIST.

Calcutta, May 13, 1860.

Sir,—In my first letter to you I adverted to the new taxes proposed by Mr Wilson, and specially to the protest published by the Madras Government against additional taxation. In the second letter I endeavoured to convey a general idea of the five cardinal points of Mr Wilson's policy—at least so far as it has been unfolded to the public—namely, first, the New Taxes; second, the Improved System of Finance; third, the Paper Currency; fourth, the Royal Indian Constabulary; and fifth, the Application of British Enterprise and Capital to the Productive Resources of India. I intimated that in succeeding letters I hoped to take up each of these several subjects in greater detail. In this, my third letter, then, I propose to advert more in detail to the first of the five points,—namely, the New Taxes.

There can be no doubt that the publication of the Madras Minutes has produced, and is still producing, an effect hostile to the Government, both among the European and the native community, in most parts of India. Fortunately this adverse influence has been felt much less at Calcutta than anywhere else. And in Calcutta the opinion of the European mercantile community continues to be as firm and patriotic as I have in previous letters described it to be. But the British Indian Association, consisting of rich Zemindars and others, continues in opposition; and the tone of the Bengalee Press

is not satisfactory. At Bombay, the European opinion never did seem to be unanimous from the first; and now there appears to be a large section of the community there who believe that the taxes are not necessary, inasmuch as the deficit might be met by reduction of military expenditure! And notwithstanding that the Madras Chamber of Commerce did at first evince the most loyal and willing spirit, and did altogether dissent from the objections raised by the Madras Government; still at Madras, also, a meeting has been held at which the opinions of the Madras Government are re-echoed; and an address is prepared, urging the Supreme Government to rely on reduced military expenditure rather than on increased taxation, and warning the authorities that it will be difficult to realise the income tax, not from Europeans, but from *natives*. So far as we can judge here, it would seem that when the meeting was resolved on, the Madras people had not received the full and ample explanation given by Mr Wilson before the Legislative Council, which explanation proved, by the most reliable figures available and by every collateral proof which could be brought to bear on the point, that military expenditure had been, and was still being, reduced to the lowest point compatible with the safety of the Empire; and that, *nevertheless*, there existed a heavy deficit, which *must* be made up by new taxes. A consideration of the facts and figures then given to the world would probably have altered the views of the Madras meeting. Again, this meeting was composed partly of Europeans and partly of natives. And the objections urged against the income tax are *purely native objections*. Surely it would have been more consistent if the Europeans had dissociated themselves from the natives, and left the latter to speak on their own account. It is certainly unusual to see European citizens taking natives by the hand in a matter of this kind, and pleading the cause of native malcontents against the British taxes. But, after the loyal and patriotic address at first received from the Madras Chamber, it is impossible to doubt that the European community at that Presidency are as willing as ever to render whatever aid may be really required by the State. The inevitable necessity of the new taxes has already been proved; and, as time goes on, proof upon proof will go on accumulating.

But it is to the North-West part of India that the public eye is chiefly turned. There is, without doubt, more or less of ferment going on in the mind of the native population up in the North. A vague expectancy has arisen, and shadowy apprehensions are floating about. There, also, the publication of the Madras Minutes has had a prejudicial effect. The swift, steady, and certain movements of the British Government in India; the calm, undoubting manner it exhibits; the unbroken front it presents,—produce a perfect fascination over the minds of the people. But just now this charm, usually so powerful, is somewhat weakened. Men who were at first quite acquiescent, now begin to murmur. And the contagion of discontent spreads rapidly. In India, too, there are always persons who, from habit, or interest, or fanaticism, or revenge, are professional mischief-makers. If they see any political fire smouldering, they blow it into a flame. If they see a flame arise, they fan it. If they see doubts in people's minds, they suggest other doubts. If they see one evil spirit arising, they conjure up other evil spirits tenfold worse. These people are, we may be sure, plying their trade all over the North-West, and probably in Central India. All sorts of lies are palmed off on the credulous natives; they are threatened with taxes which never entered into the imagination of Government; and to those taxes which are intended, a variety of unpopular attributes are assigned. All this is no more than what would be expected by those who know how the political atmosphere in India is always surcharged with electricity. And we may hope that a reaction will take place when the taxes come into play, and are found in practice to be not at all so bad as they were represented to be. In times of any difficulty or uncertainty too, India always proves to be full of political gossips and quidnuncs. Those who have not been personally acquainted with the progress of reports, would hardly believe the extent to which foolish rumours get abroad in India. The other day some question of police jurisdiction arose, and a Sikh guard at Delhi refused to give up a prisoner. Thereupon a report got abroad that a mutiny with all the usual accompaniments had occurred; and for twelve hours this tale was fully believed in Calcutta. When a mob at Peshawur went to petition their district officer about some supposed taxes (which had never in reality been thought of by Government), and some disorderly conduct ensued, it was immediately said that the Hill tribes were going to rise, and that the Dost with all his Affghan hordes would pour down upon us through the Khyber, &c., &c. The other day it was believed that Lucknow was going to be in a state of siege, and that the story of the Baillee guard would be repeated. What could be the foundation for this it would be difficult to imagine; unless it be that the commissariat in the course of business had been laying in some ordinary supplies in the citadel.

Still, after allowance and abatement has been made for all this folly, it is clear that those who will be liable to the new taxes, in Upper India especially, are anxious to know something of the intentions of Government as to the mode of assessing and collecting the duties. It has been supposed that a set of fiscal harpies would be let loose over the country to prey upon the people; or that a man would have no chance of obtaining any hearing from the English officer; or that the work of assessment would be made over to headmen of trades or guilds who might exempt their friends and overcharge their enemies; or that men who had not heretofore balanced their accounts regularly, would now have to prepare and produce balance sheets; or that account books and evidence would be required; or, in fact, that an inquisition would be held of the particulars of all transactions throughout the country. Foreseeing that such misapprehensions might arise, Mr Wilson had caused some popular expositions to be prepared; but it was impossible to translate and circulate these authoritatively, inasmuch as they touched on various points of detail, which might possibly be altered while the Bill was passing through the Legislature. The Bill has not yet advanced beyond the second reading, and three weeks or more will elapse before it finally passes into law. In the meantime, the continued prevalence of misapprehension in the minds of the people might create prejudices which would render the introduction of the taxes more difficult than it would otherwise be. It was, therefore, determined at once to circulate a brief exposition which, without at all compromising the action of the Legislature, would yet set the people's fears at rest as to the intentions of Government on certain important points. This document, among other things, contains several guarantees which will, indeed, constitute the Magna Charta of the income tax payers in India. These conditions are of consequence, and may prove of interest; therefore they will be transcribed here:—

1. The arrangements will be made through the collector or other revenue authority, to whom the people are accustomed, and with the collector will be associated other officers of proper rank and experience. There will be no new machinery.

2. Each man liable to the tax will render a return of his own income: if he cannot state it exactly, he need not give any account; it will suffice that he give an approximate estimate.

3. Any man who does not like to state his income to the Tehseeldar or other ministerial revenue officer, may give in his returns under a sealed envelope to the collector himself, or to some officer of rank specially appointed for the purpose, and may have his assessment made by such officer.

4. No man will be required to take an oath as to the amount of his income or profits.

5. The statement of income and assessment will not be read in a public office, nor made public in any way, but will be kept under seal, so that secrecy may be preserved.

6. The assessment of the tax will not be intrusted to ministerial officials who may practise corruption and vex the people; but the collector and the English officers will themselves make an estimate, after looking at the returns, according to their best judgment.

7. The books or accounts of people will not be looked at, nor will balances be struck, nor will witnesses be called, nor will questions be asked, nor will any detailed inquiry be made, nor will any affairs or transactions be exposed, nor will any trouble of this kind be given, provided that people commit no fraud, and behave fairly to the Government. If, indeed, any man shall, of his own free will, make a statement, or produce a book, or adduce evidence, then the officer will

attend to the same; but otherwise the production of such books or papers will not be demanded.

8. The collector or other English officer will, according to his own opinion, and with the information he possesses, fix each man's tax. If no objection be offered by the tax-payer, then no inquiry will be made, and the tax will be paid quietly.

9. The assessment on each man will be made by the English officer, but not by Punchayet or Chondrees, except in those places where such a plan may be more convenient to the people. In such cases, indeed, the assessment may be made by Punchayet. But even when the general assessment is made by the Punchayet of a place, any person who prefers it may have his individual assessment made separately by the English officer.

10. If any man shall desire to have his assessment settled at a fixed sum for a term of three or five years, the collector will be authorised to arrange accordingly.

11. If any *employe* or ministerial officer shall unnecessarily interfere with the private affairs of any man, or shall attempt extortion, or shall reveal any particulars stated in the returns, he will be severely punished.

These eleven conditions, if strictly carried out (as they doubtless will be), must surely prove efficacious to protect the people from any tyranny and oppression. Indeed, the safeguards are even more complete and efficient than those which prevail in England. The guarantees against inquisitorial process are, indeed, the strongest that have yet been devised in any country.

Then the people are informed further that the poorer classes will be exempt from income tax altogether; that all landholders, except the very wealthy class, will be exempted altogether; that all soldiers, European and native, will be exempted; and that all income devoted publicly to the religion of the people will be free from the tax. Thus it is hoped that the military, the landholders, and the religious classes will cease to feel any interest in the matter. And with these important classes holding aloof, it is difficult to see how the trading classes and the rich, who are being really brought under taxation for the first time, can be strong enough to offer any serious opposition. In regard to the licences, also, the people are informed that the rule will not apply to the ministers of justice or religion, or to soldiers. Then the people are reminded that the income tax is only to last for five years; and that *besides* the three taxes already announced there is no intention of levying any more imposts from the people. Thus the lieges will be relieved of their fear that these taxes formed only the commencement of a fiscal system which would gradually exhaust the country.

Lastly, the people are reminded that in time of need it has been the ancient custom of India for the King to levy special and extra imposts from the people. It has been often said that the income tax is a *new* tax, foreign to the notions and habits of the people. Doubtless the present income tax, with its complete form, its perfect provisions, founded on large European experience, may be new in form; but in the *substance* there is no novelty whatever. Every native Government has done roughly and clumsily that very thing which the British Government is now going to do with equal fairness to all parties concerned, and with every possible safeguard for just administration.—Yours truly, R. T.

Agriculture.

THE HIGH PRICE OF MEAT.

The extraordinarily high rates at which meat has recently been sold, are creating not only privation at present, but serious apprehensions for the future. In various of the manufacturing and populous districts of the country, meetings have been held by the working men for the purpose of protesting against the high price of meat, and in some instances they have passed resolutions to abstain from purchasing meat at all, so long as the prices are so high as at present. In a meeting of this sort at Paddington, it was resolved that the high price of meat does not arise from scarcity, but from the monopoly of rich provision dealers, and that a Government Commission ought to be appointed to inquire into the matter. Of course these things are only the ebullitions of discontent with the actual state of the market, for there is not a shadow of pretence of the existence of any monopoly on the part of any class of traders in provisions. The world's market is completely open to our traders, and there can be no doubt that, under the influence of present prices, no effort will be left untried to increase our supplies of meat.

But meat is an article incapable of any sudden increase; it is not easily brought from a distance, and cannot be stored up in periods of abundance to meet the demands of a time of scarcity. In all these respects it differs from corn. The experience of the last few years proves that, in the main, we must rely on our own soil for our supplies of meat. Since foreign live stock has been admitted to our markets there has been some increase of weight, and perhaps improvement in the quality, of the animals imported, The number of animals imported also is considerable, but, as compared with our total consumption, the amount of meat from this source is unimportant. Thus there were 18,900 live animals of foreign stock imported into London during the month of May last, of which 15,000 were sheep, 1,633 were beasts, 1,258 calves, 189 lambs, and 802 pigs. But then 13,300 of the sheep consisted of Merinos, bred in Germany, which came in such poor condition that the addition they made to our food supply was very slight: To a certain extent the same observation applies to the imported beasts, especially those from Spain and Portugal. But when we compare the numbers with our own produce, if the foreign animals had been, head for head, as good as our own, the aid afforded by importation would be practically unimportant, for the total number of beasts shown in the Metropolitan market during May, including the foreign, was 19,040; sheep and lambs, 124,580; calves, 2,059; and pigs, 2,950. But even this shows only a portion of the meat supplied to the metropolis, for the quantities of dead meat sent for sale in Newgate and Leadenhall markets from Scotland, Yorkshire, and the West of England are very considerable. Mr Herbert, in his paper "On the Statistics of Live Stock and Dead Meat for Consumption in the Metropolis," in the last part of the "Journal of the Royal Agricultural Society," thus states the number of carcasses so sent in 1859.—Beef, 22,000; mutton, 98,700; lamb, 34,500; veal, 3,250; and pork, 227,200. When we regard this large consumption of meat as only a portion of that going on in this country, and that in all the populous and trading districts there has been a great increase of meat consumed for several years last past, we cannot feel surprised that the price of meat has during that year been high, with a steadily advancing tendency. Meat cannot be created either so rapidly or in so large a proportion as corn can under the pressure of active demand. Coincident with this increased demand for meat, and, perhaps, arising from it, there have been changes going on in the management of live stock which have operated in the same direction. Our breeds of cattle, sheep, and pigs have all been brought to such a state of early maturity, that they come into the market at ages greatly below those of the fat stock of olden times. Sheep at 16 and 20 months old, and beasts from two to three years of age, form no inconsiderable portion of the meat supplies of the country. And the facility with which well-bred animals are fattened, induces an increased and increasing number of farmers to prefer feeding to breeding stock. Cross-breeding, too, forms the means of producing cattle and sheep for the butcher with considerable facility. So that there is, perhaps, an undue proportion of the farmers of the country who are grazing stock, as compared with those who are breeding the stock requisite for supplying the graziers. It is said, too, and we believe with truth, that the animals brought to such early maturity produce a larger proportion of fat than those which formerly were kept "in store order," that is, in a lean state for two or three years before any attempt was made to fatten them. These causes have been for some time in operation, and may be said to be permanent. Their correction is to be found in an increase of the system of breeding stock on farms throughout the country. And eventually we have no doubt this will be effected, but there are many obstacles in the way. Breeding requires more skill, patience, and capital in the management of live stock than grazing, and requires also more accommodation in the way of buildings, better drainage of the land, and various other permanent improvements on farms, which at present landowners neither effect themselves, nor permit their tenants to effect. Probably there are causes in the territorial system on which the land of this country is held which render such improvements by landowners matters of difficulty; but a practical and immediate remedy would be found in the general adoption of long and rational leases throughout our agricultural districts, under which the necessary improvements might be made by tenants. Then we should find breeding as a branch of husbandry would have an equal chance of adoption with grazing.

Besides such permanently operating causes for the present scarcity of meat as we have mentioned, there are local and temporary causes which have much effect on our markets. Last year turnips were very deficient, especially in Scotland and the North of England, and they were not abundant anywhere. The winter has been unusually long and most trying to live stock, especially to such as were not provided or were insufficiently provided with shelter; the alternations of cold and extreme wet having recurred constantly and rapidly. In April and the beginning of May the weather was dry but remarkably cold and ungenial, so that nothing grew, and at the end of a long and trying winter farmers were more distressed for provender for their stock than they have been for many years. This induced, nay, compelled them to send their grazing

stock to market in a half fat state greatly to their own loss, while the consumer suffered by anticipating in an unripe state meat which a few months later would have reached perfection. An immense sacrifice of future supplies was thus made to present necessities. Then, on the hill farms of Scotland and Northumberland, the season has proved most disastrous for the flocks, many farms having scarcely reared a lamb, and all producing far less than their usual complement, while the ewes have died in great numbers. Nor has this been confined to the hill flocks, for most farmers in exposed situations have suffered serious losses of both ewes and lambs. A strong and general opinion as to the future scarcity of stock prevails. About the 10th of May the weather became wet, and for a short time genial, and during that time a great growth of grass occurred. Then the farmers who had not been driven to part with their stock withheld everything they could from market, in order to avail themselves of the abundant pasturage which resulted from the rain. Since that time we have had far too much rain; but, on the whole, stock has not done badly, and there is every inducement to hold it on till later in the season. We believe that the present very high price of meat, which is higher than has been known for thirty years, will only be temporary; but the permanent causes we have referred to will give a tendency to high rates for meat so long as the prosperous condition of our trading and manufacturing population continues.

Literature.

UNIVERSITY EDUCATION IN ENGLAND FOR THE NATIVES OF INDIA, Considered with a View to Qualify them for the Learned Professions or the Public Service, and to Create a Class who shall Mediate between the Indian People and their English Rulers. By HODGSON PRATT, Bengal Civil Service. Ridgway.

THIS is a most opportune and able pamphlet. It is almost impossible to exaggerate the importance of gradually teaching the natives of India to govern themselves. The reason why this is so difficult, and not unfrequently almost impossible at present is, that the English do not fully understand and cannot perfectly trust their Hindoo agents and colleagues, and are therefore reluctant to co-operate with them in the more important offices of Government. In great measure this distrust is well-founded; in some degree it is not so. But whether well-founded or ill-founded the cause is the same, the entire alienation between the English and Hindoo type of character,—the broad chasm which separates them in their virtues and vices as well as in their intellectual capacities,—the complete want of community between the ruler and the subject.

Mr Pratt points this out very forcibly, and shows us clearly enough the great danger of that almost complete exclusion of the natives from Government offices of any value and consideration which is its result. How complete that exclusion is the following statement shows:—

> An English covenanted civil servant commences his career with 480*l* a year, and hardly ever terminates his period of service until he has for some years drawn an income of 3,000*l* a year. I do not believe that the Indian civil service can be kept up at its present high standard of education, social standing, character, and efficiency, at a lower rate of remuneration. But what is the scale of remuneration to natives? It has been said, with perfect truth, that a less sum than 360*l* a year will not enable a native to maintain the status and dignity of a gentleman in his own sphere. Yet throughout the province of Lower Bengal, having a population of thirty-five millions, the number of offices in which the emoluments are of this or greater amount do not, I believe, exceed *one hundred and twenty*; and in the North-West Provinces, with a population of thirty-three millions, only *thirty-one* persons receive 360*l* a year, and upwards.

Now this complete exclusion of the natives from all the more dignified offices of Government cannot of course go on without alienating them from our rule. Is it likely they should love or even long tolerate a Government which never admits any of the race of the governed into the conspicuous posts of honour and trust? All that the natives do gather from Englishmen and English literature teaches them to rate still higher the dignity and worth of political privileges. And the more highly they value them, the more bitterly do they feel the grievance of complete subordination to the administration of mere foreigners. The only way of reconciling the vast population of Hindostan to the British Government, is to make the people feel practically that it is willing and even eager to avail itself of the assistance of native capacity and integrity wherever these can be found, and anxious at once to extend the field within which they may be found.

Moreover, there is great danger that the exclusion of native co-operation and help affects the actual measures of our Government very prejudicially. Mr Pratt puts this point very forcibly:—

> The Government of an immense empire by a handful of foreigners whose home is 7,000 miles distant, alien in blood, religion, and speech, is an anomaly necessarily involving much danger, difficulty, and misgovernment. No amount of superiority in wisdom, virtue, or civilisation, can obviate the evils that arise out of such an arrangement. Rulers so placed must always be liable to fall into grievous errors and to commit cruel wrongs, simply from ignorance and misinformation.
>
> English officials in India, arduously engaged for many years in working for the benefit of the people, occupied with details of administration conceived in the most beneficent spirit, are apt to overrate the importance of what they have done, and cannot see from the point of view occupied by the masses. They forget how very differently these latter view their experiments, and how very little real progress has been effected. Their efforts being depreciated and assailed with violent and undiscriminating abuse, they are the less able to judge impartially of the real character of our rule. They may think it an exaggeration to speak of our rule in India as necessarily involving serious wrong and error. If so, let them call to mind the degraded condition of the Madras rural population produced by the land settlement of that Presidency; the wide-spread alienation of feeling produced by the treatment of the talook'dars in the North-West Provinces; the defects in the perpetual settlement of Lower Bengal; the practical denial of justice arising out of the expense and delay attending all suits in the civil courts; the objectionable mode of taking and recording evidence in our criminal courts; and the infamous state of the police. Let them remember how utterly ignorant we have always been of the real state of feeling among the population previous to the terrible outbreaks that have from time to time taken place; and how little we were aware of the grievances which led to those movements. We do not know the people and they do not know us.

The evidence given by Mr Raikes, the Judge of the Chief Court of Agra, agrees with that of every one who witnessed the troubles of 1857. He says:—"I found it to be a general rule, that where you had an official well educated at our English Colleges, and conversant with our English tongue, there you had a friend, upon whom reliance could be placed." It was well said by the *Times*, that "the sympathising natives have rescued our empire; with more of them, perhaps it would never have been jeoparded. No empire has ever been established without the admission of the conquered to high rank and office. It must be admitted that, with more natives in our confidence, and in the confidence of their own countrymen, we should have had a better chance of escaping the late calamity." An eminent missionary in Calcutta, writing to me on the subject of the scheme I am now about to put forward, says:—"We need a native aristocracy in India, both an intellectual one and one of rank; we need a class of men who will serve as "buffers" to their countrymen against the insolence of the Europeans."

The *necessity* of employing native agency more widely is as clear as the desirability. European officials willing to work in India cannot be procured in any number without enormous cost. You must pay them highly for the pains of exile, for the dangers of climate, and for the somewhat unusual and arduous education which the preparation for an Indian career renders necessary. But the great evil of our administration in India is that it has not half enough servants at its command. More must be found in some way or other. And the only servants who can be obtained on reasonable terms must be drawn from the native gentlemen of India.

Mr Pratt shows us, then, most convincingly that we are fairly lodged in this dilemma. On the one hand, native officials are not as yet either very efficient or very trustworthy colleagues for the British administrators of India. On the other hand, it is absolutely needful for the political tranquillity of the country, and for the respectability of the administration, that native officials should be constantly employed,—should be gradually introduced into positions of greater dignity and trust than heretofore,—and should be employed in far more considerable numbers. The one object, therefore, that is worth every exertion that Englishmen or Hindoos can make, is to prepare native gentlemen for positions of official trust and dignity, and especially for cordial relations with their British colleagues,—for full mutual understanding and confidence.

This is accordingly Mr Pratt's purpose in his present proposal. He aims at a very modest beginning,—such a beginning as a private and voluntary association could alone dare to contemplate,—and yet it is the first step in the right direction. He points out that the colleges established in India by the British Government for diffusing higher education and a completer knowledge of the principles and thoughts of Englishmen among the native gentry, are by no means adequate instruments for the end they contemplate. They give the Hindoos, indeed, a respectable knowledge of the superficial politics and literature of the Western world, but they entirely fail to bring them into close moral relations to Englishmen. To effect this, Mr Pratt proposes to raise a fund for the purpose of educating Hindoo gentlemen—at first only three or four—in English Universities. This and this alone would thoroughly imbue them with the knowledge of English character, and perhaps aid them to appropriate some of that frankness, courage, and self-respect, which seem to be the great shortcoming in their intercourse with Englishmen. Mr Pratt produces convincing evidence that were such means placed within the reach of the Hindoos, there are very many, at least in Lower Bengal, who would eagerly compete for the privileges thus offered. Of course in religion these gentlemen would be entirely free. No condition as to religious creed or instruction should in any way be annexed. The result might be,—often would be no doubt,—that they would adopt the Christian faith. But the very object of such an institution would be to make this a completely and absolutely voluntary proceeding, and in no way the result of influence,—direct or indirect.

We confess that we have met with no proposal so likely to further, in a modest way, the introduction of the best and deepest elements in our English civilisation into the heart of our British Empire as this. And we cordially commend the able and instructive pamphlet in which it is advocated to the careful attention of our readers.

ELKERTON RECTORY; being Part Second of "Twenty Years in the Church." By the Rev. JAMES PYCROFT, B.A. L. Booth, 307 Regent street.

THE marked success of Mr Pycroft's "Twenty Years in the Church" has induced him to complete the relation of his experiences by a full detail of the last seven of those years, upon which the Rev. Henry Austin looked back, in that work, from the sure haven of Elkerton Rectory, and which he there passes over with the brief mention that seven years had gone by since he had escaped from the privations and anxieties of a curate's life, to the dignity and comfort of a beneficed clergyman of good income.

It is a wise rule, not often transgressed among novelists, to leave off at the wedding breakfast, and to follow the fortunes of the hero and heroine no longer when the griefs and perplexities they are likely to suffer are only such as must fall to the share of every couple, however prosperous or unromantic. Something in the same way we feel that, when a poor married curate has got well through all his struggles, and attained to a snug rectory, the curtain should decently fall upon his prosperity, and that all implication of troubles to come, marring the readers' full satisfaction in the conclusion, should be carefully ignored.

If Mr Pycroft's aim had been to produce a work of fiction, or to rouse our unmixed admiration for his hero, he would have done well to abide by the old rule. The former interest of the narrative is all but gone, with the ill fortune that excited it. Of this the author seems himself to be aware, since he endeavours to raise side currents of interest in the fortunes of persons who have no direct bearing on the Austin family, and whose introduction can only have been meant as a relief to the rather monotonous course of life of a well-to-do clergyman with a large family. Mr Austin himself, too, scarcely shows to so much advantage in his new position. He has lost the vantage-ground of misfortune, and the slightly self-asserting and complaining tone, the unpastoral dislike to not a few of his flock, the spirit implied in the resolution "to be kind and accessible during the hours of duty, but beware of visiting out of your proper circle," which were excusable in a curate of small means tried by many provocations, become unpleasing peculiarities in a prosperous rector, who is, in many things, quite in the right, and all that a rector should be. Mr Pycroft, however, will probably say that he does not aim at writing a novel, or exhibiting a perfect character, but simply at painting an unvarnished picture of a country parson and his parish life; a sort of companion piece to that which he formerly drew of a curate's existence. Viewed in this light, we have no cause to complain if the Rev. Henry Austin is not absolute perfection. And if now and then he does jar upon us, as in his critiques on his new parishioners, and his admiration for the real aristocracy in contradistinction to the little country gentry round Elkington, who get no favour at his hands, we are willing to own that he has his heart in his work, and that in spite of failings he is a very fair specimen of the liberal-minded and liberally-educated clergy of the Church of England.

The truthfulness and directness of speech, the shrewd good sense, and practical way of looking at things that gave its value to "Twenty Years in the Church," are apparent in this volume also. The lesser troubles and almost ludicrous perplexities that beset a new rector on his entrance into a parish are capitally told. The advice on many pastoral matters, especially with reference to the preaching most suitable to a rustic parish, shows that Mr Pycroft has not only got a keen eye for what is wrong, but a ready will to apply the remedy, even at the expense of immediate popularity. "The days are come," he exclaims, "when they will not endure sound doctrine; so long have they been used to be humoured with a weak solution of about one part of gospel truth to nineteen parts of curious speculation.....Persons who delight in hearing of Christian privileges and of what is done for them, become really offended with any man who tells them of their duties, and what they must do for themselves. Our Lord's Sermon on the Mount, and his discourses generally, things so plain and practical about things to be done or left undone—all this would be called a mere doctrine of works and cold morality at the present day. Nearly all congregations would rebel against a gospel preacher of this uncompromising class—that is, until they were used to it."

Equally forcible and to the point are his remonstrances against the conventional effeminacy of the clergy; against the yielding to that view of their office which makes even a game of cricket "not quite the thing" for a parson; which makes a "meeting of the clergy in any city church" seem rather "to be summoned from the vaults beneath than from the parishes around, less akin to the living than to the dead;" and reduces the vital energy needed for the proper discharge of their onerous duties to the lowest ebb consistent with life.

On many other points our author is equally sagacious and outspoken. His book is, we think, calculated to do good as well as to amuse.

Foreign Correspondence.

(FROM OUR CORRESPONDENTS.)

PARIS, Thursday.

The Government, after considerable hesitation, has at last come to a conclusion on the great "rag question;" and that conclusion is set forth in the following bill, which has been presented to the Legislative Body, and which will, of course, be adopted:—

"The tariff on the export of rags is fixed as follows:—Rags of woollen fabrics,—*exempt*:—rags of flax, hemp, or cotton fabrics, pure or mixed, 12f the 100 kilogrammes; old ropes, tarred or not and old nets, 3f the 100 kilogs."

This bill is certainly a great improvement on the present prohibitive system; but, seeing that the export duty fixed on rags is very nearly 5*l* English the ton, the probability is, that for the ordinary quality of rags it will be virtually prohibitive. Be this as it may, the change will cause a great outcry among publishers, proprietors of newspapers, and other large consumers of paper.

Reports have been current for some time past, that the Government intended raising a loan of rather large amount, under the somewhat comical title of "Peace loan," to make up the deficit which the tariff reforms will occasion in the revenue, to accord advances to poor manufacturers to enable them to replace their old-fashioned and worn-out machines, to meet the changes which the annexation of Savoy and Nice throw on the country, and which turn out to be larger than expected, and to do other things. These rumours became so generally credited a day or two back, that they affected the Bourse. But the official *Moniteur* of yesterday declares them unfounded. In spite, however, of this declaration, the belief is entertained that before the end of the year the Government will have to raise a loan; and October is considered likely to be the month in which it will do so. It is, nevertheless, not easy to reconcile this belief with the fact that in the last few days the Government has caused to be passed through the Legislative Body a bill authorising the employment in works of public utility of what remains of the last loan of 500,000,000f raised for the war in Italy. Some persons say that as there is to be no loan, an extraordinary issue of Treasury bills will be inevitable; but this is contradicted on fair authority.

The Bank of France, as the ECONOMIST has stated, commenced on Monday the issue of the bonds which it has undertaken to place for railway companies, and the issue is to close on Monday next. The number of bonds is very considerable:—Orleans 200,000, and Mediterranean 275,000, each at 293f 75c; Eastern, 154,000; Southern, 100,000, and Western, 170,000 at 292f 50c; Ardennes 100,000, and Dauphiné 24,000, at 291f 25c. The sums of 93f 75c, 92f 50c, or 91f 25c are required to be paid on the bonds between the 23rd and 31st July, 100f between the 1st and 15th October, and the remaining 100f between the 1st and 15th January, 1861. Each bond is to produce 15f a-year interest, and is to be reimbursed at 500f. The applications for the bonds are represented to be very numerous. No explanation is given as to why the bonds are issued at different prices, seeing that the Government guarantees the same interest on all.

The directors of the Bank of France have paid the dividend for the first half of the present year at 68f per share. This is larger than from the depression which has prevailed in commerce had been expected. The dividend of the first half of last year was only 53f.

Counting the sums required for railways, for the loan of the city of Paris, for Algerian railways, for increasing the capital of the Discount Bank, for the share which the French may be expected to take in the Piedmontese and the Roman loans, and for other purposes, the conclusion come to is that, about 525,000,000f will altogether be required This is a large sum, but some authorities say that the country will be able to supply it without any serious difficulty.

The negotiation of the Pope's loan of 2,000,000*l* in English money has at last been authorised by the Government. An English banker in the City is taking part in the operation. The bishops are recommending the faithful to subscribe.

The newspapers announce the stoppage of a joint stock bank at Troyes, owing to the managing director having appropriated some 360,000*l* of its funds. The loss will eventually fall on the shareholders, who are no doubt, well able to pay.

One of the Paris Courts has just decided that no subscription to shares in a foreign company is binding, unless the company is sanctioned by Imperial decree in France. In consequence it held that some Frenchmen who subscribed for shares in a Belgian railway company, but repented of their bargain, could not be made to pay the calls due.

The Company of the "Magasin General des Soies" at Lyons,——a sort of silk-bonding warehouse,—which was authorised some months back, held a meeting a few days ago in that city; and received from the directors, of whom M. Arles Dufour is one, an account of the situation of affairs. The Company has only just commenced businesss, but its prospects are represented as favourable.

In my last the total value of the imports and exports of France during the last three years were given. The following is a detailed account of the *quantities* and *actual value* of the goods IMPORTED during those three years for *consumption in France* (they figure under the head of "*Special Commerce*" in French returns):—

	Quantities. 1857.	1858.	1859.	Actual value expressed in millions and hundreds of thousands francs.* 1857. m.	1858. m.	1859. m.

The following is an account of the markets:—

FLOUR.—At *Paris*, this week, the market has been calmer, and yesterday's quotations were 65f to 70f the sack of 159 kilogs for superior sorts:—four marks, 65f 50c to 66f for the present month and July; 67f to 67f 50c for July and August. These quotations, it will be seen, present a not inconsiderable decline on those of last week.

WHEAT.—Business at *Paris* was unimportant yesterday, and prices declined. The quotations were from 37f to 40f 50c the sack of 120 kilogs. In the majority of provincial markets there has been a decline.

COTTON.—The sales of the week ending Friday, at *Havre*, were 10,498 bales, and the importations 4,473. The closing prices were the same as those of the preceding week; low new Orleans being 86f, and very ordinary ditto 95f the 100 kilogs. This week, business has been animated, and prices firm. Low New Orleans yesterday was 87f.

COFFEE.—At *Havre*, in the early part of the week ending Friday, prices fell, but they rallied towards the close. The sales consisted of 325 sacks Hayti, Port-au-Prince and Jeremie, disposable at 79f to 80f the 50 kilogs in bond; 2,175 sacks Port-au-Prince, for delivery, 79f to 81f; 430 sacks Rio, not washed, disposable, 75f 50c to 77f; 125 sacks Porto Rico, 95f 50c; 160 sacks Java, 118f duty paid; and 50 sacks Ceylon fringe, 108f 50c. In addition, numerous lots of different sorts of damaged were sold by auction. The arrivals were about 8,500 sacks. This week, only 500 sacks Hayti, for delivery in September, have been sold; price 80f. At *Nantes*, last week, there were no sales, and the same has been the case this week. At *Bordeaux*, last week, little was done. Some lots of Santa Yago went part at 99f to 101f, part at prices kept secret; 320 sacks Mysore at 118f duty paid; and a small lot of Caracoli at prices kept secret. This week, some small lots of Santiago have been sold at 100f; and of Guayra at 90f. At *Marseilles*, last week, 4,000 sacks Hayti were sold at 75f the 50 kilogs in bond; 2,200 sacks Rio, 72f to 76f. Some lots of damaged were also sold.

SUGAR.—At *Havre*, the market was calm in the first part of the week, but was somewhat active in the second. 1,400 casks French West India disposable, or in the port, went at 47f 25c to 47f 50c duty paid; 350 ditto for delivery, 47f 50c; 12 ditto "usine," 56f. A lot of Santo Domingo, 46f 25c duty paid; also a quantity of damaged Havana. The arrivals were upwards of 1,700 casks and 700 sacks. This week the sales have not been large. French West India, 47f 50c to 48f; ditto "usine," 48f 50c to 49f. At *Nantes*, business was very active: 1,000 bales Reunion went at 53f the 50 kilogs; 2,434 bales and some smaller lots ditto, at 50f 50c; 3,210 bales ditto, 51f 50c; 800 ditto ditto, 54f; 304 at 46f; 2,300 at 50f 50c; 6,057 at 54f and 55f. 100 at 54f. Of Mauritius, 224 sacks "gros grain" were taken at 55f. In Mayotte, 1,500 sacks went at 48f. Of Guadeloupe, 38 casks went at 47f, 66 at 48f, and 15 at 52f 50c. Of Martinique, 25 went at 48f, and a small lot of Java was taken at 58f 50c. The arrivals were nearly 11,000 bales Reunion and 600 casks French West India. The stock is large. This week, there have been some rather large transactions: French West India, 48f; Reunion, 51f to 52f 50c. At *Bordeaux*, last week, 238 casks French West India went at 46f to 46f 25c duty paid, a rise of 25c to 50c the kilog; 8,800 bales Reunion, 51f 50c, a rise of 1f. Some French West India has been sold this week at 46f 50c.

HIDES.—At *Havre*, in the week ending Friday, 640 Buenos Ayres salted went at 85f the 50 kilogs duty paid; 200 ditto cow, 80f, 1,700 Monte Video salted, 66f; 500 Rio Grande dry, 145f; and 511 New Orleans salted, 50f. In addition by "public sale," 360 Texas salted went at 42f 50c to 46f 50c, 793 Rio-Hachs dry, 92f 50c to 94f; 6,026 Valparaiso salted, 52f 50c to 72f 50c. 577 Valparaiso dry 100f to 120f. The arrivals exceeded 7,000. The sales have been rather numerous this week: New York salted, 52f 50c; Buenos Ayres salted, 85f; Lima, 82f 50c to 85f; Valparaiso salted, 72f to 72f 50c; New Orleans salted, 50f; Rio Grande, 120f duty paid.

INDIGO.—The sales at *Havre*, in the week ending Friday, consisted of 25 cases Bengal and 7 Java, but the prices not given. There have been some sales this week, but prices are kept secret. At *Bordeaux*, last week, sales were important:—165 cases Bengal, 11 Kurpah, 32 Madras, but the quotations are not stated. Some small lots have been disposed of this week; quotations not mentioned.

WOOL.—At *Havre*, in the week ending Friday, a fair amount of business was done, and some purchases were made for Belgium. 182 bales La Plata unwashed went at 1f 85c to 2f 95c the kilogramme; 64 bales Syria unwashed at 1f 35c to 1f 40c. The arrivals exceeded 500 bales. This week, Monte Video unwashed has been at 3f; Buenos Ayres, 1f 50c to 3f 25c; Russian washed, 8f 25c.

TALLOW.—At *Havre* in the week ending Friday, no sales were made, and the arrivals were only 32 pipes. Nothing done this week. At *Paris*, yesterday, the 100 kilogs were 145f 50c—a marked rise on last week's quotations.

SPIRITS.—At *Paris*, yesterday, 3-6 of 90 degrees was at 99f to 100f the hectolitre; Montpellier of 86 degrees, 140f. At *Bordeaux*, the day before yesterday, 3-6 Languedoc was 135f, and beetroot, 108f.

ST. PETERSBURG, June 17.

The annual meeting of the Great Russian Railway Company has just been held in this city, and M. J. Pereire and other gentlemen came over from Paris to attend it. The number of shareholders present was 510, and represented 223,813 shares. The meeting was a very stormy one, and a proposition of a vote of censure on the directors was made, but not adopted. So bad was the feeling of the shareholders, that they would not even listen to an explanatory speech which M. Colignon, the resident managing director, wanted to deliver. The report presented by the directors has not yet been published; so that I am not able to give details of the financial situation of the Company.

MADRID, June 24.

At the recent meeting of the shareholders of the Spanish Credit Mobilier, the profits of 1859 were stated to be 1,605,788f, and a satisfactory account was given of the general situation of the Company. The interest and dividend were fixed at 15f per share, which is equal to 10 per cent.

COMMERCIAL AND MISCELLANEOUS NEWS.

A return of the number of bushels of malt charged with duty in the United Kingdom, from the 16th day of May, 1858, to the 15th day of May, 1859, inclusive; also, from the 16th day of May, 1859, to the 15th day of May, 1860:—

	Bushels charged with Malt Duty in the United Kingdom.
Year ended 15 May, 1859	43,494,206
Year ended 15 May, 1860	43,583,896

A return of the quantities of sugar and molasses used in brewing beer and distilling spirits for the years 1857, 1858, and 1859:—

	In the Brewing of Beer.	In the Distillation of Spirits.	
Year.	Sugar. cwts.	Sugar. cwts.	Molasses. cwts.
1857	19,720	163	6,675
1858	33,915	1,520	16,718
1859	34,521	101	40,081

A commercial report from Calcutta to the 17th May says:—The Bank of Bengal on the 3rd instant further reduced its rates one per cent. all round. Money is extremely easy, and, on approved security, can be obtained outside below the Bank's rates. The stock market has fluctuated a good deal. On the 8th instant a notification was issued from the financial department informing holders of Treasury bills that Government would be prepared to accept tenders for the funding of the said bills in the 5½ per Cent. Loan of 1859, the 5 per Cent. Loan of 1857, or the 4 per Cent. Loan of 1854-55 (subject to the terms and conditions on which those loans were respectively raised), up to the 1st June next. The total amount of Treasury bills in circulation is stated in the notification of the 10th instant at 82 lacs. Imports.—With an almost total absence of of demand, for the local inquiry has been most trifling, prices of all leading staples have experienced further decline, and some recent heavy arrivals have added greatly to already large stocks, the imports of plain cottons from England since our last being no less than 18 millions of yards, and about 2,800 bales twist, while some 250 bales shirtings and 300 bales twist have come round from Bombay. Exports.—Sugars generally very quiet during the fortnight, and prices may be quoted easier and declining in all sorts; for Europe the transactions have been very small and of little moment. Of vacuum yellows, 250 tons were taken for England at the beginning of the fortnight at previous rates, and refiners are still busy under old contracts; were they, however, to press sales, lower rates would have to be accepted. Silk—The decline in native filatures, mentioned in our last, did actually take place, and the transactions since in these sorts have been small and unimportant at the decline; in European filatures only a small parcel of the Jorsdah has been placed at 20-8 rs.

A return of the yield of the Russian gold mines of Siberia for the year 1859, gives the total quantity obtained as 1,134 poods, or about 38,556 lbs English, value say about 1,927,800*l*; being 87 poods, or about 2,958 lbs, value say 147,900*l* less than the returns of 1858.

The following is a statement of the operations of the United States Branch Mint at New Orleans, for the month of May, 1860:—

The Official Gazette of Canada contains a proclamation reducing the duty on wines of all kinds to 20 per cent. *ad valrem*; on brandy to 30 per cent. *ad valorem*; dried fruits, currants, figs, almonds, walnuts and filberts to 20 per cent. *ad valorem*. This change in the duty to take effect from the 1st June next. With regard to the Welland Canal, all vessels and goods going through or using that canal shall continue to pay the tolls at the rates charged by the existing tariff; but, of the tolls so paid, 90 per cent. shall be refunded whenever the vessel and goods that shall have so paid toll on the Welland Canal, shall enter the St Lawrence Canals, or report inwards, and enter the goods at any Canadian port on Lake Ontario or on the St Lawrence. That vessels and goods passing through the Welland Canal and entering at a Canadian port, before they shall be considered as entitled to be refunded the 90 per cent. on the Welland Canal tolls, shall make such declaration and execute such bonds as the proper Department may require, that the goods landed at such Canadian port are *bona fide* intended and landed for consumption in Canada, or to be shipped via the St Lawrence, and the owners and masters of such vessels shall otherwise conform to such regulations as may be considered necessary, and be established to prevent any evasions of the conditions upon which such 90 per cent. of the tolls is to be refunded. That vessels and cargoes passing upwards through the Welland Canal shall be treated in the same manner as vessels and goods passing downwards, that is to say: that such vessels and cargoes, if hailing from a Canadian port or which shall have come up through the St Lawrence Canal, shall be charged 10 per cent. only of the rates of toll authorised by the present tariff, upon the master of such vessel producing such evidence of his having come through the St Lawrence Canal, or of his hailing from a Canadian port, as may be required by the proper officer at the Welland Canal. It is also ordered that the regulations herein above made take effect immediately. The same Gazette contains a proclamation abolishing tolls on the following canals:—St Lawrence Canal, Rideau Canal, Carillon and Grenville Canal, and St Ann's Lock and the Burlington Bay Canal.

A very fair amount of business has been done in cotton this week both by the trade and for export. In the early part, prices continued tolerably steady, but during the last few days there has been more disposition to sell, and prices have become more irregular. We have partially reduced our quotations for American ⅛d per lb. Egyptian move languidly, and are slightly lower. Brazil are without alteration. East India less saleable. The sales to-day are 8,000 bales. The market remains heavy. The reported export amounts to 12,110 bales, consisting of 6,350 American, 120 Brazil, and 5,640 East India.

MARKETS IN THE MANUFACTURING DISTRICTS.

The accounts at hand from the markets held in the manufacturing districts this week are, on the whole, more favourable. For shipment to India, China, and the Continent, rather more business has been passing in goods at very full prices. The stocks in the warehouses have not increased. In iron less business has been transacted, and some of the furnaces have been blown out. Coals have, consequently, sold slowly at low quotations.

Manchester, June 25.—The market has been very much depressed in tone this week, especially since the receipt of the India letters. Both spinners and manufacturers appear more disposed to think lower prices inevitable, but buyers hold off, and very little business has been passing. For China and Singapore a few orders have been placed in water twist and shirtings. 7/8 printers, though lately the strongest articles in the market, have also shown weakness, and we quote a general bias, more or less indefinite, against sellers.

Bradford.—There is no change to report in wool. The market is very quiet, and prices continue firm. The new clip is slow in finding its way to this market, partly because of the high prices asked, but chiefly because of the unusual difficulties experienced by the growers in the clipping, and by the dealers in the sorting of the new wool. There is no improvement in worsted yarns, either as respects exports or home consumption. Spinners are compelled to demand higher rates—a circumstance which operates against the making of any new arrangements. There is perhaps a trifle more business doing in pieces than a fortnight ago, but still the market is very heavy. Manufacturers try, but in vain, to obtain any material advance for their goods in consideration of the increased price of yarns; the prices they do obtain hardly repays the cost of production. Looms are constantly stopped in some instances. Business might be done, if the seller would submit to old rates; but at present he is not disposed to do this. As stocks however are increasing in the manufacturers' hands, this issue seems inevitable, unless production is considerably curtailed.

Leicester.—There is a tolerable amount of business doing in some departments of the hosiery trade, but business generally is hardly as brisk as it is usually at this period of the year. At Loughborough and the adjacent country hosiery districts, trade is quiet, but future prospects are encouraging. Stocks are kept as low as possible. There is no material change in the price of yarns. The wool market is firm, at high figures.

Nottingham.—There are a few buyers in the town, and, upon the whole, there is a shade more doing in some departments of the lace trade. Plain goods are yet in request, and promise to be the chief thing in demand for some to come. There is less doing in Mechlin quiltings. The cotton fancy trade is improving, and both muslins and other cotton articles are a decidedly better sale. The home trade is yet quiet, and the changeable weather is unfavourable for light fancy goods. In the silk branch there is not much change. Rather more is doing in some choice patterns. Stocks are low, and manufacturers are mostly producing to order. In hosiery there is not much doing; most branches are quiet, and many good workmen are only partially engaged.

Leeds.—The trade in summer articles is now drawing to a close, and little has been done at the cloth halls in this description of goods beyond assorting to order.

Huddersfield.—Our market is still very quiet, and although there has been a fair attendance of buyers about the Cloth Hall and the warehouses, the amount of business done has hardly been equal to what we have been accustomed to at this, the turn of the season. Prices are about the same—if anything, a little easier.

Halifax.—The export houses are operating rather more extensively, but the home trade is flatter than it has been, there being very little doing in fancy goods, and the demand for plain goods as yet not being very great. In yarns also business is dull, and the spinners seem careless about selling at the current rates. There is very little wool changing hands, but quotations remain firm. Noils and brokes are in good demand, at higher rates.

Rochdale.—There has been a good attendance in the flannel and woollen trade, and an increase in the amount of business done. Manufacturers are stiff in their prices; and, as stocks upon the whole are low, they neither sell goods nor take orders, except at the topmost rates of last month, or a shade higher. Wools in general are fully as high as last week, unless it be some of the finer class, for which the demand is less brisk than for other kinds.

Dundee.—The demand, generally, is somewhat restricted, yet prices continue firm.

Belfast.—Our market is steady, at previous quotations.

Wolverhampton.—The preliminary meeting of the ironmasters of this district was held at the Stewponey, in Shropshire, on Thursday. There was nothing in the present position of the trade to create any difference of opinion, or give rise to discussion. The general feeling appeared to be that business was quite as good as it had been for the past few weeks, but that there was no feature to justify any advance, and a resolution in favour of an adherence to existing prices received an unanimous assent. Those prices are —bars, 7*l* 10s; hoops, 8*l* 10s; sheets, 9*l* and 9*l* 10s. The official list of prices of Staffordshire finished iron is as follows:—Common Staffordshire bars, 7*l* 10s, at the works; best bars, 8*l* 10s; sheets, 9*l*; doubles, 10*l* 10s; nail sheets, 8*l* 10s; latins, 12*l*; boiler plates, 9*l*; best and best best in proportion; common rods, 7*l* 10s; hoops, 8*l* 10s; gas strip, 8*l*; Canada plates, 12*l*; and all other sorts in proportion. It must be understood that these are the official prices. We purchase most sorts for our friends considerably under these rates. All depends upon the brand and other circumstances. Welch bars, 5*l* 10s to 5*l* 12s; rails, 5*l* 5s. Current prices of pig iron:—Staffordshire cold blast, 4*l* 7s 6d; best native hydrate pigs, 3*l* 15s to 4*l* 2s 6d; first-class all mine grey forge pigs, 3*l* 10s to 3*l* 15s; good mine pigs, with a modicum of flue cinder, 3*l* to 3*l* 5s; mine pigs, deteriorated by cinder, 2*l* 15s to 3*l* 2s 6d; grey forge cinder pig iron, 2*l* 15s to 2*l* 17s 6d; white forge cinder pigs, 2*l* 10s to 2*l* 15s; melters, Nos. 1, 2, and 3, 2*l* 17s 6d to 3*l* 2s 6d; superior makes of all mine melting iron, 3*l* 10s to 4*l*, according to make and quality. Favourite Shropshire and Forest of Dean brands, 4*l* 7s 6d.

CORN.

AMERICAN GRAIN AND FLOUR MARKETS.

New York, June 16.—Flour and Meal.—The market for State and Western flour was without important alteration on Wednesday, when there prevailed a fair demand at about previously quoted rates. A reaction subsequently took place, however and the market became dull, while prices declined about 5 cents per bbl. There prevailed a moderate inquiry yesterday, and prices further receded 5 to 10 cents per bbl. The demand was mostly from the local and Eastern trade, but a fair proportion of the transactions were for shipment. The receipts have been fair, and more than sufficed for the requirements of the trade. Sales for the three days comprise 32,000 bbls, at 10 to 15 cents below the closing rates of Tuesday last. Canada flour is dull for common at reduced prices, but firm for choice at improved rates. The sales are 1,700 bbls, including 450 bbls yesterday at 5 dols to 7.50 dols per bbl, according to quality. Southern flour has been dull and heavy, and prices have declined 15 to 25 cents per bbl, at which transactions have been on a limited scale, and confined to the wants of consumers. Export of wheat flour from the 1st to 12th June:—63,010 bbls, against 31,160 bbls in 1859.

Grain.—With continued fair receipts of wheat, together with a limited demand from the local millers, and a moderate inquiry from shippers, the market became dull and heavy immediately subsequent to the date of our last writing, and prices declined materially on all kinds. The advance in freights tended to restrict operations somewhat also, but a more active demand prevailed yesterday, at a reduction from previous rates of about 3 to 5 cents per bushel, and sales were heavy, both for consumption and shipment. The transactions for the three days present a large aggregate, comprising 250,650 bushels. The demand has been moderate for corn, and the market rules heavy, at reduced rates. The sales for the three days are 112,000 bushels, closing heavily at 70

to 76 cents for white Southern, 68 to 71 for yellow ditto, 64 to 66 for mixed ditto, 70 to 76 for round white, 69 to 71 for ditto yellow, 64 to 65 for Western mixed, and 62 to 64 for unsound. Export from 1st to 12th June :—Wheat, 223,328 bushels; corn, 463,078 bushels, against 11,560 bushels in 1859.

LONDON MARKETS.

STATE OF THE CORN TRADE FOR THE WEEK.

MARK LANE, FRIDAY EVENING.

Although only moderate supplies of home-grown wheat have been on sale in the whole of the leading markets held this week, and although the weather has continued unfavourable for bringing the crops to maturity, the demand for all kinds has ruled heavy, and, in some instances, prices have given way from 1s to 2s per quarter. In foreign wheats—the stocks of which have rather increased—very little has been passing, and the quotations have ruled almost nominal, owing to the firmness on the part of holders. There has been no movement in the barley trade. However, most of the parcels brought forward have changed hands, at late currencies. Malt has moved off slowly, on former terms. Oats have gone rather lower; but both beans and peas have been firm in price. Inferior flour has sold on easier terms.

Accounts from all parts of the country represent the crops, generally, as very backward. The early wheats are now in ear; but great apprehensions are entertained that, unless we have more favourable weather during the blooming time, the yield will be a most deficient one. Very few complaints have reached us in reference to spring corn, which, hitherto, has progressed steadily. There is a large show of both beans and peas.

The continental markets continue very firm for wheat, and large parcels have changed hands for immediate shipment to England. Flour, too, has been purchased in rather large quantities, and the transactions in all other articles have been liberal. Wheat, flour, and Indian corn have been in somewhat active request in the United States for export purposes; nevertheless, owing to the large quantities on offer, prices have shown a drooping tendency.

In Scotland, next to nothing has been passing in wheat, at barely late currencies. All kinds of spring corn, however, have moved off steadily, at very full prices. The limited stocks on hand have prevented any shipments of moment to the South.

Throughout Ireland, wheat has met a dull inquiry, and prices have ruled somewhat lower. Most other produce (except oats) has ruled steady. Very few shipments have been made to any quarter.

Although only a limited quantity of English wheat was on sale in to-day's market, the demand for all kinds ruled heavy, at 1s per quarter beneath Monday's currency. Foreign wheat was very dull, and almost nominal in price. All other kinds of produce were heavy, and the turn lower.

Mr Ed. Rainford states that 15 vessels laden with grain have arrived off coast since the 21st inst., and that less business has been passing in floating cargoes, at previous rates.

BANKING DEPARTMENT.

	£		£
Proprietors' Capital	14,553,000	Government Securities (including Dead Weight Annuity)	9 811,106
Rest	3,252,539	Other Securities	20,263,535
Public Deposits (including Exchequer, Savings Banks Commissioners of National Debt, and Dividend Accounts	9.327,313	Notes	9,285,705
Other Deposits	12,353,700	Gold and Silver Coin	781,545
Seven Day and other Bills	658,839		
	40,141,891		40,144,891

Dated the 28th June, 1860. M. MARSHALL, Chief Cashier.

THE OLD FORM.

The above Bank accounts would, if made out in the old form, present the following result:—

Liabilities.	£	Assets.	£
Circulation (including Bank post bills)	21,618,119	Securities	29,999,641
Public Deposits	9,327,313	Coin and Bullion	16,552,030
Private Deposits	12,353,700		
	43,299,132		46 551,671

The balance of Assets above Liabilities being 3,252,539*l*, as stated in the above account under the head Rest.

FRIDAY NIGHT.

The preceding accounts, compared with those of last week, exhibit—

An increase of Circulation of	£150,966
An increase of Public Deposits of	639,122
An increase of Other Deposits of	238,700
An increase of Government Securities of	50,000
An increase of Other Securities of	937,717
An increase of Bullion of	53,529
An increase of Rest of	12,458
A decrease of Reserve of	79,326

Subjoined is our usual weekly table, affording a comparative view of the Bank returns, the Bank rate of discount, the price of Consols, the price of wheat, and the leading exchanges, during a period of four years, corresponding with the present date, as well as ten years back, viz., in 1850:—

At corresponding dates with the present week	1850.	1857.	1858.	1859.	1860.
Circulation, including bank post bills	£ 20,545,632	£ 19,819.721	£ 21,191,899	£ 21,992,768	£ 21,618,119

Price of Consols	96⅞ xd	92¼ xd	95½ xd	93 xd	95⅝ xd
Average price of wheat	40s 9d	61s 6d	43s 0d	45s 3d	57s 0d
Exchange on Paris (shrt)	25 42½ 52½	25 25 30	25 2½ 10	25 7½ 12½	25 10 30
— Amsterdam ditto	12 1½ 2½	11 17 18	11 15	11 12 12½	11 14½ 15
— Hamburg (3 months)	13 11½ 12	13 8½ 8¼	13 6½ 7	13 3½ 4½	13 5 5½

At the corresponding period of the year 1850 the price of wheat was extremely low, and the quantity of money seeking employment very great; and men's minds were agitated as to the effect of the gold discoveries in California.

In 1857, it had been officially announced that 14,000 troops would be despatched at once to assist in quelling the mutiny in India. The silver remittances by the ensuing packet amounted to no less than 860,000*l*, yet a reduction in the Bank rate of discount from 6 to 5½ per cent. was coming into prospect.

In 1858, extreme stagnation prevailed in the Stock Exchange and in all speculative circles. Owing to the demand incidental at this period of the quarter, coupled with the payment of an instalment of 25 per cent. on the Brazilian Loan, the rate of discount in Lombard-street had recovered to the Bank minimum (3 per cent); and the return of that establishment showed an increase of a million and three-quarters in the "other" securities, and a decrease of a million in the reserve.

In 1859, money was rising in demand in anticipation of the instalment of the Indian Loan of 5,047,000*l*, due on the 19th of July; but the reserve of notes was very large, and the prospect of peace between France and Austria caused great buoyancy in the funds.

The amount of the "other" deposits, as compared with the "other" securities, showed, in 1850, a deficiency of 2,512,064*l*; in 1857, a deficiency of 9,803,534*l*; in 1858, a deficiency of 3,223,721*l*; and in 1859, a deficiency of 5,479,557*l*. In 1860, the deficiency is 7,909,835*l*.

The Discount and Money Market.—Money has been in active demand during the week; the rate among the discount houses has been above the minimum of the Bank. 4¼ and even 4½ has been paid on short bills, and 5 and 5½ for bills having six months to run.

The pressure for discount on the Bank of England has been very considerable during the week, and the demand has been especially heavy to-day; but the accounts from Manchester state that the market continues to be much depressed, especially since the receipt of the Indian letters. Anything like a stagnation in trade would have a peculiar influence on the money market at this moment, as the tendency is for bullion to accumulate.

The state of the weather has, however, a most depressing influence; for, although the dulness of the corn market would appear to indicate that no scarcity is to be apprehended, it is certain that large orders have gone abroad for the purchase of wheat.

Extreme caution on the part of the money dealers is the general characteristic, and is enhanced by the want of harmony between the discount houses and the Bank of England.

The Bank of England have purchased 40,000*l* of gold to-day, and 40,000*l* yesterday.

The following are the rates of discount in

	Bank rate. Per cent.	Open market. per cent.
London	4	4 to 4½
Amsterdam	3	2½
Brussels	3	3
St Petersburg	5	5 to 6
Berlin	4	4
Frankfort	2	4
Hamburg	No Bank rate	1¼
Vienna	5	4½
New York	...	4½ to 5

English Funds.—The market for English funds has been very heavy during the week, and the price of Consols has receded about ¼ per cent., viz., from 93½ to 93¼ for the opening, the closing price this afternoon being 93¼ buyers. The principal cause has been the state of the weather, and sales of New 3 per Cents. and Reduced, supposed to be Savings Bank stock on account of Government. There is a rumour also that the Equitable Insurance Company has been selling stock.

For the last two days, however, these sales have ceased on the part of the Government broker, who, on the contrary, has been a purchaser of Reduced 3 per Cents. on account of the Ecclesiastical Commissioners. A limited demand has arisen also on account of the public. The general opinion is, that were the weather to clear up, the demand on the part of the public would increase.

Exchequer Bills have been sold as low as 2s discount; but the market is very limited for these Securities, and they are to-day quoted at par to 3s pm.

The rate of money in the Stock Exchange on Government Securities is from 4 to 4¼ per cent., the dealers being able to supply themselves during the shutting from the Bank of England at 4 per cent.

Foreign Funds.—Subscriptions for a new Russian Loan of 8,000,000*l* sterling in a 4½ per cent. stock have been invited by Messrs Barings, of London, and Hope and Co., of Amsterdam. The dividends to be payable half-yearly on the 1st June and 1st December, commencing from 1st June, 1860. There is to be a sinking fund of 1½ per cent. by annual drawings of 120,000*l* sterling.

All the bonds will thus be repaid at par, and they bear interest, in favour of subscribers, from 1st June, 1860.

The subscription price is 92 per cent., say at the rate of 92*l* sterling for every 100*l* stock in London; or in Amsterdam at the rate of 90 per cent. at the exchange of 12 florins per 1*l* sterling.

The payments in London will be as follows:—

£			
10	per cent.	must be paid	two days after allotment, to Messrs Martin and Co., Lombard street.
15	—	—	on 16th July.
10	—	—	on 15th August.
10	—	—	on 17th September.
15	—	—	on 15th October.
10	—	—	on 15th November.
22	—	—	on 17th December.
92	per cent.		

The half-yearly dividend due 1st December may be deducted from the final payment.

The failure to pay all the instalments regularly forfeits all previous payments.

Subscribers may pay up all or any of these instalments under discount of the respective maturities, at the rate of 3 per cent. per annum. Scrip receipts will be delivered with as little delay as possible, on the production of the banker's receipts of payment of the instalment, and the bonds will be issued with the least possible delay.

No applications for this loan will be received after two o'clock, p.m., on Saturday, the 30th June.

London, June 23, 1860.

The discount on paying the instalments amounts to 13s 1d, which reduces the price to between 91¼ and ⅜, consequently the bonds will at 91⅜ yield interest at the rate of 4*l* 18s 6d per cent. The general opinion in the Stock Exchange is that this loan will not be taken up by the public. The price at which it has been brought out is generally considered as too high, and not giving sufficient margin for the risk, and we may add loss incurred by all those who have subscribed for foreign loans of late years. We instance the Austrinn, Turkish, and Brazilian, and also the Russian 3 per Cent. Loan.

The Committee of the Stock Exchange have had under their consideration a circumstance which has transpired on the introduction of the new Russian Loan, viz., that 5,000,000*l* of the late 3 per Cent. Loan were left on the hands of the Russian Government, and not subscribed for, when the Committee were assured by the agents for the 3 per Cent. Loan, on the authority of the Russian Government, that all the stock was taken up. This circumstance, although the Committee will take no action on it, has tended to throw a damp on subscriptions for the new loan.

The nominal quotation for the new loan is par to ½ prem. The Russian 3 per Cents. are flat at 63½ to 4.

The Committee of Mexican Bondholders have received advices from Mr G. S. Whitehead, dated Mexico, the 29th ult., stating that he had received bills on Mexico for 30,677.74 dols from the agents in Vera Cruz, making the deposit in Mexico 758,412.96 dols; and the packet also brings a remittance of 3,533.36 dols from Tampico for the dividend fund here. The news through the United States of the Constitutional General Uraga having been defeated, wounded, and captured by the Conservative General Woll, on the 25th ult., at Tepatilla, twenty leagues from Guadalajara, is confirmed, so far as that a bulletin to that effect was published in the capital on the 29th, but from some discrepancy in the dates it was thought to require further confirmation. The chairman has had a letter from Mr C. Whitehead, dated New York, the 11th instant, reporting that in Washington he had had an interview with the President, by whom he was very kindly received, and that the result of his visit in obtaining and making friends in the United States promised to be of future advantage to the bondholders. Mr Whitehead will be in Vera Cruz before the end of the month.

Mexican Bonds, have fallen in consequence of the defeat of Urago.

Turkish Bonds have been well supported during the week.

No other stocks present any particular feature.

The New Five per Cent. Sardinian Loan for 6,000,000*l* sterling, is expected to be offered at Turin for public subscription early in July at 80,—the instalments on which will be 10 per cent. monthly.

The foreign settlement took place to-day. The rate of money paid to continue stock has been from 5 to 6 per cent., according to the nature of the securities.

French 3 per Cents. closed to-day at 68·55.

Subjoined is our usual list of the highest and lowest prices of Consols every day, and the closing prices of the principal English and foreign stocks last Friday and this day:—

RAILWAY MARKET.—The principal feature in the railway market has been a considerable fall in the Grand Trunk of Canada Shares in consequence of the non-payment of interest on any of their Preference Bonds, with the exception of the first, which will be paid, as usual, on the 2d of July.

The price of the shares which were last week at 31, have fallen to 25½, but have since rallied, and close this afternoon at 27½ ¾.

The railway market has, generally speaking, been inactive, and rather heavy. The rate of continuation paid for carrying over stock has been about 5 per cent.

Subjoined is our usual list of the closing prices of the principal railway shares last Friday and this day:—

RAILWAYS.

	Closing prices last Friday.	Closing prices this day.

BULLION.—The following ships with bullion have arrived during the week:—

	Amount. £
The Plata, from West Indies and Pacific	226,400
Southampton, Australia	77,000
Marco Polo, Australia	51,000
Owen Glendower, Australia	93,000
Venetia, Australia	76,000
Dream, Australia	26,900
Vanderbilt, New York	171,316
City of Baltimore	22,000
Saxonia	55,570

The following vessels are daily expected:—

	£
The Prince of Wales	145,000
Maid of Judah	122,000
Eagle	145,000
Kent	236,000
Guatemala, Central America	6,000
Lima, South America	64,000

A small portion of the gold by the Vanderbilt has been taken for the Continent, besides nearly the whole of the 77,000*l* from Australia by the Southampton. Of the 225,000*l* by the West India steamer La Plata, 117,000*l* is in gold, and 108,000*l* in silver.

In consequence of the loss of the Malabar, the shipments of silver to China by the next mail are expected to be unusually heavy. The specie in the Malabar, amounting to 282,000*l*, will, it is feared, not be recovered before the end of the monsoon.

The imports and exports of the precious metals in the first five months of the present year have been:—

	Imports. £	Exports. £
Gold	4,422,778	4,104,135
Silver	4,415,732	5,367,680
	8,838,510	9,471,815

Corresponding period in 1859 :—

Imports.	Exports.
£	£
14,550,201	15,506,581

A return of the Russian gold mines for 1858 and 1859 gives the following results:—

	lbs	Value. £
1859	38,556	1,927,800
1858	41,514	2,075,700

Accounts from Tampico of the 4th announce the arrival at that port of 200,000*l* in specie for England.

Messrs Pixley, Abell, and Langley's Circular gives the following particulars in regard to bullion, the exchanges on India, and Indian Government paper :—

Gold.—Since the date of our last circular (21st inst.) we have several arrivals of gold to report. The particulars are as follows :—The Glasgow, from New York, with 83,000*l*; the Arabia, from Boston, with 80,000*l*; the Vanderbilt, from New York, with 171,000*l*; the City of Baltimore, from New York, with 22,000*l*; the Southampton, from Melbourne, with 77,000*l*; the Owen Glendower, from Melbourne, with 90,000*l*; the Marco Polo, from Melbourne, with 50,000*l*; the Venilia, from Melbourne, with 76,000*l*; the Dream, from Melbourne, with 26,000*l*; and the La Plata, from the West Indies, with 117,000*l*; making a total of 792,000*l*. Of this amount about 80,000*l* has been sent into the Bank, about 551,000*l* has been purchased for refining or export, and about 161,000*l* remains to be dealt with. The demand for gold not being very good, it is not unlikely that further sums may be taken to the Bank. The last steamer for Bombay took about 20,000*l* in gold.

Silver.—The Sultan has brought about 3,300*l* from the Peninsula, and the La Plata about 108,000*l* from the West Indies ; this last amount, however, will not be deliverable for some days. In the meantime the market is tolerably firm, at 61⅜d per oz standard, several orders having been given for the outgoing mail to India and China of the 2d of July.

Mexican Dollars.—The dollars left on the market have been sold for the next mail to China, at 62⅜d per oz. The La Plata has some on board, but they will not be delivered for some days yet. Several amounts are expected by way of New York, a large sum having arrived at Tampico from Mexico, which, it was expected, would be sent forward to New York. The Saxonia has brought 55,000*l* from New York.

Exchange on India is weak, at our last quotations—1s 11⅞d to 2s 0⅛d for 60 days' sight Bank drafts on Calcutta ; and 2s to 2s 0⅛d for the same on Bombay. Bills with documents, 1s 11⅛d to 1s 11⅜d.

India Government Loan Notes are very depressed, and quotations are quite nominal, at 102 for 5½ per Cents., and 97 for 5 per Cents.

Quotations for Bullion.—Gold—Bar gold, 77s 9d per oz std ; bar gold, refinable, 78s per oz std ; Spanish doubloons, 76s 6d per oz, last price ; South American doubloons, 73s 9d to 74s per oz, last price ; United States gold coin, 76s 2¾d per oz, last price. Silver—Bar silver, 5s 1⅞d per oz std ; bar silver, containing 5 grs of gold, 5s 2d per oz std ; fine cake silver, 5s 6⅜d per oz ; Mexican dollars, 5s 2⅜d per oz, last price ; Spanish dollars (Carolus), 6s 2d per oz, last price; five-franc pieces, 4s 11⅝d to 4s 11¾d per oz, last price.

Miscellaneous.—The Directors of the Eastern Bengal Railway Company have given notice that they have made a second call of 5*l* per share, the first instalment of 2*l* 10s per share of which is to be paid to Messrs Payne and Smiths, bankers, No. 1 Lombard street, on or before the 20th proximo, and the remainder on or before the 20th October next.

Mr Hewett, who succeeds Mr Pollard as manager of the London Joint Stock Bank, assumes his duties on the 1st of July next.

The South Australian Land Company held a meeting and declared a dividend of 7 per cent. for the year, payable 14th of July and 15th of January next. The usual estimate of the value of the Company's property on the 31st December last gives :—

	£	s	d
Town lands and buildings	75,880	0	0
Country lands and buildings	238,691	0	0
Port lands and buildings, including the warehouses	49,519	0	0
Mineral lands	35,644	0	0
Wharf, &c., including the expense of the new wharf	52,223	0	0
Kanmantoo Mine, buildings and stores, steam dredge, pile driver, goods in store, horses, &c.	4,537	0	0
	456,394	0	0

From this statement it appears that the value of the property has increased 13,568*l* since the last annual report. The whole of the property leased on the 31st of December last was 67,568¼ acres, leaving 6,204¼ acres still unlet. After deducting the sales during the past year, 73,772¾ acres are left in possession of the Company. The rent rolls made up to the 25th December, 1859, show the gross annual rental to be :—

	£	s	d
From country lands	17,518	15	3
Town land and buildings	4,411	7	6
Port land and buildings	3,368	16	0
Mineral land, including 102*l* 14s 10d received as royalty from the mine	1,467	2	10
	26,766	1	7

The net income is 28,557*l* 2s, from which a dividend is declared of 35s per share. This, with the year's interest on the debenture bonds, will amount to 25,817*l* 10s, and will leave a balance of 2,739*l* 12s.

A general court of the East India Company is convened for the 29th inst., "to consider the provisions of a Bill for the future management of the affairs of the East India Company, proposed to be introduced into Parliament by the Secretary of State for India.

The liabilities of the Eastern Steam Navigation Company have been discharged, leaving a surplus of 79*l*.

Since the issue of the notice of the 5th instant, stating that the Australian mail packets from Point de Galle would thenceforth proceed no further than Melbourne, and would land at that port the mails for New South Wales and New Zealand, arrangements have been made with the Peninsular and Oriental Steam Navigation Company for those packets to continue their voyage to Sydney ; to which point, therefore, the mails for New South Wales and New Zealand will continue to be carried.

A further return of 5*l* per share has been made by the liquidators of the North of Europe Steam Company, preparatory to the meeting of shareholders on Tuesday next.

The dividend is advertised on the 5 per Cent. Canadian Consolidated Stock, payable by Messrs Glyn and Co. and Baring and Co., on and after the 2d proximo.

Messrs D. Bell, Son, and Co. state :—There is nothing new to report in the market for American Securities. The various State Stocks are well held for investment, and if the demand at present for them is not active, the amount offering for sale is very small, which will account for the great steadiness in prices. In railroad bonds and shares the business during the past week has been very limited, and quotations are generally lower.

Messrs E. F. Satterthwaite report that advices from Boston record that a decree of sale of the Erie road, under the fifth mortgage, had been granted ; it appears that a movement is making by some parties to obtain payment in full of the second mortgage bonds before sale is made. In this, we are advised, they are not likely to succeed, as the trustees for the second mortgage have assented to the decree of sale under the fifth. The rights of the second mortgage bondholder have been recognised in all the legal proceedings which have taken place, and it is intended, after the reorganisation, to make some definite arrangement, so that the difficulty of having a due mortgage unpaid shall not exist. There can be no real trouble about it, as the market price stands at 95 to 96, and it is known that the majority of the bondholders would prefer a renewal, especially if a small bonus were given, or sinking fund provided, so as to guard against the possibility of future trouble at date of redemption. The traffic returns show an increase for May on the New York Central of 124,702 dols.

The Canada Company, at the general meeting held to-day, declared a dividend of 4*l* per share, payable 10th July next.

At the twenty-third annual meeting of the National Mercantile Life Assurance Society, it was stated that the business effected during the past year amounted to 253,996*l*, the annual premiums thereon being 7,898*l*. The assets were stated at 330,006*l*, exhibiting an increase during the year of 33,668*l*.

At a meeting of the General Mining Association of Nova Scotia, it was stated that the operations were satisfactory, the sales and shipments of coal having been 265,000 tons, or 36,000 more than in 1858. The net profit, including the balance from the last account, amounted to 39,243*l*, out of which a dividend of 15s per share has been paid, and another also of 15s will be payable next month.

A petition was filed in the Bankruptcy Court at Birmingham yesterday, against Mr John Lord, merchant, of that town. The liabilities amount to about 21,000*l*; the

assets are said to be under 3,000*l*. Messrs Beale and Marigold filed the petition.

The only new Companies which have been brought out during the week are the Cheshire Patent Salt Company, with a capital of 30,000*l*, in 15,000 shares of 2*l* each, and the Bahia Gas Company, with a capital of 100,000*l*, in 5,000 shares of 20*l* each.

COMPARATIVE EXCHANGES.

The quotation of gold at Paris is about at par, and the short exchange on London is 25.12½ per 1*l* sterling. On comparing these rates with the English Mint price of 3*l* 17s 10½d per ounce for standard gold, it appears that gold is about 2-10ths per cent. dearer in Paris than in London.

By advices from Hamburg the price of gold is 423 per mark, and the short exchange on London is 13.3⅝ per 1*l* sterling. Standard gold at the English Mint price is, therefore, nearly 3-10ths per cent. dearer in Hamburg than in London.

The course of exchange at New York on London for bills at 60 days' sight is 109¾ to 109¾ per cent., which, when compared with the Mint par between the two countries, shows that the exchange is slightly in favour of England; but, after making allowance for charges of transport and difference of interest, the present rate leaves scarcely any profit on the importation of gold from the United States.

Imports of the week ..... 230,726 qrs.

COMMERCIAL EPITOME.

FRIDAY NIGHT.

Notwithstanding the continuance of unfavourable weather, and that only a limited supply of home-grown produce was on sale at Mark lane to-day, the demand for wheat was in a most inactive state, at a decline in the quotations, compared with Monday, of fully 1s per quarter, and most of the samples were disposed of for consumption in Yorkshire. All kinds of spring corn were very dull, at barely late rates. In flour, next to nothing was doing. This week's imports are 12,740 quarters of wheat; 4,390 barley; 36,770 oats; 3,650 sacks and 5,070 barrels of flour.

At Liverpool, this morning, there was a moderate inquiry for grain and flour, at full quotations.

Messrs Briggs and Co., of Alexandria, thus report the state of the grain trade to the 19th inst.:—

After the despatch of our last report, prices both of wheat and beans continued to recede, but during the latter part of the week they have again shown a tendency towards higher rates. Receipts of Indian corn are dwindling down, and becoming altogether insignificant. Barley unchanged. Some further contracts for Saide wheat deliverable in Sep-

tember and October next have been entered into, to the extent of 6,000 ardebs at T. P. 85 per ardeb, equal at the present rate of exchange, to about 33s 4d per quarter f.o.b. The following are the sales of the week, with present quotations free on board:—Wheat, Saide, 3,800 qrs, 36s; ditto, Behera, 3,070 qrs, 32s to 33s 3d; beans, Saide, 2,700 qrs, 26s to 26s 6d; qrs, Behera, 6,490 qrs, 25s to 25s 8d; barley, 2,410 qrs, 18s to 18s 8d; Indian corn, 390 qrs, 26s 6d to 27s 6d; lentils, 75 qrs, 25s 7d per quarter. Freights—Owing to the excessive scarcity of shipping, and the increasing arrivals of produce from the interior, freights are very firm at the following rates, viz.:—Grain by sailing vessel to a direct port of the United Kingdom, 4s 6d; by steamer to Liverpool, 4s; beans to the United Kingdom for orders, 5s 3d nominal. For small vessels, namely, such as carry less than 2,500 to 3,000 quarters fuller rates are demanded.

There has been a rather improved demand in the Liverpool cotton market during the week, the total sales amounting to 64,000 bales, of which the trade have taken 45,000 bales, speculators 7,000 bales, and exporters 12,000 bales. There is no change in quotations for the week, but still feeble holders are here and there found who accept lower rates than those prevailing last week, in order to effect sales. The market to-day closes quiet, with sales of 8,000 bales, without change, but still an abundance of cotton offering. The Liverpool stock this week shows again a larger cipher.

The following report of the cotton market at Alexandria, and dated the 18th inst., has been forwarded by Messrs Briggs and Co.:—

There is a persistent inquiry for cotton of good staple, which cannot however be met, as the small quantity yet remaining in the country is of a low description. The sales since the 12th have been 610 bales very low to good middling, from 5.66d to 8.54d per lb f.o.b. Freights by steamers remain at ¼d per lb in full, with very little offering; for sailing ships there is no quotation. Exchange opened at 97 piastres par £ sterling, and closes weakly at 96½ piastres. Export of cotton in bales from 1st to 16th June, 1860:—Great Britain, 1,935; France, 760; Austria, 51; total, 2,746.

The public sales of tea held since our last have gone off slowly. In the value of China teas no change of importance has taken place; but Assam qualities have advanced 1d to 1½d per lb.

We have received the annexed advices from Hong Kong, in reference to the state of the tea and silk markets in China, to the 7th ult.:—

Tea—During the fortnight not a single transaction has taken place. The new Tayshan teas had begun to arrive, and one sample of congou and four of scented kinds were in the market, but none represented a parcel on the spot. They are of inferior make, and mixed with old and spurious leaf, and 33 to 34 taels asked for qualities similar to those sold last year at 26 to 27 taels. Macao.—About 1,000 piculs new Tayshan teas have arrived, and further supplies are expected. Foochow advices are to the 28th of April. Tea—No arrivals have taken place. Settlements for the fortnight amount to only 1,100 chests of congou for England at 14 taels for common to 21 taels for medium. Stock, 2,000 chests of low ordinary to good common, of which only a few hundred chests are of merchantable quality. Shanghai advices are to the 28th of April. Silk—During the fortnight 3,500 bales have been settled. Prices have somewhat fluctuated. Common and medium Taatlees at one time declined 10 taels. Closing prices, however, were firm at last quotations, viz., Taatlee, No. 1-2, none; ditto, No. 3, 390 to 395 taels; ditto, No. 4, 370 to 375 taels; ditto, inferior, 340 to 360 taels; Taysaam, No. 1-2, none; ditto, No. 3, 330 taels; ditto, No. 4, 315 taels; ditto, inferior, 300 to 310 taels. Total export of silk from China to Europe is 62,752 bales, against 73,008 bales, or a decrease for the season of 10,256 bales. Tea—The business done during the fortnight had been very trifling, and prices of black had declined ½ to 1 tael. Green—Quotations remain as before. Settlements are as follows, viz.: Congou, Ningchow, 200 chests common and fair, at 25¾ to 27 taels; Shanghai, packed and rubbish, 500 chests, at 14 to 17 taels; pekoe, 250 chests, at 30 to 40 taels. Greens, 2,200 half-chests, including 500 packages from Japan, and principally for the United States. Stocks—Black, 5,000 chests against 11,000 chests last year; green, 4,000 half-chests, against 8,000 half-chests last year. The Invincible and Beverley were on the berth for London at 2*l* to 2*l* 5*s*. No departures. Total export of tea from China to Great Britain is 75,043,200 lbs, against, the same time last year, 55,032,600 lbs, or an increase for this season of 20,010,600 lbs. To the United States the export is 30,414,900 lbs, against 27,491,300 lbs last year, or an increase for 1859-60 of 2,923,600 lbs, including the cargo of the Intrepid, for New York, which vessel has been lost.

We have no quotable change to notice in the value of any kind of raw sugar. Good and fine parcels have sold steadily, other kinds slowly; and refined goods have supported previous rates.

Messrs Schmidt and Stern, writing from the Havana to the 9th inst., observe:—

Our prices of sugar during the first fortnight, in face of advancing freights and declining exchange, declined ½r, but in consequence of favourable advices from the United States this decline has recovered, and the market has been pretty active on the basis of 8½ rs for strong quality No. 12. Dull accounts from Europe since yesterday have checked the briskness of our market, but prices are fully maintained. Our quotations are as follows:—Brown, No. 7 to 10, 21s 4d to 23s 8d; yellow, No. 11 to 12, 24s 3d to 24s 10d; yellow, No. 13 to 14, 25s 5d to 26s; yellow, No. 15 to 17, 26s 7d to 27s 9d; yellow, No. 18 to 20, 28s 4d to 30s 8d; white, low to prime, 31s 8d to 35s 4d per cwt at the exchange of 13½ per cent. pm. f.o.b. For good strong quality; damp and soft at ½r less. Stocks between here and Matanzas (hhds sugar included) amount to about 350,000 boxes, against 405,000 boxes last year. The exports from both ports since the 8th ult. are as follows:—87,557 boxes to the United States, 88,747 boxes to Cowes and Falmouth, 6,641 boxes to Great Britain direct, 6,908 boxes to Hamburg and Bremen, Belgium and Holland, 9,754 boxes to France, 12,292 boxes to Spain, 5,247 boxes to Central America—total, 217,185 boxes; and the total exports since the 1st of January up to date amount to 675,194 boxes, against 656,070 boxes last year.

Only limited supplies of coffee have been brought forward, and the whole of them have changed hands, on former terms.

Messrs Volkart and Co., of Ceylon, thus report the state of the coffee trade to the 24th ult.:—

The weather having continued favourable to the 20th instant, our shipments during the fortnight have been considerable: the exports of coffee to date stand thus:—

PLANTATION COFFEE.

To Great Britain .....cwts	295,546	against last year, cwts		274,485
Foreign Ports	30,391	—	—	31,820
Australia and India.....	6,499	—	—	4,823
	332,436			311,128

NATIVE COFFEE.

To Great Britain.....cwts	68,702	against last year, cwts		51,515
Foreign Ports.....	67,269	—	—	109,578
Australia and India.....	2,035	—	—	4,508
	138,006			165,601

We have scarcely anything to report of native coffee, a very few parcels only having been taken at about previous quotations, in most cases to complete the stowage of ships. There has been but one transaction in plantation coffee in parchment since our last. The South-west monsoon rains, so much needed, have at length fallen, and removed any fears that may have been entertained for the safety of many plantation crops, but the native gardens have suffered serious injury. Freights—A liberal supply of tonnage, added to the anxiety of agents to give ships despatch before heavy weather set in, caused a considerable decline in our rates, to the extent of nearly 2*l* for coffee in casks. Plantation coffee, low, 11s 3d; ditto, mountain, 11s 6d to 11s 9d per bhl. Native coffee, unpicked, 42s 6d; ditto, picked and dried, 45s 6d per cwt.

The rice market has been very inactive, owing to the heaviness in the corn trade, and previous rates have been with difficulty supported.

The demand for all kinds of wool in London this week has been very inactive at about previous rates. Public sales commenced at Liverpool on Wednesday. "The attendance of home buyers," observes Messrs Ronald and Son, "was very good, but there was not the usual number from the Continent. The East India were competed for with considerable spirit, and we consider prices on the average about the same as in April last. The other wools being of a miscellaneous character did not command the same attention, and were consequently to some extent withdrawn."

Scarcely any change has taken place in the value of rum, brandy, saltpetre, or hemp, in which articles the transactions have been limited.

Scotch pig iron has been in improved request at 50s 3d to 50s 6d cash. Tin is steady. The Dutch Trading Company's sale of 151,513 slabs Banca is reported to have gone at 79½fl, equal to about 137*l* 10s per ton laid down here.

Most kinds of oil have maintained their previous value, and linseed qualities are worth 28*l* 15s per ton on the spot.

Tallow continues very firm at 52s 9d to 53s in all positions.

"There is little of interest transpiring in the dry goods market," observes the New York *Shipping List* of the 16th inst. "The demand for domestic cotton goods, for export, continues uninterrupted, and the market is buoyant at full prices. The market for woollen goods is of a somewhat unsatisfactory nature, the demand being very light, while prices are merely nominal for most descriptions. Foreign goods are steady for desirable makes and styles, but other descriptions continue dull of sale, while prices are nominal. If ever money was a 'drug in the market,' such has it been most emphatically during the past week. We hear of some choice sixty day acceptances having been done as low as 4½ per cent., and six months' paper on a first-class firm at but a ½ per cent. higher. There is very little employment for capital in any direction for the moment, and until we get pretty well on towards August, lenders will have to go a begging. There is certainly nothing in the present course of general trade, either here or elsewhere, to warrant any other conclusion. We quote:—Loans on call, stock securities, 4½ to 5 per cent. per annum; ditto, other good securities, 5 to 6; prime endorsed bills, 60 to 90 days, 4½ to 5; ditto ditto, 4 to 6 months, 5 to 6; first-class single signatures, 5½ to 6; other good bills, 6 to 7½; names less known, 8 to 9."

COLONIAL AND FOREIGN PRODUCE MARKETS

TRANSACTIONS OF THE WEEK.

FOR REPORT OF THIS DAY'S MARKETS, SEE "POSTSCRIPT."

MINCING LANE, FRIDAY MORNING.

SUGAR.—There has been less animation in the demand, notwithstanding the limited supplies brought forward. Last week's value is barely sustained for some of the native Madras and soft East India submitted in the sales, otherwise quotations remain firm. Floating cargoes of foreign cannot be obtained on former terms. The transactions in West India to yesterday were considerable, reaching 2,630 hhds, including several parcels by auction, and the refiners have purchased less freely. 373 casks Barbadoes went off steadily: brown, 36s to 37s; yellow, 38s to 43s. Arrivals continue moderate. Landings were again in excess of the deliveries last week, consequently the stock has been further augmented to 71,520 tons. The total increase upon the imports to this

date is 15,820 tons. Clearances for export show an excess of 2,750 tons.

Mauritius.—Further business has been done in low qualities by private contract. 1,500 bags offered at auction, yesterday, found buyers as follows: brown, 33s to 37s; grainy brown and yellow, 38s 6d to 42s 6d per cwt.

Bengal.—2,738 bags offered in the sales chiefly met with purchasers as follows: white Benares, yellowish to good, 46s to 48s; low to fine yellow Cossipore, 42s 6d to 45s 6d per cwt.

Madras.—5,039 bags were mostly sold at and after the sales: native, 31s 6d to 32s 6d for brown, and 33s to 36s 6d for low to good yellow; dark Jaggery, 30s 6d per cwt.

Penang.—2,258 bags sold at barely the previous valuations: low to good brown, 31s to 36s; grey and yellow, 37s to 43s; white, 44s per cwt.

Foreign.—Floating cargoes were in demand at the commencement of the week at rather higher rates, five being disposed of for the United Kingdom: one, No. 8½, to 9, 25s; three, Nos. 11 to 12½, 27s 3d to 27s 10½d; one, No. 13, 28s 1½d One, No. 11, for a near port, brought 26s 9d; and a few hundred boxes, No. 14, 29s 6d. A cargo of white Havana, 37s 6d per cwt for Russia. The public sales have been small. 706 casks 70 barrels Cuba partly sold at 37s to 39s for brown to middling soft grey, and 39s 6d to 41s 6d for yellow. 328 casks 81 barrels Porto Rico brought 40s to 44s.

Refined.—The market is devoid of animation, but prices remain the same as last week. Common dry goods generally cannot be obtained under 52s per cwt. Crushed and pieces maintain their previous value.

Molasses.—A parcel of St Vincent's has sold at 15s 6d, and 150 casks of clayed Cuba at 15s.

Rum.—It is stated that the Government received tenders for 105,000 gallons of rum last week at 1s 7½d proof for Leewards. Since then the market has been quiet. Demerara commands 1s 10d to 2s 1d, according to quality. Several sales of East India have been made: Mauritius, 1s 5d; Bengal, 1s 6d; Proof Leewards, 1s 7d per gallon. The stock is 28,600 puns 7,040 hhds, against 21,900 puns 5,930 hhds in 1859 at the same date.

Cocoa.—There is not much inquiry, and lower prices must be accepted to effect sales. 34 bags Trinidad partly sold at 80s to 81s for superior red. 420 bags Venezuela were withdrawn at 102s per cwt.

Coffee.—Several vessels arrived from Colombo will shortly afford a better supply, meanwhile the market continues steady, and the public sales have been small. 146 casks 47 barrels and bags plantation Ceylon brought the former valuations in most cases: low middling small berry to good middling, 69s to 76s. 506 bags 44 casks native realised 59s 6d to 61s 6d for small mixed to very good ordinary quality. 81 half-bales 21 bags Mysore: pale mixed greenish, 64s to 64s 6d per cwt.

Tea.—The China news received in the early part of this week had little effect upon the market, buyers being occupied with the heavy public sales. These commenced on Wednesday, and the catalogues comprised 41,840 pkgs, including 1,765 pkgs Assam. The latter went with spirit at full prices to a slight advance, but the China teas passed off flatly, owing to the large quantity offered "without reserve." About 8,516 pkgs had found buyers to yesterday (Thursday). Congous went off at ¼d to 1d reduction. Other kinds without material alteration.

Rice.—Transactions have been comparatively limited, and the dulness of the corn market has prevented further speculative business. Some new white Bengal, by auction, sold upon lower terms, otherwise quotations showed little alteration. Privately a parcel of good pinky Madras has realised 11s; old white Bengal, 10s 6d to 12s 6d; low Rangoon, 9s cash. By auction, 9,061 bags Bengal two-thirds realised 14s to 15s for good to fine bold, and 10s to 10s 6d per cwt for cargo kinds.

Imports and Deliveries of Rice to June 23, with Stock on hand.

	1860.	1859.	1858.	1857.
	tons	tons	tons	tons
Imports	13650	10100	56000	29700
Deliveries for home use	31320	12940	15800	16830
Exported	8175	21800	8080	29500
Stock	47000	71440	95300	38100

Spices.—The sales have been small, and prices do not show any material change, excepting pimento, which is slightly dearer. 936 bags sold steadily at 3¼d to 3½d, one lot 3⅝d. 245 bags Penang white pepper, 6d to 6⅝d for rather mixed and dingy. A few cases small brown nutmegs brought 1s 6d. 24 cases mace were mostly taken in: fair, 1s 4d; part from Holland, at 11d to 1s 5d per lb. 180 barrels Jamaica ginger brought 4*l* 6s 7*l* 16s for ordinary to superior bold. 60 cases fair Cochin were taken in at 87s per cwt.

Saltpetre.—The market has been exceedingly flat during the week, and very little business reported by private contract. Quotations are, therefore, nominally unaltered.

Imports and Deliveries of Saltpetre to June 23, with Stock on hand.

	1860	1859.	1858.	1857.
	tons	tons	tons	tons
Imported	7050	10330	6090	8600
Delivered	5970	9260	7360	5530
Stock	4940	4000	5350	5100

Deliveries last week 117 tons.

Cochinzal.—187 bags went off without any change in prices. Honduras silvers, 3s 3d to 3s 9d; black, 4s 5d to 5s 1d; Mexican silvers, 3s 1d to 3s 3d; black, 3s 4d to 3s 7d; Teneriffe silvers, 3s 3d to 3s 5d per lb.

Other Drysaltery Goods.—Some parcels of Bengal turmeric have sold at 12s 6d to 13s 6d. Gambier is firm, and not much offering for sale. Good quality commands 17s 9d to 18s. Cutch remains inactive.

Drugs, &c.—Castor oil sold upon rather lower terms yesterday. A sale of camphor is reported for arrival at 7*l* 10s per cwt.

Lac Dye.—46 chests by auction partly sold at 1s 5d to 1s 8½d per lb for good marks.

India Rubber.—Para has advanced to 2s 10d to 2s 11d per lb for fine. East India is unaltered, and remains scarce.

Shellac.—Button sorts have sold more freely at 7*l* 7s 6d to 9*l* per cwt. Orange is firmer.

Metals—Quotations generally show little alteration to notice, and the market is steady. A few contracts have been made in Straits tin during the week at 131s. The Netherland Trading Company's sale, yesterday, of Banca was reported by telegraph to have gone off at 79½ gilders, equal to 137s to 137s 6d per cwt sterling laid down here. The market is now rather firmer. Other metals have been sold to a moderate extent at former prices. Scotch pig iron closes higher, viz., 51s to 51s 3d for mixed numbers. Manufactured is in better demand, particularly railway bars. Few transactions are reported in spelter, and the nearest value may be quoted at 20*l* 5s per ton.

Hemp.—There are still inquiries for Manilla, at previous rates. 585 bales offered by auction were partly sold: good roping, 93*l* to 23*l* 7s 6d per ton. The jute sales passed off without much animation, and generally at rather lower rates. Of 7,164 bales on Wednesday, about half sold: common to good marks, 13*l* 15s to 18*l* 5s; fine up to 22*l* 5s per ton.

Linseed.—The market is not quite so active as last week. Bombay on the spot, 51s to 52s; Calcutta, 49s to 50s. The former has sold afloat at 52s 6d. Black Sea cargoes may be quoted 50s 3d to 50s 6d per quarter.

Turpentine.—Spirits dull. About 400 barrels American sold during the week at 34s per cwt. 4,500 barrels rough have arrived off the coast.

Hides.—The sales of East India, held yesterday, passed off flatly, and the 88,000 hides brought forward were nearly all bought in.

Oils.—Olive has been dull: Gallipoli, 62*l*; other sorts, 55*l* 10s to 60*l* 10s. Sperm has been held more firmly. Some cargoes of new seal have sold, the opening price for those delivered here being 35*l* per tun. Linseed has continued to meet with a steady demand, and the sales on the spot have latterly been made chiefly at 28s 9d. For delivery in the last four months, buyers at 29s 6d per cwt. Rape barely supports the late advance: foreign refined on the spot, 43s 6d to 44s; ditto to arrive, 46s to 46s 3d; brown, 41s 6d to 42s, and 44s per cwt respectively. Cocoa-nut active at the advance noticed on Friday last: Ceylon, 45s 6d to 46s; Cochin, 46s 6d to 47s; about 6d per cwt more for arrival. There is a moderate inquiry for palm; fine commanding 45s 0d per cwt, with other kinds in proportion.

Tallow.—There has been a steady market during the week, and the market is now firm, although not active. This morning first sort Petersburg Y. C. may be quoted 52s 9d on the spot, and the same per cwt for forward deliveries.

Particulars of Tallow.—Monday, June 25.

POSTSCRIPT. Friday Evening.

Sugar.—The market was steady to-day, and the few parcels of various kinds, including 252 casks Barbadoes, 2,676 bags Mauritius, and 305 bags Penang, went off at about previous rates. 2,528 bags Madras were bought in above the value. The week's business in West India has amounted to 3,300 hhds.

Coffee.—39 bales 119 quarter barrels Mocha bought chiefly in; a few lots selling at 103s for mixed short berry.

Cocoa.—45 bags Trinadad were bought in.

Tea.—The public sales to-day went off with rather more animation; 5,232 packages being sold, leaving 4,700 packages for Monday next.

Rice.—A cargo of Rangoon sold at 11s per cwt.

Spices.—135 cases cassia lignea were withdrawn. 151 barrels Jamaica ginger went at about previous quotations. 72 bags Malabar black pepper bought 5¼d per lb for shot kind.

Saltpetre.—1,485 bags Bombay, refraction 61 to 43, sold at 35s to 35s 6d.

Sticklac.—Good to fine Siam was bought in at 75s to 100s per cwt.

Oils.—By auction, to-day, 55 tuns sperm oil and headmatter sold from 92*l* to 95*l* 15s per tun. Cocoa-nut sold at 46s 9d to 47s 3d for Cochin, and 46s to 46s 3d for Ceylon. 172 casks palm, 45s 3d to 45s 6d per cwt.

Tallow advanced to 53s to 53s 6d for Y.C. Town unaltered.

ADDITIONAL NOTICES.

Refined Sugar.—The home market for refined sugar has not shown any alteration this week worth noticing. The prices from Holland coming higher, prevent any business in Dutch crushed.

Grain Fruit.—Market clear of oranges and lemons; the season for the former nearly closed, with the exception of small shipments per steamer, and the usual supplies from Sicily are stopped from the state of political events in that quarter. Some remnant parcels of lemons, from Messina and Palermo, sold by Keeling and Hunt at public sale, went at an advance of from 2s to 3s per package. Nuts of all kinds in better demand. Barcelona advanced 1s per bag.

Dry Fruit.—Compared with the last month, the business of the present week shows an improvement in quantity sold, though not in prices obtained. Currants have been done at 23s, and at 27s to 29s; exporters are in the market for small parcels. Raisins continue neglected. The accounts of coming crops continue satisfactory, though at present it is too early to form any correct estimates.

English Wool.—The market is rather dull, and prices are hardly sustained.

Colonial Wool.—The market remains quiet, but firm.

Flax.—The market firm at our quotations.

Hemp.—The market steady, and a fair business doing.

Cotton.—The sales of cotton wool from Friday, 22nd June, to Thursday, 28th, inclusive, were:—600 bales Surat, at 3⅞d to 3¾d for very middling to middling fair; 100 bales Madras, at 3¾d for fair Western, and 5¼d for good fair Tinnivelly; total, 700 bales. The transactions have been limited, and the market dull; prices, however, are unchanged. 4,000 bales, mostly fair to fully good fair Dhollera and Oomrawattee, are advertised for public sale on Thursday, 12th July.

SILK.—No alteration in the silk market this week, nor in prices.

TOBACCO.—An active demand has continued during the week, especially for Western strips, and sales were effected of several parcels at present quotations. Middling and ordinary sorts have constituted a large portion of the business transacted. For exportation, two or three small lots of fine quality were taken.

LEATHER AND HIDES.—During the past week there has been some little improvement in the demand for leather; but at Leadenhall, on Tuesday, the transactions were very limited. The fresh supplies were, however, small; and no alteration can be quoted in prices. Good light common dressing hides and prime calf-skins are the articles that are the most scarce and in request. At the public sale this week, salted hides were again lower: Cape hides, not, however, of first quality, ½d per lb; Australian, ½d lower than at the previous sale. The East India kips brought about former prices. 55,000 were sold out of 75,000 offered. Not any salted River Plate were offered; but by private contract 600 Buenos Ayres, 59 lbs, at 8¼d; 300 light, 48 lb, at 8d; and 200 Rio Grande, 60 lbs, at 8d, have been sold with the usual tares.

METALS show little change. Copper is fairly maintained by demand at the late reduction of English, whilst the holders of foreign keep pretty much out of the market, hoping for better times. Iron is steady in prices and demand, the latter being only sufficient for makers smallest productions. In tin, the sale of Banca at Amsterdam has engaged much attention; the whole quantity of 142,000 slabs was sold at 79½fl, which establishes a very stiff market for Banca tin. Spelter is dull of sale, as also is lead. Tin plates keep steady, without change in prices.

TALLOW.—Official market letter issued this evening:—

	s	d
Town tallow	52	6
Fat by ditto	2	9¼
Yellow Russian	54	9
Melted stuff	38	6
Rough ditto	22	6
Greaves	16	0
Good dregs	7	0

Imports this week 372 casks.

PROVISIONS.

Bacon market easier; 2s less than last week; little or nothing doing. Foreign butter has advanced 4s to 6s. Arrivals fair, quality good.

METROPOLITAN CATTLE MARKET.

MONDAY, June 25.—The total imports of foreign stock into London last week amounted to 8,083 head. In the corresponding week in 1859 we received 6,936; in 1858, 3,964; in 1857, 4,924; in 1856, 2,464; in 1855, 3,681; and in 1854, 6,179 head.

From our own grazing districts the receipts of beasts fresh up were again rather limited, and in but middling condition. The demand for all breeds ruled somewhat heavy, at a decline in the quotations realised on Monday last of 2d per 8 lbs. The show of sheep was again very moderate. The best Downs and half-breds were in fair request, at full quotations; but other kinds moved off slowly at barely late rates. Lambs—the supply of which was tolerably good—were very dull, and 4d to 6d per 8 lbs cheaper. The top figure was 6s 6d. We were fairly supplied with calves, which changed hands steadily at full quotations.

SUPPLIES.	June 28, 1858.	June 27, 1859.	June 25, 1860.
Beasts	3785	3718	3800
Sheep and Lambs	28350	31100	24600
Calves	410	336	294
Pigs	600	400	440

THURSDAY, June 28.—Our market, to-day, was but moderately supplied with beasts. Prime breeds were in steady request, at very full prices. Otherwise, the beef trade was heavy, at late rates. Sheep—the show of which was tolerably good—commanded a fair inquiry, at Monday's currency. We have to report a dull sale for lambs, at the late decline in value. The supply was tolerably good. There was a fair sale for calves, at full prices.

Per 8 lbs to sink the offal.

	s	d	s	d		s	d	s	d
Coarse and inferior beasts	4	2	4	4	Prime Southdown sheep	5	4	5	6
Second quality ditto	4	8	5	0	Large coarse calves	4	6	5	0

Prime small	4	10	5	0	Large pork	4	0	4	6
Veal	4	4	5	0	Small pork	4	4	5	0

Lambs, 5s 0d to 6s 0d.

HOP MARKET.

BOROUGH, Monday, June 25.—We have but little change to report in our market, which remains firm at a slight advance for fine and colour samples on last week's currency. The prevalence of unpropitious weather retards the growth of the bine, and has increased its unhealthy character. The present prospect is much against the duty, 175,000*l* being realised.

FRIDAY, June 29.—The accounts continue to come unfavourable from the plantations generally. Trade is active, and fine samples bring higher rates. Duty, 170,000*l*.

POTATO MARKET.

SOUTHWARK WATERSIDE, Monday, June 25.—During the past week the arrivals coastwise have been small, and a rise in price was the consequence. As the old potatoes are nearly finished, this will be the last report for the season. The following are this day's quotations:—Yorkshire Flukes, 130s to 170s; Perth, Forfar, and Fifeshire reds, 120s to 140s; Irish whites, 100s to 120s per ton.

THURSDAY, June 28.—Very few old potatoes have come to hand since our last report, but the supplies of new are on the increase, and generally in very good condition. Trade is tolerably active, as follows:—York Regents, from 140s to 150s; ditto Flukes, 120s to 160s; Scotch Regents, 100s to 120s; ditto Cups, 120s to 140s per ton. New potatoes are 10s to 14s per cwt.

HAY MARKETS.—THURSDAY.

SMITHFIELD.—Meadow hay, 3*l* to 5*l* 5s; clover, 4*l* to 6*l* 6s; and straw, 1*l* 8s to 1*l* 16s per load. Trade firm.

CUMBERLAND.—Meadow hay, 3*l* 5s to 5*l* 5s; clover, 4*l* to 6*l*; and straw, 1*l* 8s to 1*l* 16s per load. Trade steady.

WHITECHAPEL.—Meadow hay, 3*l* 3s to 5*l* 5s; clover, 4*l* 10s to 6*l* 6s; and straw, 1*l* 8s to 1*l* 16s per load. A moderate supply, and a fair demand.

COAL MARKET.

FRIDAY, June 29.—Walls End Gosforth, 16s 3d—Walls End Tanfield Moor, 13s 3d—Walls End Stewarts, 18s 6d—Walls End South Hetton, 18s 6d—Walls End Haswell, 18s 6d—Walls End Belmont, 16s 6d. Ships at market, 72.

LIVERPOOL MARKETS.

WOOL.

(FROM OUR OWN CORRESPONDENT.)

FRIDAY, June 29.—The public sales are progressing satisfactorily at about the same rates that were realised at the last sales in April. East Indian wool forms as usual the bulk of these sales, and meets with fair competition.

CORN.

(FROM OUR OWN CORRESPONDENT.)

FRIDAY, June 29.—Good consumptive business in wheat. French the turn dearer. Flour a fair trade at late rates. Indian corn, rather more business at the late decline. Beans without change. Oats and oatmeal dull sale. Rather better attendance; no rain but cloudy.

METALS.

(FROM OUR OWN CORRESPONDENT.)

FRIDAY, June 29.—The market for manufactured iron remains almost unaltered, and with only a limited demand. Scotch pig iron has slightly improved in price during the past week, and a fair business has been done. For copper there has been no great increase of orders since the reduction, and the market has a quiet appearance. Lead continues dull. The periodical yearly sales of Banca tin in Holland has just taken place, and the whole was realised at a price about equivalent to previous rates.

The Gazette.

TUESDAY, June 26.

BANKRUPTS.

T. and W. T. Fenn, Norwich and elsewhere, wholesale boot manufacturers.
G. H. Lilie, Black Swan yard, Bermondsey, tanner.
W. Fryer, Norwich, boot manufacturer.
G. J. Sandford, High street, Marylebone, and Clerkenwell green, linen-draper.
T. W. Vernon, Bilston, Staffordshire, and Sparkbrook, Worcestershire, coalmaster.
R. Baker, Ipsley, Warwickshire, needle dealer.
T. Bonsor, Plungar, Leicestershire, auctioneer.
C. Gannett, Bute road, Cardiff, outfitter.
E. J. Pickslay, Wakefield, scrivener.
H. Holden, Doncaster, and R. W. Holden, Sheffield, cattle dealers.
J. W. Crawford, Lincoln, grocer.

SCOTCH SEQUESTRATION.

J. Lockhart, Glasgow, cattle salesman.

GAZETTE OF LAST NIGHT.

BANKRUPTS.

H. Gaisford, builder, Stepney.
G. Gridley, coach maker, Islington.
J. Ashton, builder, St Paul's road, Highbury.
J. McAlpine the younger, bleacher, Ball's pond.
H. Dowson, draper, Newcastle-upon-Tyne.
J. A. Hurat, mantle manufacturer, Ludgate street, City.
A. Penny, underwriter, Richmond villas, Holloway.
R. Ellis, chemist, Northampton.
J. B. Dunn and E. F. A. Boyle, commission agents, Spring gardens.
A. Sutton, corn miller, Cowley vale, near St Helen's, Lancashire.
T. Ryder, merchant, Leadenhall street.
R. Barker, boot and shoe manufacturer, Maldon, Essex.

SCOTCH BANKRUPT.

A. Binnie, brickmaker, Camlachie.

The latest intelligence from Jamaica is to the 9th inst. The *Cordova* reports an advance in the value of many articles during the fortnight, and a general improved tendency in the market. The Barbadoes House of Assembly met on the 5th inst. The crop was nearly reaped; and the produce shipped to date was—Sugar, 28,003 hhds, 2,327 tierces, 6,448 brls; molasses, 7,371 puncheons, 358 hhds, 549 brls; rum, 230 puncheons, 314 hhds. At Trinidad, a fortnight of fine dry sugar-making weather had been enjoyed, and, except where approaching too closely the end of the canes, estates had been making good use of the time. At Demerara, shipping was plentiful. Trade among the merchants continued dull. The exports for the past fortnight had been—Sugar, 2,510 hhds, 58 tierces, 2,748 brls, 647 bags; rum, 1,295 puncheons, 83 hhds, 63 brls; molasses, 33 casks; timber, 27,566 feet; charcoal, 1,683 brls; cocoa-nuts, 22,059; shingles, 203,000. From Grenada we learn that a continuous drought was telling severely upon the plantations in most parts of the colony. The current crop, not yet brought to a close, promised an increase of about 1,000 hhds upon that of last year. Exports to date amounted to 2,881 hhds, 336 trs, 1,007 brls, and 12 bags sugar; 549 puncheons, 22 hhds, 3 quarter-casks, and 13 demi-jeans rum; and 5,128 bags cocoa.

COMMERCIAL TIMES

Weekly Price Current.

☞ the prices in the following list are carefully revised every Friday afternoon, by an eminent house in each department.

LONDON, FRIDAY EVENING.

Add 5 per cent. to duties on currants, figs, pepper, tobacco, wines, and timber, deals, wood, &c., from British Possessions.

EPITOME OF RAILWAY NEWS.

TRAFFIC RETURNS.—The traffic returns of railways in the United Kingdom for the week ending June 16 amounted to 524,460*l*, and for the corresponding week of last year to 541,000*l*, showing an increase of 16,540*l*. The gross receipts of the eight railways having their termini in the metropolis amounted to 231,365*l*, and for the corresponding week of 1859 to 240,396*l*, showing a decrease of 9,031*l*.

RAILWAY AND MINING SHARE MARKET.

LONDON.

MONDAY, June 25.—The railway market opened steadily this morning, but afterwards experienced a slight decline. Compared with last Friday most of the principal English stocks have receded about ¼ per cent., Caledonian being the heaviest at a reduction of ½. Eastern Counties fractionally improved. In foreign descriptions, South Australian and Lombardo-Venetian were dull, leaving off at par. New York Central shares improved. There was a less favourable tendency in mines, and in several instances a reduction took place. Joint stock banks showed no change of importance In miscellaneous descriptions, Electric Telegraph and London Discount advanced, while Peninsular and Oriental declined on the announcement of the loss of the Malabar. Victoria debentures, new, were last quoted 107¾ to 108; the Canadian loan, 102½ bonds, and 2¾ to 3 pm. scrip.

TUESDAY, June 26.—The railway market again showed a dull tendency, and in many cases a further fractional decline took place. South-Western exceptionally improved. The general business was unimportant. The principal feature in the colonial market was the continued decline in Grand Trunk of Canada bonds and stock. The latter closed at 28 to ½, or 1½ per cent. lower than yesterday. Great Western shares also exhibited a reduction. Foreign descriptions have shown a heavy tendency; Bahia receded to ¾ to ⅞ dis., and Pernambuco to 1¾ to ¾ dis. In American railway securities, Pennsylvania Central bonds were less steady. Mines were rather dull. Stray Park, however, advanced. No change of importance occurred in joint stock banks or miscellaneous descriptions. Victoria debentures, new, left off at 107¾ to 108; the Canadian loan, 102½ bonds, and 3 pm. scrip.

WEDNESDAY, June 27.—The railway market was again very dull, and little business was done except in connection with the approaching settlement. Several of the leading stocks showed a further slight decline, especially Great Northern. One of the features of the day was the continued fall in Grand Trunk of Canada stock, the last quotation being 27 to ½, or 1 per cent. lower than yesterday. Great Western shares also receded to 10¾ to ⅞, and Buffalo and Lake Huron were heavy. The foreign market was fairly supported except as regards Brazilian descriptions, Pernambuco leaving off at 2 to 1¾ dis., and Bahia and San Paulo ¾ dis. South Austrian and Lombardo-Venetian were barely maintained at par. In American railway securities, the shares of the New York and Erie receded. In mines, Stray Park again improved. No change of importance occurred in joint stock banks. Miscellaneous descriptions were dull, Australian Agricultural, Peninsular and Oriental, and Van Diemen's Land shares showing a decline. Victoria debentures, new, were last quoted 107½; the Canadian loan, 102¼ bonds, and 2¾ to 3 premium scrip.

THURSDAY, June 28.—The railway market closed with a dull appearance. In the foreign market, Pernambuco recovered to 1¾ to 1⅞ dis. South Austrian and Lombardo-Venetian were dull at ¼ dis. to par. New York and Erie bonds and shares were flat. Mines were weaker, several descriptions, including Stray Park, showing a decline. Joint stock banks and miscellaneous securities closed without change of importance. The new Labuan coal shares are firm at 1¼ to ½ pm. Victoria debentures, new, were last quoted 107½; the Canadian loan, 102¼ bonds, and 2¾ to 3 pm. scrip.

FRIDAY, June 29.—Except as regards Eastern Counties and Great Western stocks, which were firm, the railway share market to-day was dull. In a few instances, including London and North-Western stock, prices declined ¼ to ¼ per cent. To-day's quotations were as follows:—London and North Western stock, 101¼ to ½; Great Western, 69¼ to ⅝; Midland, 117½ to ¾; Lancashire and Yorkshire, 104⅜ to ½; Caledonian, 92¼ to ⅝; South-Eastern, 81⅞ to 85¼; and Eastern Counties, 92½ to ¾. Lombardo-Venetian Railway shares were dull, at ¼ discount to par. Grand Turnk of Canada Railway stock showed a partial recovery.

AT HAMBLY HOUSE ACADEMY,
Streatham Common, Surrey, Young Gentlemen are carefully Educated for the Public Schools, Military Colleges, Professions, or Commerce, by Mr R. S. TROUSDALE, L.C.P., aided by highly qualified assistant masters.
The domestic arrangements are on the most liberal scale; and the house is very delightfully situated. The terms for pupils under ten years of age, 30 guineas per annum; ten and under fourteen, 35 guineas per annum; fourteen, 40 guineas per annum. The above amount includes board and instruction in the Latin, Greek, French, and English Languages, Writing, Arithmetic, Merchants' Accounts, History, Geography, the Use of the Globes, Astronomy, Geometry, Algebra, and the other branches of the Mathematics. A library is devoted to the instruction and amusement of the pupils during their leisure hours. Religious works are provided for Sunday perusal; and lectures on various popular subjects are occasionally delivered. German Drawing, Dancing, and Music, on the usual terms. Washing, half-a-guinea per quarter. Drilling during the summer months, at a trifling charge; and board during a vacation, four guineas. All accounts are expected to be settled quarterly. Excellent accommodation for foreigners or gentlemen of neglected education. A quarter's notice of removal is required.

ON SPINAL AND OTHER DEFORMITIES.
PRACTICAL OBSERVATIONS
on the CAUSES and TREATMENT of CURVATURES of the SPINE. Third edition, price 6s.
AND
Just published, second edition, price 1s 6d,
CASES and OBSERVATIONS illustrative of the beneficial results which may be obtained by close attention and perseverance, in some of the most unpromising instances of Spinal Deformity; with numerous Engravings. By SAMUEL HARE, F.R.C.S., &c.
"Mr Hare may take credit to himself for having effected much good in the treatment of the cases described."—BRITISH MEDICAL JOURNAL.
"Mr Hare is, we think, a sound and successful practitioner."—MEDICAL CIRCULAR.
"We unhesitatingly commend this work as a truthful and trustworthy statement of the power of scientific surgery and medicine over some of the most grievous hindrances to human activity and industry."—MEDICAL GAZETTE.
"The author has had much success in his plan of treatment, and we are of opinion that the principles on which he acts, in the treatment of these affections, are correct."—LANCET.
London: JohnChurchill; and may be had of al booksellers.

DR ROBERT ROWE ON INDIGESTION.
This day is published, price 2s 6d, the fifteenth edition,
NERVOUS DISEASES,
Liver and Stomach Complaints, Low Spirits, General Debility, and Diseases of Warm Climates; the Result of Thirty Years' Practice.
By G. ROBERT ROWE, M.D.
"Dr Rowe claims with justice a priority of authorship, while he yields to none in his treatment. The value of this work is enhanced by its practical nature."—LANCET.
"We have no hesitation in placing this work among the first ranks. We entertain a high opinion of its value."—MEDICAL TIMES.
"This is a clever and useful work; contains much that is worthy of attention, and should be read by all martyrs to indigestion and other ills."—TIMES.
Also, by the same Author, 2nd edition, price 4s 6d, On some of the Important Diseases of Females and Children.
London: J. Churchill, and to be had of all booksellers

THE FORTY-SEVEN SHILLING SUITS
ARE MADE TO ORDER FROM
Scotch Cheviot Tweeds, and Angolas, all wool, and thoroughly shrunk, by B. BENJAMIN, Merchant and Family Tailor, 74 Regent street, W. The Two Guinea Dress and Frock Coats, the Guinea Dress Trousers, and the Half-Guinea Waistcoats. N.B.—A Perfect Fit guaranteed.

FIRST-CLASS PROTESTANT
EDUCATION, at the Royal Continental Collegiate Institution, Bushey heath, Herts.—In addition to all its qualities as a first-rate classical and commercial school, it is also highly recommended for a thorough French education. Some of the parents who are continually visiting France, and whose sons have scarcely been two years at this school, are most happy to assure those parents who are desirous that their children should acquire a thorough knowledge of the French language, without wishing them to neglect their English and classical education, that their sons speak far better and more grammatically than any of the sons of their friends who have spent two or three years in schools in France merely for the purpose of acquiring that language. Terms inclusive, and vary, according to age and requirements, from £40, £50, to £60 per annum—1d est, four terms, each of 75 days' duration, with two months' holidays. Pupils are received any day, their term beginning from the day of their arrival. No restrictions to parents. Not one case of illness has occurred since the school has been established (1857).—Address, stating age and requirements, Professor Vellère (late of the Harrow Preparatory School), Bushey heath, Herts. The pupils wear a uniform very elegant and becoming.

LAWRENCE HYAM,
is announcing that his New Stock of Clothing for the Season of 1860, consisting of the largest and choicest variety of Spring and Summer attire ever designed, is now ready for inspection, and to which he solicits public attention and patronage. The greatest confidence may be placed in the durability and style of all garments, combined with the utmost economy in price.

LAWRENCE HYAM'S
15s and 17s Trousers are made from the choicest patterns in Scotch Cheviots and Angolas, all wool, and warranted thoroughly shrunk. Vests to match, 8s 6d and 9s 6d.

FOR PROFESSIONAL GENTLEMEN.
LAWRENCE HYAM'S
Attire for Clerical, Legal, and Medical Gentlemen, is remarkable for sound quality and perfect consistency of design. An unlimited variety of patterns to select from.

FOR THE YOUNG.
LAWRENCE HYAM
is everywhere celebrated for the becoming style and finished beauty of his Clothing for Children, Boys, and Youths. Perfectly New Styles in Children's Dresses, Boys' Suits, and Single Garments are now on view, ready for immediate wear.
Observe the only Establishments of Lawrence Hyam are:—City, 36 Gracechurch street; West-end, 189 and 190 Tottenham court road.

SUMMER ATTIRE.—
E. MOSES and SON beg to state that their preparations for Summer exceed any of their former efforts as well in extent as in variety. They have visited the principal markets both at Home and Abroad for the best and newest manufactures, and have succeeded in collecting such an assortment of goods as has never before been exhibited under one roof in this or any other country.
Their Bespoke Tailoring Departments have been supplied with an endless variety of the choicest and most popular fabrics.
Their Ready-made Clothing Stock is complete in every respect, and they venture to say that for Elegance of Style, Durability of Material and Workmanship, Tastefulness of Finish and Cheapness, it is quite unequalled, even in the Metropolis of England.
No less care has been bestowed on the Hosiery, Hat and Cap, and Boot and Shoe Departments, which have been furnished with an entirely new stock of fashionable and seasonable goods at such prices as enable the proprietors to offer their patrons very great advantages.
N.B.—E. MOSES and SON take this opportunity of announcing, that they intend giving their customers the full benefit of the abolition of the duty on silks, gloves, &c.
E. MOSES and SON, Corner of MINORIES and ALDGATE, and Corner of NEW OXFORD STREET and HART STREET.
COUNTRY BRANCHES—Bradford & Sheffield, Yorkshire.
E. MOSES and SON wish it to be particularly observed that if any article be not approved of it will be exchanged, or the money returned without hesitation.
Their Book for the present Season, containing "The Growth of an Important Branch of British Industry," with rules for self-measurement, and list of prices, may be had gratis on application, or post free. Also, a well-executed plan of their City Premises.

THE "INDISPENSABLE" SUIT,
made in various colours and patterns, and particularly adapted for walking, riding, travelling, and business. This is universally acknowledged to be the most comfortable and serviceable suit ever introduced. Price from 35s.—To be obtained of E. MOSES and SON, Corner of MINORIES and ALDGATE, and Corner of NEW OXFORD STREET and HART STREET.

TOURISTS AND EXCURSIONISTS
are specially provided for at
E. MOSES and SON'S,
MERCHANT TAILORS, HATTERS, HOSIERS, BOOTMAKERS, &c.,
Corner of MINORIES and ALDGATE,
Corner of NEW OXFORD STREET and HART STREET.
BRADFORD and SHEFFIELD, YORKSHIRE.

JULLIEN FUND.

Committee Room—30 New Bond street.

The Committee of the Jullien Fund, fearing that the subscriptions have been materially checked by the unfortunate death of Mons. Jullien, desire to explain that a widow and others, members of his family, can be protected from want only by the kind aid of those who appreciate the great services rendered by the late lamented maestro to the cause of the musical education of the English people.

The Committee confidently appeal to that benevolence for which their countrymen are so distinguished, for such prompt and liberal additions to the subscription list as shall enable them to do some justice to the memory of M. Jullien, and at the same time afford adequate relief to his bereaved family.

COMMITTEE for the DISTRIBUTION of the JULLIEN FUND.

Mr John Mitchie	Mr W. Duncan Davison
Mr W. R. Sams	Mr Jules Benedict
Mr Thomas Chappell	Mr A. Blumenthal

HONORARY TREASURERS.

Mr John Mitchell, 33 Old Bond street
Mr T. Chappell, 50 New Bond street
Mr W. R. Sams, 1 St James's street

BANKERS.

Messrs Coutts and Co., Strand
Heywood, Kennards, and Co., Lombard street
London and County Bank, Havover square

Who, as well as the honorary treasurers, have kindly consented to receive subscriptions.

April, 25th, 1860.

DEANE'S TWO-HOLE BLACK PENS

which are unequalled for their durability and easy action, are adopted by the gentlemen of the Stock Exchange, and the principal bankers, merchants, and public companies of the city of London, besides several of Her Majesty's judges, the most eminent counsel, and the reverend the clergy. Their cheapness and popularity ha induced many unprincipled people to put forth imitations of the genuine articles, which are equally useless to thn purchaser, and disgraceful to the vender. The public are therefore cautioned, and respectfully requested not to purchase any as DEANE'S GENUINE TWO-HOLE BLACK PENS, unless each pen is stamped

"G. and J. Deane, London Bridge,"

and the box, which contains exactly twelve dozen, has thereon a variously coloured label, inscribed

"G. and J. DEANE'S Two-Hole Black Pens, 46 King William street, London bridge."

MEDICAL ADVICE.

DR LA'MERT, REGISTERED L.S.A.,

---

TO THE NERVOUS AND DEBILITATED.

Just published, the 125th thousand, with numerous plates, in a sealed envelope, price 1s, sold by all booksellers, or post paid, by the Author, for 12 stamps,

MANHOOD: THE CAUSE AND CURE OF PREMATURE DECLINE,

with Plain Directions for Perfect Restoration to Health and Vigour. By J. L. CURTIS, 15 Albemarle street, Piccadilly, London.

CONTENTS.

INTRODUCTORY CHAPTER on the Physiological Structure and Functions of the Reproductive Organs.

CHAPTER II.—Causes of Spermatorrhœa and Impotence; Early Vicious Indulgences; Dangers of Neglect.

CHAPTER III.—A Review of the Disqualifications of Marriage; whether resulting from the Youthful Abuse, the Follies of Maturity, the Effects of Climate, or Infection.

CHAPTER IV.—Plan of Treatment, Medical and Moral, with observations on a new and successful mode of detecting Spermatorrhœa and other Urethral discharges by microscopic examination.

CHAPTER V. and VI. on the modern Treatment of Gonorrhœa and Syphilis.

The Book concludes with numerous interesting cases, to which is added the Author's receipt of a preventive Lotion.

Mr CURTIS, author of the above Medical Treatise, may be consulted as usual. The efficacy and harmless nature of the remedies employed by Mr CURTIS having been demonstrated by a successful practice extending over a period of 20 years nervous sufferers have a perfect guarantee that the utmost skill and experience will be made available in the treatment of their cases.

Consultations from 10 till 12, 3, and 6 till 8. Sundays from 10 till 1.

FREDERICK DENT,

Chronometer, Watch and Clock Maker to the Queen and Prince Consort, and the maker of the Great Clock or the Houses of Parliament, 61 Strand, and 34 Royal Exchange. No connection with 33 Cockspur street.

ICE, AND REFRIGERATORS FOR

preserving Ice and cooling Wine, Butter, Cream, Water, Jellies, and provisions of all kinds, manufactured by the WENHAM LAKE ICE COMPANY (now removed to 140 Strand, W.C.), of the best make and at the lowest cash prices. No agents are appointed in London for the sale of the Company's Ice or Refrigerators. Pure spring-water Ice, in blocks, delivered to most parts of town daily, and packages of 2s 6d, 5s, 9s, and upwards, forwarded any distance into the country by "goods" train, without perceptible waste. Wine-coolers, ice-cream machines, ice planes for sherry-cobblers, freezers, moulds, &c. Detailed printed particulars may be had, by post, on application to the Wenham Lake Ice Company, 140 Strand, London, W.C.

DINNEFORD'S

PURE FLUID MAGNESIA

has been for many years sanctioned by the most eminent of the Medical Profession, as an excellent remedy for acidities, heartburn, headache, gout, and indigestion. As a mild aperient it is admirably adapted for delicate females, particularly during pregnancy; and it prevents the food of infants from turning sour during digestion. Combined with the Acidulated Lemon Syrup, it forms an effervescing aperient draught which is highly agreeable and efficacious.

Prepare by DINNEFORD and CO., Dispensing Chemists (and General Agents for the Improved Horse Hair Gloves and Belts), 172 New Bond street, London, and sold by all respectable Chemists throughout the empire.

A TOILETTE REQUISITE FOR

THE SPRING.—Among the many luxuries of the present age, none can be obtained possessing the manifold virtues of OLDRIDGE'S BALM of COLUMBIA. If applied to the roots and body of the hair, it imparts the most delightful coolness, with an agreeable fragrance of perfume. It also at this period of the season prevents the hair from falling off, or if already too thin or turning grey, will prevent its further progress, and soon restore it again. Those who really desire to have beautiful hair, either with wave or curl, should use it daily. It is also celebrated for strengthening the hair, freeing it from scurf, and producing new hair, whiskers, and moustache. Established upwards of thirty years. No imitative wash can equal it. Price 3s 6d, 6s, and 11s only.—C. and A. Oldridge, 22 Wellington street, Strand, W.C.

HOLLOWAY'S PILLS AND OINTMENT.—Confidence, Punctuality.—Let the

the sick, be their ailments what they may, confide in these two medicaments for a few days; let them give them a fair trial, and the gratifying result will induce the sufferer to carry out the instructions accompanying Holloway's curative remedies. In adopting this advice, no risk is run—no experiment tried. That they will purify, regulate, and heal, is a fact. It is universally admitted that Holloway's preparations overcome inflammation, irregularity, debility, and decay. The action of Pills and Ointment is corrective. The Pills internally and the Ointment applied externally enter the circulation, and neutralise any morbid matter which may be present, and which would at no distant date exert a baneful influence.

NO MORE MEDICINE.—

For Habitual Constipation, Indigestion (Dyspepsia), Diarrhœa, Nervous, Bilious, and Liver Complaints.

DU BARRY'S delicious Health-restoring REVALENTA ARABICA FOOD.—Certificate No. 36,418. In our practice we have been enabled to appreciate the virtues of Du Barry's Food. In its effect on chronic Dyspepsia (Indigestion), Nervousness, Constipation, Diarrhœa, Bilious and Liver Complaints, Cough, Asthma, Debility and Incipient Consumption, we find it the safest remedy. Dr Ure, M.D., F.R.S.; Dr Harvey; Dr Bright, Dr Sherland; Dr Campbell.

At a cost of about a penny per meal, it speedily cures constipation, dyspepsia (indigestion), nervousness, flatulency, distension, phlegm, biliousness, liver complaints, hysteria, neuralgia, sleeplessness, acidity, congestion, blood to the head, headaches, loss of memory, indecision, nervous fancies, palpitation, heartburn, eruptions, impurities, fever, irritability, low spirits, diarrhœa, dysentery, noises in the head and ears, debility, diabetes, pains between the shoulders, cramps, spasms, nausea and sickness, sinking, fits, colds, catarrhs, cough, asthma, bronchitis, consumption, debility, gout, rheumatism, hemorrhoids, also children's complaints, and saves fifty times its cost in medicine. It does not interfere with a liberal diet, but imparts a healthy relish for lunch and dinner, and restores the faculty of digestion and nervous and muscular energy to the most enfeebled. We extract a few of many thousand cures:

Cure No. 1,771.—Lord Stuart de Decies of many year's dyspepsia.——Cure No. 40,832.—"Fifty year's indescribable agony from dyspepsia, nervousness, asthma, cough, constipation, flatulency, spasms, sickness and vomiting, have been removed by Du Barry's excellent food."—Maria Joly, of Lynn, Norfolk.——Cure No 53,816.—Field Marshal the Duke of Pluskow, of dyspepsia, constipation, nervousness, and liver complaints, which had resisted all baths and medical treatment.——Cure No. 47,121.—Miss Elizabeth Jacobs, of extreme nervousness, indigestion, gatherings, low spirits, and nervous fancies.——Cure No. 54,816.—From the Rev. James T. Campbell. Syderstone Rectory, near Fakenham, Norfolk: "In all cases of indigestion, and particularly when the liver is affected, I consider Du Barry's Revalenta Arabica food the best of all remedies."—James T. Campbell.

Sold in canisters, 1 lb, 2s 9d; 2 lbs, 4s 6d; 12 lbs, 22s; 24 lbs, 40s. Super-refined quality, 5 lbs 22s; 10 lbs, 33s. The 10 lb, 12 lb, and 24 lb canisters carriage free, on receipt of post-office order by Barry Du Barry and Co., 77 Regent street, London; Fortnum, Mason and Co. 181 Piccadilly, London; Abbis, 60 Gracechurch street and of all grocers and chemists.

THE BEST REMEDY FOR INDIGESTION.

NORTON'S CAMOMILE PILLS

are confidently recommended as a simple but certain remedy for Indigestion, which is the cause of nearly all the diseases to which we are subject, being a medicine so uniformly grateful and beneficial, that it is with justice called the "Natural Strengthener of the Human Stomach." NORTON'S PILLS act as a powerful tonic and general aperient; are mild in their operation; safe under any circumstances; and thousands of persons can now bear testimony to the benefits to be derived from their use.—Sold in Bottles at 1s 1½d, 2s 9d, and 11s each, in every town in the kingdom.

CAUTION!—Be sure to ask for "NORTON'S PILLS," and do not be persuaded to purchase the various imitations

---

The true guide to those who desire a speedy and private cure.—By HENRY SMITH, Esq., 8 Burton crescent, Tavistock square, London, W.C.

ENGRAVING AND PRINTING.

HENRY BRADBURY AND CO.,

BANK-NOTE MANUFACTURERS,

FOREIGN, ENGLISH, AND COLONIAL;

Designers, Engravers, and Printers of Bonds, Coupons, Bills of Exchange Cheques, Certificates, Drafts, Shares, &c.

MERCHANTS and BANKERS are respectfully informed by HENRY BRADBURY (late of Whitefriars), that the Business of BANK-NOTE ENGRAVING and PRINTING, which, under his personal direction, has hitherto been carried on by Messrs BRADBURY and EVANS, is now conducted by a separate Firm under the title of HENRY BRADBURY and CO.

"TIMES' City Article, January 28, 1860:—"A Series of Specimens of Bank-Note Engraving of a very remarkable character has just been issued by Mr Henry Bradbury, who has spent some years in perfecting that art. Apart from their beauty of design and finish, they present the essential advantage of being producible only by machinery so costly and so complex as to prevent all chance of successful forgery."

*** The above Specimens may be had upon application.

OFFICES pro tem.—10 Coleman street, E.C.

PROSPECTUS.

The seat of the Direction will be in London, and the meetings of the shareholders will be held in London half-yearly.

Bahia is a seaport city, the second in size and importance in the Empire of Brazil. The population of the city is 180,000.

The following statistics are from an official return:—Palaces, 4; public establishments, 28; fiscal ditto, 7; hospitals, 9; churches, 58; public institutions for education, 75; manufactories, 74; printing establishments, 13; workshops, 676; alimentary stores and shops, 678; other stores and shops, 660; wharves, 76; exchange room; railway station, 1; private houses paying the Government tax, 5,910.

The Bahia and San Francisco Railway, now in course of formation, will tend greatly to increase the commerce of this city. The first section, viz., that starting from Bahia, will shortly be opened for traffic.

A concession has been granted by the Government for the exclusive privilege of lighting Bahia with gas, and an arrangement has been made by the promoters with the concessionnaire, whereby this privilege is secured to the Company upon very advantageous terms.

The following are the principal conditions and immunities attached to the concession:—

1. The Company to construct the works, and fix the requisite lamps for the illumination of the city, within two years from the 10th May, 1860.
2. The Government undertakes to pay for these lamps at the rate of 235 reis per night, equivalent to £9 13s per annum for each lamp, to be paid out of the Government Treasury every month.
3. The Government guarantees a minimum number of 1,500 lamps. In the event of these being increased to 2,000, the price per lamp to be 200 reis per night, equivalent to £8 4s 3d per annum for each lamp.
4. The Company undertake to light all the prisons, barracks, and other public buildings, the Government paying at the same rate for the gas consumed in these as for the public lamps, equivalent to about 19s per 1,000 cubic feet, the Company being also paid for all fittings, &c., supplied to these establishments.
5. All payments are to be made in accordance with the actual standard value of gold, so that the Company will in no way be affected by fluctuations in the rate of exchange.
6. The Company are allowed to make their own terms for lighting all other buildings, private houses, and shops.
7. The contract is to be binding for thirty years, at the end of which period the Government is bound, either to renew the contract on the same terms, or to purchase the works of the Company at a valuation, to be determined by arbitration in the usual manner.
8. The Company will be exempt from the payment of all general customs and provincial taxes and imposts upon the iron, coals, and other materials used in the construction of the works and the manufacture of the gas.
9. The privilege of lighting any other city or town in the province of Bahia to be first offered to this Company.

The estimates of the cost of the works and the working expenses have been carefully prepared by Messrs Law and Blount, under whom similar works at Pernambuco, in the same Empire, have just been completed. These estimates have been revised and approved by Mr Croll, and a large return upon the capital invested may be confidently anticipated.

If it is assumed that the quantity of gas required by private consumers be only the same as that supplied for the public lamps, and that the price charged be at the same rate as stipulated by the Government for the public lighting, a net income at the rate of 1d per cent. will be realised on the capital expended. Judging, however, from the experience of other towns, a much larger private consumption than this may be confidently looked forward to; and in Bahia more especially may this be expected, as the cost of lighting houses with candles or oil is most expensive, in consequence of the heavy duties and other causes affecting these materials.

The success of the Rio Janeiro Gas Company, already established under a concession from the Brazilian Government, with terms not more favourable than those now offered, may be brought forward as some proof of the merits of this undertaking. The shares of this Company are at a considerable premium, having advanced in value nearly 50 per cent. The profits realised have each year increased, the dividend in 1855 being at the rate of 8 8s per cent. on the capital, while the profits of last year, 1859, allowed of a dividend equal to 16 per cent. In addition to this, 10 per cent. of net profits is carried annually to the reserve fund.

There can be no doubt that the Bahia works will yield, from the very commencement, a larger profit than those of Rio, inasmuch as the capital expended will be very much less, in proportion to the work executed; the

Rio works having been the first of the kind carried out in the Empire of Brazil.

The Pernambuco Gas Concession, with terms nearly similar to those for Bahia, was considered to be so profitable that it was purchased from a Company in course of formation in London, and carried out by private enterprise. The demand made for gas by private consumers has been so large, that additional heads and fittings have been written for to meet the requirements.

It only remains to be observed that the Brazilian securities are admitted to be beyond question.

Application for shares, addressed in the annexed form to the Directors, may be sent to Messrs A. and E. Petre, Tokenhouse yard, London, E.C., Brokers to the Company, and to Mr Clarke, Secretary to the Company, of whom also prospectuses may be obtained. Every application must be accompanied by the annexed banker's receipt.

Communications for the Board of Directors to be addressed to the Secretary of the Company, at their temporary offices, No. 10 Coleman street, City, E.C.

FORM OF APPLICATION FOR SHARES.

To the Directors of the Bahia Gas Company, Limited.

GENTLEMEN,—I have this day paid to your bankers the sum of £ and I hereby request that you will allot me Shares of £20 each in the Bahia Gas Company; and I hereby agree to accept such Shares, or any smaller number that may be allotted to me, and to pay the remainder of the deposit of £1 per Share on the Shares allotted, and to execute the Deed of Settlement of the Company when required.—I am, Gentlemen,

Name in full.....
Address in full.....
Date .....

Received the day of 1860, on account of the Directors of the Bahia Gas Company, from the sum of being the deposit made in accordance with the terms of the prospectus, on an application for an allotment of Shares in the undertaking.

£ Bankers.

NOTICE OF REMOVAL.—JOSEPH RODGERS and SONS have REMOVED their London Offices from 26 Bouverie street, to 4 CULLUM STREET, Fenchurch street, E.C., where, for the convenience of merchants and the trade, they purpose keeping a STOCK of CUTLERY.

J. R. and Sons beg to state that considerable quantities of German and Belgian Cutlery, made to imitate, and bearing their name and marks, having been recently seized by the officers of Her Majesty's Customs, they caution buyers against such spurious goods, and respectfully request them to notice that all articles of their manufacture are now stamped with a Star and Cross (being a mark granted by the Corporation of Cutlers) in addition to the name of their firm.

No. 6 Norfolk street, Sheffield, June 19, 1860.

MERSEY DOCK ESTATE.—LOANS OF MONEY.—The Mersey Docks and Harbour Board hereby give notice, that they are willing to receive LOANS of money, on security of their bonds, at the rate of £4 5s per centum per annum interest, for terms of three, five, or seven years, at the option of the lenders. The Board will accept loans for a longer period than seven years, on such terms as may be agreed upon.

Interest warrants for the whole term, payable half-yearly at the bankers' of the Board in Liverpool, or their correspondents in London, are issued with each bond.

All offers to be addressed to George J. Jefferson, Esq., Treasurer, Dock office, Liverpool.—By order of the Board, DANIEL MASON, Secretary.

Dock office, Liverpool, May 10, 1860.

THE QUEEN'S HOTEL COMPANY, Upper Norwood (Limited), registered pursuant to the Joint Stock Companies' Acts 1856 and 7, by which the liability of shareholders is strictly limited to their subscriptions. Capital £50,000, in 5,000 shares of £10 each. Deposit £1 per share on application, and £1 10s on allotment. Offices, No 14 Little Tower street, City.

The up-hill work attached to the project has been accomplished, and the valuable property, with its appurtenances and handsome revenue, is now actually in the Company's possession. The admirable management of the hotel by its late proprietor, for a period of six years, has established for it a universal and permanent reputation among the nobility and gentry here and on the Continent.

The demand for accommodation has, consequently, for the last two or three years largely exceeded the resources of the establishment. All that remains to be done is to provide the funds for the enlargement and improvements which are essentially necessary. The erection of 50 additional rooms during the ensuing autumn is an object of the highest importance to the shareholders and the public. To effect this the few remaining shares are now offered, an offer which will, doubtless, be met with a ready response. When the new erections are completed there is every probability that the dividend will reach at the least £15 or £20 per cent. The Directors feel every confidence in guaranteeing to the shareholders a minimum dividend of £10 per cent. for the first year. The visitors and friends of the establishment are assured that, although the former proprietor has ceased to be the owner, he has invested a considerable sum in the new undertaking, and will continue to exercise the same supervision as he has from the commencement; the business will, therefore, be conducted in the same admirable manner as heretofore, without the slightest alteration. Applications for prospectuses and forms for the unallotted shares will be received at Messrs Price and Brown's, brokers, 'Change alley, Cornhill; and by the Secretary, No. 14 Little Tower street, City

RIMMEL'S TOILET VINEGAR, by its cooling properties and delightful aroma, renders the daily bath or ablution doubly pleasant and salubrious. Price 1s and 2s 6d. Sold by all perfumers and chemists. Made only by E. Rimmel, Perfumer, 96 Strand, and 24 Cornhill, London, and 17 Boulevard des Italiens, Paris.

SCOTTISH WIDOWS' FUND AND LIFE ASSURANCE SOCIETY.

HEAD OFFICE—No. 9 ST ANDREW SQUARE, EDINBURGH.

ESTABLISHED 1815.

This Society is constituted on purely Mutual principles. The Members (Policy-holders) alone form the Society, there being no Proprietary Body (Shareholders) controlling its affairs and participating in the Profits arising from the Contributions of the Members. The whole funds belong to the Assured, and the profits are divided among them alone.

These principles have found very extensive acceptance in the past operations of this Society, having been applied in such a way as to afford the amplest returns to the members, while, at the same time, careful regard has been had to the establishment and preservation of that unquestionable security, which is essential in the business of Life Assurance.

The Realised and Invested Funds at 31st December last Amounted to

THREE MILLIONS FIVE HUNDRED and EIGHTEEN THOUSAND TWO HUNDRED and THIRTY POUNDS,

which exceeded the whole Liabilities, and yielded a Surplus Fund of

NINE HUNDRED and NINETY-TWO THOUSAND SIX HUNDRED and THREE POUNDS,

out of which there was reserved as a Guarantee Fund

THREE HUNDRED and THIRTY THOUSAND EIGHT HUNDRED and SIXTY-EIGHT POUNDS,

and the remainder of this Surplus Fund

(Less an unappropriated Balance of £11,860), amounting to

SIX HUNDRED and FORTY-NINE THOUSAND EIGHT HUNDRED and SIXTY-SEVEN POUNDS,

being divided among the Members according their respective rights, yielded a

BONUS of from £1 12s 6d to £3 6s per cent. per annum on the original sums assured,

besides providing a prospective Bonus upon an increased ratio for such policies as shall become claims prior to next division of Profits, all which taken together are equivalent to

AN AVERAGE BONUS of £2 5s 8d per cent. per annum, one of the largest Bonuses ever declared by any office.

Viewing the Policies of the SCOTTISH WIDOWS' FUND simply as Investments for Money, a Table, attached to the Report read at the Annual General Meeting of Members held on 25th May, 1860, shows the lowest Bonus declared (on Policies newly opened) to be 58¼ per cent., and the highest Bonus (on the oldest Policies) to be 111 per cent. of the Premiums paid. Thus, in the latter case, more than the whole premiums paid have been added in bonuses, the interest alone has been more than sufficient to provide the original sum assured.

For example:—

	£	a	d
A. B., aged 33, opened a Policy in 1819, for	1,000	0	0
There has been added as bonuses	1,262	1	5
Present amount of Policy	2,262	1	5
Deduct from this amount the Principal of the whole Premiums paid	1,136	0	7
The difference shows the Amount of Insurance purchased by the Interest alone	1,126	0	10

Being an Improvement of Money which may challenge comparison with many other modes of investing sums of small amount, the advantage of an assured sum in the event of death at any time after the commencement of the Policy being also secured.

The Substantial Benefits accruing under the Society's System are not confined to a favoured class of Policies, but are proportionally distributed among the whole body of Assured Members.

New Entrants may safely rely on the continuance of a Scale of Bonus as ample as that which has hitherto prevailed, because, irrespective of a permanent guarantee fund, the margin of Profit in the Premiums payable, which forms the main index of any Life Assurance Society's Bonus-giving power for the future, remains wholly untouched in the additions hitherto declared.

The magnitude and select character of the Business,—the very small average of Expenses of Management,—the favourable rate of mortality and interest,—and all the other elements productive of Surplus, are therefore combined in the position and prospects of the Society, and afford inducements and guarantees to intending Assurers of the most satisfactory kind.

The Directors, in terms of the Constitution and Bye-Laws, afford to Members every facility and privilege consistent with due regard to the general interest of the Society.—In particular—

(1.) Declared Bonuses may be surrendered for present cash, or applied in reduction of future Premiums, the right to share in subsequent Divisions on the Sums remaining Assured not being thereby lost.
(2.) Surrender Value is allowed upon every discontinued Policy, although no more than One Premium has been paid.
(3.) When Policies attain the value of £50, Loans are made to Members without expense, and at a medium rate of interest, as upon first-class securities.
(4.) Members are permitted to Travel and Reside in any part of the World, either without charge, or subject to moderate extra rates of Premium suitable to the risk.
(5.) In the Settlement of Claims, the wishes and convenience of parties are carefully attended to, and the full sums due are made payable without charge in any part of the Kingdom.
(6.) Members are allowed, without any Extra Charge, to serve in Volunteer Rifle and Artillery Corps, within the United Kingdom.

Reports, Prospectuses, Forms of Proposal, and all information, will be promptly supplied from the Head office and Agencies.

June, 1860. SAMUEL RALEIGH, Manager.

NOTICE.—"BEWARE OF IMITATIONS."

LEA AND PERRINS' "WORCESTERSHIRE SAUCE" Is pronounced by Connoisseurs to be a most agreeable addition to every variety of dish.

*** See the names of Lea and Perrins upon every label, bottle, and stopper.

Sold by Messrs Crosse and Blackwell, London; and by dealers in sauces generally.

Sole Manufacturers—
LEA and PERRINS, WORCESTER.

HARVEY'S FISH SAUCE.—Notice of Injunction.—The admirers of this celebrated Fish Sauce are particularly requested to observe that none is genuine but that which bears the back label with the name of WILLIAM LAZENBY, as well as the front label signed "Elizabeth Lazenby," and that for further security, on the neck of every bottle of the Genuine Sauce will henceforward appear an additional label, printed in green and red, as follows:—"This notice will be affixed to Lazenby's Harvey's Sauce, prepared at the original warehouse. In addition to the well-known labels, which are protected against imitation by a perpetual injunction in Chancery of 9th July, 1858."

6 Edwards street, Portman square, London.

PIESSE AND LUBIN'S SWEET SCENTS.—FRANGIPANNI, KISS-ME-QUICK, WHITE-ROSE, and others from every flower that breathes a fragrance; in bottles 2s 6d each, or three in a case 7s. Sold by every Fashionable Druggist and Perfumer in all parts of the world.

Laboratory of Flowers, 2 New Bond street, London.

CROSSE AND BLACKWELL, Purveyors in Ordinary to Her Majesty, invite attention to their PICKLES, SAUCES, TART FRUITS, and other Table Delicacies, the whole of which are prepared with the most scrupulous attention to wholesomeness and purity. C. and B. have for many years enjoyed the high honour of supplying Her Majesty's Table with their Manufactures. A few of the articles most highly recommended are—Pickles and Tart Fruits of every description, Royal Table Sauce, Essence of Shrimps, Soho Sauce, Essence of Anchovies, Orange Marmalade, Anchovy and Bloater Pastes, Strasbourg, and other Potted Meats, Calf's-foot Jellies of various kinds for table use, M. Soyer's Sauces, Relish, and Aromatic Mustard, Cornstalks' Sir Robert Peel's Sauce, and Payne's Royal Osborne Sauce. To be obtained of all respectable oilmen, grocers, &c., and wholesale of Crosse and Blackwell, 21 Soho square, London.

HUBBUCK'S PATENT WHITE ZINC PAINT.

By their process, which is patented, Pure White Zinc Paint is cheaper than White Lead. It is the most durable and beautiful paint known, and does not stain or discolour with the London atmosphere.

CHEAPNESS.—Two hundred-weight of this Paint, with six gallons of Oil, covers as much surface as three hundred-weight of White Lead and twelve gallons of Oil. It is cheaper in the first instance, as well as desirable on every consideration.

ADULTERATIONS.—Prejudice is caused by some Paint Grinders selling Zinc Paint adulterated with Sulphate of Barytes, some even to the extent of thirty per cent. Whether this is sold under the name of "Improved Zinc Paint," or is candidly sold as Number Two or Three qualities, no Painter can produce good work with it. He naturally condemns Zinc Paint altogether.

That Painters have never seen the best Zinc Paint is evident, or they would not use any other paint for their best work. To prevent the prejudice which the inferior article must produce, each Cask of Pure White Zinc is stamped

"HUBBUCK, LONDON, PATENT."

To New York, chief cabin, Twenty-six Pounds; second cabin, Eighteen Pounds. Freight to Halifax, Boston, and New York, £3 per ton and 5 per cent. primage. Small parcels, 5s each and upwards. These steam ships have accommodation for a limited number of second cabin passengers.

For passage or other information, apply to J. B. Foord, 52 Old Broad street, London: D. Currie, Havre, and 12 Place de la Bourse, Paris; G. and J. Burns, Buchanan street, Glasgow; D. and C. M'Iver, Queenstown; or D. and C. M'Iver, Water street, Liverpool.

STEAM SHIPS.—

The General Steam Navigation Company's powerful and first-class STEAM SHIPS leave from St Katharine's Wharf for—

HAMBURG—Every Wednesday and Saturday morning. Chief cabin, 2l; fore, 1l 5s.

HARBURG—Every Sunday.

ROTTERDAM—Every Tuesday, Thursday, and Saturday, at 11 morning. Chief cabin, 1l 10s; fore, 17s 6d. Cologne, 34s 6d or 19s 9d.

ANTWERP, BRUSSELS, and the RHINE—The Rhine and Dolphin every Tuesday and Thursday, at 12 noon. Chief cabin, 1l 7s; fore, 20s. Brussels, 22s 3d. Cologne, 35s 6d. Leaving Antwerp for London every Sunday and Friday at noon.

OSTEND, BRUSSELS, and the RHINE—Every Wednesday and Saturday morning. July 4 at 2; 7 at 4. Leaving Ostend for London every Tuesday and Friday night. Chief cabin, 18s; fore, 14s. Brussels, 20s 3d. Cologne, 34s.

HAVRE—From St Katharine's Wharf, every Thursday. July 5 at 12 noon; 12 at 6. Chief cabin, 14s; fore, 10s. London to Paris, 1l.

PARIS, via CALAIS, direct—From London Bridge Wharf, every Wednesday and Saturday morning. June 30 at 11; July 4 at 2; 7 at 4. Chief cabin, 14s; fore, 10s. London to Paris, 17s 8d.

BOULOGNE—From London Bridge Wharf, every Tuesday, Thursday, Friday, and Sunday morning. July 1 at 11; 3 at 1; 5 and 6 at 3. Chief cabin, 14s fore, 10s. London to Paris, 16s.

EDINBURGH—From St Katharine's Wharf adjoining the Tower, every Wednesday and Saturday; at 10 morning. Fares: chief cabin, 25s; return, 37s 6d: fore, 15s; return, 22s 6d; deck, 10s; which fares include all pier dues at London and Granton.

HULL—From London Bridge Wharf, every Wednesday and Saturday, at Eight morning Chief cabin, 6s 6d; return, 10s; fore cabin, 4s; return, 6s

NEWCASTLE—From Newcastle Steam Wharf, 272 Wapping, every Wednesday and Sunday, at 10 morning Chief cabin, 8s; return ticket, 12s: fore, 5s; return, 7s 6d

YARMOUTH—From London Bridge Wharf, every Wednesday; and Saturday, at Four afternoon. Saloon, 8s: return, 12s: fore cabin, 5s; return, 7s 6d.

MARGATE, and RAMSGATE—From London Bridge Wharf, daily, at 10 morning, Sundays excepted; calling at Blackwall and Tilbury piers.

MARGATE and BACK every Sunday at 9 morning, returning at ½-past 3 afternoon (one fare).

Offices 71 Lombard street, 37 Regent circus, and 35 Leadenhall street; and St Katharine Wharf.

THE DEBATE ON LORD PALMERSTON'S RESOLUTIONS.

When the rejection of the Paper Duty Repeal Bill by the Lords was first mooted, we ventured to express our conviction that that rejection would be an undesirable and imprudent, though not unconstitutional course, on the ground that the whole circumstances of the case were not such as to warrant the Lords in applying so unusual a remedy—in lessening, as we pointed out that they would lessen, the strict financial responsibility of the Government, and thrusting on it supplies for which it had not asked. Now, therefore, we are adopting a strictly consistent course in vindicating Lord Palmerston, and those who are acting with him, from the charge of pusillanimity which the organs of the advanced Liberals are bringing against them, only because they do not recommend that active conflict with the Lords for which the Chancellor of the Exchequer craves. We objected to the act of the Lords which provoked this collision as not justified by the circumstances, though we agreed with them that it would have been better had the repeal of the paper duty been delayed till the other sacrifices of revenue which the budget proposed could in some measure be repaired by the inherent elasticity of English finance. We now protest equally against the attempt to affect an attitude of resentment or alarm which it is not very easy to suppose real or well-founded in many members of the House of Commons. We believe that that attitude is now but a faint reproduction of old traditions which have lost their practical application to the affairs of the present day.

In the first place, the House of Commons does not and cannot practically fear the encroachment of the House of Lords on their privileges. Every one knows that if the House of Lords succeeds in preventing the repeal of the paper duty, it is simply because there is now a majority of the House of Commons which acquiesces willingly in the Lords' decision. Nor would this be enough to prevent the Commons from asserting their rights if there were the shadow of a doubt whether or not that right *could* be effectually asserted. Every one knows that the particular question at issue would be lost sight of in a moment if there were the least threatening of any danger lest the Lords should gain on the Commons in practical and legislative importance, and undermine their undisputed superiority. That the particular revenue question still retains its importance, and is rediscussed with every discussion which arises, proves that the constitutional danger is regarded as a mere chimera which no practical man need consider for a moment. The Commons see that the opinion at which on mature consideration they have themselves arrived, has been given effect to by the vote of the House of Lords, and being well aware that, unless the current of opinion had set strongly in that direction in their *own* House, the Lords would have been quite powerless to resist them, they are wisely enough inclined to let matters stand as they are. When Mr Gladstone appeals to the course taken by the House of Lords with regard to the remission of the postage duties in 1839 and of the soap duties in 1853 as a precedent for the present case, he omits the cardinal consideration that the House of Commons in both those cases had very decisively adopted those measures without the slightest indication of faltering judgment. With regard to the postage duties, Sir Robert Peel directed the whole force of his resistance against the pledge, for which the Whig Chancellor asked, that the House would make up any deficiency which the experiment might entail. He moved the omission of this clause only, in the resolution, and was defeated by a majority of 59. After that the Bill passed through the House without any division. There was no indication whatever of repentance or change of purpose. The same may be said with regard to the repeal of the soap duties in 1853. There may have been occasional objections, but we do not believe a single division or contest took place on the Bill in the House of Commons at all. How different is the present case! Lord Palmerston gave us the key to the whole question as to the constitutional propriety of the procedure of the House of Lords, when he said that the majority which on the second reading in the House of Commons was only 53, instead of being afterwards unopposed or carried by larger majorities, dwindled on the third reading to 9. Now here was a clear and direct intimation that the tide was turning in the Lower House itself,—and every day which intervened between its last stage in the Lower House and its discussion in the Upper tended to turn the tide still more strongly. The China war was known to be all but certain, and its expense great. There can be little doubt that if the House of Commons had had occasion to divide again on this matter at the time of the division in the Lords, their vote would then have been unfavourable to the Bill. Here, then, was a Court of Review especially established by the constitution to check the overhaste of the House of Commons, aware that that House had practically changed its mind, while, for its own part, it was entirely hostile to the Bill. Can any one say that it was a menace to the power of the Commons to reject it? It may have been imprudent,—it may have been an unwise interference with the responsibilities of the Chancellor of the Exchequer and of the Lower House, but is it possible to interpret it into a desire to encroach on the privileges of the Commons? It was an act suggested and recommended by the evidences of a varying purpose in the Commons. The Lords made themselves the mouthpiece of a changed popular will. Had the popular will been adverse, had they anticipated a contest,—the passing of new Bills to the same effect, and a session prelonged till their assent had been secured,—they would not for a moment have thought of doing what they did. They recognised the changing purpose, and availed themselves of it. They would have been foolish, indeed, if they had wished to thwart the Lower House and provoke a trial of general strength.

In the next place, while the House of Commons knows well that their own decision, were they strong and united, would not for a moment be questioned in such a matter by the House of Lords, they have the best possible reason for not challenging a needless and fruitless conflict at the present moment. For the mere sake of a formal victory, which would necessarily be followed by the substitution of some other fully as objectionable impost in the place of the paper duty, the House of Commons are assuredly not willing to give to the world the spectacle of a divided Legislature at a moment when we are all anxious to present a united front to Europe. We think that Lord Palmerston did not rate this consideration one whit too high. He knew that the majority of the Houses both of Lords and Commons are now practically agreed that it is not a fortunate time for taking off the paper duty; he also knew that to renew in 1860 alarms as to privilege which were legitimate in 1640 is simply ridiculous; and he saw very painfully the disadvantage in presenting to the world the appearance of a discord and a jealousy which can never be more than artificial. There is no real question at issue. The majority of both Houses wish to keep the paper tax at present; the majority in the House of Lords knows well that, but for the rapid change in the opinion of the Commons, they would not have used their majority and would never venture to use it again;—and the only advantage, therefore, of a struggle is to kindle jealousy and to give to foreign countries the appearance of weakness.

We could wish that the same motive which renders Lord Palmerston so anxious not to foment a dispute at the present moment in the Legislature, had more influence with the Chancellor of the Exchequer in inducing him to soften rather than exaggerate the differences in the Cabinet. As we said last week, the question is an isolated question. The different members of the Cabinet may take different views upon it, and yet may be able to act in perfect harmony on all questions of future policy. It is a question which, once settled, is not likely to recur,—and if there has ever been a time when it was desirable for Europe that the English Cabinet should be strong and harmonious, it is the present. Were any real contest for supreme power between the two Houses on the cards, Englishmen might fairly be permitted to lose sight for a time of continental politics in their eagerness as to the issue. But no one honestly believes this,—and, therefore, ninety-nine in every hundred of the English political public feel a natural impatience that, when the fate of Italy rests in the balance, and it depends almost entirely on England whether that fate shall be determined by Italians for themselves or by the dictation of some powerful neighbour, our Legislature should be divided, our Cabinet endangered, and the most sincere advocates of a sound liberal foreign policy whom it contains set at variance, by a question of this nature. Surely Mr Gladstone feels that it is a thousand times more needful even for English interests, broadly viewed, that Naples and Sicily should be protected from the danger of foreign intervention, than that a House of Commons, which may itself be said to have invited the recent vote of the Lords, and which fears practical encroachment from them about as much as it fears it from the Throne, should succeed in winning a barren victory over the Upper House as to a matter of form. We believe that the Upper House ought to possess, and ought to know that it possesses, the power to check premature legislation on finance as well as on any other subject. We are sure that it has not, and will never assume in our time, the power to defeat legislation which is not premature but which represents the well-considered convictions of the Commons and the country.

TRADING ON BORROWED CAPITAL.

FAILURES IN THE LEATHER TRADE.

We are accustomed to pride ourselves on the extent to which the system of credit is developed in this country. We are in the habit of saying that by means of it the economy of capital is carried further than it is in any other part of the world. We know that the delicacy of the system is quite as remarkable as the extent of it. Nevertheless, we are surprised when from time to time events show us the inevitable defects of this system. We are loth to admit that these defects are inseparable from it; we are apt to rail against those by whom it is administered; and we wish to obtain in this case, as in some others, the great advantages of a delicate machinery without paying the price which nature has put upon it.

The recent failures in the leather trade are instances of the truth of this remark. There is nothing that is new in principle in them; but, nevertheless, we are apt to speak as if there was. The facts are very simple; at least they appear to be so, according to our present information. A first-rate house embarked some years ago in a large speculation which failed; it has since engaged in a series of speculations which have likewise failed; it surrounded itself, as is usual, with a set of dependent firms which existed mainly or entirely by its support; it made use of its long-established credit to maintain these firms, and to maintain itself; after a time the losses which it underwent were too great for it to bear; it failed; the firms dependent on it failed likewise, and there was a general panic in a single department of trade.

Nothing can be more lamentable than that such events should happen; and yet, under the system under which we carry on our trade, they appear to be inevitable. A system of credit means a system of trading with borrowed capital. A great deal of money is constantly accumulated in this country in the hands of persons who are wholly unable themselves to employ it advantageously; it is deposited in the hands of bankers throughout the country; they employ as much of it as they can, but they cannot employ it all; the unemployed part of it finds its way to Lombard street, and is there employed by bill-brokers and others in the discount of bills from the great trading and manufacturing districts. Nothing can be better—nothing can be more necessary to us than this system is now. But it has one defect: every now and then some one person, or some set of persons, who ought not to be trusted with any money, will be trusted with a great deal of money. Some one large house like that which has just failed will engage deeply in ruinous transactions; it will use its credit to evade for the moment the certain consequences of those transactions, and the painful result will be similar to that which we see.

But can this be helped? It is customary to blame the bill-brokers for it. But in what manner are the bill-brokers to avoid it? Their's is a very difficult trade; they are bound to know the pecuniary circumstances of a very great number of persons, most of whom live in various parts of the country, and some of whom live abroad; they have no apparent means of knowing anything about any of these persons. A banker has some sort of means; he can watch day by day the accounts of his customers; he can learn from them certainly something, perhaps much, of their means and their transactions. But a bill-broker has no such assistance. He works, so to say, *in vacuo*. He has no ledger to guide him in what he does; he has to find out the circumstances of particular firms in a great variety of places in whatever way he can. His knowledge must not be confined to a particular trade; he can only carry on his business by being acquainted with all trades; he must know, or believe that he knows, which of them are trustworthy, and which are not. If he makes a mistake, he loses his money. If he trusts to the name of an old house, to the apparent wealth of its partners, to the seeming regularity of its transactions, to its long reputation for caution in business, he may lose much money. He may find, as in the case which has just occurred, that he has been aiding transactions which should not have been aided, and delaying an amount of ruin which only becomes greater by being delayed. We think that we could assign good paper arguments to prove that the bill-broker's business is impossible, were it not a long-established fact. We could allege plausibly enough, that no one would ever know that which is necessary to carry on their business; that it would be an attempt to trade without data, which must sooner or later arrive at an unpleasant termination. To make the matter worse, a bill-broker's trade is not one which will bear large bad debts. A bill-broker pays an interest for all the money which is deposited with him. He only charges a somewhat higher interest for all which he lends. His profit is composed of the difference between the two,—between the rate that he gives and the rate which he gets. It is evident that a narrow margin of this kind will not bear

very great losses. A merchant who charges a high mercantile profit to his customers may bear considerable losses; a banker who pays nothing for his money may bear a certain amount; but a bill-broker, who pays for every sixpence which is lent him, but who, nevertheless, as a rule, charges not more than the banker, can bear very few.

We find, nevertheless, that bill-broking is carried on with great profit, that it has been so for many years, and that great fortunes have been made by it. The experience of trade goes far beyond the theory of it; the continual attention of able men who attend to nothing else will discover which persons are trustworthy and which are not; their success proves it; and in such matters continued success is an ultimate criterion. But when, as in the present case, the bill-brokers are alleged rightly or wrongly to have made a great mistake,—when they are accused of giving rash credit to persons who should not have any,—we must remember the difficulty of their trade; we should ask ourselves how we could conduct a similar business,—how we should begin to acquire the preliminary knowledge which is necessary to carry it on even for a week.

These remarks have reference to the particular mode in which the system of credit has developed itself in England. But something like it will be found under every extensive system of credit. Make what arrangements we will, under every system it will be difficult to find out who is fit to be trusted, and who is not fit. Wherever trade is carried on largely upon borrowed capital, every now and then some persons will be trusted with much money who ought not to be trusted with any; they will fail, and the result will be painful. We used to fancy that we could avoid these calamities by some doctoring of the currency, but we have learned better than that now.

THE HIGH PRICE OF MEAT BENEFICIAL TO THE COUNTRY.

Political economy is a recognised science in this country. Its general truths are well known to all educated persons: its more accurate investigations have been carefully studied by an influential minority of them. But every now and then some circumstance occurs which proves that this knowledge has not penetrated deep into the mass of the community. Every now and then some numerous class is affected by some new circumstance, is quite unable to comprehend the explanation of it which the best known principles of the science suggest, and is utterly unwilling to acquiesce in the gradual and painful remedies which all educated persons understand to be the only adequate ones for it. Such has been recently the case with many of the poorer classes who are suffering from the recent rise in the price of meat. They have held numerous meetings in several large towns, at which the high price of meat has been ascribed to the interference of monopolists and to the high profits of the cattle-dealers, and at which an investigation by the Government has been anxiously asked for. We might not have thought it necessary to refer to these theories concerning the cause of the existing evil; their absurdity is clear enough; but a practical course has been recommended at several meetings by way of remedy which would not lessen the evil, but would aggravate it.

This remedy is a systematic reduction of consumption until the price is reduced to a stipulated amount. It is alleged that the high price of meat is a considerable evil; and the price would be soon reduced by an extensive diminution of consumption; and it cannot be denied that both these assertions are in themselves true. But how the persons who abstain are to be benefited by so doing is not very clear. If they succeed in reducing the price of animal food by not eating it, they will only reduce it so long as they do not eat it. The moment they begin to consume as usual, the price will rise. The remedy which they apply is temporary; the moment it ceases to be applied, the evil will recur. And while they are not eating themselves, they enable others to eat more. Any fall in price will naturally—without any artificial stimulus, without any public meetings or long speeches—produce an increase of consumption. If half the country were to say they would not eat meat till its price were reduced 20 per cent., as soon as it was reduced 9 per cent. the other half of the country would eat more. When its price was reduced 20 per cent., the whole country would again become consumers, and the price would rise to its former level.

And not only would this remedy be ineffectual, it would be pernicious, for it would prolong the duration of the evil. The scarcity which causes the dearness of food is an evil, but when food is scarce it is desirable that it should be dear. A high price is a natural remedy which is efficacious in two ways. It *naturally* limits consumption. It is not necessary to call public meetings to tell poor and thrifty people to buy only what they can afford. Experience shows that the poorer part of the middle classes will limit their consumption so as to suit their means with an economy of detail that is remarkable. The better part of the working classes will do so likewise. This natural diminution of consumption will be retarded by any reduction of price which may be caused by an artificial diminution. Moreover, a high price is the only sure source of an augmented supply. So long as meat is cheap, no one will endeavour to get us more meat. There is no motive for doing so. While the price is high, the breeder and the grazier will get much for that which they bring to market: they will endeavour to augment the supply as much as they can and as fast as they can. But as soon as meat becomes cheap, the extra-profit which should stimulate these persons to unusual exertions will cease, and their efforts will inevitably be slackened. The legitimate gratuity for the unusual labour requisite to remedy an insufficient supply is a high price, and the supply will never become sufficient till there is a high price.

There are some peculiar circumstances in the present dearness of meat which make this doctrine especially important. That dearness is, no doubt, in part caused by the recent high price of fodder, but it appears from the data given last week in the agricultural section of this paper, that the supply of animal food has for some time past tended to fall short of the demand for it. The consumption of the country is increasing with singular rapidity, and the number of animals fit for food is not augmenting with the same rapidity. Moreover, it appears that the animals now brought to market are not one with another so suitable for human food as similar animals were formerly. They are younger and they are fatter; in consequence of their age they are lighter than they used to be; there is less of them altogether: and from the great proportion of fatty matter, a much greater part than formerly goes to the tallow-chandler. From the combination of these causes, the supply of meat for some time past seems to have tended to be less than the demand for it. Animal food, therefore, is a commodity of which it is especially desirable to stimulate the production. And the only effectual stimulus to production is a high price.

THE CUNARD COMPANY'S SUBSERVIENCY TO THE AMERICAN DOCTRINE OF CASTE.

It is often said that England meddles too much with the tender question of American Slavery; that without having any practical appreciation of the difficulty of the situation, we are ready to pass the most irritating and unjust judgments on our Transatlantic relatives. This is very likely only too true. But if we refrain from inconsiderate meddling with the American treatment of the Slavery question, it is at least our duty to watch and criticise any words or acts of our own fellow-countrymen which may appear to identify Englishmen with the American position. If we are not to judge them severely, we should at least endeavour not to be guilty of deferring to their prejudices and abetting them in their injustice. It may be well to be sparing in passing sentence on those whose position it is not easy fully to realise,—it is certainly well to speak openly and undisguisedly of those whose position we can fully realise; else it will be fairly inferred that we are silent, not because we are afraid of falling into unjust criticism, but because we are indifferent.

A correspondence has been published this week, which shows that the Cunard Mail Steam Packet Company have directly sanctioned the distinctions of social caste as to persons of colour which American prejudice enforces, and have permitted themselves to found on those distinctions a difference in the treatment of their passengers. It is not often that a commercial company is called upon to vindicate moral and political principles; so long as they scrupulously give money's worth for the money which they receive, they do all that can be

either expected or desired. But when a company, founded to promote international traffic, abandons the social usages of the country which founded it, for usages less noble and less civilised, because they happen to be more suited to the other country with whom intercourse is carried on, they are guilty of injuring not only the reputation, but the character of the national commerce. That all commercial companies are founded on the principle of gain, is only another way of saying that they are commercial; but once let it be known that on this pursuit of gain there are no limitations whatever,—that there is no sacrifice, short of that of honesty, which a commercial body will not make for the sake of securing success, and, then, all that identifies the commerce of a nation with its nobler political and social life disappears at once. The first result is, that men engaged in international commerce begin to hold, as a class, less manly and national politics than their fellow-countrymen,—for men will palliate and vindicate that in which they are conscious of acquiescing;—and the next result is, that the infection extends through the commercial classes to the heart of the community, and the whole tone of society is lowered by a compromise which begins only with the international trade. There is no clearer duty for English commercial men than to see that they import with their foreign products only the higher elements of foreign customs and manners, and do not part with or endanger their own noblest national traditions.

The correspondence to which we refer is brief, and the story easily told. A lady of colour, Mrs Putnam, with her party, had engaged places on board the Cunard packet for England; notice had not been given that the party contained people of colour, because no English steam packet company had ever ventured to give public notice that the distinction was one on which differences of treatment were founded. Before embarking, however, she received the following notice:—

British and North American Royal Mail Steam Packet Company
Office, 99 State street, Boston, Oct. 27, 1859.

For your information, we desire to inform you that a separate table will be provided for yourself and party on board the Europa, hence to Liverpool, where everything will be furnished you that first cabin passengers are entitled to; the person who applied for your tickets did not state the fact that the party were coloured, otherwise we should have informed you.

Should this interfere with your expectations, please apply at this office at once, and we will refund the passage money.—Respectfully, (Signed) E. C. and J. G. Bates.

Mrs C. E. Putnam and party, Salem.

Mrs Putnam protested; but could not delay her journey, and the separation from the other passengers was enforced. On her arrival in England some of her friends took up the matter and laid the case before Sir Samuel Cunard. His reply was as follows:—

Bush hill house, Edmonton, June 29, 1860.

Sir,—I have received your letters of the 8th and 28th inst.

I do not see that any advantage would result from discussing the subject matter of those letters, therefore I must decline entering into any correspondence on the subject.—I am, Sir, your obedient servant, S. Cunard.

The Rev. E. Chapman, Durdham Down, Bristol.

Which is tantamount, we suppose, to expressing his approval of the course taken by the Company's agents.
